LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 1.]

SATURDAY, JULY 7, 1860.

[PRICE 3d.]

OUR PRINCIPLES AND POLITICS.

WHEN a new Journal is offered to the patronage of the public, it is customary for its conductors to explain its objects and define its policy. Yielding to this fashion or necessity, the projectors and proprietors of the "LONDON REVIEW" desire to indicate in the outset of their undertaking why they have ventured into an arena that seems to be overcrowded, and why they are of opinion that they shall be enabled to present to the intelligent readers of this much-read age a weekly periodical unlike any other, and which shall supply a want which is very generally admitted. By the operation of the Act abolishing the newspaper stamp, a widely-extended daily press has put the great mass of the community into daily, almost hourly, possession of the news from every part of the world. Whatever is done or said in London or Paris on Monday, is known all over the kingdom on Tuesday. In an age of railways and of electric telegrams, people live faster than they did, and cannot afford to wait seven days to learn from an old-fashioned periodical the events and the opinions that may be made known to them in one, by a journal of lighter calibre and smaller price. But, formerly, even so lately as six or seven years ago, many hundreds of thousands of families were contented to wait until Saturday to acquaint themselves with what had been done in the world since the Saturday previous. Hence arose a large class of excellent weekly journals, many of which attained great popularity and extensive circulation. These have for the most part outlived their time. The greater portion of their broad-sheets is filled with reports and descriptions which have been read and discussed in the cheap daily press for days before they are issued. The sub-editorial scissors and paste are more active in the manufacture than the pens of the editor and his contributors. The result of the combined operation of their high price and the obsolescence of their news is, that they are no longer suited to the public taste or the necessities of the time. One by one they have died off; and the few that remain are shorn of their ancient glories, and exist, like octogenarians—hale enough, perhaps, but not likely, in the course of nature, to survive for many years. The electric telegraph is too fast for them, and they gradually give place to some newer result of the intellectual activities of the age.

The want of a thoroughly original Weekly Journal, appealing to an educated public already acquainted with the week's news, has been partially supplied. But the few existing papers of this class take a range too limited; they are too purely critical; they deal too much with party and class politics; and they are published at too high a price to suit the taste, the temper, or the pocket of a public to whom a cheap press—conducted with as much tact, spirit, and ability as are displayed in the columns of its more costly contemporaries, has become a necessity of social life. It is to supply this gap that this Journal has been started. It will not aim, like some of its contemporaries, to become the journal of a class, a party, or a clique, either in Politics or in Literature. It will not be like others among them, the mere critic of the spoken performances of politicians, or the written performances of authors. It will not always be sitting in judgment upon men and books, paintings and statues, operas and opera-singers; but will endeavour to provide for the Homes of the Empire a welcome weekly visitant, which shall originate as well as criticize, and which shall afford to young and rising genius an arena in which its first distinctions may be achieved. The unknown writer shall be as cordially received as the man who has made himself famous, provided that he have anything good to

say, and knows how to say it. The intellectual agencies of our time are so manifold, and so active, that a journal which is wholly political, wholly scientific, or wholly critical, cannot adequately represent our civilization. The men of our hard-working age require to be amused as well as instructed; and the women, who not only outnumber them, but who have more leisure for reading, are not so much interested in party polemics, or in ponderous essays upon public affairs, as to look with favour upon newspapers which have nothing else to offer them.

In the columns of our REVIEW the politician shall find honest opinions upon all public events, by the most competent writers of the time; but politics shall not occupy its space to such an extent as to make the Journal a mere string of leading articles. Men in Parliament and in public life, and who loiter about in clubs or taverns, may feed upon politics alone, and desire no other mental aliment; but in the homes of the educated classes the social and scientific essay, the narrative of real or ideal life, the poem, and the appreciative critique of Literature, Art, Music, and the Drama, are equally useful, and far more welcome.

In one respect this Journal will differ from its political and most of its literary contemporaries. It will be published under the sanction of one name; and to this extent it will entrench upon the principle of the anonymous, which some hold to be the essence of the liberty of our modern journalism. But as in point of fact, the responsible conductor of every respectable newspaper in London and the provinces, is as well known by name to the great mass of people who care to know it, as St. Paul's Cathedral or Charing-cross; and as in most instances the name of the writer of any more than usually important or brilliant contribution is certain to be divulged, for the gratification of a far from unnatural curiosity, the anonymous in existing journalism is more of a theory than a fact. And the Editor in openly avowing under his own name his control over its management, offers to some extent a guarantee that no personality shall characterize its pages; and that he will not suffer the gentlemen who shall anonymously contribute to its columns to import into the consideration of the political and literary questions which may be discussed therein, any personal or private feeling whatever. It is not necessary for the refutation of a political opponent, to declare, as a great parliamentary orator once did of him, that "he had two left legs;" or of another, "that he was descended from the impenitent thief who died upon the cross;" or of a great captain that he was "a stunted corporal." All the amenities of social life may find their place in the discussion of public affairs in the Press as well as in the Parliament; and this great principle shall be strictly adhered to in every department of the Journal, so long as its present Editor shall have any control over its management. To be honest in politics, and generous and appreciative in criticism, shall be the rule to which all the contributors to this Journal will endeavour to adhere. We have no party to serve, no cretches or "isms" to promulgate, no cliques to write up, and no enemies to write down. Though the price of our sheet was fixed in the belief that the proposed repeal of the excise duty upon paper would meet with no obstruction in either house of Parliament, we have resolved, upon mature consideration, to make no change in our plans in consequence of the temporary failure of that measure. We start on a broad basis, and know that there is a public sufficiently large and sufficiently intelligent to afford us that ample patronage which we hope to deserve, and which is necessary to the stability of so large an undertaking.

ITALIAN VIRTUE AND ITALIAN CRAFT.

IT is unfortunately incidental to the highest and loftiest principle by which men have ever been animated, that it should be the rallying point for the base and unworthy, as well as for the pure and noble. The sacred cause of liberty, whether religious or political, has always been contaminated by the touch of those who have clustered round its spotless standard, not to guard and protect it, but to avail themselves of the prestige with which its triumphs and successes might invest it for their own selfish purposes. We have seen it the ladder by which despots have clambered to the pinnacle of their greatness, and the altar to which they have clung for safety in their extremity. It is the specious pretext under cover of which unscrupulous men perpetrate unscrupulous acts, the glorious end which is made to justify the most dishonourable means; denied altogether to some countries, enjoyed under various phases in others. We at all events flatter ourselves in England that we are able to discriminate between the sublime reality and the miserable imposture. In the present state of European politics, it is of the utmost importance that this power of discrimination should be exercised. The liberal principle on the Continent at this juncture, is represented by three men, so widely distinguished, that it is impossible that they can all be its true exponents,—a conclusion in which we are confirmed by the profound aversion they entertain towards each other. It is needless to say that these men are, the Emperor Napoleon III., Count Cavour, and General Garibaldi. If in the course of our remarks it becomes necessary to draw an invidious distinction between the latter and those who are his rivals in the cause of Italian independence, it is only because without adhering to the contrast which exists between the principles by which they are actuated, it would be impossible to do justice to the greatness of the true patriot. It is, moreover, of great moment, in a political point of view, that we should weigh accurately the motives which animate those who now control the destinies of Italy. Even now her fate is trembling in the balance, and it is only right that our sympathies should be accorded to him who has most sincerely at heart her best and highest interests.

A wide political difference exists between the present head of the Sardinian Government and the heroic leader of the Sicilian insurrection. The success of the latter, while it increases his power and influence in Italy, must widen that breach, until at last the question will come to be a personal one, resolving itself into the rival names—Cavour and Garibaldi. The first of these will represent French policy and French influence, with "French liberty," dominant in Italy—Cavour himself governing in obedience to France, dictating, and carrying out the views of the Emperor, without whose assistance and support he has repeatedly declared the maintenance of the new Italian Kingdom impossible. The name of Garibaldi will stand for God and the right,—Italy for the Italians,—a strong arm and a just cause, and defiance to all the despots of Europe, whether French or Austrian. If Italy, in this hour of her extremity, takes refuge in Cavour, she will purchase peace at the price of becoming a French province. If she rally round Garibaldi, she will win her freedom—if she win it at all, as freedom must be always won,—in many a hard fought field. Ever since the day that Garibaldi returned from his dearly-bought triumphs on the southern slopes of the Italian Alps, to find himself converted into a Frenchman by the secret transfer of his native town to the Emperor, he has estimated at its proper value that support which the world at the outset deemed indisinterested, and has steadily opposed a Government which, upon the plea of a political necessity, has committed an act of flagrant injustice.

It is a remarkable and significant fact that General La Marmora was no less opposed to the policy of Cavour than Garibaldi; both these distinguished men supporting the Rattazzi party, who contended that the cession of Savoy and Nice was not essential to the acquisition of Tuscany and the Romagna, and that, even if it were, no céd, however desirable, could justify so gross a violation of honour and morality. Unfortunately, it remains still to be seen whether that cession has secured the recognition on the part of the Emperor of France to the annexation of the central Italian provinces. Count Cavour admitted not long ago to the Sardinian Chamber that he had failed to extract a pledge to this effect from his august ally, and the diplomatic answer which was returned not long since by his Majesty to the Neapolitan envoy was calculated to remind the Sardinian minister that this consent might still be withheld if the policy of the Piedmontese Government with reference to Sicily failed to meet with the imperial approval. The designs of the Emperor with reference to Southern Italy are not unknown at the court of Turin, and Count Cavour hopes, by a secret opposition to the projects of Garibaldi, which Italian public opinion will not permit him to express, to embarrass a dangerous rival, and retain for his ulterior ends the support and cooperation of his powerful protector. To do this he must be a party to the imperial policy in Southern Italy, which consists in the inauguration under French auspices of a new constitution, either under the present king or one still more acceptable to the court of France. The Neapolitan Government will thus be reduced to that position of dependence upon imperial protection which is the present condition of Victor Emmanuel and the Roman Pontiff.

In return for the acquiescence of Sardinia in this project of a rival "liberal" kingdom in Italy, she is to be confirmed by imperial sanction in her possession of Tuscany and the Romagna. In a word, Cavour may be considered, though he cannot avow it, the representative of Italian dualty.—Garibaldi, of Italian unity. Under Cavour Italy must be French; under Garibaldi she may be free. Cavour fears Austria and trusts in France; Garibaldi fears nothing, and trusts in God: both are patriots, but we cannot hesitate in our choice of him who must claim our sympathy; nor can there be any doubt politically in whose success this country is most deeply interested.

Italy, as a first-class power, united and free, will be a worthy and glorious ally; Italy divided and French, will be a standing menace to our power and possessions in the Mediterranean. The more ungratifying the one more disinterested was in behalf of the oppressed Christian population of Turkey, is all that will then be necessary to enable the third Napoleon to carry out the project of the first, and convert that inland sea into a French lake.

Meantime we must earnestly hope that the simplicity of mind and unsuspecting nature, which form the highest charm of Garibaldi's character, will not be the means of rendering him the unconscious tool of intriguing and designing men. It must not be forgotten that subscriptions to a large amount have been sent from Paris with the Emperor's sanction, and received by him as a timely contribution to the great cause; while the recent mission of La Farina, a devoted Cavourian, to Sicily, was pregnant with significance. The speedy return of this viceroi, *re infidel*, and the appointment by Garibaldi, in his capacity of dictator, of Comandante Tiro to the court of Turin, augurs well for the determination of the Liberator to preserve his independence; the more especially as Amari has put himself at the head of the National Association,—a position forfeited by La Farina through his subservience to Cavour's policy. The time is, however, nearly approaching when Garibaldi will be subjected to a political pressure such as he has never before been called on to resist. The highest and best interests of Italy will be invoked by the Sardinian cabinet to urge him to accede to that compromise which the Emperor and the King of Naples seem already to have agreed upon. The most plausible arguments will doubtless be resorted to, to persuade him that he can best serve his country by accepting French mediation, and by trusting the new Neapolitan constitution to French protection. It will be for him at this crisis to prove that he is great in the council as in the field, and if, as events would seem to indicate, the fate of Italy is linked to the fortunes of Garibaldi, the day may not be far distant when he will find himself no longer the general fighting the battles of the freedom of his country, but the great administrator guiding and controlling its destinies.

AUSTRIA—POLITICAL AND COMMERCIAL.

IT is the pride and the glory of England that she stands prominently forth amid the Powers of Europe as the representative of the liberal and enlightened sentiment of the age. She occupies the advanced post of civilization, and is in possession of a system of government which, whatever may be its defects, undoubtedly secures to the nation a larger degree of political and social freedom than is accorded to any other people in the world. We cannot wonder if, conscious of the inestimable value of the blessings they themselves enjoy, the public of this country sometimes permit their sympathies with oppressed nationalities to overstep the limits of international courtesy towards "the powers that be," and thus even to imperil their most important political interests. Thus, although during the late war in the north of Italy it was evident that Italian freedom was only to be purchased at the price of French preponderance in the Peninsula, the British public hailed with acclamation the intelligence of each new victory gained by the allied troops; and though no one can doubt that the annihilation of the French legions by the Austrian army would have proved an income-tax of temperance in the point, a large increase to our navy, an extended system of national defenses, and the establishment of an army of volunteers, we do not grudge this serious charge upon our pockets and our time, because we believe that in the new political phase into which Italy has entered, with the aid of France, we perceive the dawn of a brighter and more hopeful future.

But while there are occasions upon which we feel constrained to accord our warmest sympathies to those who are engaged in making war against their own sovereigns, and in effecting an entire revolution in the institutions of their country by violent means, it fortunately falls to our lot sometimes to find our sentiments enlisted in favour of the governing powers themselves, when advancing by constitutional methods in the path of a liberal and enlightened reform. It would be in the highest degree culpable if we allowed our prejudices to respect to get the better of our intellects, or if we failed to recognize in any government an honest desire to improve its administration, because it had heretofore adhered to a political system opposed to our own, and which has become worn out and discredited. At the same time it is important to discriminate between liberal reforms initiated by the Government itself, and carried out in pursuance of a policy founded on a clear perception of the advantages of free institutions,

and those concessions which have been wrung from an ignorant and obstinate sovereign at the point of the bayonet, only to be withdrawn when the bayonet is removed. We have merely to contrast the internal policy of the Austrian Government at the present juncture with that of the King of Naples to illustrate our meaning. We value the constitution which has just been granted by the latter at what it is worth, and feel a corresponding contempt for its author. But the Government of Austria, exposed to no such pressure, and possessing in Count Rechberg a leader whose capacity and foresight have enabled him to appreciate the exigencies of the age, behaves sympathetically and deserves some encouragement at our hands.

Thoroughly apprehending the difficulties which a heterogeneous population and conflicting traditions present to the task in which he is now engaged, Count Rechberg has entered upon the path of constitutional reform in a spirit of judicious and enlightened liberalism scarcely to have been looked for in an Austrian statesman. We shall follow, with the greatest interest, the development of that policy which, if successfully carried out, bids fair to place Austria in the novel position of an advanced liberal power of Germany. Nor does she contain within herself those elements which, in France, render a government founded on constitutional principles an impossibility.

It will suffice to draw a brief parallel between the internal condition of the two countries to illustrate this, and show that Austria possesses, still untended, all the capacities of constitutionalism. She has a rich, powerful, and by no means unenlightened aristocracy, while the mass of the population, more especially among the agricultural classes, are sensible, practical, and well-affected. Her Emperor is no usurper. No one is desirous to see him ejected from his high position, while all are desirous of receiving distinction at his hands. Therefore, as with us, the Crown still retains its proper function as the prime source of reward. The cheerful acceptance by all classes of this power of concentration in the Crown—the readiness of the aristocracy to deservit, that is to compete for honours—the absence of any theoretical desire for impossible equality in the lower orders,—these are the bases of Constitutional Government, but which are not to be found in France. Austria possesses what France can never boast: those natural inherent forces which are too equally disseminated throughout the empire to submit to centralization, and which are now finding legitimate expression in provincial representation. This must inevitably lead, and is indeed already leading, to General Representation, the form of which will be Parliamentary.

In France, on the other hand, these natural inherent forces having been destroyed, there is, in reality nothing to represent save the two antagonistic principles of democracy and authority. When, therefore, she resorted to Parliamentary Government, her House of Commons became simply an arena for angry discussion, and her House of Lords a sham. The best interests of the country were neglected for the sake of that revolutionary struggle which occupied the eighteen years of Louis Philippe's monarchy, during which both parties must lose, but neither could gain, a single fruitful advantage. Austria begins public life with a far better promise, and has already so far proved her superior capacity for free institutions, that, before the tenth sitting of the Reichsrath, or New Imperial Council, that body has secured to itself the power of examining into the whole financial system of the empire, has successfully resisted any attempts made on the part of the Government to deny publicity to the result of the investigations of the committee which it has nominated for this purpose, and enjoys, in all its deliberations, perfect freedom of debate.

When we consider that this great end has been achieved not by any revolutionary action, but by the mere outward pressure of the national will upon the Government power, legitimately and constitutionally exercised, we cannot but admit that the Austrian nation has already gained an important advantage in this its first struggle for free institutions. At the same time it is only fair to the Government that we should give it all the credit it deserves for judiciously yielding to the influences this brought to bear upon it.

The effect of this combined action, upon both the rulers and the ruled, has been, that Austria, though the last to start in the race for self-government, and hampered by a variety of obstacles incidental to its heterogeneous composition, has, owing to its latent and constitutional capacities, made rapid and decided progress. Besides the inspection of the state balance-sheet, and the propositions of the national debt commission, the Reichsrath is empowered to examine the dranghts of new laws, and the statutes for the representation of the provinces, together with sundry projects of law reform. New privileges have been granted to the Lombardo-Venetian Central Congress, and its powers have been largely extended; while to the Tyrol, a provincial constitution has been granted, by which the Diet is, 1st, to have the superintendence of all matters connected with the internal administration of the province; 2nd, to assist in the legislation of the province; 3rd, to have the sole management of the property belonging to the province or its establishments; 4th, to have the right to elect the captain of the province; 5th, to have an unlimited right to petition the Crown in all matters, whether of provincial or national importance; 6th, complete publicity, as far as

the proceedings of the Diet are concerned. In a word, we have every hope for the establishment of responsible government in Austria, because there is nothing in the internal necessities of the country which renders either despotism, or silence on the part of the governed, necessary. We can indulge no such hope for France, as both have been proved indispensable to the existence of military government.

But if the contrast between the political capacities of France and Austria is thus strongly marked, the difference which exists in the extent of the internal resources of the two countries is not less striking. The productive capacity of France is already taxed to the utmost, while that of Austria remains all its elasticity. By a redistribution of the land-tax—not by any increase in its amount,—that impost, which previous to the year 1847 produced about thirty-seven millions of florins per annum, has since the reform of 1848 yielded from sixty-two to sixty-three millions yearly to the treasury,—a result gained without any diminution having been produced upon the taxable capacity of the country. At this moment, Austria, tried, worn, "moribunda," as she has been called, can, after such a year as the last, export corn to a large amount; France, on the other hand, as we read in a recent letter of the *Times* correspondent, "is so ill managed agriculturally, that she now imports, whereas she ought reasonably to export, large quantities of corn."

The enormous productive power of Austria, and her richness in material resources, suggest to us one most important commercial reform, in which it must be the interest, as it is the duty, of our country to assist, and which we would fain hope has already been proposed by our Government. There can surely be no reason why our commercial negotiations should be confined to the one country in Europe which has the least to give us in return for our produce. Every reason which has been urged by the Government in favour of a commercial treaty with France applies with tenfold force to a commercial treaty with Austria. She can give us in abundance those goods which are denied us by the French Treaty, but the free importation of which has been rendered doubly necessary by that treaty. She can supply us with unlimited quantities of timber for the hulls, and of hemp for the sails of our ships; and furnish us with linseed, linseed oil, and tallow to any amount.

The reduction of the now existing export dues on these articles by Austria would import an immense stimulus to her own commerce, and enable us to make good not only the most important defect in the French Treaty, but reduce the cost of material for our "naval defences." We, on the other hand, as our China trade develops, could supply Austria with those silks and poplins which she formerly obtained from Lombardy, but for which she is most unwilling to depend now either upon Sardinia or France. The reduction in our favour of the present import duty of 15 per cent. upon our silks, and a similar reduction of the duties on our Irish linens, which pay an *ad valorem* duty of 10, 7, or 6 per cent., would enable us successfully to compete with the silks of Sardinia and France, and with the linen of Saxony, in a country which contains upwards of 60,000,000 of inhabitants—a market of a magnitude not to be despised. There can be no doubt, viewing the present liberal temper and progressive policy of the Austrian Government, that even a less skillful negotiator than Mr. Golden might succeed in inducing it to consent to the concessions which we have indicated above; and we most earnestly hope that no unworthy considerations of foreign policy will prevent the Government from taking advantage of the present opportunity to retrieve, by honest free-trade principles, the ground they have lost, and thus prove to the world that commercial treaties are not mere diplomatic expedients, to be made use of as an elegant of political intrigue, but that they are indeed, what a recent parliamentary orator eloquently described them to be, "processes which, like the silent and careless processes of Nature herself, would bring into play a thousand beneficial influences on the side of peace throughout the world."

CANADA—PRESENT AND FUTURE.

HIS ROYAL HIGHNESS THE PRINCE OF WALES is to embark at Plymouth on Tuesday to visit Newfoundland, Nova Scotia, New Brunswick, and Canada. He will thus become acquainted with a country where his grandfathers passed a portion of his youth, and where he is still remembered as an accomplished gentleman and officer, ever zealous in the performance of his duties. The Duke of Kent was the only son of George III. who took any interest in the colonies. He was in Canada from 1791 to 1793, and after serving in the West Indies was sent to Nova Scotia in 1794, where he remained till 1798. In 1799 he returned again to Nova Scotia, as commander-in-chief of the forces in North America, but finally left the continent in 1800. The loyal and devoted colonists felt his presence to be an honour, and the policy is at once graceful and wise which connects the commencement of the public life of the Prince of Wales with the career of his grandfather, and makes it the means of confirming and strengthening the attachment of the colonies to the mother country. In all things, however, except their undying attachment, the colonies, especially the great one to which His Royal Highness will devote most attention, are greatly changed since the year 1800.

Sixty years ago the Act which separated the two provinces of Canada had hardly come into operation. Upper Canada, which in 1811 had only 77,000 people, had in 1860 scarcely the half of that number, and Lower Canada might then contain 200,000. Now the population of the upper province is upwards of 1,300,000, actually 1,260,000 in 1853, and Lower Canada possesses more than 1,100,000 people. Together the two provinces contain about 2,500,000. Since 1811 the population has increased in per-centage proportion faster than the population of the United States. In Lower Canada the people are chiefly of French origin, and the descendants of this race now form nearly one-third of the total population of both provinces. Another third consists of persons born in Canada of other origin than French, and the remaining third consists of persons born in Ireland, Scotland, England, Germany, France, the United States, and many other countries, immigrants having generally flowed in from all quarters. Deriving, however, common benefit from the general freedom and a well-ordered government, the population is not the less loyal nor less devotedly attached to the connection with Great Britain because it consists of different races.

Canada, from the coast to the upper end of Lake Superior, being three times as large as Great Britain and Ireland, possessing a fertile soil and a serene and healthy though cold climate—communication between all its parts being facilitated by great inland seas and a noble river,—only requires time to become a great empire. All the cereals by which the life of man, with that of his dependent animals is nourished, flourish there luxuriantly. Already Canada exports annually produce to the value of 25,000,000, which, as the rule, is every year increasing. It consists chiefly of timber and food; but Canada has also mineral wealth, and a capacity for manufacturing, which will be developed as people increase, and the yet unutilized land becomes cultivated. In ample space and exuberant fertility she has the means of greatness; her past great progress is an index to her future; and her rulers foresee her destiny, and are assiduous in forwarding it by wise and just institutions.

Since 1819 Canada has been entirely self-governed, and, though firmly united with the mother country, is now rather an independent state than a dependent colony. By a liberal constitution power is fairly diffused amongst all classes. A franchise of £6 in the towns, and of £4 in the rural districts, gives a vote to almost every household. A system of municipal administration, so necessary where component small communities are widely separated and differ in origin and habits, enables every county, city, or township, to elect its own officers and regulate its own affairs. A reform and codification of the law has accompanied the reform of the constitution, and justice is now administered almost at every man's door. Education, by land-grants, endowments, and local taxes, is provided for all. For superior teaching, colleges and universities which may take rank with similar institutions in Europe have come into existence mostly within the last ten years. In 1858, 4,259 educational establishments in Upper Canada, costing £1,512,386 per annum, were attended by 306,386 pupils; and 2,958 such institutions in Lower Canada, costing £981,425 per annum, were attended by 156,872 pupils; together, therefore, 463,258 pupils, or nearly one-fifth of the population, was at school. The *publicans* in Lower Canada have already conquered the repugnance they felt at first to education, and their acceptance of this improvement is the first step in the future progress of these interesting but hitherto almost stationary people. Ample means, too, are provided for religious worship; and, much to the credit of the people, they are said to be at once extremely earnest and perfectly tolerant. Pauperism is almost unknown, and distress rare, being confined to newly-arrived immigrants of the poorer class.

Land is sold at 3s. per acre (4s. on credit), and in masses, to facilitate the establishment of communities, at 2s. per acre. The feudal tenures in Lower Canada, derived from France, which stopped progress, and gave rise to many inconveniences, were completely extinguished in 1854, and now land can be cheaply acquired in every part of Canada, subject to no other charges than those the proprietors impose on themselves municipally for their own purposes. Under the influence of self-government, or the application of common sense to solve political problems, the bulk of the social and political institutions of Canada have become what science recommends and freedom demands.

Since 1819, too, the alterations made in our customs and navigation laws, have placed the trade of our colonies under their own control, and Canada derives three-fifths of her revenue from her own customs duties. Levied merely for revenue, such duties, though they may incidentally have a protective effect, are not arbitrary, more than other taxes, to free trade. Of late, however, her Government has been blamed for increasing them, but it has been unanswerably shown by Mr. Galt, that the increase was indispensable, and the best available means of enabling the Government to fulfil its engagements, and keep faith with its creditors. Canada, like other countries, has a considerable debt, £9,677,672, but it has been chiefly incurred for improving communication, making canals, bridges, railroads, &c. The revenue, in 1813, £445,578; in 1853, £1,714,350; rose in 1859 to £7,421,432—may £1,484,286. In 1857 the colony,

in common with the United States and England, suffered from the financial convulsion; in 1858 the harvest was very deficient, so that in 1859 the country was barely restored to its normal prosperity. In the year, however, the revenue exceeded the revenue of 1858 by \$1,616,458, equivalent to two-sevenths. Considering how rapidly the country has been peopled, and how little each of the immigrants carried with him—its prosperity being described "as the offspring of European hopeslessness,"—this increase of the resources of the state is another testimony to the productiveness of industry in a condition of freedom. The same population which, in England, Ireland, and Germany, could scarcely obtain a penurious existence, in Canada revels in abundance; and each individual possesses, on the average of the whole, property equal to £40,—the nucleus of great wealth in future years.

From such beginnings and such progress what may we expect hereafter? From Liverpool to Quebec—the two nearest seaports of England and America,—the distance is 2,583 miles. From Quebec up the St. Lawrence, by the lakes and by railways—some of which are constructed and others projected,—is one of the shortest, safest, and easiest means of reaching the Pacific, by crossing the continent. As the population of Canada spreads, and fills the vast territory stretching southward to the 42nd degree of latitude, including that possessed by the Hudson's Bay Company, Great Britain will acquire an unbroken connection with the Pacific Ocean and its multitudinous islands. It is doubted whether the United States can find within their own territory so convenient an access to the Great Southern ocean. For their own advantage they will probably be disposed to further rather than to check the progress of the works beyond Lake Superior which will be required to complete the route, while the growth and extension of the population of Canada over the vast region will for ever bar out the slave power, and extend the domain of free labour. Only by its energy can the difficulties of obtaining subsistence in the severe climate of the north be overcome; but now that they are overcome, the free population will expand, and force slavery to seek refuge in more northern regions, where a milder climate and an easier command of the means of subsistence may remove it out of the path of civilization, and diminish its horrors. For the sake of humanity it is very desirable that the power of Great Britain, through her union with Canada, should dominate firmly across the continent, from Quebec to Vancouver's island.

The Canadian Government has long been sensible that Canada forms the best route to the great lakes and the St. Lawrence, and from the most fertile of the western provinces of the United States; and it has kept steadily in view the improvement of its inland navigation, in order to share with New York the trade between Europe and the western states. The Welland Canal, connecting Lake Erie with Lake Ontario, the Rideau Canal and a canal to avoid the rapids of the St. Lawrence, between Lake Ontario and Montreal, have all been constructed for this purpose. In 1846, the system was completed, and it enabled vessels of 800 tons to pass from the ocean to Lake Ontario, and vessels of 400 tons to pass thence to Lakes Erie, Huron, and Michigan. Then, however, railways came into use, and ensuring a speedy connection, at all times, between the western states and New York, while the lake navigation and the St. Lawrence were closed in winter, it became necessary that Canada, too, should have a system of railways. One has been formed, under the guarantee of the State, and, by the help of its advances, connecting the American railways west of the great lakes with the ocean through Canada in summer and by Portland in winter. In conjunction with the lakes, this route cannot fail, whatever may be done further south, to attract to it a continually increasing traffic from the West. More than twenty vessels passed last year through the Canadian Canals from that quarter, bound for English ports. The Welland Canal, however, though it has been already once widened, requires, apparently, like the Erie Canal, to be still further enlarged. Last year the traffic on it declined very much, and the tolls were lower than in any year since 1848. To enlarge it, or to supplement it by railways, or to do both, are problems which now occupy the attention of the statesmen of Canada. They cannot reasonably hope to divert traffic from New York, but they may create a traffic exceeding that now carried on by this renowned commercial city. It will be only one part of that continuous stream of traffic which at some time hereafter will run between Japan and Europe.

In Canada the Prince of Wales will see the beginning of a great work which he may live to know is one of the wonders of commerce. Years hence he may reflect with pleasure on a journey which made one of the great events of all time impressively familiar to him at its commencement. His visit promises otherwise to be instructive. He may contrast the conveniences and comforts of civilised life with the first germs of society. He will pass from St. James to a patch of clearing on the fringe of a forest, where a solitary family or a solitary man is felling trees to have space for a hut and a garden. Between these extremes he will see every phase of social life. No prince of the House of Hanover has begun his public career under equally favourable auspices; and till now it was not possible to find within the compass of time which His Royal Highness can devote to a journey, the means of beholding, almost in juxtaposition, the first

germs and the farthest development of society. The empire that embraces them both is itself a marvel, and the journey of His Royal Highness may be expected to strengthen the determination to unite more firmly than ever all its parts, by upholding justice and diffusing freedom.

THE VOLUNTEERS.

WE have it upon the authority of the great Whig statesman, Sheridan, that in the year 1796, "strong wishes were expressed at certain meetings in the City of London for the landing of 300,000 or 400,000 Frenchmen, to give the City heroes 'an opportunity of exercising their prowess in slaughtering them.'" But so great and beneficent a change has taken place in opinion as to the practicability of such a performance, that only a few years ago some of our chief City notabilities sent a kind of remonstrance to Louis Napoleon, deprecating the trial of any such wicked experiment. Since then, owing to well-founded suspicion, more than actual provocation, we have been alternately scratching and soothing the French Emperor, and the French nation, in a style calculated to convince the rest of Europe that we do not distinctly know what to be about. The hand has been extended for a shake, or clenched for a blow, with as much rapidity as that of an Italian peasant playing at *morra*, or *micans digitis*, as the old Romans called it. But at last we have done what it would have spared a good deal of panic to have done three or four years ago. We have settled down strongly on the defensive, depending on ourselves rather more than on our Government, and have exhibited to the whole world—America as well as Europe—a spectacle of calm and conscious power, and of indelible resolution, which will add to our prestige, give vigour to our diplomacy, and increase the respectful deference which all men and all nations cannot but feel for moral dignity combined with physical strength. The old motto of the Scotch, "*Nemo me impune lacessit*," might become the motto of the Volunteers—as it is already the inviolable determination of every man among them, and of the nation from which they spring.

We are too late in the field for a description of the recent review in Hyde Park; but not too late to give what Massillon would have called our "*benediction des drapaux*." It required such a noble display as that long series of sombre and steady file in motion—to satisfy us that all was right with England, after the last grand military display of which we were spectators: the weather-worn and war-worn army of sixty thousand Frenchmen, pouring in a continuous stream for six mortal hours along the Boulevard of Paris, marching at rapid time, and with as much eager energy in their faces as if they were going to an attack, and not returning from a conquest. No one who is not still under the old *braguetto*, though not altogether useless conviction, that one Englishman is equal to an indefinite number of Frenchmen, could have seen that sight without feeling that France was worthy of England's best preparations, by land and by sea. Those who had seen the one sight were best qualified to appreciate the other. From our own display, every true-hearted Englishman received the greatest satisfaction, and greeted it with the warmest applause. We hope that we are returning to the spirit of those days, only with a different weapon, when Philip de Comines was obliged to confess that we were "*la fleur des archers du monde*,"—and when, without denying, as some modern statesmen have done, the use of a standing army, England may trust mainly to her yeomen and citizens for her safety, as she did when children of six practised with the bow, and when the maintenance of an adequate national defence was a responsibility which rested on the old feudal tenure—a burthen from which, if it was a burthen, the landed proprietors and aristocracy of England were relieved at a most unlikely time, during the Long Parliament, through the agency of Cromwell—a fact which those who abuse Cromwell, or complain of their own share of it, are beyond measure, would do well to reconsider. That act, relieving the crown, was a blow in the reign of Charles II., in spite of the arguments of Prynne, one of the best lawyers of the day; or, in the words of Mr. Adair, in the House of Commons, in 1794, "In Charles II.'s time, the greater part of the feudal tenures were abolished, and the system of national defence founded on them fell to the ground."

From that time England has, next to her navy, mainly depended on her standing army, and a noble standing army it has been, though a small one.

For every reason, we are of opinion that the Volunteer movement is calculated to do infinite good, not only to the spirit of the nation, but to that of the volunteers themselves: we do not mean to their courage, but to their mutual respect and good feeling, making the chill of contempt and required comparison pass away beneath the warmth of visible union and a common cause. We have heard of some amongst them, who seem to imagine that the use of a yard wand ought to paralyze the arm for the use of a rifle. Let those who entertain any such fancy, before they shoot anything else, in the words of the poet, "shoot their [own] folly as it flies." Just at this moment it would be the best object for their mental aim. If we are a nation of shopkeepers, let our enemies see that, in the unmetaphorical sense of the word, shopkeepers can do. How London apothecaries, after a two months' drill, fought tolerably

well at the battle of Naseby, unfortunately against Englishmen: possibly they might fight even rather better against foreigners. At all events, let the yard wand scorners know that a real gentleman is the least touchy person in the world, and, in defence of his country, would stand shoulder to shoulder with a navvy. Once Lord Moira undertook to say publicly, for the Prince Regent, that the latter would gladly be a private in a volunteer corps. Perhaps vagaries about "dignity" did not exist in former days, when ranks were more clearly defined. Excessive tenderness shows extreme proximity to the man who you fancy is treading on your heel. No social distinction ought to make a man's willing services to his country painful to his feelings. In the French National Guard, individuals of widely different social pretensions stand side by side without shuddering. Association at drill need not imply close connection afterwards; indeed it is perhaps all the better that it should not, as too great intimacy between the different members of a corps might make their rendezvous centres of dissipation, or of temptations to expense—a danger which has no doubt occurred to parents and masters.

Grave Englishmen will always have their jest; but we have got almost past ridicule point, which was so much dreaded at the time of the last volunteer movement, that Sheridan was obliged to say in one of his speeches, "Till a certain progress is made in discipline, it is in every point of view desirable to be separated from the observation of a promiscuous multitude. There are many individuals to whom, under such circumstances, the stare of a vulgar multitude must produce the most unpleasant sensations. There are men who would much more cheerfully expose themselves to the shot of the enemy than encounter the derision of motley spectators."

It appears that idle men and boys had been penetrating into the privacy of Lord's Cricket-ground, then, as now, one of the places of exercise, with what purpose it is not difficult to divine. If any volunteer of our day has been annoyed by street remarks, let him know that his own and his grandfather's sorrows are the same in this particular.

To other evils of which Sheridan complains we are not now liable. One was expensive uniform, which he remarks deterred many "from flocking to the standard of loyalty." This danger has been foreseen and avoided; and on this point we would remark, that we think there might be more variety of uniform without additional expense. The black, if it is black, is absurdly prominent; and invisible green is anything but invisible. Why not light greens, olives, and light shades of brown? The French might

"Smile at your lack of taste, though find your valour
Worthy their frowning air."

Political jealousies have also been avoided; they were not formerly. Lord Peter's son then raised a corps of Essex Rangers, but his and their services were declined by Government, because Lord Peter was a member of the Whig club. The Duke of Bedford offered to raise, clothe, and pay, a body of four hundred and fifty men, but, for political reasons, the offer was not accepted. We have not yet had to contend with this species of folly, nor is it likely that it will be repeated.

Talleyrand was heard to say that it was the volunteers who saved England from invasion in 1803-4. Such was the effect of the last great effort; as for this, let it be sustained! *Eato perpetua!*

JUSTICE GRAMER was the most polite judge that ever adorned the bench, and many amusing anecdotes are related of his courteous expressions. On one occasion it was said he had lately condemned a man, who had been originally convicted, to transportation, when the clerk of the court, in a whisper, said to him, "Oh," he exclaimed, "criminal, I beg your pardon; come back!" and putting on the black cap, courteously apologized for his mistake, and conveyed him to the gallows, to be hanged by the neck until he was dead. To one found guilty of burglary, or a similar offence, he would say, "My honest friend, you are found guilty of felony, for which it is my painful duty," &c. &c. Among other peculiarities he had a custom of repeating the answers made to him, as illustrated in the following dialogue:—"My good friend, you are charged with murder: what have you to allege on the subject?" "Oh, my lord!" "Oh, how did it happen?" "Why, my lord, I am aggravated me, and never as how he'd knock the breath out of my body." "Good! he'd knock the breath out of your body—and what did you reply?" "Nothing! I flogged him." "Good; and then—" "Why, then, my lord, they took him up and found that his head was cut open." "His head was cut open—good; and what followed?" "After that, my lord, they gathered him up to take him to the hospital, but he died on the road." "He died on the road; very good." This will match the best of Lord Cockburn's stories of Scottish Justices of the Court of Session, in his entertaining work recently published.—J.

THE INFLUENCE OF THE PRESS.—The truth—the whole truth—and nothing but the truth, can only be attained with the utmost difficulty. The approximation is all that can be sought to be expected in human affairs. The influence of the press is perhaps greater for what it conceals than for what it reveals. Its versions of events, and accounts of men and their motives, must often be imperfect, and sometimes they are coloured for a purpose, and sometimes they are untrue. To avoid these errors is an onerous task, but yet must be undertaken by every honest chronicler,—most useful and happy when he can fill the place of misinformation or misrepresentation with exact and simple truths.—J.

THE LONDON REVIEW AND WEEKLY JOURNAL, published every Saturday Morning, price Three pence, aims to supply a public want, to provide for the leisure of the Empire, a Weekly Journal, in which Politics shall be subordinate to Literature and Art, and in which topics of local and general interest shall be treated with the fairness and accuracy of other journals to the advantage of party and the integrity of dispassionate debate. While its pages will afford a complete record of the events and opinions of the day, and while its articles on public affairs will appear to the highest order of mind in Politics and Literature, its conductors will strive to make it an indispensable companion in every household where intelligence and good taste are cultivated. The Tale, the Sketch, and the Social Story, will, as its custom, compete with Politics for the favour of the family circle to which it will address itself.

The "LONDON REVIEW" will contain no satire, fiction, or advertisement, that would render it an improper guest at the fireside; and the announcement and instruction of those who have little time to expend with the necessities of party politics, and who look in a newspaper for something more than controversy, will be amply provided for.

The "LONDON REVIEW" is published weekly, on a Sunday, or a special day, other newspapers, but a thoroughly original journal. It is printed on good paper, in a clear, bold type; and, in quantity as desirable, greatly exceeds most of the more costly weekly newspapers, while its price is such as to make it secure for a wide-spread circulation.

TERMS OF SUBSCRIPTION.

| QUARTERLY. | HALF-YEARLY. | YEARLY. |
|------------|--------------|------------|
| 5 s. 6 d. | 10 s. 0 d. | 17 s. 6 d. |
| 5 s. 0 d. | 9 s. 0 d. | 16 s. 0 d. |
| 4 s. 0 d. | 8 s. 0 d. | 15 s. 0 d. |

Or, Three pence per Copy for any period, with One Penny additional if sent by Post.

Orders for "THE LONDON REVIEW AND WEEKLY JOURNAL" received by all Booksellers and News-vendors, or, as the Office, No. 7, South Molton-street, Strand, London, W.C.

Post-free Orders will be made payable at the above-mentioned Office, by W. LITTLE, Manager.

A Single Copy sent free by Post on receipt of Four Postage Stamps.

SUBSCRIPTIONS for "THE LONDON REVIEW" received by Messrs. W. H. SMITH & SONS, at 106, Strand, and at all their Reading Book-shops.

THE LONDON REVIEW AND WEEKLY JOURNAL, conducted by CHARLES KELLY, and all the other LONDON NEWS-PAPERS, published at 11, Pall-mall, and forwarded to all parts of the United Kingdom, India, China, Australia, and foreign countries.

ADVERTISEMENTS, and Births, Marriages, and Deaths, INSERTED IN ALL the London and Country Newspapers, with politics, days of publication, price, &c., free on application.

WILLIAM LINDEN & SONS,
Newsvendors, Booksellers, and Stationers, 7, Cannon-street, City, London, E.C.
(Established 1793)

NOTICE TO CORRESPONDENTS AND ADVERTISERS.

In consequence of the extraordinary demands made upon our space by our advertising friends, we have been reluctantly compelled to omit many articles of general interest which had been prepared for our first number, as well as a large quantity of advertisements. As there is likely to be the same pressure upon our columns in the future, we must request advertisers who imperatively require their advertisements to appear in the current week, to give their orders as early as possible, as preference must be given to the earliest orders. No advertisements can be received after 8 p.m. on Thursdays.

THE LONDON REVIEW

AND
WEEKLY JOURNAL.

SATURDAY, JULY 7, 1860.

In the early days of the newspaper press of England, certain men about town in London headed in coffee-houses, to pick up the information procurable in society, or to be gathered from foreign Gazettes, which they afterwards transmitted, under the title of "News Letters," to their correspondents throughout the country. With more facts at our command in a week than the old News-Letter writers could obtain in a month, we propose in this part of our journal to lay before our readers every week a succinct and impartial News Letter of all domestic and foreign events of sufficient importance to be fairly deemed historical.

Since the days of "the great revolution," when the debates in Parliament were occupied with the discussion and determination of those great principles which have given to England the best, because the freest and most workable, constitution in the world, there has not been mooted in the Lower House a series of propositions more important than those presented to it on Thursday last by the Prime Minister. By his resolution, Lord Palmerston, as the leader of the Commons of England, declares that the right of granting supplies in the Commons alone; and that "only in them" is the limitation of all such grants, as to matter, manner, measure, and time; that to guard for the future against the Lords exercising the power of negating the grants of the Commons, the latter should, to secure their rightful control over taxation, so frame bills of supply, as that their right may be maintained inviolate. By these resolutions, the Prime Minister repudiates the interference of the Lords with the privileges of the Commons. He treats their conduct with respect to the Paper Duties as an act of aggression, and calls upon the country to support him and the Commons in its denunciation. The subject, however, is too important to be disposed of in a paragraph. We must defer until next week, and to another part of the paper, the observations we desire to make upon it.

The revenue return for the half-year ending the 1st of July shows a net increase for the quarter of 380,000*l.*, and for the year ending 30th June, of 5,275,000*l.* There has been an increase in the excise, stamps, property tax, post office, crown lands, and miscellaneous taxes. The decrease on the quarter in the customs is attributable to the various modifications of the tariff, which we owe to Mr. Gladstone's Budget. The amount of the customs decrease is 375,641*l.*, and it is nearly balanced by the increase in the property tax of 306,710*l.*, and more than compensated for by an additional increase of 109,000*l.* in the excise, and 107,000*l.* in stamps. The balance-sheet proves that the resources of the country are elastic, its trade satisfactory, and its capabilities to encounter every emergency unimpaired.

What other empire but England could bear without dismay of that frightful addition to its annual burden which is proposed in the Supplemental Estimate placed on the table of the House of Commons on Tuesday last? Three million eight hundred thousand pounds are required to defray the expenses of the naval and military operations in China during the current year! This sum includes 475,000*l.* to be repaid to the Government of India for advances on account of the Chinese expedition. This is a heavy load to be placed, in the first instance, on the shoulders of Englishmen; but it increases the amount of our demands against China, and for which full compensation must be made at the close of the war.

The value of the rifle as an arm of defence has been already proved in the Tyrol, the United States, and Switzerland. By it the veterans of Napoleon were decimated. Even our own troops in Austria—the conquerors of the best soldiers, led by the ablest marshals of France—were not able to resist the freshly-dressed riflemen at New Orleans. In Switzerland it holds in check ambitious neighbours. And, if an invasion of England be possible, though we are glad to think it an improbable occurrence, why should not every young man who has health, strength, and good spirit procure a rifle, devote his leisure hours to an invigorating and inspiring exercise, make himself master of his weapon, and so become the defender of his own life, and the protector of the honour of his family in case of emergency? Should an invader attack our shores, the riflemen can be that which their ancestors, the archers of England, were in their day: the terror of their foes—the honour, the pride, and the strength defence of their country. The great review of the Volunteers in Hyde-park on Saturday, the 3rd of June, inaugurated it with all befitting pomp and circumstance; and on Monday last, when Her Majesty, accompanied by the Prince Consort, the Prince of Wales, and the members of the royal family, proceeded to Wimbledon Common for the purpose of opening the great rifle match, the good cause received a fresher and fuller development. Henceforth the rifle will be popularized as a weapon of national defence, a new impulse will be given to the public feeling, and the power and influence of Great Britain will be strengthened and extended in every part of the world.

The unprecedently high price of meat has been severely felt, during this untoward summer, amongst all classes of mechanics, labourers, and tradesmen. Public meetings have been held in London, Birmingham, Stockport, and other populous towns, for the purpose of devising a remedy. At these meetings some sensible resolutions have been proposed, a few foolish speeches made, and more than one absurd suggestion patiently listened to. Amongst the sensible resolutions may be mentioned "the determination to abstain from butchers' meat so long as the present high prices continue." Amongst the foolish speeches are those which declare that "the present high prices of provisions do not arise from any scarcity of food in the markets, but from a monopoly on the part of the provision dealers."

To make such assertions in the face of such notorious facts, as the rough winter and harsh spring of the present year, by which crops, cattle, and vegetation have been injured—is either stupidity or dishonesty. Prices are high because food is scarce, and the misfortune cannot be mitigated by the use of harsh and vindictive language against grocers and butchers. It is lamentable, at this time of day, and with a country possessing the advantages of open markets, to find any class of the people seeking for a revival of the law against regiments, and urging those in power to pass statutes for fixing the prices of provisions. What can be more absurd than to call upon Government, as some of these speakers do, to "place the working classes beyond the pale of starvation" or for free Englishmen to be found expressing a hope "that the time is not far distant when buying and selling cattle will be regulated by Government!" Why not at once call for a restoration of the Manufagets, and for a revival of the times when Parliament not only regulated the price of meat, but also forbade, under heavy penalties, any labourer of craft from demanding higher wages than the law-makers chose to allow him? Lord Shaftesbury has lately procured over two amendments that are entitled to the attention and sympathy of the public. The first was a *concession* in Langham-place, where several papers were read suggesting beneficial employment for women, and showing with what advantage to themselves and the community their time and abilities might be devoted to such occupations as printing, book-keeping, and law-engraving. Specimens of their "work" in these several branches of industry were exhibited—demonstrating their perfect competency to perform such tasks. The second was a meeting of the "Society for Improving the Condition of the Labouring Classes," which devotes itself to the erection of model lodging-houses. According to the report laid before the annual meeting, this society is in a flourishing condition. An instance of what has been effected by its efforts is demonstrated in the condition of Tyndall-buildings, that "was wont to be a nest of disease and crime;" but in which "there had been no case of fever during the year." It was declared by the chairman that "these model dwellings had, whilst preventing disease amongst the population, been the means of keeping down the parochial rates by 17 per cent." Similar societies have been, during the past year, formed throughout the country; and at 1100 an eligible site has been procured for lodging-houses, with a donation of 5000*l.* given by a lady for that purpose. An additional donation was given by another lady for wash-houses, a laundry, and playground in connection with the proposed lodging-houses.

On Saturday six members of Parliament presented to the Prime Minister a memorial signed by one hundred and sixty-seven members of the House of

Commons who generally vote with the Government, requesting his lordship to withdraw from the English Census Bill the clause which requires every household to state his "religious profession." The grounds for making this request are that the inquiry would produce "no information deserving of reliance," and also that the clause, if persisted in, would "seriously injure the Liberal party and the Government." Lord Palmerston admitted that a memorial so signed was a document that "demanded serious consideration." This memorial was signed by English, Scotch, and Irish members.

The eighty-fourth anniversary of American Independence was celebrated on Wednesday last by the American Association of London. The fitting sympathy for that national festival—the triumph of the great Republic—was demonstrated by the attendance of a great many Englishmen.

A SHREW observer and practised courtier, Lord Hervey, in his "Memoirs of the Reign of George the Second," makes this remark with respect to the conduct of certain kings of the house of Brunswick:—"For my own part, I have the conduct of princes in so little veneration, that I believe they are yet sadder than people, and are immensely drawn into both good and bad situations without knowing how they came there." Perhaps the same charitable view of the incapacity of princes should be taken by the world when it regards the conduct lately pursued by the Carlist pretenders to the crown of Spain. At a time when their country was engaged in a foreign war, they sought to add to its embarrassments by stirring up the flames of civil strife for their own personal aggrandizement. They sacrificed their adherents, and then, to save their own lives, renounced, under their hands and seals, their pretensions to the throne. Upon this condition they were set at liberty. So long as their personal safety was in peril they adhered to the conditions of the Treaty of Tortosa; but once out of danger, they immediately repudiated their solemn renunciation. They who are averse to themselves expect others to be true to them! The most conclusive proof that a king can give of his unfitness to rule is when he shows that he has no regard for his own deliberately-made promises. The crime beyond all others that condemned Charles I. to the block was his perjury. No party could rely upon him. He tried to delude and cajole each in turn, and all united in getting rid of him. Commiseration might be felt for the Carlist princes as exiles—pity might have dropped a tear upon their graves had they fallen as heroes in the battle-field, fighting for the maintenance of what they believed to be just principles of government, identified with their own claims as princes; but now, convicted, by their own acts, of rashness, incapacity, and perfidy, what other fate can await them than the scorn of Spaniards, and the contemptuous pity of mankind? There cannot possibly be the smallest chance for these Spanish Bourbons, after this suicidal act, to reign over that brave people whose love of integrity is well symbolized in their ancient proverb—"Eat sand sooner than do a base action,"—*Comer arena antes que hacer vilicio*.

The King of Naples, as "a mark of benevolence," has notified to his subjects, in a public proclamation, issued on the 26th of June, that he is "determined to grant constitutional and representative institutions" to the people of Naples, as well as of Sicily. If His Majesty was at all times influenced by feelings of "benevolence" towards those over whom he rules, how happens it that what he gives in June he would not concede in February? If he refused a constitution formerly because he thought it to be "bad," how come it now to be considered as "good?" His "benevolence" must have been rightly or wrongly directed at one time or the other; and in whatever right we consider his proceedings, we are forced to the conviction that his sincerity is not to be relied upon. Unimpaired in strength, with an army devoted to him, and a people disposed to be loyal, he refused that which he now concedes. What are the motives to his conduct? They are well explained and tersely expressed in the words of one of his victims—Poetry—who, in the Parliament of Turin, on the 26th of June, thus described the Bourbon policy in Naples:—"The traditions of the Neapolitan Government are hereditary perjury. The new king, almost to prove the legitimacy of his descent, is preparing to perjure himself; and in order to qualify himself for the task of forswearing himself, he must first swear. It is with that view that he dedicates himself ready to swear constitutions and alliances."

Garibaldi is carrying everything before him in Sicily, forming an army, organizing a fleet, and opening the ports of the island. How well and honourably he is conducting himself, one fact will suffice to demonstrate: he has resigned the public debt of Sicily, and keeps the funds ready for paying the half-yearly interests due on the 1st July. The soldiers, who a few weeks ago were arrayed against him, are joining his standard. Men rely upon the word of a Garibaldi, whilst they regard the most solemn oaths and declarations of a Bourbon king as unworthy of credence. A characteristic act of this illustrious man has been the destruction of the ancient fortress of Castel-Mare. For a long time the fortress had been used for a double purpose—as a fortification to overawe Palermo, and as "a bastille," or state prison, for the incarceration of all suspected of plots, or even of aspiring for liberty. Garibaldi desired Castel-Mare to be destroyed, not by the soldiers, but by the people, to whom it had long been an object of execration. The wish of Garibaldi was at once acted upon: men, women, children—even clergymen—united together for its demolition; and the last accounts from Sicily declare that, in a few days every vestige of this stronghold of despotism will have disappeared. It is upon the site of Castel-Mare that a statue should be erected to "Joseph Garibaldi, Liberator of Sicily."

Garibaldi, in a letter dated 24th June, has applied to his friends in London,

asking the English people to aid the cause of Italy by "a couple of steamers armed with Armstrong guns." We hope they will be forthcoming.

The enemies of Italian liberty are actively engaged. Proposals have been circulated by diplomats for a confederation of Italian states, upon the basis of the Austrian and French compacts; and arrangements are made for a "popular" vote on the annexation of Sicily to Piedmont. The occurrences in Savoy show how such annexations are managed. The materials for getting up a popular vote are to be had in Paris, with tricolor flags, gas-lamps, illuminations, and other "demonstrations for the Emperor," in his visits to the various towns in France.

On Tuesday last was celebrated in Paris with all the grandeur and solemnity of imperial dignity, the funeral of Prince Jerome—the uncle of the reigning Emperor—the brother of Napoleon the First. The circumstance is not only remarkable in itself—but acquires additional interest in the fact that but few years have passed away since it was deemed to be an impossibility the Bonapartes could be restored to France. Their existence as a dynasty was regarded as a portion of history almost as difficult to believe as the realization of an ancient fable. One of the shrewdest of French writers—a person who ought to have known the sentiments of his fellow-countrymen—the celebrated Balzac, writing at a time when the throne of Louis Philippe appeared to be firmly established, thus referred to the great Emperor:—

"*Tout de Napoléon est tout que des poèmes.*"

The poem is converted into a stern reality. Jerome, with no great qualities to recommend him, is honoured with a public funeral, attended by the representatives of all the crowned heads of Europe; whilst Louis Philippe is buried in an obscure grave in England, and his sons wander as exiles away from the land over which the man whom they scorned as too contemptible a rival, now reigns—the most absolute of monarchs.

Syria was restored to the sovereignty of the Porte by means of the two Christian powers, England and Austria. Previous to the usurpation of Mehmet Ali, the Maronite Christians had often been exposed to the cruel incursions of the Druses. Whilst Mehmet Ali reigned over Syria, such maltreatment of the Christians was prevented; but Mehmet Ali having been driven out of Syria, and the administration of affairs restored to the Porte, the misdeeds of former times were renewed; and by the last advice from Beyrout (on the 21st June) we learn that the Druses, aided by Kurds and Bedouins, have attacked the town of Zahli, the last refuge of the Christians, sacked it, burned it to the ground, and put to death 1,000 Christians—men, women, and children! Assuredly, England, which restored power to the feeble hands of the Porte, ought to use its influence to put an end to these barbarities.

THE GOUTY PHILOSOPHER.—No. I.

I beg to inform my readers (who will, I hope, include all the sensible and educated men and women of Great Britain and Ireland, Canada and the United States, India and Australia), that this column of "THE LONDON REVIEW" belongs to me, John Wagsdale, of Wilby Grange, gentleman, justice of the peace, and ex-M.P. for Great Stumpington. I am not an author by profession, and shall not be paid for my contributions; for I feel too much indebted to the editor for the use of this column whenever I need it for the expression of my honest opinions on men and things to take his money. And, to tell the truth, I do not want money. I have six thousand a year—a house in Belgrave, another in Marlborough—and a fair wife, who loves me, and who never so much as heard of Sir Crosswell Crosswell, or, having heard, never cared to know the gentleman's business. I have, in addition to these blessings, eight handsome children, several very strong opinions and sturdy British prejudices, a good cellar of wine, a somewhat irritable temper, and the court. I belong to four clubs in Pall-mall and St James's-street. I took the degree of M.A. at Oxford, and have travelled over most parts of Europe and North America, and seen more than a little of life and the world. All my wild oats have long been sown, even to the wild oats of my theological and political opinions. In my hot youth I fancied that I was a Radical in politics; but it was a mere fancy, born of my ignorance,—for I found ere I was thirty years of age, and after I had contended with—won Great Stumpington, at a sore expence, that I was too prudent to be a Radical, too conservative to be a Whig, and too liberal to be a Tory. I am not now a seat in Parliament, and do not wish to have. It is too full of juvenile "swells," provincial attorneys, and ignorant men who have made money, without being able to speak correct English, or do justice to the letter H, to suit my tastes in my advancing years. In fact, I neither like the company nor the hours they keep, nor the dirty thoroughfare of a contested election, which it is necessary to pass in order to get among them. So I keep out of Parliament, and save my money and my character, and look after my gout and my own affairs. I do not think it necessary that the reader should know any more about me for the due appreciation of the papers that I shall from time to time write in this column, unless it be the small and unimportant fact that he need not look in the "Court Guide," the "Post-office Directory," or the Club Lists, to find me under the name of Wagsdale. The income and property-tax collector knows no such person, neither are my club associates acquainted with me under that cognomen. I do not choose that either the swells or the noddies, or the respectable gentlemen of the pleasant establishments to which I belong, should know my secret, and either love me with their impertinent curiosity, or cut me in the lobby because I have become a

public writer, and may have to show up needlessly if my pen and my fancy happen to run in that direction.

In this column the editorial "we" shall be discarded; and I shall speak in the first person singular—heedless of the egotism,—which I think may be made quite as good as the "we-egotism" of the editor and his other contributors. In this column I shall be perfectly independent, and shall not inquire whether I agree or disagree with the sentiments expressed and the policy supported in other portions of the journal. The column is mine, and I shall do what I like with it—saying my say upon all topics whatsoever, and calling the editor himself to account, if it so please me. I warn the reader, in order that he may understand me from the first, that I am one of the class of men of whom Dr. Samuel Johnson so much approved. I am, I hope, a good, hearty, honest hater. I detest bad men, bad ministers, bad measures, bad manners, bad wives, bad cookery, and bad looks. Whenever the humour seizes me, or the occasion calls, I shall speak my mind in the plainest English I can command, on these or any other subjects.

One of my idiosyncrasies, with which I trust to make the reader more familiar in due time, is my detestation of the present race of political and literary critics in Parliament and in the press. I hate their arrogance, injustice, carelessness, and conceit, and intend in this place to open for outraged public men, and for authors and artists, a Court of Appeal, where the judges shall be judged, the critics criticized, the reviewers reviewed. And as my motives may be misconstrued, I beg to state, at the outset and once for all, that no personal pique, or wounded vanity, is at the bottom of my determination. I have not published a book or made a speech which the newspapers have reviled; but my British sense of fair-play is so continually outraged by the injustice done by the little whipper-snappers of the daily, weekly, and quarterly press, and by the wide-mouthed lawyers in Parliament, climbing by dint of tongue up the greasy pole of preferment, that I can hold silence no longer. They annoy me by their efforts to impress upon the vulgar that there is no other generalship in the army, piety in the pulpit, patriotism in the senate, learning in Westminster Hall, nor common sense or honesty anywhere, unless it be marked with their mark, and "endorsed" (to use their own slang) by their approval. When Lord Raglan, in the Crimea, was proving even to our jealous French rivals that he was a true, good man, and a hero of a *braveur antique*, the small gaddies of Parliament and the press were buzzing their detraction in his dying ears. When Admiral Hope was fighting against fearful odds and enormous treachery on the muddy shores of the Peiho, there was scarcely a critic in England who had not a reproach to cast at him, and a self-satisfied smirk on his face, born of the conceit, that he (the critic) could have done the thing better. As for the literary critics, some of whom sell the books that they abuse, to help pay the small bills of their washerwomen, there is not an ignoramus amongst them who does not seek to convey the impression to his readers that he can write a better history than Macaulay or Hallam, and a better novel than Sir Walter Scott or Sir Bulwer Lytton. Over all the doings of these fellows, I, John Wagstaffe, shall keep a sharp look-out. They have had so much of their own way of late, that their presumption has become unbearable. In me—especially when my pen is in motion—they shall find a judge ready to execute justice, and not to be turned from his purpose by fear or favour. Generals, admirals, ministers, public functionaries, poets, historians, novelists, painters, sculptors, musicians—behold, in Mr. Wagstaffe's column of "THE LONDON REVIEW" the High Court of Equity, to which appeal shall never be made in vain, against the false verdicts pronounced by ignorant, envious, careless, or incompetent criticism, printed or spoken, sung or layned, whispered or shouted. Not that I mean to confine myself to this function, for the men who can do nothing but criticize the performance of others, and perform nothing themselves, I hold in small estimation. In this column, while it is mine, there shall be complete liberty of subject, of treatment, and of opinion. I shall not only consider the topics started by others, but start subjects of my own; currying my pen into corners of our social system and observances, where the pens of newspaper writers and reviewers have not hitherto thought it worth while to penetrate. But the reader need not expect to hear my voice every week. If I have nothing to say, I hope I shall be wise enough to say—*nothing*.

TOWN AND TABLE TALK.

THE talk of the week in literary circles is decidedly about *The London Review*. To start for the Derby is something; but to start in the newspaper race is a horse of another colour. An annual triumph is, no doubt, very gratifying; but a foremost personal place in the front rank of the press is an object of nobler ambition, extremely difficult of attainment, and requiring blood, speed, skill, judgment, and other high qualities, to win. Quite sensible of all this (and we, in this column, speak in our own behalf, and not in that of the editor), *The London Review* seems to start with confidence, and ask no odds.

But, *pendente curricula*, it may be asked—What is a Newspaper? and then, if one looks around, it requires nerve and jockeyship to fancy there is a fair chance amongst them; for, in fact, though they have entered the course under that name, many of them are not newspapers at all. It would not do to be invidious, and therefore rather to generalize than particularize is due to the clerk of the course; but the blind may see that

Some are so pre-eminently political, that, pursuing their grand purpose, in a great measure as pamphlets, they care little or nothing for that sort of intelligence

in which the vast majority of readers take a greedy interest. The chief end of such papers is to reprehend, commend, advise, or, it may be, dictate, to governments, at home or abroad. Their peculiar vocation is to set domestic affairs right, and foreign affairs in the strong light—of their own vision. In finance, if ways and means fail, they will put the Chancellor of the Exchequer up to a new dog—say a tax upon gray hairs; and if Europe is in a turmoil, they will arrange the vacillations within lakes, rivers, natural frontiers, &c., in the most fitting manner and become transmitters—of more or less of the ordinary circumstances and lessons of life they have neither taste nor room.

Others add to these propensities the admitted distinction of being utterly devoted to party, party designs, and party manoeuvres, so that, if the former omit news, the latter improve upon the vacancy by perverting them to subserve their more direct and limited aims. They give intelligence all on one side, or, if on the other, so disguised that neither origin nor shape can be traced. Conjurors, who can make truth lie, are not wanting to this ingenious land.

Others, again, pretend to nothing more than omniscience, and, with modest presumption, busily venture to condemn everything and censure everybody. News from them would be a curiosity; for if they

—delight to snarl and bite,
—'Tis but their nature;

and acrimony lends harmony in attracting—at least for a season, the long ears of the listeners to crackle from these metamorphosed Bull-Buttons.

A pretty numerous class are famed for eulgar demonstrations—pictorial as mummy-cases, science shows, and portrait galleries. What may be represented or misrepresented it is not easy to decide; but, speculatively, taking the ideal with the real, upon the whole, and considering the true amount of knowledge that can be conveyed by this method, an opinion may be hazarded that the elegant means of typography is capable of doing more (not transposing the importance of principal and accessory), and that—

When lost to sight to memory dead

is rather a drawback than an advantage in the supply of mature and rational instruction. To illustrate matters otherwise difficult to be clearly understood may often be desirable, but it is not consistent nor useful to be always illustrating or playing text to picture, instead of picture to text.

As was an Archer, and shot at a frog,

is excellent for children; but men, though of a larger growth, are not big babies; and when they have any sense can do better with less "artistic" nonsense than too frequently occupies the place of sterling information.

On the argument for and against publishing an Editor's name there is something to be said on both sides; but the *pro* appears to beat the *con* quite before the distance-post. The anonymous, when worth while, is readily penetrated; and though loud thunder may issue from the cloud, and amaze the outer world, the aggrieved thereby will find means to discover and reach

More in the air,
Of the sky Lord Mayor;

and make him answerable for the lightning bolt. The "staff" and contributors are generally well-known, and traceable; for the former cannot conceal their connection and particular province, and the latter are wonderfully apt to blazon their doings, if they make a noise; if they do not, why, the least and is soonest pardoned, and ignorance to him. But when an individual openly promulgates his name, he is, after all, only immediately responsible for what cannot be avoided in the pseudo-secret case. The Great Unknown is as liable for consequences as he, and yet the mere fact that he has sought no disguise or cover, must operate beneficially on his conduct. He is free to face with the public, and cannot equivocate. There is no hedging in his race, and the result must be advantageous. To say the least, some modesty must attach to the delivery of his opinions, some honesty be infused into his judgments, some authority be found in his statements, and some gentleness and candid feelings be displayed towards every one, and on every subject and occasion. Only a single virtue is indispensable to his righteous performance of his onerous task: he must, be indefatigable, guided entirely by a sense of the duty he has undertaken—even stern when it is demanded; and guarded against being misled too far from the straight path by the kindly sympathies which deserve moderate yielding, but not sacrifice. It is very desirable, then, to prove that a Newspaper may be a Newspaper, furnishing news of every kind worthy of well-informed and intelligent beings, without being at all dictatorial, self-sufficient, inefficient; add to fiction, superficially fast, profoundly slow, or grievously jocular;—in short, that the wide field of literature, arts, sciences, history, instruction, and social progress (marked by extraordinary ordinary and extraordinary incidents), may be explored diligently, faithfully, and cheaply, so as to produce a sheet containing a new construction of the N.—north, E.—east, W.—west, and S.—south—an obsolete notion?—and combine News, Entertainment, Wisdom, and Success?

The whole town has witnessed in a happy humour the advent of the *Orpheus*—these interesting foreigners (not the less so because our Betty calls them the Orpheuses). Regarding them and their movements with extreme complacency, we have jotted down a few observations concerning them. A letter, signed "Felix Aldin" (All din?), barrister and honorary director of the Choral Society of Paris, *L'Orpheus*, in the *Times*, is devoted to rectify public opinion as to the true motives of the writer's compatriots in coming in such a mass, from so far to the "noble shores of England." It reminds us rather of the recipe for taking the curls out of a wig—Dip it into a tub would not do; immerse it in the ocean would! The gist of M. Aldin's letter is that the expenditure of the *Orpheus* in London is not defrayed by the Crystal Palace, and that there is no pecuniary reward for their performances, the bare idea of which is revolting to the feelings of men belonging to every rank of French society. The expense

* Our correspondent had only seen our announcement, and not our prospectus, when he wrote this letter; and the coincidence in opinion of a veteran of some authority in the periodical press is so far satisfactory that we overlook somewhat of repetition. Ed. L. H.

of travel to and fro between Paris and London is all that has been contributed from other sources to this disinterested artistic visit. A second letter in the same journal, and in a yet more French or grandiose style, is subscribed by Andorger, *réducteur*, and twenty other *Opéra*ons, (53, Lower Thames-street), including another *réducteur*, a pharmacist, and sundry notaries, also repudiates pay, and states that they did not come to see and sing for such vile, selfish ends (*mais un bel, sans vénielle intérêt*), the bare supposition of which is an error which their *honour* and their *dignité* demand to be edited. No! their object was to promote a grand emulation, calculated to comprehend "the secret of two peoples." Never were such reunite likely to be realized by trombone and trumpet accompaniments before; never was singing so prospectively effectual in cementing the Anglo-French alliance. The *catene cordale* was nothing to it. It was a "patriotic and quite national demonstration"—a *doit*, in fact, introduced by a solo, "Napoleon III.," and concluded by a glebe of the British empire and a dinner at the Crystal Palace. They were friends and brothers, not salaried instruments—which would be altogether incompatible with *la dignité Française*. It was not an *adieu*, *espérance*, yet there were 2,500 vocalists from remote parts of France, most of them artists, who had saved money for six months, in order to pay their way, and the other 500 of higher rank, who had meant to assist their associates in gratifying their common love for harmony and having a peep at John Bull's smoky city.

Among the things said about the *Opéra*ons, not exactly in a similar spirit, we may refer to the *Charivari*, or *Paris Punch*, whose quips and jests on the occasion are the more amusing as they include not a little piquant irony upon the *Ride Review* in Hyde Park. Our facetious friend *Cham* of the *Charivari*, not baring the fear of an advertisement before his eyes, is funny upon the subject, and says it is certain the English are a little offended (*quelque peu blessés*), while the grand review of Saturday (not our esteemed contemporary the *Saturday Review*) has turned their heads. And it was a wonderful spectacle. Some of the journals compute the army at 18,000, others at 20,000, to estimate it at no less than 20,000 riflemen! Their order and discipline was prodigious; and the acrobatics of all Cockayne loud enough to be heard. Heaven knows how far beyond the Rhine and the Po. But the Volunteers were forbidden to shout till "half-past six o'clock," and were so steady that they didn't. But when the hour did come, they reveled themselves *follement*, for the long restraint, by one "*en sort de toutes les poitrines*," the highest their bosom-bellows could supply the wind to "ventilate." Till then (continues our quizzing informant) they kept looking at their watches for the appointed time, and trembled with impatience, when a voice exclaimed, "*gentlemen*, it is half-past six!"—and in an instant there breaks forth a *hurra* the most unanimous and formidable that ever was uttered. The ridicule of the entire exhibition is sportively enhanced, after the fashion of Sterne's single captive, with an individual portrait of supreme mockery. One fellow, *M. Charivari* describes, whose watch ranged slow, was so admirably drilled, that he kept back five minutes after the general shout, and had a *hurra* by himself! He was threatened with the police, but nothing came of it: and after the parade was over he went and boxed the watchmaker who had thus mis-looked him. Our humorous critic adds that a grand naval demonstration next week, at Spithead, was to be grandly celebrated, and that he remarks that such is the way at the moment in which the people, the most serious on the face of the earth, amuse themselves! *Voilà à quel amusement ce moment le peuple se livre après de la terre!* Still continuing our glorious manifestation of British feeling with the fear of orphonic invasion, the publication of next day, June 30, his way at its butt, in the arrowy shape of letters from one of the company of invaders. The correspondence is whimsical enough—we doubt if "Our Own Correspondent" could be more entertaining,—and assuredly, for the truth and relishfulness of his account they are much on a par with others we have occasionally read in various papers. A *M. Chiffard*, and the immortal *Three Thousand*, started from Paris, as is stated, the railway whistle having variations on *Le Carnaval de Venise*. He was beset by an Englishman, who tried to make him drunk with grog, and other strong drinks, in order, as he perceived, to pump out of him what he knew about the descent upon England, to the first corps of which he evidently belonged, while the others were to follow in due succession. He mentions the *Opérite* that it was of no use endeavoring to humbug him. "*Il est dit évident* (as he expressed himself in pure French), *de tromper moi, je ne suis tout*!"—he knew all about it. They arrive at *Boslogne*, where the spy in terrible agitation, and the Englishman, who was looking off the train into a *fiacre*, the last that is heard of him is "*de télégraph*." Chiffard concludes that he is an emissary of Lord Palmerston's. The first letter from London is of the 27th June, about two leagues from which capital the vessel in which the awful sea-sicknessing channel had been crossed was hostilely boarded, and the passengers told of ladies armed with grenades prepared to afford them a warm reception, and of the brave Riflemen of London, who were warned of their designs, and had taken proper measures to thwart them,—calling upon them therefore, there and then, to surrender at discretion. He gathered that all this was owing to a dispatch from London. The *Riflemen* accordingly remark their *sans* without finding fault with the till now the end, where a *piquet* of *balloons* of the value of fifteen mus, belonging to Tote, creates an enormous sensation, and is held to be evidence of their covert progress. On representations to head quarters, however, they are set at liberty, and the first things they notice are announcements that "English is spoken here," and placards on the walls announcing splendid fireworks in honour of the victory of the noble corps of volunteers over their invaders. Explanations ensue. Tranquillity is restored. They are cordially welcomed, right and left. At the table (*à table*) a notable company treat them courteously, and after feed, request them (*le pseudo letter-writer and his comrade*) to sing, but they refuse, on the excuse that they had come to chant in an entire body, and exceptional cases would not suit. In fine, Chiffard avers that he would not lift his voice if 200,000 of the Riflemen of London were to press the last upon him. "A noble lady," however, throws

herself at his feet, and begs him to oblige her; and as "no Frenchman can say no to a *jolie femme*," he pours out the popular air—
 Ah! si à des bottes,
 Il m'a des bottes, bottes, bottes, . . .
 and his splendid harpison is tumultuously applauded. And lastly we have the thorough French *déconcent*. The noble lady rises, slips a billet into the enchanter's hand, and retires. Five minutes after Chiffard follows, and the writer, "Philippe Comand" by signature, goes to the opera to spend his solitary night.

THE MUSICAL SEASON IN LONDON.

Denno what is called "the London Season," the beginning and the end of which are marked by the opening and closing of the great places of fashionable resort, the two Italian Opera Houses,—a period which generally includes the months of April, May, June, and July,—a greater quantity of music, of every variety of kind and quality, is heard in our metropolis than in any other city (our rival, Paris, not excepted) during the course of the whole year. During these four months London is the resort of all the musical talent and celebrity in the world. Legions of public performers, of every sort,—singers, pianists, violinists, harpists,—flock to the capital whose streets are paved with gold. A professional expedition to London is a journey to the *gipsies*. The one is not so abundant as the adventures have been led to believe; but, such as it is, the foreigners contrive to get the largest share of it, leaving in the race of industry, enterprise, and (we must add) impudence, our quieter and more shame-faced countryfolk far behind. Without any superiority of merit, and often without any merit at all, numbers of these punk theorists have lost their way to the aristocracy, and the fashionable classes, and penetrate into circles from which Englishmen and Englishwomen are excluded. The complaint that native talent is neglected in England is sometimes represented as unfounded or exaggerated. In some things it may be so, but not in music. It has been made ever since the time of the great old English musician, Henry Lawes, whose remarkable words uttered in the seventeenth century, might be repeated with perfect truth by his countrymen of the present day:—"Wise men have observed our generation so giddy, that whatsoever is native, be it ever so excellent, must lose its taste because themselves have lost their taste. For my part, I desire to reader every man his daughter stranger or native. I acknowledge the Italian, the greatest masters of music, but yet not all; and, without depressing the honour of other countries, I may say our own nation hath had, and yet hath, as able musicians as any in Europe; and many now living (whose names I forbear) are excellent both for the voice and instruments. I never loved to set or sing words, I do not understand it. But this present generation is content with what is native that nothing takes their care but what is sung in a language which (commonly) they understand as little as they do the music." It is true that the claims of English talent are sometimes so great that no class of society can overlook them; but these cases are rare, and the exception only proves the rule. Generally speaking, English music and English musicians do not find acceptance in the regions of rank and fashion, and we know what a large portion of the English public consists of fashionable or would-be fashionable society.

Fortunately, however, there is a still larger portion of the public—and it is daily increasing—who are not guided by the dictates of fashion in their musical tastes and judgments. These people may love fashionable music and musicians, but they do so, not because the music and the musicians are fashionable, but because they are excellent. The Queen, in her royal box at the opera, and the humble occupant of a seat in the gallery, may do so, and some enjoyment from the strains of Mozart or Meyerbeer, coming from the lips of Mario or Grisi; but the humbler classes derive a much higher enjoyment from another kind of music,—the sublime oratorios of Exeter Hall,—to which fashion pays little attention. Queen Victoria, exemplary in everything, has set the example of listening to the music of Handel and Mendelssohn; but the example has been but little followed, and among the middle-class multitudes who crowd to suffocation the vast edifice in the Strand, the fashionable visitors are few and far between. The same thing is the case with the concerts of the Philharmonic Society—a body for half a century renowned for these efforts for the classic grandeur of its orchestral music, and for which the most illustrious masters—Bach, Beethoven, Cherubini, Spohr, and Mendelssohn—have expressly written some of their greatest works,—which has, during its whole existence, been supported by the middle classes of London. Its refined and intelligent audience is drawn from the ranks of trade and commerce, literature, professions, and the arts. In the last of its programmes, the name of a titled personage has seldom appeared; and this continues to be the case, notwithstanding the constant attention paid to these concerts by the Queen and the Prince Consort.

Such, we apprehend, is the division with respect to music which still exists in different classes of the English public. But this is an age of progress. The tendency of the time is the approach and union of the various ranks and degrees of society. The hard lines of denaturation, drawn by mutual ignorance and prejudice, which have set class against class and rank against rank, are disappearing under the influence of liberal and enlightened views; and it may be expected that the judgments and feelings of the nation will become more catholic in music, as in graver things.

We have been diverted by these reflections from our immediate object of giving a few particulars respecting the musical entertainments of the present London Season.

Everybody knows that the Italian Opera, the oldest and most magnificent of these entertainments, is now split in twain. Ever since the great schism of 1847 and the establishment of the Royal Italian Opera in Covent Garden, in opposition to Her Majesty's Theatre, we have had two opera-houses, each as great as the single one was before. There was a similar schism a hundred years before, which in a short time had the effect of ruining Handel, as well as the party which opposed him. Our modern schism has been equally disastrous, for the losses of both houses have been ruined more than once, while Covent Garden Theatre was destroyed by fire. The theatre has been rebuilt, and the establishment is carried on with great energy by the present lessee, Mr. Gye; while the old house, in the hands of Mr. Stanger, is maintained with no less vigour. Their present competition seems a combat à l'instinct—a mortal struggle. Each establishment is on a scale of

equalization of dramatic rights. All the theatres stand, in that respect, on the same level; and the dramatist, like the roving bee, now extracts honey from each. He illustrated the free and open system by the fact that he had himself brought out an equestrian drama at Ashtley's. But he forgot that he might have done the same thing under the monopoly. There was nothing in the patent to prevent him. Whether under that restrictive régime he could have tempted to wage for Drury-lane or Covent-garden is a different matter; and in this, we imagine, lies the true secret of the rejections of the play-wrights. If the restraint is removed, so too is the thing restrained. We well remember that the legitimate drama was the *cheval d'battle* of the abolitionists. Shakespeare could not be played beyond the consecrated confines of Bow-street and Vinegar-yard. Why should not the Victoria play Shakespeare? Why should Houdinsfield be denied the immortal land? Well, the patents were abolished, and where is Shakespeare? Nowhere. He was placed, no doubt, when the race began, but he is nowhere in the running. This is one of the effects of the abolition which our popular author accidentally omitted to mention. There is not a single playhouse in London where that drama is played, for the exclusive representation of which the great theatres hold their patents, and were deprived of them. Whether this is a result upon which the play-loving community should be congratulated, we will not pretend to determine; but it is obvious that the play-wrights have much reason to exult over it. The old limbering Five-Act obstruction is out of their way. They have the stage to themselves. They can run up a highly exciting Domestic Drama, or a Three-Act picture of English life, taken direct from the French original, in less time than it would formerly have occupied merely to rehearse one of those antiquated solemnities. There is nothing in the shape of thoughtful writing or mighty displays of other time, but they need no competition. The abolition has done its work; it has abolished both the patents and the plays they protected. Much reason, therefore, have the play-wrights to exult. Whoever desires to have an accurate sense of the advantages those facile pens have derived from the total rout of a once formidable drama, should take a modern piece, say a Haymarket comedy, which is presumed to be the most skillful of the class, and study it in his closet. Let him examine it side by side with any by-gone play that happens to belong to the same order; let him carefully analyze and compare their structure, characters, and language. When he shall have completed the task, he will fully comprehend the reasons why the modern play-wright protests against the obsolete form of Five Acts, and why he rejoices over the rarity of its appearance. The task to which we have invited the curious reader is an arduous one. But if he perseveres he will achieve two ends by it: he will not only discover in what elements the modern Haymarket comedy differs from the conventional comedy of other times, but he will be enabled to measure exactly its literary value. It is all very well to see these pieces, and to laugh heartily at the infinitesimal fun of Mr. Buckstone, and the dry humour of Compton; but you know nothing about the authorship till you have endeavoured to read one of them. We do not say you may not succeed in the attempt, for talented capacities may say so—try.

The consideration of the influence of this species of production upon the Stage, and the character of our dramatic criticism under the existing patchwork régime of plays and actors, must be reserved for another occasion.

THE TYPE-PLANS OF ANIMATED BEINGS AND THE SPECULATIONS OF PHILOSOPHERS.

[FIRST ARTICLE.]

FROM any part of the British shores we can easily collect some few familiar forms of life to illustrate the great groups into which all animated beings seem divided. We have only to tread on to that slippery ledge of rocks before us to gather what we want. Look into that little pool between the huge weed-cled stones, and on the tide-bared surface round. The little pool which you are looking down upon in the portrait of the one before us; and many other numbers, in many another place, are looking down on pools just like our own. Here are conical islands stuck down upon the rocks; there, some white-crueted barnacles are hipping the water with their feathery curls. In the ooze, and under the mud-covered sea-weeds, crabs and shrimp-like crustaceans scramble awkwardly but rapidly about at your approach, or closely crouch and hide themselves. Here, in a quiet nook under a protecting ledge, are clustered a dozen doct; there, an eel, with curious finger-like lungs upon its back, is crawling with rapid undulations over the slimy weeds. In another pool close by some rock-fish sport, and, perchance, you may capture, too, some young turtle-fish, to add another necessary illustration to what we want; but if you do not, you can easily procure one from any of the fishermen, who use them profitably for bait. You can gather tenderly a little crop of these berry corallines, and you can place in your collecting jar some of those pigmy jelly-fish not bigger than shillings, which are dabbled about in hundreds on the sands. Put in, too, a few of those rudely, flower-like animals called, and if you do not mind wet feet, pull up some of those large-stalked tangles which are waving their broad fronds in the shallow sea just beyond where the tide still clings to the rocks; and a pocket-knife will enable you to detect amongst their entangled roots some tiny shell-like objects which naturalists call, from their outer envelopes being perforated with holes or pores, *Foraminifera*.

FIG. 1. *Edis papillosa*.

FIG. 2. *Orbulina universa*.

FIG. 3. *Edulia Breccia*.

We have now, in this small gathering, the types of many animal existences, each apparently based on a very different plan, but equally wonderful in the purposes and design exhibited.

As we must not presume, however, even in this sultry summer-time, that every one is at the "cool sea-side," or that the country hills and dales have no admiring visitors, we will ourselves take a ramble in the "flowery fields," and, for the purpose of showing a few other objects illustrative of Nature's type-plans. This common worm will do for one, and from the stagnant pool we may gather a dozen things to suit our ends. Put a few bits of those floating twigs into a glass of water, and you will see dozens of tentacled threads; these are hydrea, and will serve as well as the larger, grander "anemones" of the sea. Those translucent shrimps, pecking themselves with feathery, on-like forcings, along in interlocking curves are just as good in illustration as our sea-side crabs; the little stickleback or minnow, from the stream close by, will do as well as rock-fish or as any other of the finny tribe. Search now the underside of stones or the floating leaves of the water-lily for short translucent branching threads. Your straining eyes will see nothing new when you lift the stones or lily-leaves,—for the tiny beings that inhabit them are very timid, and shut themselves up in their cells on the least disturbance. There are several kinds of these; but what we are most likely to find are the *Planulids*, and these are equal to the stouter corallines of the rocky shores.

In the water from the stagnant ditches, under the microscope,—you cannot perceive them without,—some jelly-like little beings may be seen twisting their bodies into fantastic shapes; here indenting them into temporary stumps; there squandering away their jelly-like flesh into equally temporary tentacles or feet. These *Amoebæ* are even better examples than the marine *Foraminifera*, as they represent more properly the rudimentary plan of their class. We will then, from land-side and sea-side, familiar illustrations of the type-plans of animal creations,—the globular, the radiate, annular, soft-bodied, and backboneed, or vertebrate.

We find thus that we are brought down to some four or five primitive type-plans, upon one or another of which the individuals of every species, of every group of animals, are organically and primarily constructed. However advanced or restricted may be their actual development and organization,—however high or low may be their position in the scale of life. From the mud to the sky, in our own land and all over the wide world, every organized living being is framed on one or another of these few plans.

In these days of strange notions and new theories, it behooves every one to look a little into matters for himself. It is not the authors of speculations and novel theories who are called upon to decide the merits of their own ideas; nor is it the ignorant or unlearned who should approve or condemn them. It is before the world,—that the world,—that these opinions are laid; and it is the world which accepts or rejects the new doctrines,—which reaps the knowledge or advantage, if any, to be derived from them.

Among the present leading topics of high interest is the question of the successive development in actual age of higher and higher organic forms on the principle of "natural selection," which has been opened out by the recently-issued, learned, and interesting book of Mr. Darwin, "On the Origin of Species." We know there are some who think in such matters lay people should not meddle, and that scientific brains alone should reflect upon such subjects. We have just expressed our own opinion on this point, that people should make themselves competent to judge; but like other authors Mr. Darwin has put his book before the world, and already it has found five thousand purchasers. How many more readers and critics!

The consideration of the question requires leisure, thoughtfulness, and actual investigation. It involves, also, an acquaintance with the organic creations of the various and vast geological ages, and with the organic contents of the rock-formations of our great groups of terrestrial space, for time is an essential element in all changes effected by natural means, and is especially regarded in that light by Mr. Darwin himself, in those he considers to have been slowly brought about in the course of the gradual migration and transmutation of species, which has been opened out by external circumstances, individual wants, necessities, and habits, and the natural tendency to "sportiveness," under the control of that principle which he denominates "natural selection." We can, therefore, neither confine our researches to the historic period, nor extend the consideration of the gradual migration and transmutation of species to a geographical range of these ancient fancies revealed to us in a fossil state, which must have happened in the lapse of the stupendous ages of the past, by reason of the varied alterations of level, and the relative superficial distribution of the ancient lands and seas.

Mr. Darwin himself at one time, in connection with the generality of modern naturalists, entertained the opposite theory to the one he is now advocating, a theory so ably supported by the late Professor Edward Forbes, of specific centres of creation of new forms. We are apparently in nature, as well now in our own days as in every stage of the past conditions of our planet, particular species, genera and families of animals confined in their geographical range to certain limited regions; we find certain prolific kinds, as well as certain rare sorts confined to very restricted areas; we find from the organic contents of the rock-formations,—those whose historical records of the succession of the past physical events of our globe, that in time, also, there have been similar restrictions of particular kinds of animals, and of plants. Of these, some seem to have been introduced in at a certain period; to have increased, multiplied, and swarmed at another; finally dying slowly and gradually out, to be succeeded by some new race, which in its turn, in like manner, laid its reign of greatest development in numbers, and over con-

FIG. 4. *Planulids repens*.

ade regions of space. Naturalists were thus led to the idea that these races had diverged and multiplied from a *specie centre* of original creation.

It is but right in this place that we should clearly define what is meant by the term or principle "natural selection." Reflecting on the correlation, well known to naturalists, and obvious to the most superficial observer, of the bones and general organization of the Vertebrate class, whether fish, land, reptile, or mammal, all constructed on modifications of the same plan, and having a vertebral column, in each the limbs presenting modified conditions only of certain primitive structure-plans; as, for instance, the fins of the fish, the wings of the bird or of a bat, the arms of a man; on the like modifications of parts and organs severally in the trilles of shell-fish (*Mollusca*), crabs (*Crustacea*), worms (*Juridica*), or sea-animals, jelly- and star-fish, and the ancient bird-like animal, *Archæopteryx*, and other forms of the Invertebrate class; and reflecting, also, on the like modifications of type-plans in the vegetable kingdom,—Mr. Darwin has been specially led into the study of the variations of animals and plants, both in their state of nature and under domestication, whether as mere "sportive varieties," as they have been termed, or as the more permanent and regular kinds, such as the race-horse, coach-horse, cart-horse, pony, the various sorts of gooseberries, cherries, apples, &c., which have been brought about by skilful breeding or continued culture.

The accumulation of facts upon these subjects has further led Mr. Darwin into the belief that such modifications, whether naturally or artificially brought about, could and would be maintained under the necessary accompanying conditions of climate, nutriment, &c., and that in the free state of nature the "succession" of such variations has accomplished those marked differences we observe in the various species of animals and plants. "Now," as many more individuals of each species are born, Mr. Darwin has shown that can possibly survive; and as, consequently, there is a frequent recurring struggle for existence, it follows that any being, if it vary, however slightly, in any manner profitable to itself, under the complex and sometimes varying conditions of life, will have a better chance of surviving, and thus be naturally selected. From the strong belief, of inheritance, any selected variety will tend to propagate its new modified form.

Neither the doctrine of development of species by "natural selection," nor that of "specific centres of creation," is introduced here with any idea of our entering into the details of either of these vast investigations. Yet twenty years Mr. Darwin has been collecting materials in support of his views, and only the outlines of which are published; and we have not yet before us all the evidence on which he has based his conclusions. It is not likely, therefore, we should attempt more than to explain briefly the chief facts and principles upon which the interesting and important discussion is based. We have not collected so many shells, so many fish, so many plants or sea-weeds, to display as curious objects, but as illustrations of those universal structural type-plans of organization which certainly appear, from any evidence yet adduced, to be and to have been persistent. We may regard these type-plans,—indeed, we can scarcely do otherwise, when we look into the minute structure of organized beings,—as unchangeable, immutable modifications and adaptations within their respective limits, but the question becomes highly intricate when we attempt to deduce the modification of one type-plan into another.

The great points of Mr. Darwin's investigations are, whether the differences in the various classes of animals and plants have been derived from long continued natural variations, as modifications of primitive type-plans, and whether these so-called primitive type-plans themselves may not really have been derived from some older, or anterior and more primitive plan.

AN HISTORICAL DRAMA.

THERE was once a gentleman of learning and position, whose name I forgot at the present moment, who said, "I never wish to study any other history of England than Shakespeare's plays. They present me with clearer pictures of the times and manners they depict; they lay bare more completely the springs of human action; and they are more exact in dates and the sequence of events than most of the ponderous historical volumes I can find in my library."

Allowing for a little love of paradox—a little fancy for appearing singular,—there may probably be some truth at the bottom of these remarks; and, any way, there must be many people existing in the world who have only read the history of their country and are presented to them in the shape of an amazing drama. If it is necessary that such people should be educated in this particular branch of knowledge, it is fortunate that Shakespeare's plays are so popular and so historically reliable; and it is also fortunate that the successors of the great dramatist—the little knot of highly-talented gentlemen who call themselves the "Dramatic Authors' Society," and their more humble, or less famous brethren, who supply the passing dramas for the minor theatres,—are always willing to "illustrate" the times in which we live and move, according to their talents and their opportunities.

As one of the great events of the present year is the "fight for the championship," it is not surprising that the watchful dramatist has seized it for literary material, some years, perhaps, in advance of the regular historian. At the very moment when Thomas Sayers is a leading man—when he has been praised from the pulpit and by the journals, and when he has returned the compliment by praising the journals for their literary genius and descriptive talent,—when he has been *fit* on board the Queen's ship, and received on the Liverpool Exchange with more honour and enthusiasm than was bestowed upon Lord Doughty on his victorious return from India,—when he has been declared the "Mincing Lane Poet," with a retainer of a hundred guineas, and the "Capel-court Blackie," with another retainer of a similar amount,—when he has received more money for "colours," and shares of the railway fighting-train, than ever any professional gladiator received before,—when he has been made the object of a subscription by the House of Lords, another subscription by the House of Commons, many more subscriptions by different clubs and classes in London, in Paris, and throughout the provinces, and a wide extra subscription, amounting to more than four thousand pounds sterling, that is led off by a noble lord who sends a hundred pounds, and closed by a little girl,

under eleven years of age, who sends sixpence,—when all those honours and profits have been heaped upon the head of a single individual, it is not surprising that the theatrical stage should select him as the hero of many dramas, and seek to embody the leading incidents of his career. This "noble" pugilist, after several weeks of decent diplomatic reserve, has become reconciled to his American opponent, and the two countries seem to breathe again. We are now able to attend to our ordinary political and social business, as the two combatants have retired hand-in-hand to the country, for the profit and pleasure of a "sparring-tour." I have not heard, nor, I believe, has the respectable editor of our leading sporting correspondence, that any offer has been made to Sayers to stand for this season or tomorrow as a member of Parliament. It is not probable, on this occasion, it was satisfied with "Mr. Gully, ex-champion and publican for many years, and why not try Sayers? His name, when translated into English, signifies 'broken-bird,' and shows a philological sympathy with pugilism.

The Olympic Theatre was the first to recognize the importance of the great pugilistic event, and to deal with it from a farcical point of view, in the piece called *B. H.* More than one of the minor houses were not slow to follow so high and so successful an example; but it was reserved for the Victoria Theatre, in the New Cut, Lambeth, to present its patrons with a drama, half "domestic," half historical, that may be fairly taken as having exhausted the subject. This drama contains much that is known, with much that was previously unknown, and the following is a fair copy of the play-list, omitting the perishable part,—the names of the actors:—

THE CHAMPIONS BELT.

OR, THE RISE AND ITS MORAL.

| | | |
|--------------------|-------|---|
| Mr. Harry Headling | Mr. — | Tableau 4.—The First Meeting |
| Tom Sayers | Mr. — | Shake Hands. The American's Colours. |
| John Heenan | Mr. — | The House and Tom. |
| Old Joe Sayers | Mr. — | The Theatre opened by Sayers. |
| Augusta Tomlin | Mr. — | The House and Tom. |
| Benjamin | Mr. — | Green Sniff's Parlor. |
| Harry Headling | Mr. — | Three Cheers for Tom Sayers! The Belt! |
| John Heenan | Mr. — | The House and Tom. |
| Gullish | Mr. — | The Colours of the Championship of England! |
| Mr. Sayers | Mr. — | Grand Tableau. |
| Mary Sayers | Mr. — | Act II.—The Training. |
| Benjamin | Mr. — | The Theatre up to this Work. |
| John Heenan | Mr. — | The Snuff (Grand up). |
| Old Joe Sayers | Mr. — | Heenan's Lodgings. Yankee Double. |
| Benjamin | Mr. — | The Fight! |
| John Heenan | Mr. — | Tableau 4.—The House and Tom. |
| Old Joe Sayers | Mr. — | The Death of Ben. |
| Benjamin | Mr. — | Grand Tableau. |

The drama opens with a representation of a street, from which we learn that "Owen Sniff's Tavern" (in Tottenham-street, Hackney) is a large private house, with a handsome portico, standing in an extensive square. Immediately opposite this mansion is a cobbler's lat, not unlike a blacksmith's forge, in the recognition of "Old Joe Sayers," "dead country," the "Champion." Here we have the visible emblems of two opposing principles. The house, or "tavern," is typical of idleness and dissipation; the hut is typical of industry and sobriety. Before the door of the first are a few betting-men and hangers-on of the "Ring," including a wild, gay nobleman in a battered white hat and blucher boots, described in the play-bill as "Sir Harry Headling," while before the door of the second are the hard-working, perspiring "Joe Sayers" senior, the frugal and homely "Mrs. Sayers," and the virtuous and interesting "Mary Sayers," their daughter, forming together a beautiful "tableau," or family picture.

We learn from a rather general conversation, that Sayers senior, while he retains some physical remains of masculine development, and the power of giving a blow from the shoulder, is opposed to the ring and all its associations, and that he has contravened his daughter "Mary" to disown all relationship with her brother "Tom," until he is found to walk once more in the paths of industry. We also learn that Sayers junior, otherwise "our noble Tom," otherwise "our glorious champion," has generously offered to maintain his father out of the gains of his pugilistic profession; but it is almost needless to say that the offer has been firmly though respectfully declined. Much striking of a hapstone, and much flourishing of an old boot take place, as pantomimic incidents that the independent spectator is not yet unequal to enjoying in broad daylight.

It appears, at this period of the Sayers history, that "Mary Sayers" has attracted the attention of the wild, gay nobleman, "Sir Harry Headling," and though, strictly speaking, not persecuted with his address, she is chased by him round the square, or street, before described, and roughly embraced, in broad daylight, on the Queen's highway. It also appears that "John Heenan," the American Champion, who has arrived in England, is under an obligation to a "family bearing the name of Sayers," for some help rendered to him some years ago, in some part of America, and he is not the man to forget these in his prosperity who never forgot him in his adversity. There are also some traces of a former attachment between him and "Mary Sayers," who only knows him for the present, under the assumed name of "John Carter."

The unusually cold of the wild, gay nobleman, in the Queen's highway, gives a happy opportunity to "John Carter," otherwise "John Heenan," of showing that his mouth is not crammed full of empty sentiments, and of introducing himself in a triumphant manner to the family he is in search of. He enters the square, or street, at the very moment when "Old Joe Sayers" has been ruthlessly pushed aside, when "Mary Sayers" is being unwittingly embraced by the wild, gay nobleman, and with one blow he has sent American "John Carter" otherwise "John Heenan," after performing this feat, are worthy of a place amongst the maxima of school copy-books.

The noble American retires, after promising to "hit Old Joe Sayers" and his daughter at their lodgings, and we are introduced, for the first time, to the English "Champion." He comes out of the house, or tavern, cheerful and confident. He observes that he has never yet seen his opponent, and should like to know whether he is going to fight a man on a mountain. His reception by a small but

enthusiastic body of supporters is highly encouraging, and he only wishes that his father was less opposed to his profession. No matter, he will do his utmost; no man can do more. He fights for the honour of old England. A fair ring and no throng; may the best man win, and may that man be Thomas Sayers. Hurrah! Tabloo! the third. The pugilistic party is grouped on the left side of the stage; the shoe-smoothing and anti-pugilistic party, in the persons of "old Joe Sayers" and family, is grouped on the right side of the stage. A few chorals are given by the orchestra, and the scene closes.

We are next introduced to "a street," which seems, oddly enough, to be in some part of Italy (a mistake, no doubt, of the scene-shifters), and what is technically known as the "underplot" of the drama. This underplot consists of a professional poetaster, called the "nimble grasshopper," who is supposed to be changed in a scene "great match," which causes him to walk across the stage, whenever it represents anything like the open air. He runs against most people, at different times, but particularly against one "Augustus Twiddle," a comic amateur of pugilism. The duty of all persons engaged in the drama is, to knock down this comic amateur at every opportunity, with the exception of one "Shorts," a comic maid-servant, and her duty is, to marry the comic amateur, and help to protect him. The result of this arrangement is, that all the characters, except "Mary" and "Mrs. Sayers," have a fair chance of showing their skill in the art of boxing.

We will now return to the more serious and historical business of the drama. The scene changes to "old Sayers's lodging," where, true to his word, the American Champion, still disguised as "John Carter," pays his promised visit. Thomas Sayers is also there, and we learn that the first and most interesting meeting of the two opponents took place under the roof of one who was already the father of the English "Champion," and soon to be the father-in-law of the American. The two heroes, the future brothers-in-law, shook hands—still only knowing each other as mutual friends of the family. Powerful situation! Something told them they should meet again.

"Tom Sayers" was the first to take his leave, soon followed by the American Champion. The latter, to the evident disgust of his trainer, constant attendant, and lackey, "Harry Brumston," snatched a kiss from the willing "Mary" before departing, and in so doing disgraced his "brother-in-law." "Ha!" exclaims "Mary," as she picks up this blue-and-white object, "what is this? A handkerchief? A name in the corner? John C. Heenan, the Benicia Boy! Ha, ha! I see it all! He cannot—he must not fight my brother!"

The action of the drama now becomes more rapid. We are introduced to "Owen Swift's parlour," and to the company of a number of convivial supporters of pugilism. The English Champion enters, and is received with deafening cheers. He looks round the room. He makes a speech. His sentiments do honour to his head and heart. The American Champion enters, and is also received with deafening cheers. The two heroes are now formally introduced to each other. They start. "The friend of my father!" "The brother of my brotherhood!" There is no danger of this. The trial is bitter, but it must be unflinchingly borne. Ah! knock for silence, unsuspecting chairman of the tavern table; little do you know the mental agony that is now racking the strong frames of the "gallant Heenan" and the "glorious Tom." The American makes a speech. His sentiments also do honour to his head and heart. A noise is heard outside. The door is thrown open, and in rush "old Joe Sayers" and his daughter "Mary." They come to stop the fight. Too late, alas! too late. It cannot be. The first act immediately closes with a "grand tabloo."

The second act opens with a picture of "Tom Sayers" under "training," and we are taught all the mysteries of the "chale," the "dumb bells," and "boving the sack." We are next hurried to "Heenan's lodging," where "Mary" makes yet one more attempt to dissuade her lover from fighting, but without success. He cannot withdraw from this contest with honour, and he will only promise to remember, during the battle, that "Tom Sayers" is her brother. More than this, in justice to his backers, he dare not do.

In the mean time, "old Joe Sayers" has not been idle, and communicating with certain "detectives," he has led the way to "Heenan's hiding-place," by following the footsteps of his daughter. His plans are defeated; the American is warned, and makes his escape—in rapid succession with history—from the window. The drama now opens its last act, and unfolds its end in some respects, of Richard the Third, as tinkered by Colley Cibber. "Heenan" starts across the stage, in front of an open-curtain picture, followed by the police authorities. "Old Joe Sayers" and his daughter "Mary" next appear, and a scene of much emotion takes place between them. A noise of many voices is heard, and it tells them that the fight has already begun in the neighbourhood. "Mary" shudders when she hears the fearful sound, and is led away gently (to music) by her father.

The next and final scene is "The Ring," where all the historical features of the fight are reproduced with diligent fidelity. We see the numerous "alls" of the English "Champion," the "blows" that dishevel his "right arm," the return "blows" that he gives with his "left hand," the "struggle over the ropes," the tearing up of the "ring-poles," and the final "skipping" of the two combatants. A "grand tabloo" is certainly formed by the mob round the ring—as mob and tabloo, in theatrical language, generally mean the same thing,—but we are at a loss to know what the play-bill means by winding up its list of scenes and incidents with what it calls "The Death-bed of Heenan." It is the only part of the promised drama left unrepresented, or unperformed, and for the sake of English history and Victoria audiences, we should like some solution of the mystery. The thoughts who flock every night to the temple of the English hero, unlike the gentleman before alluded to, who was so satisfied with the historical lessons contained in Shakespeare's plays—they have scarcely any other teacher. That gentleman could read and write, and cut accounts, but, unfortunately, the bulk of a Victoria audience either possess no such accomplishments, or possess them in a very limited degree. It is too bad if the author, the stage-manager, and the printer have combined to impose upon ignorance and good nature.

SLANG, AS A SOCIAL SYMPTOM.

PASCAL somewhere says something to this effect:—"When you meet with a natural style of writing, you are startled and delighted; for you were prepared only to find a book, and unexpectedly stumble on a living man." Nobody ever knew better than Pascal how to perform that rare and difficult feat of writing in a natural style—pure and correct, yet unadorned; flexible, without being grotesque or gymnastic; a style which never sinks into slipshod squalor, nor swells into the cumbersome pomp of fine writing.

The difficulty of such a style lies in choosing exactly the right words to express your ideas. And the right sort of words are those which most simply present the thoughts they clothe, without attracting attention to the colour or texture of the words themselves. Language is at best an imperfect vehicle of thought, which passes through it as light passes through glass;—the less it discolors or distorts the idea or the landscape, the better is the quality of the phrase and the window-pane. As the best piece of a man's taste in dress is to say that you remember nothing particular about his clothes, but that he looked like a gentleman; so it is the highest commendation of an author's style that you were very much interested in what he said, but that you cannot call to mind any peculiarity in his manner of saying it. All words starting from their unfamiliarity or weariness from over-frequency recurrence, are alike objectionable. The whole sphere of bad writing revolves between the two poles of staidness and extravagance in diction; if that can, by any stretch of metaphor, be called a sphere whose periphery extends over so vast a tract of contemporary literature, the extremes of whose axis are so little removed from each other. For the grotesque paraphrase which some verbal acrobats tumble upon to-day in his antic struggles after originality, passes at once from the extravagant to the stale phase of its career the very next time it is used. Really well-made clothes of well-chosen material and colour, never look shabby till they are fairly worn out; and phrases of simple and direct construction, composed of words rich in meaning as the dictionary can furnish, but not gaudily "expressed in fancy," never go out of fashion.

But how are we to find those words and phrases which shall be easy without being commonplace, and idiomatic without vulgarity? It is easy to say they are the terms of speech which highly-educated persons in the best society might use in grave conversation on any topic of importance, whose intelligible discussion implied the use of language according to delicate distinctive shades of meaning. [Tints of meaning would be a better phrase if it had not a distasteful flavour of art affectation.] And the really intelligent part of good society do talk the language by whose adoption or avoidance words and phrases may be best condemned and absolved as apt or inappropriate, over-formal or ungratified, for the uses of literature.

Considered in this light as the living standard of the language in which books are to be written for the benefit or disadvantage of all people at large, good society ought to mind the sort of phrase it permits itself to talk, and to be a little more than it does. Authors, especially novelists, who have to represent conversation in their pages, must take it pretty much as they find it, or their personages would talk like books. The language of literature again reacts on the language of society, too often spurring slang from the sewers into the gilded drawing-rooms, and sprinkling namby-pamby allusions of pseudo-fashionable life among the parlious.

It is disagreeable enough to hear young gentlemen talk slang among themselves; but it is much more unbearable when they talk it to women; and the few silks of disgust is reaped when the women begin to talk it among themselves.

Not many years ago, the present writer was partaking of tea under a tree in the suburban pleasure of a person of rank, when there descended among the company from one carriage two very lovely creatures. One was a duchess and the other a marchioness. Not obscure local duchesses and marchionesses from the country, but "the cream of cream." I did my best to represent literature admitted into the circles of fashion, and talked my choicest English, in full confidence that an unadorned literary style was the language of good society. When these exalted personages had refreshed themselves with tea, and accomplished a reasonable length of visit, the marchioness suggested to the duchess that "further conversation during their presence, must needs precipitate their departure." So, at least, it would be rendered in those tales of high life which it is believed are written by accomplished lady's-maids. But the words addressed to her grace which actually fell from the pretty tips of the marchioness were, "Don't you think, dear, it's about time for us to cut?"

I heard the words distinctly, without any auricular effort. I was no more intimate with these ladies than I am with her Majesty, Queen Victoria: no! suppose there is no breach of implied confidence in my recording this fragment of conversation in high life.

The dreariness and amenities of civilized society originally grew from, and still depend on, the prevailing influences of women who have been, since the rise of chivalry, arbiters of our social code. The spirit of purity and the grooves of refinement have hitherto advanced among ages and nations in direct proportion to this social ascendancy of women.

Women, endowed by nature with more of that good shame which we call modesty, and troubled with less of that bad shame, which is usually mentioned in French, than men; readier with their wits and tongues; more watchful in observing, and more serious and earnest in administering the small politics of society, are essentially most fitted, and no doubt are by Providence intended, to temper and attune the ritual of assemblies gathered in the name of innocent and decorous amusement under the statute code of courtesy and the common law of tact.

The matrons of England in former times thought it prudent to permit no other language than the mother tongue to be spoken in their presence. They liked to be able to understand with critical precision, what the young men were saying to

their daughters, and what their daughters said to the young men in return. But the idea of Slane seems to have set in with such an Atlantic flood, that the matrons are overpowered, like Mrs. Partington. It is a severe blow to that chivalrous racial ascendancy of women. Our young gentlemen are accordingly vulgarizing our young ladies down to the tone of the betting-ring, college wine-party, and saddle-room, instead of our young ladies refining our young gentlemen, and tuning them up to the drawing-room concert-pitch. Civilization will be none the better of this arrangement. The deterioration of language is one of the first signs of a national career having culminated and lapsed into the retrograde. Let the mothers, and wives, and daughters of England look to it, for our civilization has no other guardian angels.

THE WEATHER DURING THE LAST NINE MONTHS—OUR FUTURE PROSPECTS.

By JAMES GLAIBER, F.R.S., ROYAL OBSERVATORY, GREENWICH.

THE familiar use of any instrument frequently causes a forgetfulness of the principles on which it is constructed, and, consequently, only an imperfect knowledge of its operations, and of the indications given by its varying readings. This is the case with respect to several meteorological instruments, and particularly true respecting the barometer—an instrument depending on principles as beautiful as any in the whole range of physical inquiry.

Before we speak upon the late extraordinary weather, it seems desirable to give a brief account of the barometer, and the atmospheric phenomena on which its variations depend.

The first step in such an inquiry is to ascertain the elemental components of that invisible and inodorous fluid by which we are surrounded, and which is imperatively necessary for the existence of both animal and vegetable life, and of which, if man be deprived for two or three minutes, he ceases to exist; but at present we shall speak of the mechanical properties of air only.

Air possesses impenetrability; which implies that no other body can, at the same time, occupy its place: it has inertia; that is, it is possessed of the property that it will not move till it is forced to do so by some active power: it has mobility; that is, a property by virtue of which it will not stop when once put in motion, until it is acted upon by some opposing power: it has compressibility; that is, a certain portion of air, under greater pressure, will occupy less space; and it has weight. To these mechanical properties of air, together with the influence which heat and vapour exercise, nearly all atmospheric phenomena can be traced. Air being compressible, it follows that that which is nearest to the surface of the earth is the most dense, as it has to bear all the superincumbent mass. If we take 100 cubic inches of air from near the surface of the earth, deprived of its carbonic acid and aqueous vapour, it is found to weigh 31 grains, which is about one-eight-hundred-and-fiftieth part of 100 cubic inches of water; and therefore, mass for mass, water is 815 times heavier than air.

The weight of the air is determined by the barometer. A column of air one inch square, and reaching from the earth to the top of the atmosphere, balances a column of mercury of the same area, and 30 inches in length, which volume of mercury weighs 14½ lbs. nearly, and therefore this column of air weighs 14½ lbs. nearly, and the mercury in the tube of a barometer always balances the atmospheric weight or pressure; and in this estimate the reading of the barometer varies from 28 to 31 inches, indicating that at times the air is less by 1-20th than at other times.

The variation in the reading of the barometer thus indicates the fluctuation in the atmosphere, and those variations in the preceding nine months have been remarkable: they have been large, unusually frequent, sometimes as low as 28½ inches, and seldom high. From May 22 to June 30, the reading was never so high as 30 inches; the volume of air in the last nine months has been continually varying by large amounts.

In close connection with these changes have been the severe storms. The winter commenced in October, and as soon was characterized by low barometer readings, with sudden fluctuations and heavy storms. From the beginning of 1860 the air became more continuously in motion, as shown in the following particulars:—

In January the wind frequently blew with great strength for 20, 30, and 40 hours continuously, and at times with such force against a square foot of surface, that the power necessary to stop it was equivalent to a weight of 38 pounds, and during this month the air was in rapid motion for one hour out of three.

In February the wind was mostly N.E., blowing without intermission for 20, 40, 50, and at times 60 hours; and on the 27th the heaviest gale of wind occurred that has been experienced in and around London for twenty years. In this gale pressures of wind to 28 pounds on the square foot took place, and the air was in rapid motion for one hour out of two throughout the month.

In March the air was still more continuously in rapid motion, averaging two hours out of three, and blowing with violence at times for 50 hours together; and for the 100 hours following March 30, the air was in violent motion—a most unusual circumstance. Weather of a similar character, in this respect, continued during April, May, and June, and the air was in rapid motion for one hour out of three till the end of June. Heavy gales of wind have taken place each month, and many fine clays, strong eads, and a large number of haunches have been torn up by the roots, and their places know them no more. The injury to shipping, all round the coast, has almost been unprecedented. Some of the particulars relative to temperature are as follow:—

On October 21st severe cold suddenly set in, and from that time to the end of last week, with the exception of a few days at the beginning of November, from December 24 to January 21, and from May 8 to 26, the temperature has been below the average of the season, and at times has been bitterly cold. The temperature was deficient in every month from November to June, with the

exception of that of January and May, when it was slightly in excess. In April both the days and nights were from three to four degrees too cold. The effect of this want of heat, together with the violent winds, has caused the food of both man and beast to be very scarce.

The fall of rain up to the end of June was 15½ inches, of which 4 inches fell in May, and 5½ inches in June. The average fall of rain for the first six months is 10½ inches; so that the fall of rain this year exceeds the average by 4½ inches. Rain has fallen on 102 days of which 29 were in June.

The fall of rain in June is very remarkable. From the year 1815 to 1837 the fall once reached 32 inches; in the year 1838 it slightly exceeded 5 inches; in the year 1838 it was 21 inches; in 1852, 4 inches; and the average fall for June, from 1815 to 1859, was less than 2 inches; so that the fall of rain in June was three times greater than the average fall.

In conclusion, we may observe that the early winter was characterized by very low readings of the barometer, and temperature with sudden fluctuations and heavy storms, and that the weather of 1860, up to the end of June, has been remarkable for a long continuance of low temperatures, of great and frequent changes in the pressure of the atmosphere, an almost continuous and very unusual succession of storms and heavy winds, and in June for its unprecedented heavy fall of rain. The weather appears now to be more settled; the circumstance of the barometer having reached 30 inches on June 30, having been below this point from May 22, together with the fact that there is no instance on record of a wet June being followed by a wet July, gives us cause to look forward, with some degree of confidence, to fine weather for the coming farming operations, and which may, in a measure, tend to relieve the general uneasiness caused by this extraordinary season.

THE COMET.

OWING to the very unfavourable weather which prevailed, until the present week, only three observations of position of the new comet have been procured. The following are its places:—

| Greenwich Mean Time. | Right Ascension. | North Declination. |
|------------------------|------------------|--------------------|
| June 29, at 10 30 5 .. | 7 49 50.9 .. | 30 29 2 |
| July 1, at 10 22 49 .. | 8 15 19.1 .. | 36 39 23 |

From the observation of June 29, again at the Observatory of Paris on June 22, published in the daily journals, and a third taken at Florence on the 21st, by Dr. Donati, the following first approximation to the elements of the comet's orbit have been calculated by Mr. Hind:—

Perihelion passage, 1860, June 16, at 12h. 50m., Greenwich mean time.

| | |
|---|--------|
| Longitude of the perihelion | 152 29 |
| Ascending node | 83 54 |
| Inclination to the Ecliptic | 79 22 |
| Logarithm of perihelion distance, 9.17329 | |
| Heliocentric motion—direct. | |

THE COMET.

The Constellations of *Ursa Major* and *Ursa Minor*.

"It appears from these elements," says Mr. Hind, "that the comet is receding from the sun, but is approaching the earth, which it will continue to do until the middle of the month. It will cross the ecliptic from north to south very near to the orbit of Venus on the 11th instant, the planet being at the time about twenty-one degrees further advanced in longitude.

"There is no similarity between the above elements and those of any other comet at present computed. Though the position, by the Paris observation of June 22, was precisely that which the comet of Charles V. should occupy, if its perihelion on the 26th, the opposite motion of the comet now visible now indicated that it could not be identical with the one so long expected.

"Dr. Donati considered the nucleus on the 22nd as bright as a star of the first magnitude, and judged the length of the tail to be 15 deg. As the comet

the absurdity of religion, the utter injustice of all laws,—these are the sentiments which form the groundwork of the poet, mixed up with the most odious pictures of society. The French writers we speak of do not produce these pictures as mere literary themes, the result of their imaginative powers, but they are intended to pierce their political passions, and to promulgate socialistic principles. Their pen is an instrument with which they wage war against society at large. In the dramas of Victor Hugo, in twenty of the novels of Balzac, in those of Frédéric Soulié, of Eugène Sue, and others, the prevailing theory is, that all the upper classes are unjust, oppressive, and cruel; and that among the lower orders, on the contrary, elevation of mind, generosity, and superiority of character are alone to be found. The public functions are always represented as devoid of honour or conscience, as intrigues, and hard-hearted.

Having in this manner overthrown all established tenets and recognized authorities, and tried to prove that the actual order of things is unsound and defective, the logical inference must be that such a system can be set to rights by brute force, and, therefore, in many passages, an undignified appeal to arms is made, and insurrection urged as a duty. Just as in the first revolution in France,* but then a long and tyrannical oppression of the lower classes could, perhaps, to a certain extent, justify a sudden outbreak; while in our day it is in our blood that all principles are overthrow by writers who have nothing to complain of but too great indulgence for their excesses.

The virtuous M. de Lamartine himself, who, not satisfied with his poetical renown, pretends to be the king of historians, often strangely confuses the notion of right and wrong. In his history, for instance, of Queen Marie Stuart, he admits all the worst charges made against her, and, nevertheless, excuses her on the plea of beauty and fascination. Can anything be more illogical and unpardonable than to trifle thus with grave historical questions?

"L'histoire des Girondins est pleine de subtils raisonnements. Je impute la grande blâme à M. de Lamartine, d'insinuer que les Girondins ont été victimes de leurs volontés misanthropiques; for when he perceived from his windows the armed bands sweeping through the streets of Paris, in the Revolution of 1848, he exclaimed,—*There goes my history of the Girondins!*" De Lamartine, in his *Paroles d'un poète* (of which ten editions were sold in a short time), did not make the mistake of the Girondins. He sought to excite the minds of his readers to the destruction of all laws, social and moral. This book, brilliantly and powerfully written, caused, perhaps, a greater sensation on the public than any work that had appeared for five-and-twenty years. Every reader, in perusing it, must be struck with the conviction that a crisis is at hand, and that a nation who proclaims such principles openly, and with the applause of the multitude, must have reached the verge of its moral ruin.†

The stage soon after became the active medium by which these furious attacks upon society and the laws were familiarized and encouraged. A drama called *Le Brigand et le Philosophe* openly professed that there was a duty,—*« que faire dans une société qui vous vole parce que vous êtes pauvre. Il faut voler afin d'être riche. Depuis long temps crime et vertu ne sont que deux mots. »* Balzac went over and over again inculcates the same doctrine. "L'honnêteté ne sert à rien; la corruption est une force, sans l'honnêteté nous ne sommes qu'un peuple de bêtes." These who have the courage to say so, may read, "Les deux Serruriers," "Le Chiffonnier de Paris," by Félix Pyat, and many other works, wherein they find the same principles applied. Do not let the reader imagine that our quotations are isolated passages, picked out here and there to serve our purpose; entire pages in the same works are written in a similar strain. The volume of Lamartine, *Paroles d'un poète*, from the literature of France during the last five-and-twenty years, the contents of which would be thought unfit even for the inmates of Newgate.

This incurable public *folly*, as Tacitus says, produced its fruits. The Romans became hardened and corrupted by the sanguinary spectacle of the circus; the French became demoralized by their ignominious wars, murders and other works portraying nothing but vice and crime. The field breath of impiety and materialism has withered their hearts, and the standard of private and public morality is lowered in consequence. The nation has been vain changed its government, as sick men change his doctor—it makes no progress towards recovery. The love of liberty has been replaced by the love of equality in its worst form, namely, envy,—and what is there left then for a people but despotism which to a certain extent becomes a boon, social dissolution being the only other alternative.

Should our readers be disposed to think that we have in any degree exaggerated the influence of the works we have passed in review on the social condition at large, let us remind them of one single fact, which being official, will prove how deeply struck are the roots of this evil. In the reign of Louis Philippe, whenever one of the plays of which we have spoken was acted, or whenever a popular work was published, containing the usual declamations against social order, or open provocation against the laws, the director of the police was enjoined to double the number of his men for the surveillance of those parts of the town inhabited by the working classes, always ready to bring into play the evil passions aroused within them by such publications. The Baron de Biele, who for some time filled the difficult post of *Préfet de Police*, under the reign of Louis Philippe, once said, in the presence of some of this state of things, he directed that notes should be kept in order to observe from day to day the several literary and political publications more or less dangerous to society, and to attest their influence on public opinion. By this means could be seen the relation between the progressive perversion of ideas, and the disturbances which, under one pretext or another, broke out among certain classes of the population.

* Dans cette lettre du pauvre contre le riche, du faible contre le puissant, on se voit le tableau d'un monde qui se dégrade, et l'indignation contre la convention, on se voit le tableau d'un monde qui se dégrade, et l'indignation contre la convention, on se voit le tableau d'un monde qui se dégrade, et l'indignation contre la convention.

† "C'est le plus grand mal de notre époque, c'est pourquoi les rivaux et les ennemis de tous ceux qui se font appeler grands, ont été maudits."

"Qu'est-ce que ces hommes qui tourmentent sans cesse, et que haïssent-ils? Félix d'Adam, ces hommes sont les bêtes de nos sociétés, ils sont les bêtes de nos sociétés, ils sont les bêtes de nos sociétés."

"Il y a un remède aux maux de la société," dit Eugène Sue, "un remède aux maux de la société, c'est de les laisser aller, c'est de les laisser aller, c'est de les laisser aller."

Had we been so fortunate as to procure a sight of this curious document, it would, doubtless, have afforded a still stronger proof of the correctness of our conclusion, that despotism is the necessary consequence of the moral degradation of a people, and it is greatly to be desired that our neighbours on the other side of the Channel should lay to heart the principle expressed by one of our greatest living authors (Gautier), viz. "that the writers of all books, poems, plays, pamphlets, and newspapers, are the real working effective power for good or for evil, of a modern country." For the noble sentiments which a gifted soul clothes in melodious words, and the noble deeds of feelings, dangers, and endurance of a brother man, when brought home to us, do they not touch our hearts, and warm our souls, and lead us to worship the good and the true, in contradistinction to the meretricious and the sentimental?

"Literature," says Fichte, "should be a continuous revelation of the god-like, in the terrestrial and common."

What is it, alas! in France!

DRAMATIC RECORDS.*

Few departments of our literature have been so inadequately chronicled as that which relates to the stage. Many causes have concurred in consigning it to neglect; its temporary nature, the fugitive character of the ordeal through which it first passes into publicity, and the difficulty afterwards sustaining in the closet the interest of productions which were intended to be presented with the animating adjuncts of scenery and action. If plays drop into oblivion for lack of the living principle with which they are endowed in the representation, we cannot be surprised that the still less substantial attributes of stage history should be almost equally aloof. We have, indeed, an account, if it may be so called, of the English theatre from the very commencement in Queen Elizabeth's time, in ten volumes, compiled with wonderful industry (and quite as wonderful incapacity of every other kind), by honest Mr. Genest, of Bath; and, probably, a more curious monument of trivial research and elaborate and tasteless accumulation of raw materials is not to be found in any other language. But it is indispensable to us, because it is the only comprehensive panorama we have of the progress of the stage and its literature. Other writers have illustrated particular periods, and some particular theatres; but Mr. Genest takes in the whole circle, availing himself of every opportunity to digress, and, with as much of a better, more routine, to occupy a corner on our shelves, until he shall have been displaced by some writer equally zealous and more efficient. Mr. Collier's "Annals of the Stage" came down only to the Restoration, when a new dramatic period opened, and a new form of comedy came into existence; but even were Mr. Collier's work more extensive, it could not be recommended as an authority.

The first contributions that were made to the history of the English stage appeared in the shape of booksellers' catalogues. Prefixed to Gifford's "Caroline Shepherdess," was printed, in 1666, a list of such plays as were then to be acted on stage; and after the same manner, and in the same style, we come to Lambaugh's "Account of the English Dramatic Poets," published in 1691, the slight foundation upon which all subsequent superstructures of dramatic biography and record have been raised. Gibson, Jacob, Whincop, and Kerston, followed at intervals, enlarging upon Lambaugh's account, particulars, and adding fresh matter. The *Lectures, Remembrances, and Registers*, which succeeded, showed at least that some interest was felt in the subject; but it was not until the appearance of the "Biography Dramatica," by Mr. David Erskine Baker, in 1764, that the "Catalogue Raisonné" began to assume the dimensions of a critical and historical dictionary. In 1782 Mr. Isaac Reed continued that work down to his own time; and Mr. Stephen Jones published a still more complete edition, in three volumes, in 1812, bringing the information under every head down to the preceding November.

Works of this kind can never, in the nature of things, be as complete or satisfactory as we could desire them to be. Outisious are unavoidable. It is hardly possible, by any amount of inquiry, to obtain full intelligence in all cases. In some directions, facts and criticisms must be taken at secondhand. The originals are inaccessible, and descriptions of them must be accepted on any authority that can be found. Then, to say nothing about the nature and overgrown dimensions of the work, to play in vast number of small items, there remains that large section of the labour which consists in a critical account of the plays enumerated, and which it is impossible to protect against the admission of errors, both of statement and opinion. None of the authors or compilers of the "Biography Dramatica" are exempt from complaint on this score. They have not the whole they are undoubtedly entitled to praise for the pains with which they collected their materials, and the diligence with which they investigated them; but their judgments are often marked by a degree of carelessness, to say the least, that greatly mars the intrinsic value of the publication. It is no doubt a very difficult thing to relate fully the story of a play in short space, or even to seize distinctly the central idea, as may be inferred from the terrible hash good Mr. Genest makes of the plots he attempts to unravel. The editors of the "Biography Dramatica" do not appear to have considered the development of plots a part of their undertaking, and whenever they descended into such particulars, they certainly did not do so with them than Mr. Genest did; but their labours in this respect were, nevertheless, not well performed, and the information of that kind which they impart constitutes a very inferior portion of their claim upon the acknowledgments of their readers. The real merit of the "Biography Dramatica" lies in the quantity of material it contains. It is the largest and most complete up with illustrative details, we possess of the literature of the English stage.

Mr. Halliwell's volume is avowedly grounded on the "Biography Dramatica," and, as far as it goes, improves upon its predecessor in the wealth

* A Dictionary of English Plays, written either in Print or in Manuscript, from the Earliest Times to the Close of the Seventeenth Century; including also Notices of Latin Plays written by English Authors during the same Period. London: J. B. Nichols. 1860.

of its resources. Dropping out all the plays that belong to dates subsequent to the close of the seventeenth century, he is enabled to preserve a certain character of unity in his work, which is unattainable in a miscellaneous catalogue of early and recent plays. The close of the seventeenth century marked a sufficiently distinctive period in the history of the stage to suggest a boundary at which the compiler has collected most appropriately a pause. Dryden and Shadwell, the last of the Restoration dramatists, and the laureates of the contending factions, were both gone, one before the century had quite expired, and the other immediately after. Congreve, although he did not die till nearly thirty years later, had brought out all his great comedies before the close of the century. A new style of stage entertainments was setting in; and the only writer who carried into the eighteenth century the spirit and gaiety of the Stuart comedies, produced all his pieces, with a single exception, before the close of 1704. The year 1700 may, therefore, be accepted as a landmark, where the gathering and note of our plays can advantageously be terminated, leaving successively marked our dramatic history from its beginning down to the latest moment from whence its decline may be dated. Mr. Halliwell's volume is, in this point of view, both curious and useful. It contains a list of all the plays that were written in the best days of the drama, and is unencumbered with any of those that have been written since.

He adopts all the articles of his predecessors that come within his design, but it is by the addition of new articles, especially of Latin plays, and of pieces of which the former editors had no knowledge, and in many instances could have had none, that Mr. Halliwell has chiefly enriched the work. Some of these he does their own good, as, for example, in the case of Sir Cornelius Formicola's tragedy, the "Governor." "This play," says the presiding editor, "was among those destroyed by Mr. Warburton's cook." "This play," says Mr. Halliwell, "was supposed to have been one of those destroyed by Warburton's cook, but a manuscript of it, dated 1636, is still preserved, and is in the Bodleian Museum, MS. Aldrich, 10411." In other instances, he checks their hasty conclusions, as in the case of the old play of the "Disguises." "It is probable," says the "Biographia Dramatica," that Stronche's play of "All Plot" was taken from this. "It is possible," says Mr. Halliwell, still following out the suggestion. Even the discretion which Mr. Halliwell exercises in such conjectures does not reconcile us to the employment of them. Guessing is no part of the business of an editor. Nothing should be taken for granted, and nothing should be assumed from the mere outside of things, or verbal resemblances. The fact that one play bears very nearly the same name as another, or that its plot is almost identical, does not, without further evidence, justify the supposition that the later piece was founded on the earlier. As an illustration, take the ancient play of "Dioeclesian," of which nothing more is known than that a play of that title was produced at the Rose Theatre in 1594. "It was," possibly, observes Mr. Halliwell, "the foundation of the play on the same subject by Beaumont and Fletcher, the last of the last century, which, hampered upon a lost play, is, that some future editor will drop out Mr. Halliwell's cautious 'possibly,' and transmit the suspicion as an ascertained fact to posterity. But why hazard such a suggestion at all? The subject is historical, and is open alike to all dramatists. Nor is there any reason for assuming that the play of the last century has been taken from the first, with no reference to the older play, and there is nothing that we know of in common between them but the name.

INCREASE OF INSANITY.*

CIVILISATION, or something that is called by that name for want of a better, is rapidly advancing, and insanity is on the increase: can there be any connection between the two facts? Horace—regarding Rome in the very height of its glory, when arts most flourished, when the state was most prosperous, and the empire most wealthy—detected a dark vein of insanity running through the Commonwealth:—

* André, autre totem l'opium, les complices, quinquas
Améliorés mœurs, et argentei palli amor;
Quinquas leuisti, tristes superstitio,
Quos non moris mortis odit. — *Line stylis me.*
Dum doctus insensate causas, vos ordines audit."

The lines of Horace seem to be as applicable to us—the foremost people on the globe—as they were to the Romans. It is the boast of the age in which we live that the efforts of human ingenuity in the last fifty years have outstripped in ingenuity of invention and in importance those of any half-century in the history of the world. Future generations will, in all probability, admit the justice of our self-congratulation; for it would be impossible to take even the most cursory view of the progress of science and art without appreciating the vast and rapid strides which have been made in the period indicated. We have had the galvanic current applied to the purposes of daily intercourse so effectively that no event of political or commercial importance can occur in any capital of Europe without its being known, within a few hours, from Stockholm to Lisbon and Constantinople. The progress of engineering statistics recorded in the Britannia and Victoria Bridges, and the world has wondered at its last effort in the construction of the *Great Eastern*. Labourers in the field of chemistry have been rewarded with prodigious success;—the organic division of the science may almost be said to have come into existence within the century, and so rapid has been its development, that at times the explorer seems to stagger upon the very verge of the abyss. The various branches of natural philosophy have shared the same rapid onward movement. Arts and manufactures have not lagged in the race of progress; every day ushers new inventions into life, and alas! for our civilisation—the art of war has in an especial manner crowned its victories with success in the extent and the rapidity of destruction at which their inventions aimed. And do we not all know that our commercial operations are conducted upon a scale and with a boldness of which our predecessors never entertained a conception,—their happy ignorance or caution, however, saving them from the perils of the thrones of a commercial crisis. But the prodigious laurels of the age have perhaps been won in the cause of education. The

labouring classes have had the opportunities of self-improvement afforded them, and how successfully they have availed themselves of the privilege is daily forced upon the attention of those who care to study the subject. A market daily over-crowded with candidates who as clerks seek to earn their livelihood at the desk, the introduction of middle-class and competitive examinations, and still more the severe and judicious use of the stick, has given a powerful impetus to mental culture amongst the middle classes. The over-crowded state of the learned professions, and the resulting severity of the competition amongst their members, have operated strongly, though indirectly, to raise the standard of education.

It is impossible to follow the retrospect, nor is it desirable to add to the self-illusion of the age. There are other facts intimately connected with the same period which, if they are not so pleasant to contemplate, do not the less demand serious reflection.

Of these facts one of the most undoubted is the lamentable increase in the prevalence of the insanity of the present age. The advance of science, the progress of civilization, the extension of education have been great, but insanity, in its various forms, has advanced *pari passu* with these triumphs of our day. We are forced to the conclusion that there is a connection between advanced civilization and the increased prevalence of mental disease. Upon no other supposition can we explain the fearful amount of insanity in our large cities, and its steadily increasing ratio as we ascend from the least to the most cultivated class of those who subsist by the labour of their hands. Such a state of things is not encouraging.

What are the circumstances mainly productive of insanity, and at the same time conducive to its increase? The causes which operate as yet unfortunately, are of the very triumphs that we regard so consecrately as the boast of the century; but in an especial manner they are the extension of education and that competition of the day which may be designated as "the struggle of life." Nowhere is life so "fast" as in America,—nowhere is insanity so common, or the prevalence of the insanity so early in age, as in England. In the various professions is so incommensurate with the demand for their labours that the severest competition results. Fearful of being outstripped in the race, men systematically and continuously overtax their mental powers, and when they flag from want of repose, too often spur them on by artificial stimulants. Little physical exertion, and the excessive mental and brain-work by day, stimulates which exhaust nature's small reserve of power, while they appear to create new energy,—night, however, often disturbed by anxieties for the morrow, and all this for a series of years! What must be the last chapter of such a feverish existence? Unfortunately, too, the competitive life does not begin when the professional man enters the arena fairly to earn his livelihood; it opens at college; it is felt at school, and anxious parents whisper the first promptings of emulation as they strap the child's satchel on his back. The boy of eight or nine is too often urged on to study, while little heed is taken of his physical development. What was the cause of the premature school becoming a hard mental labour in his first feverish work at college, where mental competition in his profession, until at last the prematurely overworked brain loses its coordinating balance, and madness or softening of the brain and dementia close a short and often a promising career. And, to descend a step lower than the learned and literary professions, the same causes operate amongst the trades, the mechanic and anxious mental labour is ever required; and, apart from the onerous duties which they have to discharge, how many there are of their number who, from the competition of the age, are unable, though willing, to find employment. When in a situation, uncertainty of tenure; when out of work, want of money,—the uncertainty of the future, the anxiety to the lunatic asylum. In England we are happily free from one great source of mental disease—violent political excitement,—and it is unnecessary to allude to such endemic causes of madness as religious excitement, evidenced, however, of late in the revival movement in the north of Ireland. A deep feeling of class of prophesying causes to insanity, present itself for consideration in our social state with regard to marriage and other cognate subjects, but the discussion of these could not be undertaken within the limits of this article.

We have already alluded to the commercial operations of the present day, and on this subject it must be remarked, that whether arising from the anxiety and tension of mind inseparable from the uncertainty of speculation or from the nervous consciousness of overtaxing and daily impending embarrassment, it is an unquestionable fact that the commercial world furnishes an astounding number of lunatics to our asylums, and most medical men in London practice have had professional experience of the frequency of premature softening of the brain amongst the same class. The same alienation, frequent as its manifestations have become, although the most evident, is not the only imperious result of excessive intellectual labour and the daily anxieties of life. There is a degree of mental distension short of well-marked insanity, but often its precursor, which is unhappily more common than would be suspected by those who have not paid attention particularly directed to this subject. There are few physicians who devote their attention to psychological disease, who are not at least daily consulted respecting symptoms of premature mental decay, loss of memory, fancies and illusions, the most distressing and even hideous character amongst the educated classes, the community, and which long experience has taught them to recognize as the frequent heralds of advancing insanity. We might almost venture to say that a large majority of the brain-working classes have at times experienced mental symptoms of a character which their own judgment recognizes as so nearly allied to the diseased class of psychological actions that they have for a short time occasioned suspicion of the gravest nature in their own minds.

Is there any remedy for this prevalence and increase of mental diseases? The question is full of difficulty. It would be hopeless to attempt to answer it shortly and satisfactorily, but its suggestion will at least attract attention to the subject, and perhaps induce people to pause and consider whether they are not living too recklessly. Its mere discussion may induce our brain-working classes to labour less continuously than they now do, and to give their minds that reasonable amount of repose which is essential to a healthy discharge of their functions. It has been our purpose throughout less to subject so difficult a subject to a severe and rigid analysis, than to which, in the busy life, rarely attract his attention; and after having suggested their existence, to leave him to make his own reflections. Great as is the capacity of the human mind, it can be taxed beyond healthy limits;

* *Chronic Diseases of the Brain and Disorders of the Mind.* By Forbes Winslow, M.D. London, John Churchill.

* We warned, you victims to an ill-regulated ambition, you morose-problems, you pleasure-seekers, you boys and girls, and you who allow your powers to be filled with an all-engrossing passion, you are mad!—mad!—all down-right mad!—Crazy, listen to me, and I shall convince you of your insanity."

and this observation, applicable to the individual, holds equally good when applied to a generation. Does not society *en masse* lose more than it gains by that feverish and railway speed of life of our day? The age has much to boast of, but it is possible for even an age to attempt too much. *Fœtus* life is the moral of our theme—a moral which requires iteration in this “gas-hell” nineteenth century.

These reflections have been suggested by the perusal of Dr. Winslow's latest production, a valuable work upon obscure diseases of the brain and mind. Dr. Winslow has been long and honorably known to the medical profession and the public as one of the most earnest and enlightened laborers in the difficult field of psychological medicine. The work before us is worthy of Dr. Winslow's high reputation. We need hardly say that it is a volume intended for the professional reader, and in respect to mental diseases, and more particularly their presymptomatic symptoms, it is a valuable contribution to medical literature. Dr. Winslow earnestly impresses upon the profession the importance of recognizing and treating the early symptoms of brain disease, of which he gives a masterly outline for their guidance. To the professional reader his description of what he very happily names “the chronic phase of insanity,” will be deeply interesting, and his hypothesis of medullary alteration in the nerve centres, as influencing the intellectual, will be found of interest. We are glad to notice that the book is, to some extent, prefatory of a more extended work upon psychological disease, and we cordially commend the present volume to the attention of the profession.

AN AMERICAN STATESMAN.*

ENGLISHMEN are best acquainted with two epochs in the history of the United States—with that age when the great men of the war of independence shaped the destiny of the Republic, and that period which preceded thirty years ago, when newspapers and extended intercourse between the two sides of the Atlantic have made every state of the Union as familiar to us as an English county. We do not, however, connect the two pictures. We cannot explain how the one society grew out of the other. In the first period the canvas is filled with the major figures—Washington, Franklin, Adams, Jefferson, and others whose names there has already gathered the historical halo which has hitherto belonged almost exclusively to the heroes and legislators of a remote antiquity. The sagacity, the unimpassioned wisdom, the spotless integrity, and the lofty patriotism of these men, gave their impress to the policy and legislation of the Republic during the earlier years of its existence. In all classes, at that time, we could trace the same desire to found a stable government, by the repression of riot and revolutionary excess, and the same readiness to sacrifice personal interests to the good of the commonwealth. With a vast and rich territory, with such leaders and such a society, it was concluded that the Union had entered on a boundless and unclouded career of prosperity. We are startled, then, when we again become closely connected with American politics, to find that the old picture was gone, and that a more caricature had usurped its place. Power had been wrested from the hands of honourable and patriotic men, and handed over to the leaders of factions,—and intriguing and insinuating placemen engaged in endless plots and counterplots of selfish aggression. It was difficult to explain how this change had been effected. It was difficult for a foreigner to trace the various phases by which the Federalists and Republicans of earlier days had been metamorphosed into Whigs and Democrats; to follow the *ars et opus* by which the sons of the Virginian cavaliers had begun to regard the offspring of the Massachusetts with a deep and alien look. It had been known to their fathers,—and how, above all, it had come about that the small minority of the slave states monopolized the talent and eloquence of Congress, and, in defiance of public opinion in the rich, the populous and the cultivated north, could control every act of the Legislature. We find all these questions fully discussed in this work, which recurred to the memory of a great statesman, who by his first political writings attracted the notice and guided the foreign policy of Washington, and who, devoting his powerful and highly-cultivated mind to public affairs, never closed, down to our own times, to exercise a powerful influence in American politics and legislation. It shows us how the complicated network and tangle of modern parties and factions has been produced from elements which existed in the earliest days of the federation; when slavery, on the eve of extinction, seemed a subject so unimportant as not to attract the notice of the framers of the constitution. How could they anticipate the rise of the steam-engine, and the consequent growth of the English cotton trade? It traces all the causes which have made America suffer to the curse of slavery. It maintains that its abolition will restore the political system of the United States to healthy existence; and it proves that those so-called phenomena of social decay ascribed by European publicists to republican institutions are totally unconnected with these causes, but have sprung from the same ignorance which has oppressed and undermined the civil and political life of the State. The author of this work, who himself is the last representative of the old school of American statesmen, was better able than any living politician to record the life and opinions of his old friend and fellow-laborer. He has, we think, been pre-eminently successful in producing a book calculated to re-awaken and enlighten his countrymen, and he has done so not by commenting on the facts he records, but by extracting from the voluminous writings of Adams himself those passages which best exhibit the consistency and soundness of his political career, and by making him “the expositor of his own motives, principles, and character, without fear or favour, in the spirit neither of criticism nor eulogy.”

John Quincy Adams was born at Braintree, in Massachusetts, on the 11th July, 1767. Standing with his mother on the top of Penn's Hill, near his father's house, he heard the cannon of Bunker's Hill, and saw the smoke of the burning Charlestown. He took part when the declaration of independence was read at the Old State House of Boston. From his earliest years he was thrown into the closest contact with his father, the sagacious and thoughtful John Adams who had tempered the democratic republicanism of Jefferson.

In 1773 John Quincy Adams accompanied his father and Franklin to Paris, whither they went as plenipotentiaries. Next year his father was named to Holland as American Ambassador, and there the subject of this memoir went to school at Leyden. When the elder Adams was appointed ambassador

to England, his son, then eighteen years of age, and still in Europe, felt strongly tempted to join him; but a strong feeling of duty induced him to stand by the pleasure and distractions of diplomatic service for the absence and dull life of a country lawyer. He returned to the United States, and after studying law, was admitted to the Bar. He opened an office in Boston. The ranks of the profession were crowded. “My father,” he says, “was then in a situation of great responsibility and notoriety in the Government of the United States. But he had been long absent from his country, and still continued absent from that part of it to which he belonged. I went, therefore, as a volunteer and adventurer to Boston. While my father was absent he made his *ad hoc* in political life. Thomas Paine had just published his “Rights of Man,” and a reprint of it was announced, with a letter of recommendation by Jefferson. Nurtured in his father's political school, young Adams entered the lists. He denied that “whatever a whole nation chooses to do it has a right to do.” In opposition to this doctrine, he held that “nations, no less than individuals, are subject to the eternal and immutable laws of justice and morality.” The doctrine of Paine, he said, annihilated the security of every man for his inalienable rights. It would lead to a hideous despotism under the mask of democracy. In 1783 he published a series of articles on the foreign policy of the United States, which attracted the attention of Washington and his Cabinet. He was induced, reluctantly, to quit the sphere of private life, to return to Europe as minister to the Hague. After a brilliant diplomatic career of eight years in Europe, he was obliged again to return to the work of a lawyer at the Massachusetts Bar, with old studies to revise and new statutes to read, and a family to support. But poor, he had a large family to support, and he felt he had made a sacrifice in devoting himself to the public service. Mr. Adams had, throughout his whole life, bestowed his leisure on the enthusiastic study of science, and more particularly of astronomy. He was not only acquainted with English and classical literature, but he had, while resident in Europe, studied the great authors of Italy, France, Germany, and Holland; and all his productions show with what profit he had done so, and how constantly present to his mind were all those great elements of heroism and self-sacrifice, ennobled in literature, which tend to calm and ennoble the human character. In 1805 his directions for a voyage to the North Pole, for astronomical observations, and Harvard College. In 1817 he was appointed Secretary of State—in popular opinion a proximate step to the presidential chair. No sooner had he assumed this position, than all the old columns launched against his father were revived. He was represented by the press as “an enemy to the rights of man,” “a royalist,” “a friend of oligarchy,” “a person quite unfit to be the minister of a free and virtuous people.” At this time the great question whether Missouri should be admitted as a slave state rendered the political atmosphere dark and stormy. Slavery had become already the great question of American politics, and the Missouri Compromise passed into law.

Slavery a question of deeper and more serious importance than the Missouri incident. The torrent of calumny and abuse which then poured down upon him is incredible. At the end of four years he was supplanted by President Jackson, who was returned by a coalition between the slave interest and the unpopularity of the north. Jackson confirmed his popularity by a new policy. He resolved to bring about the annexation of Texas, a province which had been discovered by the United States, but which he had in extent to Kentucky. In 1836, after swarms of land jobbers had covered the Mexican territories with slaves, in defiance of the laws of Mexico, and when the war was just beginning, Mr. Adams delivered a memorable speech, in which he pronounced the war to be one of aggression, conquest, and for the purpose of extending slavery. He said, “The banners of freedom will be the banners of Mexico, and your banners—I blush to speak the word—will be the banners of slavery.” We need not say that the eloquence of Mr. Adams was unavailing. Mr. Quincy tells how he was treated, how attempts were made to expel him from the House, how he was bullied and threatened with assassination, both open and by letter, and how, during the most stormy debate which had ever occurred in Congress, he received, among other communications through the Post-office, a coloured lithograph of himself with the picturesque annotation of a rifle-ball on the forehead, and the significant words “This will stop your noise.” The session of 1840 was painful to him because of the great energy he knew before that American parties had lapsed into profligate factions; but now there was a change in the manners of the people, and all the institutions of the country were visibly degenerating. The constitution of the country, which had combined the advantages of federal institutions, monarchy, oligarchy, and democracy, was now being steadily and systematically guarded against democracy, had practically defeated all the expectations of its framers. The influence of slavery was the subject of the last great effort of his life,—an address which he delivered on the 7th day of October, 1846, to a political society of Boston. After recapitulating the banks of an omnium bonorum which he had enjoyed for more than fifty years of life in his native city, he said, referring to his former business: “They were your fathers, and they had maintained the freedom transmitted to them by their sires of the war of independence; they have transmitted that freedom to you; and upon you now devolves the duty of transmitting it unimpaired to your posterity. Your right is approaching. The time is fast coming when the great energies are drawing together for the deadly conflict of arms. . . . Prepare for the struggle; and I say to you, in the language of Galgacus to the ancient Britons, “Think of your forefathers, think of your posterity.”

At the advanced age of eighty-one Adams continued daily to attend the House of Representatives. On the 21st of February, 1848, he answered to the call of his name in a clear and emphatic voice. Rising soon after, with a paper in his hand, to address the House, he was seized with paralysis, and fell into the arms of the gentleman sitting next him, uttering these words: “This is the last of earth: I am content. He was removed to the speaker's apartment in the capitol, where he shortly afterwards breathed his last.

THE ENGLISH TONGUE.—One of the Orpheuses having received an unintended answer to a query, thus expressed his disappointments:—“Ver odd little diggle diggle. He say, angering, ‘I talk into you!’ How can he do that? Bettle conjurer, he tell me, talk into hot; but dat was take in—swindle. I can not comprehend. He call him ‘his fellow,’ who never in time for keep him promise.”—J.

* “The Life of John Quincy Adams.” By JAMES ALLEN, LL.D., Boston.

In One Vol., bound in crimson cloth, price 12s. 6d.
A SECOND SERIES OF VICISSITUDES OF FAMILIES. By Sir
 HENRY BIRKE, Under King of Arms. This Second Series comprises Stories of Vicissitude in our great families, and is more marvellous even than those which
 rendered the first series so popular.

LONDON: S. C. PALMERSON & CO.

* * * Orders should be given at once to the Bookellers.

THOMAS HOOD.

This day is published, in Two Volumes, post 8vo, 21s. cloth.

MEMOIRALS OF THOMAS HOOD, collected, arranged, and edited
 by his Daughter, with a preface and notes by Mr. N. S. P.
 Illustrated with many copies from his own sketches, and of a MS. page of "The Song of the Shirt."

LONDON: EDWARD MORDEN & CO., DORSET-STREET.

TEXTON'S "PRINCESS," WITH MACHINES ILLUSTRATIONS.

Printed in royal 8vo.

THE PRINCESS: A Melody. By ALBERTA TEXTON, Esq., D.C.L.,
 Port-Lancaster. With Twenty-six Illustrations in Wood by Thomas Dalziel, Williams,
 and Green. From designs by D. Macdonald, R.S.A. Cloth gilt, 1s. 6d.; morocco gilt, 1s. 10d.; morocco
 stamped, by Hayley, 6s. 11s. 6d.

WORKS BY MR. TEXTON.

THE KING OF THE KING. Price 7s. cloth.
POEMS. Thirteenth Edition. Price 10s. cloth.
IN MEMORIAM. Ninth Edition. Price 10s. cloth.

THE PRINCESS: A Melody. Ninth Edition.
 Price 5s. cloth.
MAUD, AND OTHER POEMS. Third Edition. Price 5s. cloth.

LONDON: EDWARD MORDEN & CO., 44, DORSET-STREET.

DYCE'S SHAKESPEARE.

In Six Vols., demy 8vo., price 6s. 6d., bound in cloth.

THE WORKS OF SHAKESPEARE. The Text Revised by the
 * * * In this Edition the Notes are placed at the end of each Play.

A minute examination has satisfied us that this is the best Text of Shakespeare which has yet
 been given to the world. * * * This is a new edition of the works of Shakespeare, and is
 an admirable text of Shakespeare before, and we will be true to the thousands of people who
 are always looking for something interesting to read, that this will read again the Works
 of the Sonnet of Literature, and read him in the edition of Mr. Dyce. — *Quarterly Review*,
 January, 1850.

LONDON: EDWARD MORDEN & CO., 44, DORSET-STREET.

New Edition, price 12s., cloth, lettered, with Two Engravings on Steel.

TURNER AND HIS WORKS: Illustrated with Examples from his
 Pictures, and Critical Remarks on his Principles of Painting. By JOHN RUSKIN, F.R.S.,
 Author of "PRACTICAL NOTES ON PAINTING," "ELEMENTS OF HIS WORKS," &c. The
 Second, by PETER CUNYFFE, F.R.S., Author of "A HAND-BOOK TO LONDON," &c. Re-
 edited by HARRY MURRAY, F.R.S.

LONDON: JAMES S. VICTOR, City-road and Ivy-lane.

New Edition, price 12s., cloth, lettered, with Fourteen Engravings on Steel.

REMBRANDT AND HIS WORKS: comprising a Short Account of
 his Life, and a Critical Essay into his Principles and Practice of Design, Light,
 Shade, and Colour. Illustrated by Examples from the Engravings of Rembrandt. By JOHN
 RUSKIN, F.R.S., Author of "PRACTICAL NOTES ON PAINTING." Re-edited by H. MURRAY,
 F.R.S.

LONDON: JAMES S. VICTOR, City-road and Ivy-lane.

New ready, in demy 8vo., price 10s., cloth, lettered, Illustrated with Three Hundred
 Engravings on Wood.

**UNITY IN VARIETY, AS DEDUCED FROM THE VEGETABLE
 KINGDOM.** By CHRISTOPHER DREMER, Ph.D., Author of "RECURSUS OF BOTANY,"
*Lecturer on Botany, and Lecturing Classes in the Department of Science and
 Art, South Kensington Museum.* Being an attempt at developing that oneness which is
 discernible in the beauty, mode of growth, and principle of construction of all plants.

LONDON: J. S. VICTOR, City-road and Ivy-lane.

New ready, in demy 8vo., price 12s., cloth, lettered.

THE RUDDIMENTS OF BOTANY. By CHRISTOPHER DREMER, Ph.D.,
Lecturer on Botany, and Lecturing Classes in the Department of Science and Art, South Kensington Museum.
 Illustrated with nearly 100 Engravings.

This work contains a full Introduction to the Science of Botany. It is so constructed as to
 give the most elementary knowledge of the Science, as well as all necessary details to the more
 advanced learner. It is especially a Manual for Students, making no higher pretension than
 that of giving, in the most simple manner, as complete a knowledge of the Vegetable Kingdom, and
 is founded upon the system on which the science is taught in the Department of Science and
 Art of the Privy Council for Education.

LONDON: J. S. VICTOR, City-road and Ivy-lane.

New Edition, Revised.

A WEEK AT KILLARNEY. By MR. AND MRS. S. C. HALL. Illustrated
 by Twelve Engravings on Steel, Two Maps, and about One Hundred Woodcuts.

The Publisher has the pleasure to announce that the authors of this popular Work have
 carefully revised it, so as to augment the interest with all the new notices and observations which
 recent improvements have introduced in the several districts surrounding, or which lead to
 the Killarney Lakes; and the most complete change has been made in the Notes, and in the
 additional information that are here set out to visit the most beautiful and interesting portion
 of the British dominions. Price 1s., cloth gilt.

LONDON: JAMES S. VICTOR, City-road and Ivy-lane.

THE ENGLISHWOMAN'S DOMESTIC MAGAZINE
 6d. Monthly. No. 3 (for July) now ready.

THE FASHIONS ARE NEEDLEWORK.

1. A STEEL PLATE OF THE FASHIONS FOR JULY, printed and painted by hand in
 Paris, showing the styles of the season.

2. AN ARABESQUE BERLIN WOOL-WORK PATTERN OF CUSHION, in seven colours.

3. A LARGE SEPARATE SHEET OF COLOURED PAPER (equal to 32 pages), containing
 31 of the several Embroidery Patterns of Collars, Shirts, Pocket-handkerchiefs, Initial
 Letters, Ensigns, Inscriptions, Bookmarks, Patterns in Sewin Stitches, Crochet Fringes,
 Infants' Frochings, &c. All of each size for working.

4. A FULL-SIZE PATTERN OF SILVER, showing the precise shape and size of
 the Spoonettes, Fork, Whisk, Straps, &c.

LITERATURE AND ENGRAVINGS.

1. The Family Secret. By the Authors of "Caleb's Clerk." Chapters IV., V., and VI.
 Illustrated by JULIUS POTT.

2. The Domestic History of England. By MARIA & RICH. THE NORMANS. With seven
 Illustrations from "Rural." Price 1s. 6d.

3. Amongst the Americans. By F. GRANTZHAFF. With a Sketch of the Cruise on the
 Mississippi, by H. G. H. H.

4. The Son-in-Law. By CHARLES DE BRANDAN.

5. The Son. By HENRY HAY.

6. A Memoir of Helen. Duchess of Orleans. By MRS. HENRIETTA.

7. Poetry of the Month. July. With Embellished Heading by MISS HENRIETTA.

8. "Little Richmond." By MISS HENRIETTA.

9. The Fashions, with Descriptions of the Dresses shown in the Coloured Plate.

10. What to do in the Garden in July.

11. Things in Season, and Domestic Recipes for July.

12. The Englishwoman's Conversation.

No. 1. and No. 11. of the ENGLISHWOMAN'S DOMESTIC MAGAZINE have been reprinted,
 and are now on sale, with the Fashion Plates and Berlin Patterns complete.

S. O. DREMER, 294, Strand, London, W.C.

A specimen Number sent, post free, for six postage stamps.

Published this day, price One Shilling.
UNIVERSAL SUFRAGE AND NAPOLEON III.
 By LAWRENCE GILBERT, Esq.
 London: W. BLACKWOOD & SONS.

Published every Friday Morning, for Saturday, Price 1d.

T H E B U I L D E R .
 An Illustrated Weekly Magazine and Newspaper
 FOR THE
 ARCHITECT, ENGINEER, ARCHITECTURAL, CONSTRUCTOR, AND ARTIST.

Conducted by GEORGE GOSWELL, F.R.S.

Vice-President of the Royal Institute of Architects, &c. &c. &c.

"THE BUILDERS" is to be found on the part of the most illustrious Gentlemen in the kingdom,
 and the Clubs and Government Offices, in the library of the clergyman, as well as in the more
 humble dwelling of the operative, and in all places it is to be found matter of the greatest interest
 to Architects, Engineers, Surveyors, Builders, Artists, Antiquaries, and all the numerous
 readers connected with Building, owners of house property, the guardians of public edifices,
 Dealers of national improvements, &c. &c.

Constantly and judiciously made use of, and of course the proprietors' duty price,
 in return for this favour, the paper is given more prominently enlarged, without increase of price,
 and various new features introduced. An occasional Supplement is also given.

Honesty, exactness, and zeal, to claim no higher praise, has caused "THE BUILDERS" to be
 recognised as an authority on the subjects which it treats, from one end of the kingdom to the
 other; and is read, and regularly quoted by the whole of the periodical press, meteor-
 ologists, physicians, and foreign.

"THE BUILDERS" is printed on good paper, and in a superior style of typography, by the well-
 known firm of COX & WYATT.

Price Fourpence, or stamp for post, Fivepence.

OFFICE: 1, York-street, Covent-garden, London, W.C. 1.

And may be had of all Newsreaders and at Railway Bookstalls.

AGENTS—MILNERS, Mr. G. Robertson; ARBUTHNOT, Mr. W. G. Roper; NEW YORK,
 Messrs. Willson and Rogers.

**MESSRS. CASSELL, PETER, & GALPIN'S
 NEW WORKS.**

NOW READY—CHEAPEST ILLUSTRATED BIBLE EVER PUBLISHED.

CASSELL'S ILLUSTRATED FAMILY BIBLE. Vol. I. Genesis—
 1 Samuel. With Comments and Notes explanatory of the Text, from the highest and
 latest authority, and Marginal References, with specimens of THIRTY HUNDRED
 ENGRAVINGS, representing Scenes, Localities, Industries, and Objects mentioned in
 Scripture.

8vo., Handsome Cloth Boards, Gilt Back and Edges, 7s. 6d.

8vo., Handsome Cloth Boards, Red Edges, Gilt Back and Side, 9s. 6d.

8vo., Handsome Cloth Boards, Red Edges, Gilt Back and Side, 9s. 6d.

Cases for Binding Vol. I, price 2s. 6d., 3s. 6d., 4s. 6d.

The Work is also published in Weekly Numbers, price 1d.; in Monthly Parts, price 6d., and

6d.; Quarterly Issues, 1s. 3d.; and in Half-Yearly Volumes, 2s. 6d.

"The type is large and clear, the references are sufficiently ample, the illustrations are

excellent, and the notes are very full and useful. It is a noble undertaking." — *Morning Herald*.

"Not only is it furnished with copious historical and descriptive foot-notes, and references to

parallel passages, but it is embellished with a series of engravings, unprecedented in number, to

beauty of design, and artistic finish." — *Daily Telegraph*.

JUST PUBLISHED, IN ROYAL 8vo., ELEGANT CLOTH, ILLUSTRATED WITH

THIRTEEN OF 100 WOOD ENGRAVINGS AND TWELVE TINTED PLATES,

VOL. I. PRICE 6s.

CASSELL'S POPULAR NATURAL HISTORY, containing an interesting
 and complete account of—

I. FOUR-HAND ANIMALS, including the whole of the Monkey Tribe.

II. WINGED-HAND ANIMALS, including the Bat, the Vampire, and numerous
 other curious varieties.

III. FISH-EATING ANIMALS, comprising the Haddock, Tench, Shrew, Musk
 Fish, &c. &c.

IV. ROBBER, OR GRABING ANIMALS, as the Hare, Rabbit, Squirrel, Marmot,
 Porcupine, Beaver, Moose, Bat, and numerous others.

V. FLESH-EATING ANIMALS, which commences with the Lion Tribe.

Parts XIII. to XV. (Parts I. to IV. Second Volume) are now ready, price 6d.

"We cannot appreciate or commend too highly the volume before us, which, both from its
 classification of details, sequence of argument, and general mode of treating the subject, is
 eminently calculated to facilitate the acquirement of the student, and bids fair to become one of
 the most popular books of its kind." — *Literary Gazette*.

"Its size and elegance render it suitable for the drawing-room; the masterly character of the
 contents adapt it for the study." — *Church Chronicle*.

"One of the latest acquisitions of popular literature combined with science that we know."
 — *Christian Witness*.

**GLENNY'S ILLUSTRATED FORGET-ME-NOT, with TWENTY
 ENGRAVINGS;** and

A SERIES OF ORIGINAL ARTICLES UPON RURAL SUBJECTS.

In 12mo. Cloth in Cover Wrapper, price 1s. 6d.; or, elegantly bound in Cloth, extra gilt, for
 the drawing-room, price 2s. 6d.

ANY MOSS; or, THE BANKS OF THE OHIO. 12mo. Illumi-
 nated Boards, price 2s.

ROLAND DE MONTREUIL; or, THE COMPANIONS OF JEHU.
 A Tale of the French Revolution. By ALEXANDER DUMAS. 12mo. Illustrated boards,
 Price 2s.

HOPE EVERMORE; or, SOMETHING TO DO. A Tale of the
 Pearl Schools. 3 Vols. Crown 8vo. In the press.

SHARDS OF SHAKSPERE. A Collection of the most brilliant passages
 from the Works of William Shakspeare, arranged and designed by Henry
 Madden. 12mo., beautifully bound in cloth, extra gilt, lettered boards, price 1s.

"A pretty and charming volume." — *Illustration*.

"An ornament to the drawing-room table, as well as for occasional perusal." — *Morning
 Herald*.

**CASSELL'S ILLUSTRATED HISTORY OF ENGLAND; from the
 Earliest Period to the Death of George III.**

By WILLIAM BOWITT.

Complete in Four Vols., royal 8vo., cloth boards, price 1s. each.

CASSELL'S ILLUSTRATED HISTORY OF ENGLAND during the
 last 100 years. From the Commencement of the Reign of George III.

By WILLIAM BOWITT.

Now published in Weekly Numbers, price 1d.; in Monthly Parts price 6d. and 6d.; Quarterly
 Sections price 1s. 3d.; and will be completed in Two Vols. royal 8vo.

LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 2.]

SATURDAY, JULY 14, 1860.

[PRICE 3d.]

POLITICAL COWARDICE.

IN private life there is scarcely to be found a more objectionable and mischievous character than the amiable man of good intentions, who loves his own ease better than high principle, who desires in all emergencies to "make things pleasant," and who is cursed with the inability to say "No." His moral cowardice continually leads him into difficulties, from which he can escape only by pecuniary or personal sacrifice. He adjourns the unpleasantness which he cannot hope to avoid. He encourages aggression by his weakness, and in his weakness he succumbs to it. His children become undutiful, his servants ungrateful, and his friends, even if they affect to love him, despise him in their hearts. He is the prey of beggars and swindlers, and of all the sharp-sighted knaves who learn that to threaten is to subdue him. By dint of being continually pleasant to everybody, he ends by making an atmosphere of unpleasantness all around him. He dies without securing that peace and ease which were the objects of his life, and is dismissed into oblivion, condoned but despised, with the contemptuous epitaph, that he was "no one's enemy but his own."

It will be a bad day for England if our statesmanship shall permanently assume a character such as this, and if our leading public men shall become the political cowards which some of them are. Of late years there has been too decided a tendency to this unworthy good-nature—too strong a desire to "make things pleasant," and to forget, despise, or adjourn the consideration of those high and enabling principles of conduct which have made us a great and powerful nation, especially when their assertion threatened to hasten the easy jog-trot of political hacks, and to cost much exertion to men in office, or much money to the State.

To tide over the evil day appears to be the highest object of such men. To conciliate opposition suits them better than to conquer or overbear it, especially if the conquest be attended with any personal sacrifice; and to yield all demands, however degrading, which it is inconvenient to resist with no other than a barren remonstrance against the wrong, is the highest effort of virtue which they appear to be capable. It was in this way that our statesmen made default, when the late *Comte de Nicholas* threatened to march his armies across the *Pruth* for the conquest and humiliation of Turkey. A bold message from the Prime Minister of Great Britain, at the very commencement of those difficulties, notifying that such a step would have been a declaration of war against this country, would infallibly have prevented all the horrors, bloodshed, and bootless glory of the Crimean campaign. But our respectable statesmen were timid, and allowed the critical moment to pass by. The consequence was, one of the most useless and unsatisfactory wars recorded in modern history;—a war in which we neither saved Turkey, nor seriously checked Russia, —a war in which our ally gained all the credit, and we all the hard blows, and which was brought to a termination against our will, at a moment when our blood had just been sufficiently roused to enable us to do something effectual for the future peace of the world. A curt and decisive negative to the demand of the Emperor of the French, when he called upon the Ministers of Great Britain to alter the criminal jurisprudence of their country, in the matter of the trials consequent upon the wicked attempt of *Orsini* on the Emperor's life, would have saved the Palmerston administration of 1858 from an ignominious defeat, and raised not only the moral status of British statesmanship, but the prestige of the country throughout the world.

But such answer was not given, and the Anglo-French alliance has ever since exhibited symptoms of coolness and dilapidation; not so much from the fact that the ruler of the French was unreasonable, but from the worse fact that the responsible chief of the British Ministry was much too good-natured to say "No;" and far too anxious to "make things pleasant" to a powerful neighbour, to perform a disagreeable duty.

The same sort of amiable but mischievous weakness is to be seen in the conflict of powers that has unfortunately broken out between the Lords and Commons on the vital subject of taxation. As usual, our excellent Prime Minister desires to make things comfortable. The House of Lords is told that it has done wrong in attempting to re-impose the excise duties upon paper, after the House of Commons has determined to abolish them. It is softly admonished not to interfere with the power of the purse; and politely informed that its breach of privilege, and usurpation of an authority not belonging to it by the recognized practice of the Constitution, is to be endured for this time only, and must not be repeated,—otherwise the House of Commons will have the unpleasant duty of remonstrating again;—perhaps a little more sharply than before, but certainly not to the inconvenient extent of an open quarrel and a counter course of action. There could be no sadder political poloyneroo on the part of the House of Commons than this. Such a tampering with a sacred principle, though it may give the Administration a lease of office until February, 1861, must of necessity create new and greater difficulties—either for this Administration or its successors—and will indubitably foment a great and very serious quarrel, out of what might otherwise have been a small one.

The country itself has a more earnest spirit, and sees that Ministers and the House of Commons will both be stultified, unless measures be found to give practical effect to the resolutions carried by the aid of the too-willing Opposition on Friday last. To collect, on the authority of the House of Lords, a tax abolished by the House of Commons, whether the tax be abolished by a great or a small majority, or be in itself considerable or inconsiderable in amount, is a beginning of strife of which no man can foretell the close. Better to stop such an evil at its outlet, when it is but a little stream, than allow it to swell into a flood. Most people admit the question of the abstract right of the House of Lords to refuse its consent to the repeal of the paper duty, or any other tax; but, after the exercise of that right, the functions of the House of Commons again come into operation, to assert the prior and paramount right of the popular branch of the Legislature, and to re-affirm its first determination. There are many abstract and theoretical rights which wisdom and common sense will not exercise. It is a man's right, if it so please him, to cut off his nose; but none, except fools or maniacs, would exercise such a power. It is the theoretical right of the Sovereign of these realms to reject measures passed by the Lords and Commons, and to make successive appeals to the country to elect a Parliament subservient enough to give effect to the royal will; but what king or queen would be insane enough to stake the tranquillity of the country and the popularity of the monarchy on such an unworkable principle? Had this country undauntedly such a sovereign to rule over it, a civil war, and perhaps the destruction of the monarchy, would be the result if the chief of the State unluckily happened to be as obstinate as he was unwise.

In the present state of Europe, we should deprecate and deplore any dislocation of the British Ministry that might tempt the des-

potie Powers of the continent to combine for the extinction of the nascent liberties of Italy, or for the mutual aggrandisement of the confederates. For this reason, among many others equally cogent, but not perhaps so pressing, it is to be hoped that Lord Palmerston, and the colleagues who agree with him as to the inexpediency of resisting the House of Lords, by acts as well as by words, will reconsider their determination, and exhibit the moral and political courage which the occasion demands. Mr. Gladstone and Lord John Russell owe it to their own honour and reputation, and to their chance of future usefulness to the country, either to convert Lord Palmerston to their bolder and sounder views, or to leave the Administration. Courage is the best peacemaker, and if a majority of the House of Commons do not see their duty to resist the encroachment at the present time, the day will assuredly come when they will either have to fight a still fiercer battle, or resign their place as the governing power of the nation.

THE COMING CONFERENCE.

Mons. DE Vattel, in his admirable work, defines the *Natural Law of Nations* to consist in the application of the law of nature to nations. "It contains the precepts prescribed by the law of nature to states, on whom that law is not less obligatory than on individuals, since states are composed of men, and the law of nature is binding on all men, under whatever relation they act. Hence it is necessary, because nations are absolutely bound to observe it." This is the law which Grotius calls the *Internal Law of Nations*, "on account of its being obligatory on nations in point of conscience." If these eminent jurists had been in the habit of studying the Blue-Books of the present day, more especially those relating to the affairs of Italy, Savoy, and Nice, they would have been forced to the conclusion that some of the nations of Europe, at all events, having no consciences, had ceased to be bound by any law, but had become a law unto themselves, and therefore sat at defiance all those international principles so carefully and ably laid down by these learned men. Unquestionably, that moral code by which men are bound in the social relations in which they stand towards each other, is equally applicable to states. A fraud is not the less reprehensible when it is perpetrated by a ruler in his public and not in his private capacity; and acts which are illegal, as between man and man, are not justified because they receive the sanction of governments. Unfortunately, it has become too much the habit of the present day to acknowledge two moral standards—one for the state and one for the individual; that process of territorial aggrandisement which, when perpetrated by a government, is called annexation, or colonization, if put into operation by an individual, is called filibustering, and the adventurer is stigmatized as "conspiring," where the sovereign is only said to be "diplo-matizing." The most scandalous instance of a political swindle which has recently come before the notice of the public, took place three months ago in Savoy and Nice. The Blue-Books to which we have alluded been with protestations upon the part both of the French and Sardinian Governments: first, that the transfer of these provinces was never contemplated; secondly, that it should only take place with the consent of the Great Powers; and, thirdly, that the populations interested should be consulted, and an opportunity allowed them for the "free" expression of their opinion upon a subject of such deep importance. Six months before the first of these assurances was given, the Treaty of Plombières, by which the transfer of the two provinces was negotiated, had been signed. The annexation took place in defiance of the Powers, who were never consulted, because it was well known that they were opposed to it, and if we are to believe the description given in Mr. Oliphant's pamphlet* of the mode in which the wish of the population was taken, the choice put before each voter was French annexation or a French penal settlement. Nor was the pressure thus exercised confined to French influence alone. We regret that the Sardinian Government should not merely have connived at the political jugglery which was carried on in Savoy and Nice under the name of universal suffrage, but that it should have actively co-operated in forcing the people to vote in accordance with the treaty of the 24th of March, and allowed it to be generally understood that a hostile vote would be considered an act of rebellion. The result of the pressure exercised by these two powers upon a simple and timid population was, as might have been anticipated, an almost unanimous vote in favour of France. The police were strictly enjoined to see that no voter exercised his suffrage in an opposite sense, and all the Government employees suspected of an Italian leaning were dismissed before the vote took place. The much-coveted provinces having thus been acquired by France, and formally annexed, the object of the Italian war would have been already gained, had it not unfortunately happened that the northern part of Savoy occupies an exceptional position with reference to Europe, and notwithstanding the skill and dexterity of the Emperor, and the apathy and indifference of the Powers with whom he has had to deal—are not to be disposed of so readily. The standstill-block in the way of the imperial policy at this moment is Switzerland. This stubborn and outrageous little Power has, during the last six months, bombarded

M. Thouvenel with notes and protocols to an extent which has caused that fluent and versatile diplomatist no little embarrassment. In vain have threats and carresses been employed to win over to silence the Federal Council. While all Europe was doing, the Swiss, like the bold inhabitants of Lilliput, were binding down the giant with real tape, and sticking tiny spears into him in all directions. There is an Eastern proverb to the effect that a cat will fly at an elephant if she is pushed into the corner. Switzerland is in this position, and while struggling manfully to hold her own, appeals to the Powers of Europe to help her,—not as an act of charity, but in fulfilment of those obligations in her behalf which were entered into in the interest of Europe itself.

In order to enable us to appreciate the nature of those obligations, and the attitude maintained by Switzerland at the present juncture, a brief recapitulation of the communications which have passed between the Federal Council and the French Government will be necessary. The position adopted by Switzerland at the outset was clear and definite. She denied the right of France to annex much less to occupy, provinces the neutrality of which, as against France, had been guaranteed by Europe. Denying it absolutely essential to her own safety that the neutrality of these provinces should be preserved, she protested, both on political and strategical grounds, against the proposed annexation. Much special pleading was resorted to on the part of M. Thouvenel to prove, first, that the provinces of Northern Savoy had not been neutralized in the interest of Switzerland, but of Sardinia; and, secondly, that inasmuch as the Swiss frontiers are open to France, Faucigny and Chablais are strategically valueless to Switzerland, as preventing access to the Simplon.

The reply of the Federal Council to these arguments possesses not merely political, but historical interest. It establishes, by the production of a "*Mémoire*," which has not yet been published in English, presented in October, 1814, by M. G. de Humboldt, at the Conference of the Powers, and by the correspondence of M. Pictet de Rochement, quoting the text of the very protocol of the 26th March, 1815, appended to by M. Thouvenel, that the Powers considered it necessary to give Switzerland a good military frontier, that it could defend, and that failing accession of territory to her in northern Savoy, these provinces were neutralized, upon the demand, in the first instance, of the Swiss deputies; and in the note of M. Pictet the following curious passage occurs: "We must make this (the neutralization of Faucigny and Chablais) appear to be an advantage for the King of Sardinia," thereby showing that the Sardinian element so much relied on by M. Thouvenel, was merely introduced to facilitate the attainment of the great object—namely, the neutralization of the territory in favour of Switzerland.

The negotiations with reference to the provinces resulted in that article of the Treaty of Vienna, the reconciliation of which with the second article of the Treaty of Turin is to form the subject of a conference of the Great Powers. The 92nd article of the Treaty of Vienna runs as follows: "The Provinces of Chablais and Faucigny, and the whole of the territory of Savoy to the north of Ugine, belonging to his Majesty the King of Sardinia, shall form a part of the neutrality of Switzerland, as it is recognized and guaranteed by the Powers. Whenever, therefore, the neighbouring Powers to Switzerland are in a state of open or impending hostility, the troops of his Majesty the King of Sardinia, which are in these provinces, shall retire, and may for that purpose pass through the Vallais, if necessary. No other armed troops of any other Power shall have the privilege of passing through or remaining in the said territories and provinces, excepting those which the Swiss Confederation may think proper to place there."

The stipulation with which this article is to be reconciled is to this effect:—"It is equally understood that his Majesty the King of Sardinia cannot transfer the neutralized parts of Savoy, except on the conditions upon which he himself possesses them, and that it will appertain to his Majesty the Emperor of the French to come to an understanding on this subject with the Powers represented at the Congress of Vienna and with the Swiss Confederation, and to give them the guarantee required by the stipulations referred to in this article."

In entertaining the possibility of reconciling these two articles, we have to consider, not so much in whose favour the territory was neutralized, as against whom it was neutralized. The only Power to whom the acquisition of this district could be of importance was France; hence the trouble she has taken to acquire it, and hence the impossibility of her fulfilling those conditions which were imposed for the purpose of keeping her out of it. So evident was this to M. Thouvenel,—so transparent were the objections which were to be urged by the Powers interested in the acquisition by France of the very barrier designed to check her aggression, that the Foreign Minister, in a conversation with Lord Cowley on the subject, stated frankly,—"that while the French Government asked for guarantees for the safety of France, they had no intention of violating or infringing upon those which Europe had thought necessary to take for her own safety. The annexation, therefore, of Savoy to France would not break the engagements entered into for the neutrality of the

* "Universal Suffrage and Napoleon III." By Lawrence Oliphant. W. Blackwood & Sons.

districts of Chablais and Faucigny; indeed, in the opinion of the French Government it would be well that those districts should be united permanently to Switzerland."

It was not until the French Government perceived the absence of any concerted action on the part of the European Powers, that it recoiled from the language held by M. Thouvenel, above quoted, and discovered that the cession of the North of Savoy to Switzerland was impossible, in consequence of the objections said to be entertained by the Savoyards themselves to the dismemberment of their country. The fact that upwards of 12,000 Northern Savoyards signed a petition in favour of this dismemberment is a sufficient denial to the accuracy of this statement, and is fully borne out by the accounts which have been received from persons who were on the spot on the occasion of the taking of the popular vote. Encouraged by the absence of any opposition to this process, which was in itself illegal, and in direct defiance of the treaty of 1815, as well as of the former treaties of 1564, which expressly stipulate that "no part of Savoy shall be alienated, which may affect the position of Switzerland," M. Thouvenel entered upon a course of diplomatic coquetry with Switzerland, with the view of inducing that Power to come to some arrangement which might enable France to disengage with the Conference demanded by the Federal Council, or at all events to determine beforehand the propositions which were to be submitted to it. It was evident that if Switzerland had entertained any such proposition, she would have condoned the offence of which she now complains, and destroyed the alliance which she desires to lay before the Assembly of Europe. M. Thouvenel, finding the Swiss Government determined to resist all cajolery, and to stand upon those rights which have been conferred upon her by treaty, has addressed a circular to the Powers, proposing, among other suggestions for the arrangement of the difficulty, a Conference, to have for its object the reconciliation of the conflicting treaty engagements. This Conference, however, must be regarded as evoked not by France but by Switzerland, for that Power is entitled, by the supplementary treaty of 1818, to appeal to the Powers who have guaranteed her neutrality, in the event of that neutrality being threatened. England, Russia, and Austria have agreed to join in this Conference, and it is of the utmost importance that they should meet not as parties to a discussion upon equal terms with France, to consider an expedient solution of a complication, but as a tribunal sitting in judgment upon the acts of the French Government—bound in honour to respond to the invitation of a weak and threatened power, whose independence they have sworn to protect, and ready if need be to demand the restitution of territory which can alone secure that independence. The political character of the guaranteeing nations for honour and good faith is at stake, and if there be a moral code which is to govern states as well as individuals, it surely must dictate a firm and decided tone upon this occasion. There can be no doubt that if the Powers insist upon the abandonment of Northern Savoy by France, as the only solution which will be accepted by them, France would be compelled to revert to her own original proposal of their annexation to Switzerland. This is what the Powers are bound morally to insist upon. Unfortunately, in the present demoralized condition of Europe, it is not what we have any right to expect from them. Mentioning, if the Conference ends in no concession on the part of the Emperor, those who have been parties to it will have been justly humiliated, and Switzerland most unjustly betrayed.

THE FRENCH AND ENGLISH NAVIES.

THE same impulses of the old uncomprehending martial spirit of Britain that covered the hills and lined the seashores with an entire people in military array, when the first Napoleon threatened our coast, upon the young men of the present day to array themselves as Volunteers, to encounter any foe who boasts that he is strong enough to invade the English soil. The bone and sinew, the pluck and daring of the country, have "come out." The flower of our youth have donned the uniform and shouldered the rifle, and those who cannot do so by reason of their age, applaud the energy of their juniors, and tell them how they, in their youth, did likewise when the hordes of the first Napoleon threatened our homes. The armed multitudes of this country, and the Imperial Zouaves or Turcos, cannot, however, come in collision, without a descent of the latter upon our shores. Should such an event take place, the history of nations will never have seen a bolder sight than will then be enacted by the resolute and undaunted of these islands. No sacrifice of life or property will be spared to read the invader a lesson such as invader was never taught before. But though possible, the event is improbable, and every friend of liberty in Great Britain and out of it will pray that Heaven may avert from this land the horrors and sufferings of such a calamity.

"Fight the enemy on his own ground; let him not land on our shores;" such has been the cry and the policy of Great Britain ever since the Norman Conquest. At first this policy was carried out in a series of offensive wars and conquests on the continent. Then, growing wiser, the British people confined themselves to the creation of a navy, which should command the shores of an enemy's country,

and prevent him sailing forth, either to the annoyance or danger of our shores. In the last great war with France, Great Britain not only conquered the supremacy of the ocean, but engaged in Spain, in Egypt, and in Belgium, in offensive wars, on behalf of other European Powers. The five-and-forty years of peace which have subsequently ensued have wrought great changes. Satisfied with our past successes, we have allowed our navy to stand still, whilst that of France has made rapid and large development; and at last our old antagonist has found a ruler who appears to be capable of bringing her vast military power to bear upon us, in the only way in which it need cause us any anxiety. He has created a huge navy, and given it a thoroughly new organization, admirably adapted to one special purpose—that of bridging the English Channel, so that he may let loose upon us these half-million soldiers who, equipped as they are, the whole of them within three months of their landing, will nevertheless be able to inflict such humiliation upon us as a hundred years of commercial success will not enable us to remedy.

Without one colony to defend, France—or, at all events, a very large proportion of the most influential Frenchmen, have but one problem to solve—how, by the humiliation of England, to wipe out the recollections of the failure of the First Empire, and to secure to the Second Empire that preponderant influence in the world which it is their craving to acquire. Put England into their place, would not England do likewise? We honestly believe it would. If Englishmen were Frenchmen, would not Englishmen like to punish those who marched twice through their capital in a quarter of a century, and imprisoned and banished their elected king? Of course they would; and would only congratulate themselves that, when directed by the genius of a great man, their army and navy stood ready to undertake the task. Secondly, since 1840, the naval and military administrations of France have worked towards that end. In Algiers, France trained and matured her soldiery; and her army has subsequently attested, in sanguinary fields, its ancient valour. The preparation of the navy was a longer and far more anxious task. The introduction of steam, and still more that of the screw propeller, added the task; but the want of a great foreign commerce denied to France the facilities which we possessed—of drawing from a commercial marine any number of seamen we might require. She therefore determined to foster and create a body of seamen, who should be naval sailors, *par sang*. Adopting what was good in our system, rejecting what was bad, introducing a knowledge of gunnery under a uniform system, before we even thought of such a measure, and, latter still, instilling into the minds of the officers a uniform idea of naval discipline, France has the satisfaction to-day of being able to point to a standing navy, a large portion of whom are voluntarily serving the state, and the rest are derived from her system of conscription. One hundred thousand represents the naval power at the disposal of Louis Napoleon at any hour he may please to direct it against England, and the morale of this force is almost as good as its numbers are great and organisation perfect.

The Orleans family inaugurated a system of popularizing the navy in France, of acclimating her marine to petty triumphs, which, trivial as they appeared to us, had great effect upon a profession whose record of service was a blank. A prince of that royal house put forth an able and well-considered work, inciting his brother naval officers to labour for the common end—the humiliation of Great Britain. The Prince de Joinville showed France that steam was the agent by which England was to be compelled to surrender her pretension to naval superiority. French sailors were taught to hold English sailors in contempt, by a series of petty insults to the British flag, which our naval officers were compelled to submit to by their superiors. At Tangier, off Vera Cruz, in the Isle of France, at Otaheite,—indeed, whenever an opportunity occurred, insults were heaped upon us, all too trivial to go to war about, but still serving the object which the French had in view—that of raising the morale of the French sailor, and teaching the young officer to consider himself superior to an Englishman. The majority of the officers who perpetrated those acts now stand high in the navy of the Emperor of the French; and perhaps this country has no more cordial hater than his Minister of Marine, or one of whose antipathies we have lately have only served to render that French navy still more perfect. We need not dwell upon its efficiency for the purpose for which it is intended,—that can only be tested when the time comes; but so far as human foresight can provide for every contingency,—so far as force, numbers, efficiency, and a thorough organisation are concerned,—and so far as we can judge by the way that fleet has done its work, whenever and wherever it has been called upon to act, whether in the supplying of the French army in the Crimea during the winter time, whether in carrying whole divisions, and landing them abroad and ready *en-a-pie* on the beach of Genoa, or in conducting warlike operations against Russ or Chinaman,—we are struck with the efficiency of the French sailor of the new régime, and still more with the apparent unity of action in their navy generally.

Turn now to England, and mark the contrast. Englishmen, who were once without equals,—are, whose sailors stood alone as the

best, men-of-war-men in the world, are told that the old sailor is gone, and that there is nothing to replace him. The admirals Duncombe, Napier, Bowles, Hardwicke, and Martin, sound a note of warning as to the utter rottenness of every department, the agglomeration of which forms the navy of England. In the House and out of the House, in all the clubs, at every dinner party, there is one constant subject of lament—the inefficiency of the present Board of Admiralty, the utter disorganisation of the fleet, rotten gun-boats, line-of-battle ships of green wood, and iron sheathed vessels whose timbers the Duke of Somerset can probe with a toothpick,—constant court-martials on mutinous *seas*—*seas* in line-of-battle ships—officers consoling and almost feeling members of the House with monumental tablets or silver vessels, to support their cause against official rulers,—paupers representing the lamentable, almost starving condition of half-pay officers, who can only starve, as they must not beg,—captains just serving long enough to qualify themselves for their flag rank, and determined, when that rank at last is reached, to revenge themselves upon an ungrateful country, by remaining on a non-actively active list, though every faculty should fill them, and then, as admirals, only sail in Bath-chairs, and be fed by nurses,—all this, we say, denotes a most unhealthy condition of our navy. And our anxiety is not lessened when we read of the manifold and contradictory remedies suggested by those whose professional knowledge ought to entitle their opinions to proper weight. The admirals not in the Admiralty, or whose interest lies not in that quarter, directly assert that there—at Whitehall—is the source of all evil. They call for a committee of the House of Commons upon the constitution of the Board. The sooner such a committee is ordered, the better for the honour, safety, and welfare of the British empire.

IMMORAL LITERATURE IN FRANCE.

WHEN last week we pointed out the fatal tendencies of modern French literature, which demoralized public and social opinion and feeling, we were far from supposing that the French Government itself was actually confirming our observations by an official notice.

The French newspapers contain, this week, a circular addressed by the Minister of the Interior to the prefects of all the departments, wherein he states that, inasmuch as the administration for the maintenance of public order needs the authority and interference of the law, so in like manner special powers are required to restrain the press for the better protection of public morals.

At the time that we were asserting that the novels and dramas in France were overthrowing all established tenets and recognised principles, Monsieur Billault was lamenting, in his circular, the deplorable consequences arising out of the same cause, and proclaiming the necessity of applying a remedy.

He urges the prefects to exercise due severity in checking the unhealthy and immoral tone pervading the literature of the day, and directs them to send for trial before the tribunals, the authors of such works as seek for success only by the impurity of their portraits, the immorality of their plots, and the wretched corruption of their heroes and heroines.

So far so good. The French Government feels that the popular mind has a right to more wholesome food, and that the literary works which offend or pervert all right principle and good feeling, are quite as injurious, if not more so, than political declamation.

But Monsieur Billault only touches on the surface of the evil, or rather, is prevented by his position from laying his axe at the root of it. He has too much experience, and is too well informed, not to know that the activity of the human mind is not easily quenched, that it must have a passage for escape, and that when freedom of thought is compressed, and political liberty has become a mere by-word, that activity will throw itself into other channels, according to the propensities of the national character and the temperament of the people. In Germany, to the fetters laid upon the press may be ascribed those cloudy metaphysical works which border on the unintelligible and delight in the ecstasies in matters of theology. In France, under similar restrictions, literature has become licentious, as if Nature herself asserted her rights, and punished all attempts at impeding the exercise of that heavenly gift, the independence of human reason. Ancient as well as modern history teaches us the same lesson. When, in Greece and Rome, all liberty had expired, the restless mind took refuge in works of licentiousness. Petronius and Martial wrote with the applause of the nation, at a time when Scipio and Cato would have been exiled or put to death by the Emperor.

We have but little hope that this new measure introduced by Monsieur Billault will be efficacious in remedying the actual evil. The desired reformation can scarcely be produced until the effervescence of the public mind is allowed to expend itself on those topics of general interest which are connected with all that the human heart holds most dear—liberty and independence of thought, and free discussion of political measures. Diverse interests and diverse opinions, openly expressed, produce a wholesome agitation, and support the vitality of a nation. Why should men always be walking about as masked figures, injuring the honesty of their own minds by

an insincere adherence to that which they inwardly disapprove and condemn? But this is a question on which it is not our purpose to enter at length. We will only say to the French people, as the Minister of the Interior would doubtless say if he were allowed to speak openly, "Wait and hope."

THE GOUTY PHILOSOPHER.—No. II.

MR. WAGSTAFF PROPOSES A SCHEME OF MANKIND REFORM.

I MUST own that I shared the weariness of every man I meet, as regards the late discussions upon the Reform Bill. Who asked for reform? When a dog is not hungry, what does he care for a bone? Mr. Disraeli's reform lion had no marrow in it, and Lord John's was not particularly meaty. And if the dog—or I ought perhaps to say the lion [British], who is but a tolder and fiercer kind of dog—was really famished, he would rend such keepers as come into very small fragments, if either of them insulted him with mere bones instead of beef.

The extension of the suffrage was a good cry enough in 1836. But in 1860 it has lost its attractiveness. Whether the occupancy of a ten-pound or a six-pound house be made the test of a man's fitness to exercise political power, mean, venal, and cowardly knaves, who value a five-pound note, or a tenth of the money, or even a pot of beer, more than they do any political principle whatsoever, will offer their votes for sale, and will find purchasers as unprincipled as themselves. Therefore, and for a thousand other reasons, I do not approve of any hilly-hilly extension of the suffrage, like that of Lord John Russell or that of Mr. Disraeli. I would rather extend the suffrage at one stroke to its extreme limit, and so have done with it. MANKIND REFORM—that is my panacea for purifying alike the electors and the elected. Universal Suffrage I do not propose, for it never existed either in ancient or in modern times.

Democrate America does not admit the principle. The constitution of the United States gives no vote to women, the fairer as well as the more numerous portion of the community. "Niggers," and all who have one drop or even half a drop of African blood in their veins, though they may have skins as white as the Empress of the French, are denied that, and every other right of citizenship in the southern portion of the Confederacy. In France, where the people were asked to elect a monarch, and found themselves shortly afterwards under the dominion of an absolute lord and master, the suffrage was not universal, for the women and children were excluded. My scheme for putting an end to the Reform question—for a whole generation, if not for two or three—is based upon the right of every man to a share in the government. Instead of testing this right by the amount of rent or taxes he may happen to pay, I assert the broad principle that every male, having attained the age of twenty-one years, being a citizen of a free country, has a natural right to a vote in the management of its affairs.

Do not be frightened, oh, ye timid Conservatives! do not be rejoice too soon, oh, ye rampant Radicals! Wait until you have heard the disqualifications which I propose. Of course I would not open the doors of the county jail, and take out a murderer—a man who is to be hanged on Friday, and allow him to exercise his right as a free Briton, if Mr. Fudge, the candidate for Great Stumpington, were hard up for a majority, and offered him a sovereign, or ten, for the one vote that might chance to turn the scale in his favour. No; in my scheme of Mankind Suffrage, there are many disqualifications, by the aid of which the number of electors would be reduced within safe, reasonable, and manageable limits, and the residuum made so virtuous, respectable, and intelligent, that misgovernment and corruption would become impossible within our happy realm; and the cry of reform made as obsolete as the war-cries of the Picts and Celts, or the language of King Arthur. I shall classify the disqualifications under twelve separate heads, and describe them *seriatim*.

1. I would exclude all persons living in workhouses, in receipt of outdoor relief, or begging in the streets and roads, and would not allow them to vote until one year after they had ceased to be paupers, and were honestly earning their daily bread.
2. I would exclude all persons in prison for debt or crime, or having been in prison for crime within any period not exceeding seven years previous to the day of election, or for misdemeanour within three years.
3. I would exclude every soldier, from the Commander-in-Chief down to the drummer and fife, inasmuch as it is the soldier's duty to obey, and not to think for himself; and that, in his military capacity, he has no concern, and ought to have none with the civil and civic affairs of a free country. The sailors in the national ships should be excluded, for the same reason, from the admiral of the fleet down to the cook and the cabin-boy.
4. I would exclude every tradesman or shopkeeper who should have been convicted on sufficient evidence before a magistrate of having adulterated beer or bread, gin or wine, coffee or tea, sugar or mustard, or any other article or commodity whatsoever, within a period of three years previous to the day of election.
5. I would exclude every tradesman, shopkeeper, merchant, or manufacturer, who should knowingly have sold, in deficient measure or weight, any article or commodity; or who should have fraudulently imitated the trade-mark or marks of any other dealer or manufacturer at home or abroad.
6. I would exclude any man who should have been convicted by a magistrate, within a period of seven years prior to the day of election, of

having beaten, or starved, or otherwise ill-treated his wife or other woman dependent on his care and kindness; or who being able to work, should have allowed his wife to be the bread-winner, while he lived in drunkenness and idleness.

7. I would exclude for the same reason any one who, within three years, should have cruelly beaten his own child or that of another person.

8. I would exclude any one who, within twelve calendar months, had been fined for cruelty to horse, or ass, or any other animal.

9. I would exclude any one who had within one year been fined for drunkenness, profane swearing, or indecency.

10. I would exclude every linen-draper's shopman or other assistant who sold women's apparel—such as stockings and feminine under-garments generally,—upon the ground that by competing with women for women's natural and appropriate work, he was the munificence cause of many great social evils and perplexities, of which the starvation of women was among the least, and their social and moral degradation the greatest.

11. I would exclude every man who wore livery and plush breeches of any colour—red, yellow, or green,—until he should have purified himself by three years' abstinence from the attire of a slave.

12. Lastly, it should be imperative that every man, after having given his vote openly and in the face of day, should sign his name in the polling-book. If he were not able to do so, his vote should be struck off the list.

This is my scheme. And now Mr. Radical, what do you say to it? You do not want knaves, and ruffians, and cheats, and swindlers, and wife-beaters, to legislate for us—do you? If you do, I do not. A man may be a man "for that," but such a man is no more to be trusted with a vote than a child of three years old with a revolver or a razor. I am sorry that the necessities of my theory should compel me to include within the circle of disqualification the honest fellow who cannot write; but I believe, were the scheme once converted into law, the number of honest men who could not write would sensibly diminish every year, and that ultimately no such man would be found in our happy isles.

And what do you say to it, Mr. Conservative? Are you afraid that numbers would swamp intelligence under my system? Or that property would not be so surrounded with proper safeguards, if all the riff-raff, with or without money, and all the proved knaves were inspected by their knavery from meddling with public affairs? The electoral lists would not be very voluminous. Only think of the havoc that my project would make with them—say, for instance, in the metropolitan boroughs of Lambeth, Finsbury, Marylebone, or the Tower Hamlets; in Birmingham or Manchester; among the vendors of short weight and measure, who cheat the poor; and the adulterators of commodities, who cheat and poison both the poor and the rich. Surely, the electoral lists would be well rid of such scoundrels as these. If any among them really valued the suffrage, he could obtain it by ceasing to poison and to cheat the community. This would be a double gain, and every accession to the number of voters, from such a cause, would be a diminution of one of the most dastardly petty villainies known to our civilization. I know very well that Lord John Russell—if he ever laugh—which is doubtful will laugh at my scheme, that Mr. Disraeli will treat it with a contemptuous curl of his upper lip, and that Lord Palmerston, blandly smiling, will think that it is not so very bad, and straightway forget it; but I am of opinion that, like the shake of Lord Burleigh's head, it has "something in it." At all events, it would be a virtuous suffrage, which is more than can be said for Lord John's scheme of six-pound householders, or for the fancy franchise of Mr. Disraeli. If the electors of Mifflington, or Great Stumpington, or Marlshire, or any other borough or county, think anything of the project, and will elect me to Parliament, free of expense, to support it, I, John Wagstaffe, of Wilby Grange, and my man, and will hold myself at their disposal for a week from this date.

A PLEA FOR NON-SMOKERS.

The statistics of tobacco are so portentous, and carry the mind up into so many millions of pounds, both sterling and avoidupois, that we are obliged to admit the herb to be one of the social and financial powers. It holds a divided empire with cotton—that other vegetable dominator. Against tobacco we intend no argument; it is too vast a theme in volume and effects to be so assailed. The London Dock and the revenue tables rise before the vision, and impose silence. A Stuart king tried a "considerable" in the infancy of his importation; but the Stuarts were blown off the throne, and tobacco remains—one of the chief supports, in a money sense, of the monarchy. We do not wish to lead any kind of revolt or reaction against tobacco itself; but we must remonstrate with some of its lovers, for their tyranny towards those who not only do not share their predilection—but detest it. It may be good for them to smoke; but to compel others to breathe their ejected vapour, at second-hand, is a grievance against which 1—a non-smoker—appeal to all railway boards and directors. Why, when eight persons are locked into the cushioned box of a first-class carriage, should four of the passengers, or fewer, be allowed to suffocate and smother the others? Why are those who do not smoke to be made martyrs by those who do? Is it any gain to the shareholders to make hours of torture one of the consequences of paying a first-class fare? The authorities are, of course, ready enough with an answer. "Smoking is strictly prohibited," they say; the by-laws of the company make it punishable, "on conviction," by a fine, and any passenger can object to it, and appeal to the conductor. But, practically, the prohibition, the by-laws, and the power of objection, are all a fiction. No one likes to protect himself from one annoyance by encountering another still greater

—a series of quarrels with fellow-passengers, with the certainty of insult and the risk of worse than bad words. A "tip" to the railway porters and guards makes the odors and by-laws a dead letter; and if an objection is made, the hope of a few pence thrown rather on the side of the smokers. Now and then we hear of a "conviction" and fine (which is always "immediately paid"); but we suspect the offenders thus punished are punished, not for smoking, but for parsimony; they have been marked for non-payment of the regular penalty. The "old hands" may smoke like chimneys, without being interfered with; and if they have not a special immunity, they certainly have extraordinary luck.

The railway companies have adopted a wretched half-and-half railway system of action in this matter, and it is time it was superseded by an open and honest regulation of a practice too general to prescribe. The attempted proscription of smoking, met by continual evasion, creates a series of evils in connection with what might be rendered a matter of indifference. The selfishness that inflicts positive suffering on the minority is disgusting. The systematic defiance of the written law of the time, the belittling that lays impunity for it, the tyranny of the smokers, and the general submission, or occasional resistance, to their despotism—are all bad; they are bad in themselves and their consequences. The common-sense remedy would be a frank recognition of smoking as a habit, and such arrangements for those who practice it, as will allow them to inhale and exhale at their pleasure, without stifling those to whom "the weed" is noxious. Many men, and most women, are in this category; and they really have some right to consideration. As the inveterate smoker rarely smokes it, when travelling with others, let him have a place apart, where he cannot force the fumes of his cigar or his pipe down throats to which they are loathsome; as, in, if you will, but give us the choice of an atmosphere that our lungs can breathe.

On the German lines, though they run through populations among whom smoking is still more general than in England, this consideration is shown, and the smokers themselves are better accommodated. There are carriages reserved and marked for the "Nichtraucher." The non-smoker can avoid his relentless enemies; he has no ill-natured squabbles to encounter, and need not appeal to any "by-laws" for the protection that the bouncer officials do not care to give him. The traveller goes to the carriage where there is no smoking, and there it is as usual; and if he is a smoker, he finds all the fittings of his carriage adapted to his habit; leather linings instead of cloth, tin boxes for the ashes, and companions who will reciprocate and return his fire, or even vanquish him. We have known three Polish Jews smoke the whole way from Berlin to Ostend without intermission; and their cigars being of the strongest—the vile things the Germans call "moth-destroyers,"—they were almost too much even for the well-scented Tentons. Imagine the condition of a non-smoker, shut up for twenty-four hours with those persevering Helvetians! May their like never take tickets with us to Liverpool!

The American smokers are, unhappily, cheerless; the attendants and results of the habit are more sickening than those of smoking, to all who abstain from both practices. More unhappily still, the smokers cannot be excluded from any public conveyance; in fact, no place, public or private, can in America be secured from the delirium of universal expectation. It is the national error, and spoils every floor, and most male dignities of the Republic. But smoking has been subjected to better regulation than in England. It is strictly prohibited in their large railway carriages; and the prohibition is not a sham. There are "cars" appropriated to smokers, where fifty or sixty persons may "compel" such clouds that one end of the carriage is not visible from the other. But they smoke modestly, and we presume, please themselves. There is nothing to prevent an arrangement similar to that of the American and German lines being adopted here; it need not involve the expense of any carriage of new construction; the old ones are quite good enough to smoke in; only let a certain number of places be known as the smokers' seats—the *salon* of the train; let them smoke there, and nowhere else; then enforce strictly the prohibition as to the rest of the carriages. The production of a cigar-case, in the exempted compartments, ought to bring instant expulsion on the offender, whose taste has been provided for elsewhere. In time, when directors openly recognize a common practice, and become a little more liberal, they may furnish a real capacious smoking-carriage for their passengers; but the time too much to expect at present. They have so yet only got as far as having something of the sort for themselves.

THE LITERARY LANDSCAPE.—One of the steps in advance made by our age, is that it has learned to regard all conscientious labour as honourable. But though literature is abundantly honoured in the person of its most distinguished producers, the generals and field-marshal of the great army whose especial business it is to do battle for truth and light against ignorance and falsehood, the world is still inclined to look askance at the rank and file, and grudge us a fair recognition of our services; yet a pen, even when it can work no magic, may as honest a tool as a spade, if we choose to make it so. *Sermon contra!* Then, lift up your heart, oh, Grab-street! If we are rejected of men, let us look round and back along the files of time, and see what good thing has not been at some time or other. Privately we may acknowledge that perhaps Grab-street itself has been much to blame in the matter. Firstly, because it has not, alas, always used its labouring implement honestly; secondly, it has smothered its acquired in Mrs. Grundy's opinion, instead of bidding her assent. I must own, though, it is easier for me to see, and I have seen, how in my former life, and how, even the voice of the world only set off, like the noise of many waters. But, be of good cheer, my brother; let us have a respect for the service in which we are enlisted; and how infinitely small a score may be our duty and performance, though we may have not the smallest chance of seeing our names in this world's Gazette, there is no fear that if we have done our best, we shall be finally overlooked by the great commander-in-chief. Honour be to the instruments and the sons of labour, but "Wir mit Schülern und Gehirnen hundert pflegt, sich nicht vergessen,"—S. B.

THE LONDON REVIEW, and WEEKLY JOURNAL, conducted by CHARLES MACCARTHY, and all the other LONDON NEWSPAPERS, regularly SUPPLIED to the, and forwarded to all parts of the United Kingdom, India, China, Australia, and Foreign Countries.

ADVERTISEMENTS, and Bills, Marriages, and Deaths, INSERTED in ALL the London and Country Newspapers.

A List of London Newspapers, with prices, days of publication, price, &c., free on application.

Newspaper, Bookellers, and Stationers, 74, COVENT-GARDEN, City, London, E.C.

(Established 1800.)

SUBSCRIPTIONS for "THE LONDON REVIEW" received by Messrs. W. H. SMITH & SONS, at 186, Strand, and at all their Railway Book-stalls.

THE LONDON REVIEW—NEWS-AGENTS and the PUBLIC in LIVERPOOL and DISTRICT, will be SUPPLIED with THIS PAPER and all other LONDON PAPERS and PERIODICALS, STATONELY, &c., by J. VAUGHAN, 64, Broadwood-hill, near Chancery-street, Liverpool. London papers daily.

THE LONDON REVIEW

WEEKLY JOURNAL.

SATURDAY, JULY 14, 1860.

The Prince of Wales left England on Tuesday last, to visit the American provinces of the British crown, and for a brief tour in the United States. The Canadian papers which have since arrived show that great preparations are making for the fitting reception of his Royal Highness. It is calculated that the cost of the various receptions to be given to the heir to the British crown will amount to 100,000*l*. This money will be voluntarily expended by the Canadians, as a proof of their loyalty.

An interesting conversation took place on Monday in the House of Lords, with reference to the affairs of Italy. In reply to the assertion of the Marquis of Normandy, that exiles had been committed by the revolutionary party under the command of Garibaldi, it was affirmed by Lord Wodehouse that the Italian leader had adopted the severest measures to check excesses, and had issued a commission to inquire into and punish the perpetrators of them. In the course of the debate, Lord Brougham, with all his ancient and characteristic energy, expressed a hope that the promise of a constitution would not be able to save from a merited downfall "the detestable tyrant of Naples."

The attention of the Lords was on Tuesday called, by Lord Stratford de Redcliffe, for many years British ambassador at Constantinople, to the late deplorable massacres in Syria. His lordship gave a detailed history of the outrages committed, and asked what course had been adopted by the British Government to put a stop to them. Lord Wodehouse partly confirmed the statements of Lord Stratford de Redcliffe, and added that "the Christians were attacked by the Druses in presence of some Turkish troops, who in no way interfered for their protection;" that the Christians had been induced to lay down their arms with a promise of protection, and that when this unearned they were barbarously slaughtered. His lordship also stated that orders had been sent out to Admiral Martin to proceed with his squadron to the coast of Syria, for the protection of the Christians; and that the French authorities had sent ships to the coast for a similar purpose.

The clause in the Census (England) Bill requiring the statement from each person of his "religious profession" has, on the motion of Mr. Baines, been struck out of the bill, with the assent of Sir G. Lewis. The latter, on the part of the Government, avowed that he was responsible for its insertion. This being the only clause objected to, the bill passed through committee on Wednesday. On the same day the Irish Census Bill went through committee, but the clause requiring the statement of "religious opinions" was, with the full assent of the Irish members, retained.

The long-established renown of Hercules is in jeopardy. The son of Jupiter in a single night cleared out the Argos stable; but we have in England an Attorney-General who has undertaken to clear out the Argos stable—the Bankruptcy and Insolvency Courts,—and to remove from out of human reach all the filth, the roguery, villany, scheming, and dishonesty, which their administration had accumulated. Hercules only performed twelve labours, but Sir Richard Bethell has to grapple with a Bill of 544 clauses!—to take it onward between this and the close of the Session—(probably the 12th or 13th of August)—a "little month" from this time!—to carry it safely through the Commons and the Lords! and this in despite of expiring credits, watchful foes, and worst of all, of the lawyers—who have been elevated to the peerage. Never did mortal man undertake a task more difficult, hazardous, and, we may add, more praiseworthy. The great vice of our legislation hitherto, upon the relations between debtors and creditors, has been, that our lawmakers have gone upon the assumption that all debtors are victims to be pitied, and all creditors heartless and rapacious men to be restrained;—"innocence" has been supposed to be characteristic of the former, and "roguery" of the latter. The man who parted with his money or money's worth has been assumed to be a "schemer," and the man who received what did not belong to him, and was indisposed to return it, or give value for it, has been cared for by our legislators as if he was a "dupe." The Debtor and Creditor Bill of Sir Richard Bethell, is based upon common sense and common justice in these matters, and for these reasons we wish it success.

England is, at this moment, engaged in a petty but most deplorable war,—

a war in one of her colonies,—a war waged against the aborigines of New Zealand. The "savages" (as they are called) of New Zealand have shown themselves, when fairly treated, to be not only as intelligent, but as well-disposed, justice-loving, and honest men. They have, however, not at all times been fairly dealt with; and attempts have been made to despoil them of the lands on which they were born. The aborigines are again in insurrection; and in their outbreak they have devastated property, and murdered innocent persons, who were incapable of resisting them. Late accounts from New Zealand give the details of military expeditions, in which hundreds were slain with only a few casualties on the part of the assailants. It is most fitting that murderers should be punished; but it is not fitting that savages should be provoked, by despoiling them of their land, to commit murder. We believe, of all the dark chapters in the history of mankind in all ages and all countries, there are none to be found so deeply dyed in blood and crime as those which truly narrate the misdeeds of civilised men upon the helpless beings that their exterminators condemn as "savages" and "barbarians."

The rifle-shooting at Wimbledon is over; the prizes—hotly contested for and fairly won—have been distributed at the Crystal Palace,—and Teesdale, Flintshire, Buckinghamshire, Lancashire, Manchester, Gloucestershire, Edinburgh, Bristol, Lanarkshire, Surrey, Norfolk, Yorkshire, Shropshire, and various other parts of Britain, are welcoming home their champions and prize-men who have afforded to the world the proof that the men of England and Scotland are not only willing but able to defend their houses against a display in arms. One universal feeling of satisfaction pervades the country at the world exhibited on Wimbledon Common, of the British mastery over the new, effective, and now truly national weapon—the rifle. No native of the British islands, be he Englishman, Welshman, or Irishman, feels the slightest pang of unworthy jealousy, that on this occasion the prime place of all has been won by a Scotchman—young Ross—the son of Captain Ross, who "taught the boy" to shoot amongst the mountains of Ross-shire, and who had already won for himself no slight local fame as "the best shot at deer in all the Highlands."

Additional interest was given to the rifle-match at Wimbledon by the appearance in the lists, as competitors for the prizes, of many fine young men from Switzerland. The same love of liberty, the same desire to repel foreign aggression—which incited the British Volunteers to arm themselves, have long since impelled the free citizens of the cantons of Switzerland to become proficient with the rifle. They have been, for no inconsiderable period, masters of that weapon with which Englishmen are now making themselves acquainted, and soon will prove themselves to be adepts. The Swiss, by their example, have proved the value of the rifle as the best means by which a few brave men can render themselves formidable to ambitious kings and glibly-kissed despots. They came to England to show that they are no useless toys in their hands; and in the various matches in which they engaged they gave full proof of their efficiency by winning several prizes. The manly feeling of Englishmen towards them was fittingly proved by the hearty cheers that greeted them, as each of these successful champions carried away the prize which his skill had won. Sentiments of mutual regard have for ages been entertained by the Swiss and the English people; and the rifle-match at Wimbledon has served to strengthen such sentiments—to add, if it were possible, to their intensity, and to increase their cordiality. The English have, in the Swiss, living proofs of the value of the rifle as "a national weapon of defence;" and the Swiss have left us, declaring that they have learned here the means of making that weapon still more effective.

The consequences to be expected from the meeting at Wimbledon are of the first importance. An impulse has been given to the military ardour of the people; and the community has been thus urged to employ for a good and effective object those hours which hitherto were merely devoted to recreation. Young men are incited to become Volunteers, and the rifle-matches at Wimbledon show to what good purpose a rifle volunteer can direct his skill and energies. What a pity it is, that at such a time, "a foolish lark" should, by a foolish speech, seek to disturb the national feeling on this all-important subject. We know of few things more mischievous than the declaration attributed to Lord Hardwicke, that he discountenanced the formation of volunteers composed of the working-classes. In the Volunteer Corps there ought to be no distinction of classes: rich and poor—the humble and the lofty—should stand side by side with each other; for, to the poor man his small thatched cabin, and those it shelters, are jewels as dear as the marble palace, and its richly-robed inmates, to the highest noble in the land. Instead, then, of the loyalty of the working-classes being disparaged, it should be appealed to and encouraged; and sure we are that, if the hour of conflict should ever come, and a foreign invader have to be encountered, not even "the belted Earl" of Hardwicke would prove himself braver, stronger, stouter, or more resolute in the fight than the humblest fustian-clad mechanic who, with a rifle in his horny hand, rushed to encounter the foe with the common cry of—"For God, our Queen, and our native land!"

Tux latest accounts from Sicily describe Garibaldi as actively engaged in collecting forces; and we know, from his correspondence with this country, that he is endeavouring to procure a fleet. Upon Garibaldi alone, of living men, may be said to centre the hopes of all true Italians, and

what tunc those who assume the name of Conservative politicians would argue in support of a great extension by one House upon the other? Did he mean to imply that modern Conservatism really meant backing up every encroachment upon popular freedom? This was an ugly and dangerous charge, and no wonder the Conservatives sat uneasily upon their seats. Mr. Gladstone had not yet to vindicate himself for not objecting to the resolutions. They were good, as far as they went, and they sufficiently vindicated the rights of the House of Commons by words. Yet the illigient orator, to the inevitable astonishment of the Derbyites, and the unmeasured delight of the Liberals below the gangway, proceeded to declare that in his opinion the House would do well to vindicate and establish its rights also by action. This looked like mutiny. Was the orator about to resign, or had he stipulated for the freedom of action he had indicated? Was the member for the University of Oxford about to act up an independent standard, to become the leader of a new party, and declare war against his chief? Was this great question of Constitutional Privilege to be an "open question" in the Cabinet, like the Ballot or Church-rate Abolition? These were some of the speculations that ran through the minds of Mr. Gladstone's hearers, as he declared that he had himself been in support any proposal that offered the slightest promise of success for traversing and revoking the unconstitutional action of the other House.

Among the Liberals who cheered the Chancellor of the Exchequer most vociferously was Mr. Lawson, Sir James Graham's nephew and brother member for Carlisle. The Netherby Baronet has been the "dark horse" in the race, voting with the Conservatives in the committee, but defending his vote on technical grounds, based upon the "instructions." But the nephew's cheer was worthy of a nighty was Nimrod, as he sang and half a dozen others "gave tongue" with equal powers of vociferation. It was noteworthy that Sir John Lubbock, also, upon the Ministerial benches above the gangway cheered the orator. The Ministry and their adherents listened in silence to this measure of possible action; and when Mr. Gladstone sat down, after a lofty, eloquent, and well-reasoned assertion of the rights of the peerage house of the Lords, not a man said "Hear, hear," or expressed by sound or look the smallest sympathy or approval. The enthusiasm was all below the gangway, and there it was abundant enough.

Lord Palmerston next day said, with charming frankness, that he had no intention of following up his resolutions. He would pursue the controversy with the Lords no further. It is not easy to say what the Commons, in the present temper of the country, could do, and the proof is, that the Chancellor of the Exchequer, after all the study he has given to the question, and with all his fertility of resource, is unable himself to suggest any course of present constitutional action which promises any hope of success. If he, with all his ingenuity and subtlety cannot devise a mode of delivering us from the Paper Duty in August, with what hope can we look to Mr. Disraeli, Seymour, or Mr. Isaac Hill, for rescue?

I doubt whether the public spirit, or the patriotism of the present House of Commons will be rated very high either by the constituents of the empire or by posterity. They showed a mouth ago upon the Reform bill, and now upon the Privilege question, that they have but one wish—to get through the session without a dissolution. Out of doors, that portion of the press which is opposed to the abolition of the Paper Duty, has exercised a torpid influence upon public opinion. The stars, in their course, have fought, too, for Lord Derby, and the bill for the China War has been introduced to John Bull just when that respected individual has no "change" in his pocket, and is obliged to borrow a sovereign or two from a friend in Lombard-street, to his sore vexation, and the bitter humiliation of his Chancellor of the Exchequer.

TOWN AND TABLE TALK.

THE "season" is drawing to a close. One Opera-house has already ended its subscription. London is beginning to close. Regent-street and Bond-street are thinning. The seasons at institutions and museums are in most cases ended. Still a course of twelve lectures, by Alexander Gordon Melville, in connection with the British Museum have just been commenced in the Museum of Practical Geology, Jernyn-street, and will be continued on Tuesdays, Thursdays, and Saturdays, till the end of the present month, commencing on each day at three o'clock. These lectures are free.

A new club in Arundel-street, Strand, entitled "The Arundel Club," has recently been established. The list of members includes many well-known names. Another new club, on Liberal principles, is in progress. The house is to be situated in or near Pall-mall, and to be almost without hearing of the division bell.

The Brough Memorial Fund is making satisfactory progress. Three or four of the principal London managers have offered to give benefits in aid, and a grand concert has been announced in St. James's Hall.

In a dignified and gentlemanly letter to the *Times*, Mr. Eugene Delaporte has made known how ill he has been used by one or two English hotel-keepers. As the representative of the *Orpheus*, who have been delighting London by their marvellous chorus-singing, Mr. Delaporte has not only been overcharged as only an English or French band could be, but was actually compelled to learn a little more of our English manners and customs, and to indulge in right-riding more than he contemplated, by spending some time at an English "hook-n-bow." Casual strangers will beware of the hotel and of the landlord indicated.

In a recent discussion in the *Field*, the Hon. Granville F. Berkeley says,—"I ought to know the English rabbit naturally and scientifically, having studied ornithology, and killed and eaten them all my life." In the same lively manner he further alludes to the whole as an ornithological specimen.

A fine slab of Cornwall Serpentine has lately been placed over the grave of Douglas Jerrold, at Norwood. It bears the following inscription:—"To Douglas William Jerrold. Died June 7th, 1857. An English writer whose works will keep his memory green better than any epitaph."

Messrs. Chapman & Hall have some new books in the press. Mr. Walter White's new work, "All Round the Wrekin," will be out in a few days, and was subscribed "out of print," a technicality known in the trade. A new work by the author of "Our Farm," called "From May-time to Hop-ping," will be published in a few days. "Our Farm of Four Acres" has reached the 10th edition. We are glad to welcome a new author in the field—not that authorships are scarce,—Miss Macready, daughter of the great tragedian, has just finished a volume of poetry, which will be forthcoming immediately.

The fourth edition of Baron Forrester's "Portugal and its Capability" is about to appear. It will contain the new regulations of the Portuguese Government for the free export of the wines of the Douro to England—regulations which have been forced upon Portugal by the recent reduction of English duties upon French wines. Ribeiro Port wine has paid a heavy Portuguese export as well as an English import duty.

Messrs. Murray and Heath, the photographic publishers, have just issued an interesting view of the National Rifle Association Meeting, held at Wimbledon. To all those who assisted at her Majesty's first shot, this will prove a valuable memento.

The total expense of the maintenance of the British Museum from its foundation in 1753 to March 31, 1850, has been £1,382,733. 13s. 4d.

T. W. Arkhison, author of "Western and Oriental Siberia," announces a new work, entitled "Travels in the Regions of the Upper and Lower Amoor, and the Russian Acquisitions on the Confines of India and China."

Messrs. Puttick and Simpson announce for auction, on Saturday, July 21st, a valuable collection of autographs, formed by the late E. Crowlandish, of Boston, U.S. They include all the principal names in American history, besides a selection of eminent European names.

Messrs. Puttick and Simpson also announce, during the season, the sale of the effects of the late Mr. Joseph Sans. These are a very extensive collection of books, MSS., antiquities, pictures, and autographs. The sale will occupy many days, and will prove highly interesting to collectors.

THE TYPE-PLANS OF ANIMATED BEINGS AND THE SPECULATIONS OF PHILOSOPHERS.

[SECOND ARTICLE.]

THE struggles of naturalists after a perfect connected plan of classification have been almost as severe as the struggle for life which Mr. Darwin points out in animated nature. We see, however, certain organs, certain peculiarities prominently developed in some members of one group of animals or plants of which the genera and species are linked together by the bond of these common characteristic modifications of one of the primitive type-plans. Let us look for one moment at the mammalian class—let us even select one limb only to simplify our meaning. Take, then, the fore-limb of locomotion, and out of the same number of bones, with a nearly like relative disposition to each other, we have the arm of man, the wing of the bird and of the bat, the flipper of the seal, and the fin of the fish. Let us restrict our exemplification to an extraordinary extent its component bones are modified and adapted to various uses and purposes in the various groups; and while we look at the few selected examples given in our woodcut—restricted, necessarily, by our limits, to the smallest number of examples,—let us bear in mind that similar although slighter modifications are to be found in every single species, and that even individuals are not exempt from minor but sensible variations of those least specific modifications.

Fig. 93. Hind-foot of gorilla. Fig. 94. Hind-foot of camel. Fig. 95. Hind-foot of elephant. Fig. 96. Hind-foot of lion. Fig. 97. Hind-foot of bear. Fig. 98. Hind-foot of gorilla. Fig. 99. Hind-foot of camel. Fig. 100. Hind-foot of elephant.

One remarkable example of specific modification is afforded by the front-paws of animals of the lion or cat tribe in the sheaths into which their claws are retractable, and by which they are preserved sharp and clean, ready for

use. Whilst digressing thus back again to the fore-limbs, we may allude to the remarkable condition of the human hand, in respect to the length of the fingers. If you will place your hand on the table, you will see at a glance that the middle finger is the longest, and that the third (between the middle and little fingers) is next in length, while the thumb, or inner finger, is shortest of all. In vertebrate animals, with pentadactyl limbs this, as a general rule, holds good, and in those which have a less number of fingers or toes it is the representative of the middle and third fingers which occupy the chief positions; while in the monotreme foot of the horse it is the equivalent of the middle finger, which is modified into the hoof. We seem thus obliged to recognise the middle or longest finger as the most primitive. The tridactylate foot of the ancient reptiles is represented in the fore, middle, and third fingers of the human hand; the four-toed limbs next appear in order of succession, and last, the thumb or pollex form is produced. With progression of development, or from some other unknown cause, this seemingly last-added part, while so short and so laterally placed in the monkey tribe that those animals cannot touch with it the tips of each finger of the same hand, becomes considerably elongated, and placed opposite in many, who can perform this, to him, simple operation with the greatest facility, for it is this adaptation which gives to his hand its exquisitely varied capabilities and its wonderful perfection.*

I can never pass that wonderful eye, the gorilla, peering with its large glass eyes from its corner case in the British Museum, without stopping and wondering at the strange likeness between that half-human face and the grating, snarling features of the other creature, the thick lips and flattened nose and long receding forehead: but here I pause, and look at the creature's bony framework. There is the same type-plan of the mammalian class—vertebrae formed on the same principle, skull of the same number of jointed bones; ribs, arms, legs, feet, teeth, nails, all like modifications of the same constructive type. The gorilla, however, has a more upright, but yet widely differing from those of man. The bear's approaches far more nearly to the human foot than does the hind-hand of the gorilla; the whole hind-limb of the former resembles that of man, and hence the capability of the bear for walking on its hind-feet, its unassisted use of gait arising from the reversed size of the toes, the inner being, contrary to nature, the smallest. Nothing, perhaps, is more remarkable in the differences between the gorilla and man than the differences of the capabilities of the hind-limbs. For example, take a man in the act of ascending a flight of stairs. This common attitude is impossible in the gorilla. The bear, as we know from the wondrous dancing specimens at our streets, can alternately balance itself on either hind-foot; but the gorilla could not, on reason of the construction of its hind-limbs, repose the weight of its body on one foot, but would be forced to mount the steps on all-fours. There are other characters between the skeleton of the gorilla and man that the most casual observer could easily detect, and which place a great barrier, as we can scarcely see, as an insuperable—gap between the mere organisation of the highest known Quadrumana and that of Man. We all feel how objectionable to our pride is the idea of tracing back our ancestry to a monkey, although some arguments on the principle of inheritance of instinct might be well maintained against some of us for the same reason. The gorilla, however, is not supposed to have thus retained. There is ample scope, however, for debating the great principles of development and natural selection in the wide field of the rest of Nature, without going into the question at all of the first development, or the first creation of man. There is something so transcendently superior to the divinity—I mean to the divinity of our own race—that places him, at least for the present, quite out of the argument. But if it be true that we must look back to one of those horrid progenitors, and we should hereafter be forced to admit it, it will be something for Mr. Darwin's theory, that it necessitates our descent from the best, and not the worst of the tribe.

Now look back into the past, and pterosaurs, ichthyosaurs, hippos, mammoths, and many another of the strange and less familiarly-known animals of the geological ages, rise up and show like modifications of the same primitive type-plans from the earliest era of life to our own. Look back at the plants and the animals which grew by our rivers of bark and wood, and some by an inner growth, like canes and reeds. Look around, and they are growing so still.

Why, if repeated creations of species have been evoked, after repeated intervals, by the Great Ruler of all things, have these creations borne the stamp of the same universal type-plan? Why, if some species were created at particular spots, and adapted to particular conditions, do we find other species or varieties in some neighbouring or distant places, under similar or different conditions, so like each other, that naturalists can neither agree as to the distinguishing features between them, nor determine how slight variation should go to constitute a species, and how much should constitute a variety? If varieties and species progressively merge into each other, why should not species diverge into genera. Admit this, and genera must be admitted to diverge into families, and families ultimately into classes. But here we must stop—at least for the present.

Let us take a more definite direction, and ask—What is the meaning in nature of rudimentary limbs or organs? Why are creatures endowed with that which is useless to them? Look at the ox; the incisors of its lower jaw are strong and well-developed; in strict union with its requirements for cropping grass they bite against the flat toothless surface of its upper jaw or skull. Why in the calf when young—through whose gums they never cut, who has no possible use for them—these rudimentary upper incisors developed for a time, to be ultimately absorbed away?

All these difficulties upon the principle of special creations for every species are inexplicable. But not so on the natural principle eliminated by Mr. Darwin, if that author be correct in the conclusions he has drawn from nature that these type-forms are modified by progressive descent.

Let us turn now to another and very different class of facts. Do you know any of those few lowly-ovenated fish which naturalists have grouped as cyclostomes? I did you ever see the "glutinous hag," with its one recurved palatal tooth that sinks into the body of the codfish as a hookfast, while it breeds, with the lingual palatals pointed out to the young as a sucking mouth on either side is armed into its victim's flesh, and rasped its way

into its vitals. Other similar horrors in the habits of some parasitic animals immediately occur to one's mind, and make one almost shudderingly ask if the Great Creator could call into existence such monsters; but these fearful ideas vanish with the belief that natural circumstances in some exceptional cases might lead to their undesigned development, and that being adapted to no useful end, their kind must ultimately, in the struggle for life, perish.

Let us here, still more clearly, if we can, understand the principle of accumulated variation on which Mr. Darwin found one essential part of his theory.

* Owing to this struggle for life, any variation, however slight, and from whatever cause proceeding, if it be in any degree profitable to an individual of any species, in its infinitely complex relation to other organic beings, and to external nature, will tend to the preservation of that individual, and will generally be inherited by its offspring. The offspring, thus modified, will have a chance of surviving; for, of the many individuals of any species which are periodically born, but a small number can survive. I have called this principle, by which each slight variation, if useful, is preserved by the term of natural selection, in order to mark its relation to man's power of selection. We have that man, by his selection, can certainly produce great results, and can adapt organic beings to his own uses, through the accumulation of slight but useful variations, given to him by the hand of Nature. But natural selection, as we shall hereafter see, is a power infinitely more potent for action, and is as immeasurably superior to man's feeble efforts, as the works of Nature are to those of Art. . . . It may metaphorically be said that natural selection is daily and hourly scrutinizing, throughout the world, every variation, even the slightest; rejecting that which is bad, preserving and adding up all that is good; silently and insensibly working, whenever and wherever opportunity offers, towards the formation of new species. . . . A struggle for existence inevitably follows, from the high rate at which all organic beings tend to increase. More individuals are produced than can possibly survive, and, therefore there must be a struggle for existence, either one individual with another of the same species, or with individuals of distinct species, or with the physical conditions of life."

Thus the tendency of individuals to vary, inherited and carried on continuously by the progeny, but prevented from a general intermingling by the natural opposition of one form of life to another in the general struggle for existence, gradually and imperceptibly modifying the offspring of the original species into a new and differently-adapted form, or, in other words, gives rise to a new species. So beautiful is this idea, so accordant with the silent changes of Nature in her ever serene aspect, so worthy of the wonderful far-seeing design and power of the Infinite, that we may yet fairly entertain the hope, if even we should hesitate to adopt it as a primary cause, of a subsidiary principle, modifying within the restricted limits of the great Creator's type-plans, that varied fauna and flora which forms the glorious chern of our beautiful world.

Undoubtedly we may safely regard it in this modified light until future data and patient research shall have brought together as an amount of experiences and facts as will either establish its general applicability, or teach us to look in some other direction for an explanation of one of Nature's greatest mysteries.

In our next and concluding article on this topic, we shall go back into the far past, and see what evidence Geology brings to bear from the great roll of the Earth's history.

INAUGURATION OF HOGG'S MONUMENT AT ST. MARY'S LOCH.

BY ONE WHO WAS PRESENT.

SCOTLAND has at length discharged a debt long owing to the memory of one of her sons. In November, 1835, a band of sincerely sorrowful mourners—plain Ulster shepherds in their grey plaids, to whom he had endeared himself as a neighbour, men of letters who had been attracted by his genius and gentleness—bore, in slow procession, past St. Mary's Loch, the lifeless remains of the poet of the "Queen's Wake" to their last, lonely, lonely resting-place in Ettrick. Not until a quarter of a century had wellnigh elapsed—until June, 1860—did his countrymen see fit to rear him a monument, to stand in grateful token that his remembrance has not been forgotten among the people of his native glens. Not that he needed such a memorial to perpetuate his fame; that is engraven deep on the everlasting hills; and St. Mary's Loch must utter his praises so long as it contains a drop of water to ripple over its pebbly bed. Not for the poet, but for the people, was it well that a monument should be erected; and not for the people themselves, whose topos and antiquities can be so easily forgotten, but for the future, in "Denholm Sandstone," except to take away the reproach of the stranger who visits Ettrick or Yarrow without finding a memorial of the shepherd-poet who had hither led his flocks.

Thursday, June 28th, was a red-letter day in the calendar of Ettrick Forest,—for forest it is well called, though

* The poems are devout ones, and have, Where furnished once a forest fair,—

that often rang with sound of rural bugles, when royalty's staghounds pulled down noble hearts. An out-of-the-way place, and a solitary, is the forest; and its silence and solitariness are described by the poet of Hogg, as "a lone and a lone" in the "Baron of Buchan." He says: "A great road runs through't, but aften hae I sat on a knowe commanding miles o' it, as no single speck stir as far as the eye could reach, no a single speck, but a thin a sheep crossing, or a crow alighting, or an auld crooning beggar-woman that ye thocht was leaning motionless on her stick, till ye and by the colour of her dress, and the red of her cloak, saw a bit wench after her own, rather than heard, her praying for an answer, w' shivered hauns and fyled on her breast, or, in their paly, held up heavenwards so heesecingly as to awaken clarity in a meeser's heart."

Hogg, who as he was (he had a considerable share of vanity, and not without good reason) considered himself a poor uneducated shepherd, having by the force of his own genius raised himself to be the admired companion of the first literary men in Scotland, when London was not so much the centre of intellect as it is now, could hardly have put much faith in the prophecy of

* The gorilla can very readily approach this action.

North, six-and-thirty years ago, that he should one day have a statue here. "My beloved shepherd," says North, "some half century hence your effigy will be seen on some lonely green knoll in the forest, with its lowest fence stone face looking across St. Mary's Loch, and up towards the Gray Man's Tail, while by moonlight all the wandering wanderers will wear a dance round its pedestal." But even if he had placed confidence in the prediction, he could not certainly have imagined that the inauguration of the monument would have attracted so many people to such an out-of-the-way place.

Up and down that great still road from Skiddaw and from Moffat—the two nearest points from which full communication is available,—vehicles of all sorts and sizes rattled, from an early hour in the morning, with visitors from Glasgow and Edinburgh, and divines from these and intermediate stations. From Peebles and that direction came jovial youths, with fishing-rods in their hands, and craved over their shoulders, to do honour to one of their orders—for Hogg's "The Shepherd" and also the same time to cast a fly in St. Mary's Loch, or a worm in the Meggart or the Yarrow. Across the lonely moors stalked staid shepherds in their plaids; and ploughmen and servant-boys, from far farmhouses, came on foot or in carts, in their Sunday apparel, to show their gratitude to the poet whose songs had cheered many of their solitary gloaming-hours—who had told them of a secret.

"That courtesan Diana lies"

Where the greatest lioness

That the courtesan's man can tame?"

"To be sure, a lonely lioness"

Place the eye across the beam."

And last, there was one enthusiastic photographer, who had borne a huge camera across weary hills, to catch a fleeting glimpse of the scene.

All and these had gathered beside Tibby Shiel's cottage. Tibby, whose dwelling was celebrated twenty-six years ago in the "Noctes," and who herself is there described as an ancient lion that had long lost its mane, is still alive to minister to the wants of some of the younger wanderers, and in one of the "Noctes" as a worn pet, by the Shepherd, as an ant-hill by North, and as a bee-liver by Tucker. Each give good reasons for their own description; but Tucker's is the one decidedly most applicable to the appearance of the cottage on the day of the inauguration of the Hogg Monument,—only that the human being was wanted in to devour what he brought in the hive, instead of to deposit what he had culled from the flowers, and that the queen-bee, Tibby, in her neat old-fashioned widow's cap, was, though her years are now seventy and seven, the very reverse of a drone.

One o'clock was the hour fixed for the inaugural ceremony. At that time the rain had somewhat abated, but it still fell lashing into the loch, and with rattling tearing sound on 200 or 300 umbrellas, which the more sanguine had brought with them. Nevertheless, at this hour, some 300 or 400 persons, chiefly shepherds, were enthusiastic enough to form in procession at Tibby's cottage, and, headed by a gallant piper of the 42nd regiment, Donald Bain (a son of one of the Hogg family), and followed by a band of pipers, crossed the bridge over the stream uniting St. Mary's Loch and the Loch of the Lowes, with banners, some national and some local,—one or two with Latin mottoes, which doubtless the shepherds knew all about,—and one with the picture of some animal called "Hector," which was charitably supposed to be intended to be the anniversary of that name,—to the hillside opposite, where stood the statue, reared in dripping wet canvas, as indelicately a looking object as one could wish to see. To the west of the statue was erected a wooden platform, for the use of the inaugurator, Sheriff Bell, of Glasgow, a gentleman of genial literary sympathies, and himself a poet, the monument committee, reporters, and other chief personages, who included three of the poet's daughters. The "observed of all observers," however, was the master of the ceremonies, the Albany Herald from Edinburgh, with his long flowing hair and beard, dressed in the costume, as we were told, of a border-minstrel of the olden time,—black velvet hat and feather, fine satin tunic, black knee-breeches and stockings, a silver chain-knife of his rank as an equerry, with links only a little smaller than the anchor-chain of a man-of-war, suspended over his shoulders, and falling down over his breast, with other badges and decorations "too numerous to mention," as the auctioneer's programmes have it; altogether a sight not to be seen in the forest every day, as the open-eyed and open-mouthed wonder of the shepherds plainly told. This striking and gorgeous individual now came forward and announced that the nation had subscribed £400 for a monument to James Hogg, the Ettrick Shepherd, and that that monument was now to be inaugurated, the inauguration to commence with prayer.

Prayer over, Mr. Currie, the sculptor, a local gentleman who had gained some celebrity by a monument to the late George Park, in St. James's, erected the statue. It represents the poet seated, in shepherd's garb, on a moss-covered rock, supposed to be one of the relics of the old forest. Two broken blades from a stem behind fall over the shepherd's seat, the base of which is encircled by ivy. The poet's right hand, outstretched in a somewhat stiff and uneasy manner, rests upon a goat's walking-stick while in his left he holds a scroll, upon which is engraved the last line of the "Queen's Wake," the first word, however, being changed,—

"He taught the wandering winds to sing."

At his feet, on the left, reposes his dog Hector,—not like the portrait on the banner, but like that "faithful Hector" which the shepherd has described as "sitting like a vane (Christian by my side, glowing far off into the glens and uneasy manner, rests upon a goat's walking-stick while in his left he holds a scroll, upon which is engraved the last line of the "Queen's Wake," the first word, however, being changed,—

"JAMES HOGG,

THE ETTRICK SHEPHERD.

Born 1770. Died 1835."

(Whether the sculptor had better means ascertaining the date of his birth than his biographers we know not; but it will be observed that he differs from them all in placing the poet's birth in the year 1770, it being usually given in 1772.) Above this inscription is the representation of a harp, which, again, is surmounted by a queen's head (Queen Mary probably) surrounded with a wreath of flowers. The sculpture is altogether eighteen feet high, the figure being eight feet and a-half and the pedestal

nine feet and a-half in height. One of Hogg's daughters testified to the excellence of the statue, so far as the likeness is concerned.

The unveiling of the statue was the signal for a burst of cheering that might have startled "the little people" of the hills and glens, as they lay hidden in the hearthstells or the buttercups, very considerably; and it was renewed with even greater enthusiasm on the conclusion of Sheriff Bell's admirable and effective speech.

Sheriff Bell had scarcely commenced his address when the sun shone out beautifully, and sympathized with the object of the gathering, as the papers said; and the little lark soaring up, with glad voice, carried the intelligence of the proceedings to "the gateways of the day."

The statue inaugurated, the privileged part of the company rushed off to the manse, to dine; the unprivileged portion sought Tibby's and the tent "from Moffat."

Of the proceedings in the tent, after dinner, more need not be said, than that they partook of the poetry of the scene. All these may be imagined, as well as the awful stillness of the glens and hills, where the monument was left to solitude and the fairs. And doubtless the two or three anglers who remained all night at Tibby's, saw, if they were watching, "Ivanhoe Kilmory" come down the glen "like in the glowering," and "white

"Her voice, like the distant melody"

"That floats along the silver sea,"

chanted his praise,—with her hands waving a wreath of immortal flowers from the "land of love and lychie," around the brows of the poet's effigy.

THE SCIENCE OF THE SEASHORE.—No. I.

INTRODUCTORY.—THE SANDS.

At this season, happy memories of the seashore, and its peacefulness and sedulousness, recur to many inland residents. The fresh sea-breeze seems necessary to success among the odours of city and town. The toils of the counting-house or the manufactory have told severely upon patience; and even the roses upon the younger and fairer tenants of the parlour and drawing-room languish and begin to fade. Neither alpinism nor homophily can rescue us from the best tonic in sea-air; the most moderate marine walks; the best globules the sands of the shore. What a month or two at the seaside can do for the body every one knows; but few are aware what it can do for the mind. This latter it is our purpose to show; and our hope is that, instead of idly passing the long hours of the summer or autumnal day, without a thought to treasure up for use in winter, our readers may, with our assistance, derive as much benefit to the mind as to the body from their marine sojourn, and that without too close addition to study, and too great a burden of formidable technicalities.

A seashore is Nature's museum. In Britain it is in truth the British Museum,—a department of natural history. Some inland things are wanting, and of the tenants of the air we have only an occasional sparrow or stormy petrel. But a glance at any natural history museum will show how large a portion of its treasures are due to the sea and its marginal boundary. The shells, the molluscs, the annelids, the crustaceans, the corals and the corallines, and the pebbles,—not to speak particularly of the great tribe of fishes,—are all the proper produce of the sea and the gatherings of the strand; while no small portion of the geological specimens are extracts from cliffs and rocks that overhang and underlie the shores of the coast. When, therefore, we treat of the science of the seashore, we treat of a considerable section of natural science, and that section which is most likely to interest the general mind. It is our object, therefore, to show the nature of the objects beneath our eyes and feet in the days of our leisure, and in the happy and healthy hours of our hard-earned holidays. In this respect, too, it is the best school of natural science, the best educational course, and the most suitable locality for a series of lectures upon objects which are laid before us by Nature, the lessons shall be given by a student of Nature who has himself trodden our shores year after year, and gathered not a few "unconscionable trifles" during what he remembers as the most healthful and the happiest hours of his life. He began his wanderings in early boyhood, and will not, therefore, be unimpaired of those who are still boys. He began when science of this kind was far less cultivated than it now is, and he has missed and puzzled over many a marine enigma which is now solved and recorded amongst the archives of the careful investigators who have sprung up of late years, both at home and abroad.

The moment we set our feet upon the washery many questions occur to us, and we begin to ask ourselves, "What are these things?" Here are the sands,—dry walking and dry talking! Can any man find anything scientific in sand? Certainly; and much that is very interesting, when freely pondered. Every grain of this immense accumulation has its interest. It has travelled far; it has travelled by water, and has come by a circuitous course to its present resting-place. It is once removed from its native river product; for the rivers bear down the sands in mechanical suspension, or force them forward over the bottom of the sea. They are derived from the wearing away of cliffs and sandstone rocks, and probably from the attrition of the pebbles and shingles upon beaches. Shells and corals, also, are triturated by the action of the billows, and add their grains to the vast heap beside them.

Mentally, as some philosophers think, the world is going to seed; materially, much of it is certainly going to sand, silt, and shingle. The hardest and densest rocks are subject to attrition by breakers; there is nothing that cannot be worn away in time by sea-water; and one great source of the countless assaults of billows upon rocky fastnesses is the perpetual addition of grain to grain among circles of sand. A high authority has told us that there is nothing new under the sun; and we might be almost warranted in adding that there is nothing new under the sea. As regards the formation of sand, this is true; for we have every reason to conclude that the way in which it formed now, was the way in which it was formed millions of years ago. Primæval shores were doubtless opened out from the degradation of primæval rocks. These becoming consolidated into sandstone were subject in some cases to what is termed *autostratification*, and thus many of the rocks composing our hardest and highest mountains were once in grains upon the untrodden sands of the sea. The insolent and insolent sandstone, however, is not, but still mainly remains as sandstone. To reduce this was easier and

speedier work. The waves wroth and the rains dashed at their reduction. It was impossible for the boldest cliff to withstand these potent enemies. These very rocks that were picked up grain by grain, are grain by grain brought down. Production and reproduction are not limited to the annual season. Drift, dead matter, and the sand under the foot of the cliff, are in a different phase. Aggregation and disintegration build and overturn the rude material of our earth. The arenaceous (sandy) strata have had their primal times of travelling, their subsequent times of quiet consolidation, and now, wherever they are within reach of the restless ocean, they must have their times of travelling again. They have seen these grains, they have seen solid rocks—they are now more to be loose grains. Sand, they first were, and to sand they shall return. Half the world, as we hinted, is going to sand, and if the world should last as long as it has already lasted, it would not be extravagant to say that aqueous and atmospheric, and other natural agencies, might effect the disintegration of every particle of rock, and the great globe itself be once reconstituted out of its own ruin. In these notes, then, most interesting philosophy to be got out of meditations upon the sands! True, all these theories demand thought, observation, and the power of drawing legitimate, and well-sustained inferences; but for this very purpose are we now reclining upon the shore, free from business and far from the common cares of the jostling and struggling city.

The free winds of heaven are blowing in our faces, and bracing our nerves, but they are also doing other and less familiar and refreshing duty—they are at work with the sands, carrying them forward and far; and every vigorous blast, like every soaring balloon, has its ballast of sand. Station yourself any day upon a sand-bank, and you will see the sand blowing in the air, and tolerably dry, and you may observe the manner in which grains of sand are transported inland, and mark the various modifications of surface arising from the depositions of sand among sea-weeds or pebbles. Some grains are held in mechanical suspension by the wind at a height of an inch or two from the surface itself, while the rest, under the influence of the air upon larger bodies, the current of wind, so that similar grains of sand are merely slowly swept along the bottom. When these two sets of grains meet, they form a small heap, which is slowly but surely increased, grain by grain, until it becomes a sand-hill. This age-long process enlarged until it arrives at the enormous of a dune, 5—8—such is the nature of the sand, and the annual amount of blow that will skirt our own shore in some places, as in the neighbourhood of Yarmouth, and along the Norfolk coast, and numerously also on part of the coast of Cornwall. For whole days have we walked amongst the Norfolk dunes, and curious larvae-like mounds due to that coast present to us, as if whole sheets were not blown there by the wind, and the sand was the issue of one-sided and painted savages deposited; but nothing, in fact, is buried there, save a few shells and sea-weeds. The wind has done all this; it has raised mounds to its own power, and it does not overthrow them, though they are loosely built and entirely unprotected; without foundation, without definite form, without any single bond of union, or any binding puncture, there they stand safe and unmoved, there run along the coasts of Holland, and Denmark, and Spain, wind-mounds, reared out of one material, and that the simplest in nature—mound, too, by an invisible agent, the sole visible power of long-pest breezes and whirlwinds!

In some few localities the sand is so closely compacted of shells ground down by the sea-breakers to the minutest fragments; and we have noticed in such cases a tendency to the consolidation of the parts, resulting in sandstone. A colourless consolidated sandstone of this kind, at New Kaye, on the northern coast of Cornwall, has long been employed as a building stone. The neighbouring church of Trestle is constructed of it, and very ancient stone coffins, composed of the same consolidated sand, have been discovered in the adjoining churchyard. So firm is this modern sandstone, that where it passes into a sort of conglomerate, hard pebbles can be broken by a blow dealt out to them upon a block of the sandstone, without fracturing the sandstone itself; and a violent blow from a sledge is necessary to break it where not indurated. On the shore opposite Gooltry Island an immense mass of it occurs, of more than a hundred feet in length and from ten to twenty feet in depth, containing entire shells and fragments of clay slate, while the whole mass assumes a striking resemblance to stratified rocks, or rocks disposed in layers. The component sand may be supposed to have been brought from the sea, and from other shores, by hurricanes, at a remote period. At the present time its advance is singularly arrested by the growth of peoni (*arundo arvensis*). Here, then, we have a rock forming before our eyes; here we have sand in process of conversion into hard sandstone. The carbonate of lime in the shells is acted upon by the carbonic acid in rain water, and soluble matter, and the result is a sandstone, which, when plants have established themselves upon the surface of the sand, Carbonate of lime is thus held in solution, and agglomerates the grains of sand together until finally they become indurated and serviceable to man in building and in agricultural uses, in churches and in coffins.

Sands, however, are not always so closely consolidated or peaceably heaped up. A dune is commonly a fixture, but not always. When the winds are very powerful, and prevail from the same quarter, the dunes themselves show a tendency to move in the same direction, and before the blast. Then they produce changes upon the low lands, and even upon slopes of adjoining hills. The rains, which cannot find a passage into the sea in the shape of streams, years against the sands, and yet that one sand-hill, more than sixty feet high, was almost visibly advancing upon it. The position of some lakes being altered by the sands, the former invaded, in 1802, five fine farms belonging to St. Julien, and they have since covered a Roman causeway which led from Bordeaux to Eborac, and which was seen about forty-five years ago when

the waters were low. The Adour, once known to flow by Vieux Boncourt, and to fall into the sea at Cape Breton, is now turned aside more than a thousand toises—that is, about 6,400 English feet, or somewhat less than a mile and a quarter—and all by the sands.

This description, then, as it is so often the case, is the unthinking and unknowing, is no contemptible part of the material world. It is hardly dull, for it fires about on the wings of the wind; it is hardly dull, for it travels in its own fashion at a steady but sure pace; it is hardly contemptible, for it can threaten man in his houses and farms. It is, indeed, an important component, as well as a formidable agent, in the history of the world. It is the great work of the world. It can bury his burial places themselves; it has surrounded the Egyptian temples, and is fast dissolving up lofty pyramids; it half covers the huge sphinxes; it veils from us many an architectural triumph of Egypt's earliest rulers; it holds monoliths under its vast desert sea; and it hides hieroglyphs from our eyes. The eager Egyptians, and the more numerous, many centuries under the sea; are there not as many under the sands? But, on the other hand, as a component of our shores and our rocks, it affords us a firm foundation, and it is one of the pillars of the earth. A single grain of it is a singular proof and illustration of Nature's power of reduction; a single rock of sandstone is as great a proof, in the reverse order, of the wonderful power which, through long and unrecorded centuries, has built up the vastest bulks out of once loose and incoherent particles.

Such is the mere foundation of one part of our shores: the yielding substance which bears the impress of our wandering feet, the playground of the sportive waves, and apparently the most interesting of the elements about us. Yet this simple particle has a history of its own. Still to be told, it has already gone a long round, and may yet again set upon its travels, and help to bury fields and farms, depopulate villages, and bar the flow of many waters. It may march before the trade-winds, to arouse distant forests, summer mountains, and once more hile the glories of nations under a dead and arid level!

A SOCIAL PROJECT.

ALREADY the centrifugal force which always tends to empty the metropolis of its inhabitants at a certain period of the year is beginning to be felt. This year there has been no spring and as yet very little summer; nevertheless, the days of the calendar, bringing round again the usual period of departure, are succeeding each other with unrelenting steps, in spite of barometer and thermometer, and all London will soon be shaking its wings for flight. It is rather curious to reflect, how this time of year is practically destructive to the duties of the Church, regulating the terms of the lawyers at Westminster, and the earliest influence in fixing the London season. It was promoted by the growing business before Parliament far beyond its old limits, under which no person of fashion remained in town after the celebration of George the Third's birthday, and no society dinner, and no party danced, and no party given, by the natural habits of certain wretchedly bled, whose very name was unfamiliar to the Londoners of fifty years ago. By considerations belonging to the department of ecclesiastical antiquity, and by the modern pursuit of gossamer, he decided the season of recreation for thousands of persons who never give thought to the spring or the autumn, or the summer, or the winter, or the present arrangement for holiday-taking, by those whose avocations oblige them to live in or about London during the greater portion of the year, is probably the best. July, August, and September are, no doubt, in many respects, less enjoyable in town than April, May, and June. It is hardly fair, however, to attempt to conclude the argument, as it is so often done, by asserting in the usual way that September is certainly the worst month to pass in London. Let common justice be done to this vilified portion of the year. Has this unhappy and much-abused month ever had a fair trial on the question of its claims to be ranked as a time for agreeable residence in Belgrave, Tyburnia, Bloomsbury, or St. Marylebone? Is it ever likely to get it, in the only way it can, by the universal consent of a considerable number of persons to stay at home in London, and see what a September in an unadorned city would be like! At present, and under the existing régime, the great centre of life is universally abandoned in September. Careless floors, brown-bellied corners, and dismantled rooms, aggregate the horrors of solitude. Workmen and painters, at their septennial or triennial task, increase the score of danger and discomfort, within and without. The drains, deprived of their usual supplies from many a bath, vent their complaints to the upper air in distressing apoplexy to the noses of the few wanderers along the desolate pavements. Empty houses, or houses, or children, or children, remain a sad and solitary scene, and the joy of the joys that are gone. Life and society are the soul and charm of a great city. Without these it would be as dreary in May as in September.

We now proceed to unfold a project which appears highly deserving of attention, and which is mentioned thus early, in order that persons who may be so much as avoid themselves of it may have ample time to make their arrangements accordingly. To try the experiment of an autumn in London with any fairness, it is obvious that May and September must be made to change places—not indeed in the almanac, but morally and socially. Everybody should agree to stay in town. The partridges should have a month's respite from their annual slaughter, and the Exeter Hall meetings should be held to take place in September. The railway companies should organise special excursion trains to enable the country-folks to enjoy the charms of London at the height of the season, which would be about Michaelmas. Mr. Murray, in honour of the occasion, should bring out a new edition of his "Handbook of London," for the particular use of persons desirous of taking the opportunity to make acquaintance with the wonders of the chief town of their native land. It is astonishing how much there is to be seen in and near London, which few people ever do see. Urquhart, who takes his omnibus daily to the great fairs of business, and Russians, who spend his annual ticket on his line, must both have their eyes opened to the beauties of London by overlooking what is the holiday-time is always spent at a distance, and the great objects of interest and beauty immediately accessible to them remain for the most part unknown to themselves and their families. With the exception of the grander features of mountain and lake, there is, as such, beautiful scenery within an hour's ride of London in any part of England. London proper, too, is in itself a most remarkable and beautiful locality. How fine is a sunset at the bottom of Pall-Mall! How glorious

* Probably from the Danish, *de sand*, or the Saxon, *de sand*, a hill.

are the lines of gas-flames seen glowing like emeralds against the ruddy sky! What real beauty of lawn and foliage there is in the Parks and Kensington Gardens! What noble sheets of water are the Serpentine and its sister lake in front of the Queen's Palace! In what other country can a walk of a mile be taken over turf and under trees in the very heart of its vast and thickly-peopled metropolis! Then, if all the indoor "sights" of London were to be "done" in the manner that people set about doing the sights of Paris or any other foreign city, not one, but ten autumnal vacations would be required for the task. If a Guide to London were to be compiled on the same scale as those for most other places, its dimensions would almost rival those of the Post-Office Directory—so much of interest is there to be described.

The true thing, therefore, would be for a number of sensible people, who are capable of appreciating good advice, to agree to make a beginning, and undertake to spend a September in London together. They would find their own houses—when not disrespected, or dismantled, or be-brown-hollanded, but in their habitual and normal condition of comfort—far more agreeable and much less expensive than any hotel or seaside lodgings. They would, of course, spend their mornings and afternoons in seeing London, which it is presumed, they have never yet seen. There would be dinners, and receptions in the evenings, at which there would be fresh subjects for conversation; and there would be a peculiar set in mixing with society under these very novel and interesting circumstances. Excursions to places of note within easy distance, would frequently be made. Middlesex, Surrey, Berkshire, Kent, and Essex, would unfold their hidden and unexplored beauties to the delighted gaze of the stay-at-home travellers. Unknown forests, mountains, and lakes would be visited. Leith Hill, in certain states of the atmosphere, has sometimes almost an Alpine character about it. Virginia Water is an extremely respectable and well-wooded lake, and feeds a waterfall which has at least the merit of never being without water. It would be difficult anywhere to beat Windsor or Richmond Parks for sylvan scenery of the highest order of beauty—or to match the river-view from Richmond Hill. And then every night, these happy and well-advised people would sleep in their own wholesome beds; and every morning—O, exceeding joy! there would be no packing, no squabbles, and no bill to pay, as when travelling,—and no "nothing to do" as at the seaside; and the letters in the Times, headed "Hotel Charges," which abound at this season, would be read with a sense of inward complacency and satisfaction that would alone be a sufficient reward.

We have thus shortly indicated a novel scheme, which, as it appears to us, need only be tried to be approved of. Perhaps a week or a fortnight's absence might be permitted at the end of the time, for the sake of obtaining that complete change of air and scene which a few projected persons may still think necessary to refresh the system, and enable us to return with renewed vigour to the routine duties and business of ordinary life. But the rest of the time should be spent in seeing a great many things very well worth seeing, which are now seldom seen; and those who stayed in London would be in no want of matters to relate on their return for the experiences communicated by their friends coming home from abroad or from our own coast with empty purses, dissatisfied expectations, and the uncomfortable recollections of money grievances.

THE TOTAL ECLIPSE OF THE SUN ON THE 18th OF JULY.

(From an Astronomical Correspondent en route to Spain.)

The physical constitution of the sun is the great object of attention in a total eclipse. It is not the few moments of darkness which occur at the time of total obscuration that the astronomer is curious about, nor would he tell all this long journey merely to note its effects on animal and vegetable life. In the present eclipse Saturn and Mercury, Jupiter and Venus will be seen in the immediate neighbourhood of the Sun; Castor and Pollux, and numerous other bright and well-known stars, will likewise make their appearance. Although this conjunction of all the planets may be very singular at such a time, and useful in judging of the darkness at the critical moment, yet they are of no further utility to astronomy or science. Amidst all the grand phenomena of the sudden extinction of light and the universal laws of nature, when burned and ignorant, and proud and humble are equally impressed with the awful strangeness of the scene, the attention of the telescopic observer will be directed to the sun itself, now really "conspicuous by its absence," and endeavoring, even by that absence of "excess of light," to find some clue to the nature of that glorious luminary.

If we observe the sun at the present moment, we see an immense number of dark spots, of all shapes and sizes, on its surface; whilst, on the other hand, in some parts we see spots which are considerably brighter than the general surface of the luminary. The dark spots, continually and hourly changing in form, were at first supposed to be clouds floating on its golden atmosphere. Succeeding observers could not, however, reconcile their observations with this idea, and came to the conclusion that the sun was surrounded with two or three envelopes, and that its real surface was situated at a considerable distance from the luminous atmosphere which throws out heat and light in every direction. Between the sun itself and the luminous envelope they considered there was a less luminous atmosphere, whilst the very brightest spots and veins, they imagined, might be clouds of intense brilliancy thrown up by the volcanic action which produced those breaks in the sun's surface, and in the neighbourhood of which they are mostly situated. Those latter must be of remarkable interest, when it is considered that the darkest parts of the black spots on the sun are estimated to be some thousand times more brilliant than the light of the full moon. With a small telescope all those appearances may be seen at the present moment, the spots now being very plentiful. Solar eclipses have demonstrated, however, that other influences are at work on the sun, and many other facts have been observed. Thus, at the moment of total obscuration, when the moon completely hides the sun, and when the sky in the neighbourhood of both bodies should be as dark as any other portion of the heavens, it has been always found that the moon is surrounded by a beautiful corona, which, in a clear tropical sky, presents a most brilliant appearance, flashes and bundles of rays of light flying away in all directions, and being seen as vividly as if they were passing through an opening in a cloud. In addition to this, crimson-and-white projections, but mostly having

the form and appearance of red flames, are seen in the immediate neighbourhood of the dark edge of the moon. The corona and red flames have been seen during every total eclipse which has been observed with a telescope, but it is only during the eclipses of 1842, 1861, and 1868, in which they have been narrowly scrutinized, and people are now prepared to look for them as a matter of course. These phenomena, as seen in the eclipses of 1842 and 1861, are well known; but that of 1868, as observed by M. Liais, at Rio Janeiro, in which the crown and the red prominences took the most extraordinary forms, is not equally so.

The eclipse will not be very considerable in England, and the darkness can be but very slight, although upwards of eight-tenths of the solar diameter will be eclipsed at London. It must not, however, be supposed that the phenomena to be noticed are few or slight, in consequence. Leaving the pure astronomical measurements out of the question, which are always valuable, we may state that, at the last eclipse observed at Rio Janeiro, shortly after the commencement of the eclipse, M. Liais was able to see the whole of the moon's disc, although the part of its surface which was projected in the sky was very faint. Sometimes it appeared brighter than the general ground of the sky, and sometimes darker. It was impossible to see it with a telescope, by direct vision, but by looking at the reflection of the sun on a piece of unpolished glass, it was plainly visible. In some photographs which were made of the various phases of the eclipse, the whole of the moon's disc could be traced in a similar manner. This is a fact which is quite novel, and deserving of attention; and as the sun will be at a considerable height in the sky, at London, it will probably be verified by some of the ingenious photographers there and elsewhere. It has been said that the whole of the moon's disc was seen in the partial eclipse observed in London in 1860; but it is not stated in what manner the sun was scrutinized.

Another fact deserving of attention is the phenomenon of Baily's Beads (as they are called), which occurs near the moment of greatest obscurity, and when the edges of the sun and moon are almost in contact. At this moment, when the thread of light should be gradually becoming thinner before it finally vanishes, it has been found that it breaks up into distinct fragments, which present a most remarkable and brilliant appearance. Although this phenomenon is only expected when the eclipse is total or annular at the place of observation, yet it was plainly visible in that of March, 1858, as observed by Mr. Breen, at Cambridge, where

the eclipse was only partial. It was supposed by him to be due to the irregularities on the edges of the moon, which, when examined by a telescope with a high magnifying power, never presents the same regular contour as that of the sun. In the eclipse of Sept., 1858, M. Liais, however, states that the edges of the moon were smoothly and sharply defined, and that Baily's beads were plainly seen. Another fact observed by Mr. Breen during the eclipse of March, 1858, was the appearance of a faint light projecting beyond those broken points of the sun's margin which were considered by him to be a portion of the corona, as seen during total eclipses. The instrument made use of by Mr. Breen was the Northumberland twenty-feet telescope, which was at that time the largest in England.

It will be seen from the previous remarks that it is not the mere accident of a few moments' darkness that takes the astronomer away from his observatory; but that many problems in optics and physics are involved in the question, so say nothing of the verification of theory at the places of the sun and moon by delicate micrometrical measurements. Even those who are merely prompted by curiosity

to undertake the journey, and who are anxious to witness the grandeur of the phenomenon, as universally described, may be pardoned. They might ask that if the sun descended below the horizon only once in twenty years, how many would be on the look-out for the event. The philosopher would be ready with his instruments to observe the time at which this occurrence took place, would endeavour to explain the wonder of the twilight, and make some hazardous guesses about the solar light. A total eclipse of the sun at any particular place is a much rarer event. One occurred at London on the 20th of March, 1140.

There was not another at our metropolis for a period of 575 years; nor since the latter, which occurred in 1715, has a total solar eclipse taken place. Many partial eclipses of the sun have taken place, of course, during that time; but it will be seen from this statement how rarely it is wisely observed. A description of the present eclipse will, therefore, deservedly find a place in the columns of "THE LONDON REVIEW." The next greatest eclipse which occurs in Europe during the present century, is that of 1887.

BREAD.

Or all the industrial arts, none has made so little progress as that of "panification," or bread-making. Centuries after century, while the marvels of human ingenuity have been steadily advancing and civilizing mankind, this alone has remained stationary. With few creditable exceptions, those who supply our tables with the "staff of life," pursue the old barbarous mode of trituration and amalgamation of the materials; a process scarcely differing from that in vogue during the primitive times of Fabriceus and Cincinnatus. The ordinary method of bread manufacture is not only coarse, filthy, and disgusting, but is fraught with fatal consequences to those engaged in this—as at present prevalent—demoralizing and health-destroying occupation. It is even extraordinary that individuals, even when the public interest is at stake, should not unanimously adhere to ancient and injurious usages. Of this perversity and prejudice, the baking trade furnishes a lamentable example.

The condition of the journeyman baker—of whom there are 10,000 in London alone—is singularly anomalous, and calls aloud for commiseration and amelioration. We doubt much whether the sugar plantations of the American slave states produce one-half the miseries engendered by our English bakeries. Although—thanks to the efforts of the Sanitary Commission—the horrors of these "white sepulchres" have been widely exposed, nevertheless the same evils exist, the same practices prevail, and the public maintains the same stolid indifference it previously displayed.

As one of the class of "white slaves," the journeyman baker stands pre-eminently. From the hour of eleven at night, until five, six, or even seven o'clock the following evening, and occasionally for a much longer period, this helpless victim of a "social evil" plies his laborious and unwholesome handicraft, and for a pittance varying from 10s. to £1.10s. per week, the maximum wages of such incompetent drudges. Half naked, in a highly-baked, closely pent-up underground room, the atmosphere of which is densely impregnated with insidious particles of flour, he toils with his hands—ay, and even with his feet,—until the perspiration in his big drops from his exhausted body, knowing the tediousness of that is to form.

"Bread that doings man with strength supplies."

Nature will not brook so flagrant and systematic a violation of her righteous laws; so the avenging Nemesis of justice, slowly, but surely, pursues the transgressor. Overwork, impure air, and an unhealthy occupation, soon tell their need upon the wretched journeyman. He is struck down ere he reaches the prime of life, while his family have no alternative but to beg their bread, or seek the miserable refuge afforded by the parish. It is an unquestionable fact that there is a far higher degree of mortality among bakers than among the operatives of any other unhealthy calling, not excepting miners, knife-grinders, stone masons, or silk-pressers. According to the most reliable statistics we find that (excepting all youths connected with the trade who die ere they reach manhood) the average period of life attained by the journeyman baker is but forty-two years. Coupled with this excessive mortality, the ordinary existence of the wretched baker is but a protracted condition of ill-health, not unfrequently terminating in consumption, which Dr. Letheby emphatically terms, "the malady of bakers!" But among the host of disorders attendant upon the occupation of a baker, there is one which, although repugnant, may be lessened in itself, is yet necessary for the public to know. We allude to the cutaneous disease, which principally affects the hands and arms, characterized by the vulgar epithet of "the baker's itch." This arises, we are informed, from the constant contact of those members of the body with bread ingredients; the fermentative condition of the dough, and the presence of saline particles, greatly aiding the development of that disgusting disorder. Surely, if it were needful for the legislature to interfere in the case of factory-workers, in order to save them from the grinding tyranny and impetuosity of heartless taskmasters, the great body of operative bakers have not less claim upon the sympathy of the nation, and the interference of the state. But if not on humanitarian grounds, demand for cleanliness and decency should make the public perpetually to demand a less objectionable system of bread manufacture.

About eighteen months since, a terrible and successful effort was made by Mr. Stevens, of Hackney, to improve the physical and moral condition of the operative baker. For this purpose he invented and patented an ingenious machine for kneading dough, which altogether dispenses with hand-labour, so far at least as the process of what is technically termed "mixing" is concerned. It is rather an inopportune anomaly that such a machine had not been invented some centuries previous; but more surprising still, that having once been invented, it is not universally used. Notwithstanding the numerous and unquestionable advantages of machine over hand-labour, especially in the manufacture of bread, scarcely a dozen, out of nearly 8,000 master bakers in the metropolis, bring this humane agency into requisition,—a striking proof of the desperate tenacity with which men will cling to old systems and preconceived opinions.

On the grounds of health and cleanliness, machine-made bread must be considered preferable to that manufactured by hand. But the new system of panification offers several important advantages besides these. The bread thus produced is superior in quality, whiter in colour, sweeter to the taste, considerably more substantial, and less liable to waste by crumbling, than that formed by the ordinary process; while it creates a saving of bread material to the master baker of nearly 12 lbs. on a sack of 280 lbs. The machine being enclosed while in action, prevents the flouraceous matter from being, and thus dispenses with "sweepings," as none are made. The "sweepings" of an ordinary bakery are considerable; and when we consider that flour costing from 47s. to 50s. per sack is wasted in this leprous condition for 12s. per sack, the loss must be rather serious; to compensate in some measure for which, as well as to remedy imperfect trituration, adulteration is frequently and freely resorted to. Although the machine produces a great saving of labour—inasmuch as the mixing process is performed more thoroughly and quickly thereby,—nevertheless it does not operate injuriously against the journeyman, a similar number of hands being required in these bakeries where machinery is adopted as where hand-labour is exclusively employed. Mr. Thompson, the intelligent master baker of Greenwich Hospital, has declared that since his adoption of the modern system of bread manufacture, about six months ago, his men prefer working at the machines to the old, laborious, and objectionable process of "mixing."

In a sanitary point of view the advantages offered by this improved system, both to the operatives and the community, are very important. The former is released from excessive overwork, destructive employment, and a pernicious, confined atmosphere, for the high temperature required to induce fermentation is produced by warm water poured into a receptacle at the bottom of the machine. It likewise obviates most of those distressing diseases which are peculiar to the baker's lot, and to which we have heretofore alluded. To the latter it affords a pure, wholesome, agreeable, and economical article of consumption, which can be regarded without ceasing disgust and pity for the hard-worked and ill-paid producer. Truly and truly has a foreign writer observed,—"We have become Titans through the medium of science, which, nevertheless, has not given us bread worthy of man!"

Dr. Darghish lately invented a most ingenious and scientific mode of making bread, known as the "sifted" process. This system not only goes further still towards ameliorating the condition of the oppressed journeyman baker, but bids fair to entirely revolutionize the baking trade. It is well understood that the formation of good bread chiefly depends upon a chemical transformation of its constituent properties. Originally mankind prepared their corn by simply boiling it, and forming viscous cakes—a food anything but palatable or digestible. In course of time it was discovered that flour mixed with certain quantities of warm water and yeast produced an alcoholic and pearly fermentation, which not only destroyed its acidity, but rendered it light, wholesome, and easy of assimilation, when properly tritinated, exposed to prolonged warmth, and subsequently baked. This process of preparing the "sponge," although necessitating from eight to twelve hours' labour, continues in general usage at the present day. Dr. Darghish's system entirely removes an abstraction so formidable, and yet so unnecessary in the production of our "daily bread." It generates a steamy acid gas, by means of fermentation, imparts to the solder-hump of flour and water a vascular character, while it effects a transformation, or rather deterioration in the starchy and mechanine properties of the flour itself. By the new process, carbonic acid gas is artificially produced, then stored in an ordinary gas-holder, and finally pumped into a cylindrical-shaped tank of water. This chemically-charged water is subsequently mixed, under pressure, with the flour, when dough is produced; and after having been kneaded by the arms of the iron "mixer" from five to ten minutes, is divided into loaves, placed in shelves, and baked.

The alleged advantages of this new method of bread-making, consist, first, in the cleanliness of the process, secondly, in the rapidity with which flour and water are forced into bread; thirdly, in preserving the flour from deterioration, which it avowedly undergoes during the fermenting process; fourthly, in producing certainty and uniformity in the production of good bread, and obviating the vagaries and irregularities to which the old system is frequently liable; fifthly, in rendering the bread thus made more wholesome and digestible—it is being admitted by eminent chemists that the *débris* of the yeast is more or less constitutionally injurious; sixthly, in effecting a pecuniary saving—the cost of carbonic gas being considerably below that of yeast; and, lastly, in superintending immense economy of labour and health, while it changes bread-making from a degrading manual work, manufacturing machine-work, and transforms operative bakers from mere human over-worked drudges into intellectual and healthy labourers.

A DEFENCE OF SLANG.

[There is no false doctrine devoid of some few grains of truth; and there is no truth (without the pulse of mathematics and the exact sciences) to which some grains of exception may not be taken, or some grains of salt added. It will be seen below, that our article of last week, on "Slang as a Social Sympptom," has awakened the indignation of a vehement advocate of the constitutional freedom of speech. He is not only a free thinker on speech, but a very free speaker of his thoughts. He is certainly a little pert, and not over courteous (considering the circles in which he says he moves) to our contributor. But he is quite mistaken in supposing we should be the least likely to suppress him as too formally unanswerable. He seems in earnest about his so-called liberty of speech, and as he appeals to the People, to the People he shall go: not because we wish to "write him down" the quiescent he so modestly mentions, or mean to show off our end-of-day-platypus by his ears—but because, however wrong he may be theoretically, he has the command of a lively style, which, with a little pruning and seeding, might make him a good]

writer. He is already above the average of amateur writers; and he is so, not by virtue, but in spite of his theories; for, in practice, wherever he is good, it is simply because he is unconsciously acting on those very principles of a true and natural style of writing which our contributor insinuates upon.]

TO THE EDITOR OF "THE LONDON REVIEW."

SIR,—Though I firmly believe it is one of the greatest things a man of the world can do, to take up an unprofessional pen, and pick out the gentlemen of the press, I cannot resist the temptation of laying a shew at your editorial parlor. I labour not only under the disadvantage of being unaccustomed to brandish the tawdry pen which your journalist of all-work no doubt can turn on the thick skull of an assailant, just as easily as he can use it to chop his logic and mince his phrases fine for that meek and docile noun of number, general reader. I do not so much care about this, for I can write as I talk, and tending to that society which your slang critic implies ought to talk as he writes. We should be very sorry to err on ourselves to his standard. But just look here—if I happen to lose better fight than you expect, and your professional friend seems likely to come off only second-best, the simplest way of dealing with me is to lunge me, armed at all points, like Marcellus Curtius, into the yawning gulf of your waste-paper basket. So, my only chance of appearing in the arena of fair discussion at all, is that you should judge me an obstreperous blockhead, likely to make sport in the battue, and kindly let me put my foot in it. I merely mention these pleasant conditions under which I write, that the public may be warned to see fair play. As to you, sir, the sower you write me down an ass the better are my prospects. My hope is that you and the public may differ in opinion. And now to the point at issue! What is this slang, whose introduction into society you so much deprecate and deplore as a symptom of social degeneracy?

If slang be the general term of an uneducated and ill-formed of all forms of expression which are not already adopted and acknowledged in the classic national literature, I maintain that the erosion of slang would turn English into a dead language. Language lives from mouth to ear, not from page to eye. It is only reflected in literature. The essence of deadness in a language consists in its standard of purity being comprised within certain works already written; so that, to express any new thing you must twist an old expression, and use its warped dry withes in your new-fashioned basket, instead of cutting fresh green ones with your own whittle. We know how that system answers by the best samples of modern Latinity.

There is a great tendency to what they consider a dignified form of expression in the minds of all feeble uneducated folk who worship the Kiamom of respectability. Their highest aim is to be correct. The gentlemanlike shopman does not put a thing down in his bill, but "places the article down in his account." The ladylike lady's-maid is not helped to a little bit, but "assisted to an exceedingly small portion" of pudding. Your polite dentist does not simply make an appointment with you, but "arranges an interview." Your correct Member of Parliament, instead of coming roundly out with his sentiments, is still "free to confound," even after the stupid old phrase has been a hanging-stock for years. Your Abolitionist literary gent, who no doubt is proud of being able to write and talk in his correct style, is indignant with that poor dear marchioness for styling, in the simplicity of her heart, "that it was about time to cut." When she sees every of his stilted prose and company manners. I think I hear him discussing under his tree, like Jonah to the Ninevites, after his "best literary style,"—and I can imagine how completely his choice phrases were justified by the quaint contrast of that haughty expression. After all, this terrible piece of slang is but an abbreviated form of the pulchre oriental symbolism of departure, typified by providing himself with a palm-leaf wand from the handiest and wandiest copple. When the correctest of fashionable tourists say, "I shall proceed on my wanderings," he uses precisely the marchioness's figure of speech in other synonyms. He might just as well say he was "going on with his walkings-tickings."

If words that live in the people's mouth are to be accounted slang unless they have been admitted to dictionary franchise by high literary authority, before Chaucer and Dante wrote, Italian and English were not languages, but slanguages. If Shakespeare had used only the words he found already in use among previous distinguished authors, where would English be now? How many Shakespearean words were still more slang when he took them out of the people's mouth and shelved them, neck and crop, into the dictionaries?

And why should not Mr. Dickens filter the cockney sewage into literature, if he finds good literary material in it, as in those necessary channels? Did not Homer jumble all the dialects of Greece into his cantos?

The fact is, that what purists call slang, is the loose margin of the web in the stocking-loom of our language, on which the glittering needles of life are knitting fresh loops from the thread of human discourse day by day. There are pragmatic conservatives in language as well as politics, so much alarmed by reckless innovators that they would lay an embargo on constitutional progress. The vital principles of speech are clearness and freedom of expression, just as liberty and publicity are the essence of the constitution. Above all, freedom! How many good thoughts are drowned that come to the mind's surface, and cannot break the ice which has congealed on our literary languages under the frost of criticism. The pleasure of good society consists very much in this freedom. All the departments of life have their idiosyncratic technologies. But good society, which is their conglomerate cream residuum, naturally uses an eclectic *lingua franca* gathered from all those confound channels which swell the effluvia of aristocratic centralization. This is a match of high literary slang of which I should be sorry to have to write much. Indeed, in that style I could not go much further without having to eliminate certain elements of error from the æsthetic sequence by whose resolution we might elicit a final cause—an exhaustive process—a crucial test—or some similar instrument of intellectual penance with which the young-minded young ladies are accustomed to afflict their souls as a preparation for the Sabbath.

I fear, to make myself intelligible, I must say some of them over again in plain English. All trades and occupations have their slang, from the equity draughtman who conveys your real property, to the light-fingered practitioner when the heavy hand of the law pale up for appropriating your personality. The one calls your garden a "messuage," and the other your pocket-handkerchief a "cly;" and, whether you choose to stip yourself clyvent with a y, or clyvent with a wherefore, your legal and illegal practitioners alike leave you with emptier pockets than they found you.

There is scientific slang, and clerical slang, art, poetical, and sporting slang, musical slang, critical, dramatic, mathematical, logical, medical, nautical, and military; as well as the legal, parliamentary, and pocket-picking varieties already alluded to. In short, the good ship ADULT is cluttered with as many genera as Noah's ark. Good society reinforces itself with the successful men of all professions, if you except the pickpockets, whose aristocracy are, however, amply represented by the pickpockets, plagiarists, and plagiarists. Good society is itself a profession. Its final cause is amusement, its crucial test the elimination of boredom, its exhaustive process, universal smattering. And you shall note that any plodding prosaic business will amuse a man, but it takes a very distinguished, ornamental, and variegated form of idleness to keep up *en casu*. Good society amuses itself with fancy specimens from every man. They let others sweat, and smother, and grope, and work the pump to avoid drowning in the hot, damp, dark shafts where Truth, delighting in words, is only found by weary toiling. And it is natural that they should catch some of the special terrors in use among the various gangs of snatched and grimy men from whom they purchase the glittering nuggets and crystals at the pit-mouth. Good society is the world's bazaar, and its language will be as mixed as its wares are universal. Our language forms itself to our wants, and everything comes to be expressed in the shortest and easiest way.

Like all running streams, the full-flowing river of speech purifies itself as it runs. It has its puddle-ditch and foul-water tributaries; it muddies, muddies, muddies, muddies, and then falls lower, may flow upwards, it is anxious, but the drifting rubbish is gathered into eddying nooks, the puddle sinks to the bottom, the putrid gas-bubbles burst and evaporate, so that the stream keeps sweet and limpid. New words on probation are assimilated or rejected, revived archaisms swim a little way and are whirled into a corner. The clumsy refuse of inappropriate terms cannot long lodge the current of national thought; and words that are inherently coarse and unmanly are soon scattered to the winds. The English language will take care of itself as long as it runs. Dam it up in Dolla Green embankments, and it will be a smooth, silver, stagnant pool of corruption, which philosophers will find as difficult to deal with as the Serpentine. Let it bubble along in its channel rippling. The natural instinct of the Englishman is to shun artificial criticism. And the society most capable of criticism is most decided in its preference of unadvised spontaneity. A reckless abolition, indeed, giving full scope to a multifarious familiarity of expression, is the myriad-syllabled shibboleth of civilisation's brokers who hustle out all unqualified intruders from their 'change. Your logic-choppers and phras-miners run a great risk of being lamed by it; they venture within the precinct; and in confidence I would hint that this may have been the misfortune which has set your colloquial purist's critical teeth so much on edge. Let me recommend him not to find fault with his letters; but to learn to speak and write that living English which springs spontaneously to the lip, and flows freely from the pen. Let him learn to think his thought into air or on to paper, without halting for his lexicon to pick and riddle his words. Then his marchioness may cease to smother him under every green tree in what he is pleased to call the "plumage of persons of quality."

Yours truly,

NATHANIEL BARNHAM.

THE "FOURTH OF JULY" IN ENGLAND.

THE "Fourth of July" should be a festival for Englishmen as well as Americans. To those who have warm sympathies with freedom, it represents the successful termination of a great and patriotic struggle, which, in its results, has been productive of greater good to Great Britain than to the United States themselves.

To those who have some lingering idea that wrong is not wrong when perpetrated by Englishmen, this anniversary ought to appeal through the sensitive faculties of our perked-up consciences. Our country is relieved from the costly burden of a "meddling" with an unwilling state; that state is constantly setting as a financial example, in showing how thirty millions of people can be well governed for twelve millions sterling a year, instead of eighty millions; and its commerce flows into our hands to such an extent that we "grow with our growth, and strengthen with its strength." No wonder, then, that out of two hundred gentlemen connected with diplomacy, commerce, and literature, who assembled at the London Tavern, under the wing of the American Association of London, on the night of Wednesday, the 4th of July, there should have been many Englishmen who could cheerfully risk their shirts in battle on the 4th.

The decorations of the long room of the London Tavern on this occasion were emblematic of the blood-relationship, and the political union of England and America. Long flags of both countries—the Union Jack and the Stars and Stripes—spread out from the side-walls, and dropped almost to the heads of the sitters at the side-tables. At the lower end of the room, immediately over the gallery and the brass head of the City Rider, was Winterhalter's full-length portrait of Queen Victoria (sent by Her Majesty for the festival), imbedded among the flags of the two nations. The same union of one people and two countries was typified by other flags, at the head of the room, behind the chairman; and on each side of these were portraits of Washington and his wife. The white hair of the greatest patriot who ever lived, shone out from the canvas like a "dory;" and the round face of the old lady smiled upon the banquet from over the top of a dress, fashionable in its day, but which somewhat resembled a beer-barrel in ours.

The Americans, to judge by the speakers at this festival, are not in favour of long speeches, although they are an eminently sociable and talking nation.

In the ante-room, during that critical half-hour before dinner, the buzz of conversation gave place to a roar: the barriers of personal shyness and reserve were broken down, and the assembly was more French in its manners than English. At the dinner-table, a venerable general who sat next to the writer of these lines, insisted upon exchanging names without the formality of an introduction. It was a curious anecdote, and he had no less success during his short stay in England, and he had overcome a vast amount of our national coldness to strangers in consequence.

The chairman of the meeting, General Campbell, the Consul of the United States in London, was a model of after-dinner brevity. He was up and down with the rapidity of a flash, and had no thought of wading through the "toasts" in the purely English manner. He told the company while expressing thanks for the portrait of Queen Victoria which adorned the room, that Her Majesty had been asked to allow her portrait to be taken by an American artist. The request had been declined, on the ground of want of time, but permission had been given to copy any existing painting. No other remarks were made, but we thought this was scarcely polite to the artists of a great nation, and wished that the request had been graciously granted.

This want of politeness on the part of Sir C. B. Phipps was paid back by a want of politeness on the part of the Association, in giving precedence to "Yankee Doodle" and "Hail Columbia" over "God save the Queen."

When Mr. Dallas, the American minister, rose up to reply to the toast of "The Day we Celebrate," he looked, with his white hair and his old man, like one of the pilgrim fathers. He represented, in appearance, that old and sterling America which struck its roots in the wilderness; which still forms the true life-blood of the nation, and from which the half-fatalities "rondavies" and "fillin'flour" which lie, like blots, upon the surface. His speech was short, though very slowly delivered, and might have been longer, but that he happened, in closing a sentence, to mention Garibaldi. The pent-up enthusiasm of the meeting found vent at this, and was led on to fervent rebellion by the party. The chairman was overruled, the stout pompous toast-master, with his roll of paper, was dethroned, the whole of the company started upon their legs, many leaped upon chairs, glasses were waved about over heads, the experienced and not easily-excited waiters looked on in amazement, and the very vigorous brass band in attendance was ordered for once, as three champagne clinks, with "three times three" and "one additional," were given for the great protest. The meeting from this point, became almost devoted to Garibaldi and his doings.

Few speakers who stood up avoided touching upon the Italian struggle; and if the two hundred gentlemen assembled to celebrate the "Fourth of July," 1776, were that generation, as it might seem, and were of their sixty millions of English and American countrymen, it will be long before any struggles after freedom will pine for want of active sympathy and assistance, or before the two greatest foes "negroism" in the world "will be closed to the unfortunate and distressed of every nation."

Reviews of Books.

MEMOIRALS OF THOMAS HOOD.

A LABOURER, an exercise of filial affection, far superior to the oft-misnamed phrase of an "labour of love," is not to be scanned as a presumptuous, nor criticised as an ambitious publication. A daughter and a son lay the offering on their father's (and we might say their mother's) tomb; and we can hardly regret the delay of fifteen years, seeing that an earlier period must have precluded the strongly coupled enjoyment with which we can now mingle our mirth with our sorrows in reading the "Memoirals of Thomas Hood." As is the book, therefore, so may our notice of it be a laugh at a brilliant pen next door to a sigh at a touching sentiment; a smile and a tear at the same moment on the page where wit and pathos are so curiously and inseparably blended.

A dedication and preface lead us to the body of the work, in which the matters they indicate are so fully dwelt upon that they need not be specified here; and we shall merely advert to the point they raise upon the question—whether the relatives of the dead, or some literary friend, were to be the most eligible for the satisfactory discharge of a duty of this kind. It is evident that no children in their nomenclature could comprehend the thorough biography of a literary parent, whose doings were with the public, and with the world. Their knowledge and estimate must necessarily be limited to his domestic virtues and habits—his "inner private life," as the preface defines it; and for so much these "Memoirals," *par et animam*, are sufficient; but with the fame that truly belongs to the authorship of their father, the due memoirs or life remains to be hereafter written in an ample manner, more adequate to his rich deservings as a man of genius, as a lover of his kind, and as a poet inspired by the finest muses.

As the work is divided chronologically, and, after the first introductory sketch of 1799-1835, a chapter devoted to each of the several years till 1845, when the troubled drains closed, it may be as eligible to pursue a similar train in our review of these exceedingly miscellaneous recollections, which bring the man before us as he passed along his weary road, with a sweetness of temper and a patience of endurance rarely equaled under similar trials of fortune and adversity, till he has reached the point when his nature could endure no more, and he sank beneath the pressure of a few years, more heavily worn (as mind and manual toil were expended together) than those whose ill-requited daily exhaustion he pictured with so pathetic a pencil.

Born in London, in May, 1799, he was the son of Mr. Thomas Hood, a native of Scotland, and of the firm of Verner and Reed, bookbellers, in the Poultry. His father died while he was yet young, in indifferent circumstances. The best part of his education was acquired in his father's native land, whither he was sent from his apprenticeship with his uncle, Mr. Sands, an engraver, on account of ill health, and remained several years, and where his first essay in print appeared, in a Dundee newspaper. On his return to London, early in 1821, he became connected with the *London Magazine*, and was thus led to

adopt literature as a profession—an unfortunate one, as it proved to him, notwithstanding his remarkable talents, and unflinching industry under severe distractions and crushing difficulties. In May, 1824, he married Jane, the daughter of Mr. Reynolds, the head writing-master at Christ's Hospital, and sister of that John Hamilton Reynolds who, brought up as an attorney, became a literary and dramatic circles, and an author of many very clever contributions to the periodical press, and Mathews' entertainment, and a humorist hardly, if at all, inferior to any of his time. It is lamentable to have to state that a breach of friendship took place between these brothers-in-law, which could not be reconciled, and to add that the same Mr. Reynolds had refused to our authors the use of the correspondence between them before the ad quarrel to which we have reluctantly alluded.

Both cowed to write in the *London Magazine* in 1824; and with its strength and diversity of talent it is surprising that this periodical had not prospered and numbered more. They published in partnership "Lads and Addresses to Great People," which was very popular, and has long sold. It is worth mentioning that Wainwright, one of the magazine company, and perhaps the most sparkling of the set (whose later career was unhappily inglorious), almost by anticipation, most admirably characterized the genius of Hood as a "painter to the visible eye—and the inward comeliness of what the superficial deem incongruous elements!"—"Instructive living proof how close lie the fountains of laughter and tears! Then fermenting brain—oppressed, as yet, by its own riches; though melancholy mood soon to have touched thy heart with her painful (solitary) hand, yet is thy fancy never—undressed; and sparkles and crackles more from the contact,—as the man who has banqueted with the freest, and the most varied of the half-similitudes, and coherent in incoherents, which the same acute critic discovered, were speedily exhibited in "Whims and Oddities," published in 1826, and followed by a second series in 1827 and also the "Plan of the Midsummer Fancies," and two volumes of "National Tales," dedicated to Sir Walter Scott, and which were afterwards published by Mr. W. H. Lister, on the path of a bookseller, in Bond-street, before "Jack Sheppard" was conceived. In 1829, "Eugene Aram's Dream" appeared in the "Genie," an annual of which Hood was editor, and at which time he sought a sweet cottage at Wincemore Hill, where, delighting as he did in the country, he spent the next year, made very pleasant by the neighbourhood of Mr. Sill Gilchrist, a mercantile gentleman of literary taste, and where (having previously lost an infant son) his daughter was added to his felicities, in 1830, and the first of his "Comic Annals" was born; yet contemporary. Of this production he truly said, in after years (1838), "the 'Comic' is what I may truly say, and none under very peculiar circumstances, perhaps being used to it is something, though the having done it for so many years, and having first some 700 or 800 sheets, makes the birds more rare,—i.e. cuts and extracts. But somehow it always is done, and this time apparently by a special Providence." It is nevertheless to be regretted that sickness and other causes frequently led to the copy and illustration of the late, and not only enervating him with his publisher, but injuring the sale of the "Annual," which was always late in the field. "Hoods Own" was chiefly a refutation of the "Comic."

In 1834 the failure of a mercantile firm involved poor Hood in pecuniary embarrassments, from which he was never entirely extricated, and his consequent dependence on literature for subsistence he so laboriously compensated, and has himself so engrossed by ideal speculation, that he is never very competent for the world-like business which might serve to redress him from the slavery of debt and the bloodsucking of the law. To these, if the affliction of ill-health be conjoined, it is easy to perceive why no moderate or partial turn of fortune's wheel could redress the distress into which the struggling author had been plunged. No economy could enable him to meet the expense of later legal differences with another publisher (who figures so largely in these pages under the initial of B—); and the fever which preyed upon his heart was indeed but too subtle and overbearing an ally to the physical malady which laid him in his early grave. He sought refuge and a quiet refuge to pursue his vocation in Coleridge, whither, in 1835, he transported his family, now increased by an infant son, the second Tom Hood of our present day, and with much in him to remind us forcibly of his illustrious father. This period was brightened by a foreign friendship formed with a Lieutenant De Franck, in which they met, and with whom he took an interesting and useful relation. His home friendship with Dr. William Elliot, of Strausfeld-le-Bow, whose medical skill unquestionably prolonged the life which his constant, warm, and genuine attachment, from the beginning to the end (occasionally seconded by the affectionate attention of his wife and domestic circle), sustained and cheered him on. We are not sleeping on the laurels of his life, and we are not, in a single instance—that to no other class than their fellow-men whatever are the author, the artist, the aspiring in every intellectual occupation, and the ingenious in every branch of invention or improvement, so deeply indebted as to the feeling and liberality almost generally extended to their sufferings by the professors of medicine.

Hood's letters from Coleridge afford lively descriptions of the Rhinevald population, their customs, manners, cockery, amusements, and, above all, their petty rogues and universal universal imposition upon the English who visit or sojourn among them. He wrote and published a book, "Up the Rhine," in which these letters were largely included; but an interesting and useful relation. His health fell under German discipline, and when an artist, Mr. Lewis was summoned to paint his portrait, he, as usual, plays fancifully on the occasion: "He will have a nice grizzled head to exhibit! What! that pale, thin, long face the Comic? Zounds! I must gunnison him, and get some friend to sit for me." On the national complaint, he writes, "Oh! my dear friend! I blessed everything that came down to their lips. They have the worst of the French character without the best of the German. . . . I have not learned smoking yet; but hated it worse than ever, since I see its effects on the mind and person. . . . It is not pleasant, nor even a pecuniary trifle, to pay from twenty to thirty per cent. over the value of ill health, on an Englishman—and you cannot avoid it; but it is still more vexatious to the spirits and offensive to the mind to be everlastingly engaged in such petty warfare, for the defence of your pocket, and equally revolting to the soul to be unable to repose confidence on the word or honesty of any human being around you. In aggravation, I am persuaded that the English are no favourites with the natives." Whether the increased

* * * * * "Memoirals of Thomas Hood." Collected, Arranged, and Edited by his Daughter, with a Preface and Notes by her Son. Illustrated with Engravings from her own Sketches. Two vols., 12mo. London: E. Moxon & Co.

intercourse of twenty years has altered this state of things, and the continent has ceased to have its two tariffs of price, the highest being, as an especial compliment, in honour of the English, we leave for "Murray's Handbooks," and recent travellers to declare; but the main circumstance which ultimately drove Hood from Coblenz to Ostend (May, 1838), was the difficulty of carrying on his needful London correspondence without ruinous delays and obstacles to trying even for his philosophy. The interchange of missives, packets, or letters, between England and Germany then, was more tedious and uncertain than it is now between England and India or Australia.

After about a couple of years at Ostend, with fluctuating health, and elasticity of temperament broken by a most unsatisfactory conclusion of his connection with Mr. B—, saddling him with one suit at Common Law and another in Chancery, he finally came back to his native land, settled for awhile at Canterbury, moved thence to the Regent's park, and in the new *Sparring Magazine*, contributed to the *New Monthly*—*"Miss Khivanaga"* being one of his papers,—because its editor on the death of Theodore Hook, differed with Mr. Colburn, and resigned,—published the immortal "Song of the Shirt," in *Punch*,—started *Hood's Magazine*,—and died in harness, emancipated to a shadow, and leaving his utmost to nearly the last syllable recorded time upon his deathbed. Nor was that deathbed without many consolations. Some friends evinced their sympathies by every kindness and service in their power. Mr. Ward did his work at the *Magazine*; Dr. Elliot made a willing sacrifice of his valuable time between Stratford and Regent's park, long after hope was gone. His own family, full of love, not his tenderness with an affection not to be exceeded,—a fond and devoted wife, with whom his chequered career had been passed in rich and uninterrupted harmony, and who, within a few months, followed him to the grave, and children who had been his delight in the midst of all his sore trials, attended his painful couch, watching with precise change, and weeping to see that in this world neither useful toil, nor filial duty, nor conjugal love, could avail to avert the desolateness that awaited them.

Moved by Lord Ellesmere, Lord Wharfedale, Mr. Monckton Milnes, and other powerful interests, Sir Robert Peel, then Prime Minister, had in the preceding month of December, in a gratifying manner, granted him a pension (sadly inadequate) for a year; but he died in May. Also! this scanty succour was late—too late. As in the cases of Haydon and Maginn, that aid which a few years sooner might have supplied them with requisite comfort, and supported their wasting energies, fell upon the dull cold ear of death, or seemed but to throw a transient gleam upon their parting hour.

In the course of the narrative before us, there is frequently a good deal said in proof of Hood's Christian faith and unaffected piety. This, perhaps, was needless, as a very erroneous opinion has prevailed in many quarters that his principles inclined to infidelity, and that he made a mockery of religion. It was not so. Hypocrites and impostors were his abhorrence, and like the Scottish Burns, he lashed the pretenders with an unsparring scourge. His dying voice gave the lie to the slander, and we can bear witness, not only to the truths brought forward on this delicate subject, but adduce a contemporaneous incident (not related in the *"Memorials"*) to show how anxiously he dreaded even the possibility of scandal. A very young and very beautiful female relation mentioned as having been deranged through financial troubles, but partially restored to a more sober, but still vehement and excited condition of mind, insisted on disturbing the invalid's later moments by the intrusion of strong sectarian disputes for the expression of sentiments and belief in doctrines altogether alien to his habits and his views. After several visits, this persecution became intolerable, and he begged of a friend to free him from the annoyance, on the special ground that, in some paroxysm of delirium or prostration, he might extract from him insensate words which, being carried away and reported to her spiritual directors, would contradict everything he had written, defeat the consistency of the extracts he had exhibited him saying as a vacillating and narrow-minded bigot, who had ever been a diabolic and calm believer. The friend commenced with Mrs. Hood, and the grievous plague was never again permitted to vex the firm though sinking spirit. His last words, clapping his wife's hand, were—"Remember, Jane, I forgive all—all, as I hope to be forgiven! He lay for some time peacefully, but breathing slowly and with difficulty, when she, bending over him, heard him utter faintly,—"O Lord; say, 'Arie, take up thy cross, and follow me'—I—dying, Christ." Assuredly he made a good ending, and such as became a true Christian.

THE LIFE OF GARIBALDI.*

A LIFE of Garibaldi, written by himself, and edited, with a predatory sketch of Italian history, and interstitial links of narrative, by Alexander Dumas, presents attractive material for a title-page. A vague affinity exists between the general and the writer of historic, metaphysical, and melodramatic romances. No two men in the world are absolutely more unlike in character—the one being essentially true and real, and the other meretricious and fantastical. Yet some ingredients, which equally colour their opposite careers, may be traced in both. There is a Garibaldi element in Dumas, which makes a dash of guerrilla fever his way. He is to be forgiven, for he was the soldier of fortune to the legitimate wars of princes. He executes the most eccentric movements, abhors repose, and if he has not got regular employment, his restless genius is sure to make it out of the most unpromising opportunities, if none better are to be had. He has, like Garibaldi, his *Le Pisto*, his *Salto Santo Antonio*, his *Rome*, and his *Palermo*. At one time we hear of him in Algeria, at another he appears suddenly in the Sicilian waters. He carries a roving commission in the service of that descriptive literature of which he is so famous a master; and when he ceases to illuminate one hemisphere, we may confidently calculate upon his turning up in another. When last we had tidings of him he was plotting sudden changes of pincery in one of the law courts; which exploit was rapidly followed up by the production of a five-act drama at the Vaudeville. He now comes out, by a fresh revolution of the wheel, as master of the ceremony to Garibaldi.

He does not do much in *this rôle*, but what little he does do is characteristic. The contrast and the sympathy between the two men are indicated

by unmitigated touches. The modesty with which Garibaldi speaks of himself is felicitously opposed to the bursts of admiration with which he is spoken of by Alexander. But as this modesty is not incompatible with fervour, neither is Alexander's enthusiasm incompatible with fidelity. A contemporary may be allowed to indulge in raptures which are denied to posterity; and we who live in the same age with Garibaldi can readily comprehend how difficult it is to write soberly concerning him in the presence, and under the actual influence, of his heroic deeds.

On the 22nd of July, Garibaldi will be five-and-thirty years of age. He has lived a series of Chronicles, such as Froissart would have gloried in compiling, during those years. Born at Nice, by a strange coincidence, in the very chamber in which Massena was born, his first taste of true Italian sentiment was upon a voyage he made to Rome with his father, and thence to Alexandria, the capital of his country, with Felletti. Rome, he tells us, was increased in subsequent times by distance and exile. "Often, very often," he exclaims, "from the other side of the world, at 3,000 leagues from her, have I implored the All-Powerful to allow me to see her again. In short, Rome was for me Italy, because I only view in the re-union of her scattered members, and that Rome is for me the single and unique basis of Italian unity." The autobiography which this *Giuseppe* with Roman ends with it, but under very different circumstances. In the intervening time, Garibaldi, compromised in the Revolution of 1848, has taken service under the Republic of Rio Grande, has fought in the Brazil, passed through the most romantic enterprises—not the least remarkable of which is his marriage, returned to Europe, re-appeared in Lombardy, rescued his ancient ally, with Mazzini, beaten the Neapolitans on their own ground, and entered Rome in triumph. This grand incident in his career took place on the 24th May, 1849. All the world knows what followed: with what discretion and courage the town was held, what admirable administrative measures were adopted, and how noble the sacrifice of the defence of the city, and the execution of the responsible task they had undertaken. But a moment came when human efforts were mere waste and prodigal outlay of blood. The news of the breaking up of the democratic party in France, and the flight of some of its leaders to England, determined at a single blow the fate of Rome.

"After receiving that news (says Garibaldi), resistance was nothing but madness dreamed of, and I conceived that the Romans had much to do in the face of the world to stand in need of having recourse to despair. The collected Powers had enclosed the Roman Republic—that is to say, all the democracy of the peninsula—within the old walls of Asinara. We had nothing more to do but to break through the circle, and carry, as Seipio did, the war into Carthage. Now, our Carthage is Naples; it is there that I hope some day Despotism and I shall again meet face to face. May that day be near!"

The words are ominous of what is coming. Wonderful, too, it will be, if this noble career should be rounded off at last by the completion of Italian liberty.

The close of the Roman occupation is like the catastrophe of some mighty tragedy. A pall is drawn over the heroes by the overwhelming destiny of the scene. The siege had been carried on with indefatigable energy, and not without some perfidies, by the French; and at last, a practicable breach having been effected, the firing of cannon at two o'clock in the morning announced the close of the war as expected. Garibaldi, at the critical moment, and placing himself at the head of his men, sword in hand, threw himself upon the French, singing the popular hymn of Italy. He despaired of the future, and sought only death. For a whole hour he fought through the thick of the enemy, and, marvellous to relate, in the midst of that desperate hand-to-hand struggle, he never received a single wound. He had lost blood. Every person immediately around him was slain, and he must have fallen had he continued in the sanguinary *mitte*. But a message came from the Assembly, summoning him to the Capitol. This providential message saved his life. Mazzini had already put the Assembly in possession of their position, and pointed out the only three courses that were open: to treat with the French, to defend the city, barricade by barricade, or to withdraw.

"When I appeared at the door of the chamber (says Garibaldi), all the deputies rose and applauded. I looked about me, and upon myself, to see what it was that awakened their enthusiasm. I was covered with blood; my clothes were pierced with balls and bayonet thrusts; my naked was so wet with striking, that it was not more than half in the slough. They cried, 'To the tribune! to the tribune!' and I mounted it. I was interrogated on all sides."

He proposed to take from Rome all the volunteer army that was willing to follow. "Where we shall be," he exclaimed, "Rome shall be!" The Assembly rejected his proposal, and he withdrew in discontent to his defence. On the 2nd July, Garibaldi assembled the troops, and announcing his determination to quit Rome, and to carry into the provinces the revolt against the Austrians, the King of Naples, and Pius IX., inviting all to follow him who were willing to share his enterprise. He told them he had nothing to give them, but that they were to have no pay, no food, no shelter, when they could find any. Four thousand foot and nine hundred horse ranged themselves round him—two-thirds of the whole force. His wife, dressed as a man, was one of the first at his side. "Towards evening," he concludes, "we quitted Rome by the Tivoli Gate; my heart was as dead. The last news I heard was that Mazzini was king of Rome."

The termination of melancholy enough, but the brightest page remains yet to be added to this remarkable autobiography, when Garibaldi records the events of the last war, the redemption of Sicily, and may we hope—the emancipation of Naples.

THE MAN AND THE HORSE.*

THERE are some things in the knowledge and culture of which the world has retrograded. The horse is one of them. Who can believe that the war-horse of Ismail, or the "breeding jennet" of Shakespeare were considered in times when horses were ill-used, and that the affectionate sympathy to equine blood and beauty with which the poems and romances of the middle ages abound were mere strokes of fancy? There must have been a truer estimation of the nature and value of horses in the old days, when the horse

* Garibaldi: an Autobiography. Edited by Alexander Dumas, Translated by William Bown. London: Routledge, Wans, and Routledge.

and his rider were friends and companions, and shared in common the dangers and triumphs of adventurous career, there exists in our degenerate and ruler age, where the companionship is exchanged for servitude on the one hand and tyranny on the other. The amount of ignorance, and, we are sorry to add, brutality, that exists amongst us, from the highest to the lowest, on the subject of horses, is incredible. We have made some enquiries out of this barbarous and ignorant class, but they are slow of conversion, and, so far as the bulk of the people who have to do with horses are concerned, we are as benighted as ever, with an accession of increased obstinacy, arising from instinctive resistance to innovation. The cabmen denounce the new doctrine of substituting gentleness for violence as an impudent imposition; and there is not an omnibus-drawl or a wagoner's boy that can't produce a chap who knows a hundred times better about horses than Mr. Ray.

This is the kind of mental sottishness which requires to be cured in England; and we know of no better way of effecting the desired end than by the publication of such useful and enlightened books as the volume before us. Establishments like those of Mr. Ray are always open to suspicions which the vulgar mind takes advantage of as an excuse for scepticism. There may be collusion or trickery in a hundred shapes, and although Mr. Ray has repeated his experiments under such a variety of conditions as to establish beyond controversy the merits of his system, he has gained but few converts amongst that large class whose delinquency he has laid bare. Now, a book is not exposed to doubts or innuendoes. It is true or false upon its own showing. Its demonstrations do not depend upon individual address, or the aid of confederacy. It stands or falls by theories which every practical man can test for himself. Mr. Mayhew's work comes strictly within this description. It describes with great clearness, and in ample detail, all the diseases to which the horse is subject. The knowledge of this important fact enters fully into the proper curative process. But this is only the medical side of the work. It has a moral side also: it is an earnest, and, in some respects, almost a pathetic protest against the savage severity and culpable neglect with which horses are commonly treated in England, and it supplies the best of all possible arguments for a more humane and popular kindness and thoughtful care are more economical than cruelty and indifference. The literary merits of the book are considerably above the average of medical publications; and although the delineation of horse disorders is not the most agreeable subject to contemplate, the skill with which Mr. Mayhew has accomplished his task imparts to it a high degree of popular interest. The utility of the volume is increased by a profusion of illustrations from the pencil of the author.

We are glad to find Mr. Mayhew lending testimony, out of his ample professional experience, to a fact which we believe to be the key to the whole inquiry into the natural character of the horse. The knowledge of this important fact is the first step towards a knowledge of the right method of treatment in health and disease. To timidity may be referred most of those nervous demonstrations which ignorant groom and rough-driver ascribe to vice and bad temper. The horse is naturally affectionate and impressionable. It soon learns to take the voice of a kind owner as a signal for obedience, and to regard the whip and dole as a dog. But instead of endeavoring to quiet its alarms, we alarm it still more. This proceeding is palpably illogical; and it is astonishing how illogical we are in such matters, and how irrationally we persevere against the admonitions of experience. When a horse runs away, in a fright, we seek it with a whip, and we shout "go on," and "go on," and "go on," which means "stop!" The two actions are not only inconsistent in themselves, but are continually calculated to increase the terror and perplexity of the animal. Instead of adopting these methods, it is obvious we should adopt the very contrary. Don't pull the rein: speak to your horse unassumingly and cheerfully; repeat your words in the same encouraging tone of voice; till it begins to listen and slacken its pace; then touch the reins gently, and you have it completely under control.

The same system pursues us throughout. It is the custom to beat horses for the slightest false step, and even for weakness of limb, instead of encouraging and supporting them. The animal, writhing under the lash, gets frightened, loses its self-command, and trips; for which the judicious rider or driver lashes it again. He makes it stumble, and then beats it for stumbling; as the Irishman in the song knocks a man down, and then kicks him for falling. All our fashionable means and appliances are equally at variance with humanity and common sense. To obtain a good croak, an arched nose, a head borne proudly in the air, the leading-rein is broken into its requisition; the horse is put to agony; his pace is rapid, his action high, he cannot see the ground, and he comes to the earth with violence, shattering the skin of the knee, and the structures beneath. The snaffle, or bit, is indispensable to produce that startling effect with which a man of fashion dashes up to a door, and stops short, as if the horse had been called to fall in with the full column. This is the true spanking style, which dazzles the eyes of the spectators as much as it gratifies the pride of the character. See what it costs in pain and cruelty. The horse pulled up suddenly is thrown on his haunches, the girths are wound by the violent pressure, frequently the jaw is injured, sometimes broken, sloughing areas on the mouth and gill level, the portion of bone must be cut off. Not one of the imbeciles we use to quicken the pace of horses, or to give them a fine high-lifted town air, but may be described as an implement of torture and destruction. By the bit, the "cruel bit," as Mr. Mayhew calls it, the jaw is often broken; by the snaffle girth and horse are injured; and in the most cruel manner the horse is put to pain and distress which end in disease. It is very surprising, under such circumstances, that a large majority of horses should perish before they are eight years old, and that many of them are distorted by ill-usage before the growth of the body has been fully developed.

The treatment of horses by the fellows who are generally collected about men, opens a chapter in which we trace the worst traits of cunning, ignorance, and superstition. To make a horse look at the least possible expenditure of their own labour is the main study of their lives. Hence they cultivate the lowest forms of empiricism. They delight in the locust-pod of medical ignorance. Myriads of cures have the fascination of spells in their eyes. They have great faith in charms, especially in the use of herbs, which are strong. Arsenic, vitriol, and nitre, are in high repute; raw eggs, forced into the esophagus, is a favourite recipe; raw tobacco is in much request; but, says Mr. Mayhew, "the ashes of the weed, collected and wrapped in several papers, are much more esteemed in the generality of stables." There

are other remedies forced by these fellows down the throat of the horse which our shoulders to think of, and which cannot be recorded here. Nor is the evil limited to the administration of these terrible specifics. When any of them stick in the throat, the butt-end of a loaded whip is employed to force it down, and used with increasing violence till all impediments are removed. In obtaining this desired result the gullet is ruptured, food finds entrance into blood, and death ensues. To reason with the author of a calamity of this kind, who has proceeded *accusatus carere*, and who, in the face of a thousand examples, would do the same thing again and again, would be perfectly useless. "Of all persons living," observes Mr. Mayhew, whose authority upon this point is of weight, "grooms are the most prejudicial to the health and comfort."

In the country, the cloas to whose care horses are entrusted, although they may not pretend to the same amount of refinement as the town gentry, do not yield a jot to them in stupid barbarity. It is a common custom with country carters and drivers to throw provender over their horses on Saturday night, and then locking the door to take their rest on Sunday, leaving the animal to do the same. They even erect this material device between their situation and that of the horse—that they are all the time in the open air, while the horse is shut up in a close and fetid atmosphere, with a supply of food which becomes contaminated by being constantly breathed upon. On Monday morning the driver revisits the stable, and the poor animal licks up in evident pain, its coat starting out, the expression of its eyes dull, its drooping mouth heavy, and its food for the most part untasted. The bawny carter, who has enjoyed a day of idleness and a good night's rest, stares with wonder, and can't make out a bit how this extraordinary change has taken place. But it is easily explained. The horses, worn out by the labour of the day, was unable to eat, from fatigue and pain, and was suffering the horrors of insupportable thirst. The disease called water-farcy, one of the many offsprings of debility, had consequently set in. Such cases may be classed under the combined heads of gross ignorance and culpable neglect. The following verse, which is in the words of the author as a picture from the life, belongs to much the same category:—

"In agricultural districts, the veterinarian is frequently knocked up at night by a messenger, who announces 'Farmer Hodge's horse be a-dying.' The farmer may live several miles off in the country, and the reluctant sleeper hurries on his chaise, to obey the implied summons."

"In due time the poor roach Farmer Hodge's homestead. It needs no notice to point out the stable. The sound of laborious breathing effectively notifies it. The practitioner upon entering the place is horrified to find himself with no better company than a horse and a rapidly sinking animal. The veterinarian, however, after assistance. The horse-doctor cannot help giving voice to his requirements. The lad, hearing this, says hastily, he will fetch something very soon; leaps up the ladder, and vanishes into the darkness."

In Mistaken, and in a corner, the horse is left. The divisions of the hour are struck by the village church, and still no sound of returning step. The animal becomes worse and worse. In its disabled state it fears to lie down, as that position impedes the breathing. In its efforts to stand it reels about, now falling on one side and now on the other; yet it does not sleep. The veterinarian finds the limits of delay are passed; ten minutes more, and the quadruped will be down. He takes out his lancet. One foot from the breast-bone, and as near the centre of the neck as the rocking motion of the horse or the shining light of the lantern will admit, he strikes, and the blood flows deeply into the flesh; if possible, at one cut dividing the cartilage of the trachea."

The country is distinguished not only by this kind of stolid indifference, but by a horrid brutality, which, if not peculiar to it, is seldom so actively developed elsewhere. Take the instance of prize-fighting, which is very in the service of a well-to-do farmer. The youth is possessed of the traditional cunning of his class, and young as he is, has graduated in the school of trickery and deception. He is entrusted to take home a horse, his master has just purchased at a fair, and strictly cautioned to lead it gently, which he faithfully promises to do. He is no sooner out of sight than he converts the halter into a "draw" (draw for something to chew), and clanking on the animal's back, rides him triumphantly home. The "draw" is formed by twisting the halter into the horse's mouth, and then using it as a bridle. To this bridle the boy slings himself, rolling and lurching from side to side, and thinking it high fun, as he goes along, to drag at the animal's mouth, out of that instant which is the cause of the animal's suffering. Arrived at the stable last in the stable at home, the halter is found to be saturated with blood, the animal's mouth is full of blood, and its tongue nearly cut through. Anything put into a horse's mouth produces a feeling of uneasiness, and the animal never ceases feeling and poking about it, till it gets its tongue under it, and then it begins to chew, and the dragging of the "draw" does the rest.

Beating about the head is the ordinary method adopted by common country drivers, of communicating their desires to the unfortunate animals entrusted to their charge. They seem to think that they can make a horse understand what they want, or, at all events, that they can reduce it to obedience, by punishing it severely about the head, and generally on account of things for which they are properly responsible themselves. But, as Mr. Mayhew judiciously observes, "the whip can convey no idea; the lash does not instruct the animal; beat a horse all day, and it will only be stupid at sunset." The worst of it is that the unreasoning driver beats his head, without any distinction, whether he wants the horse to stop, to go, to turn, or to perform any other service, under the influence of these contradictory orders. The greater its intelligence, and the keener its capacity for receiving instruction, the more it is puzzled by want of clearness and consistency in its master. The only inference it draws from this senseless system of beating, or rather that it is made into it by it, is to get out of it; but it never goes far from the stable, and it is "jagged" and "jagged" by the use of the reins; and thus two evils are accomplished at once—the natural timidity of the horse is heightened into confirmed nervousness, and its mouth is ruined.

The source of these accumulated cruelties and mistakes lies in the ignorance and barbarous nature of the class of people who are entrusted with the conductive review of the subject. It is a subject upon many considerations which call for a higher tone of mind, and a wider reach of education, than are to be found amongst common grooms, and helpers, and carters. Under the present system the intelligence of the animal is seldom consulted, and its timidity and affectionate disposition still more rarely thought of. Mr.

comedies—a name which seems to be rather loosely applied to plays of a mixed character—and farces. They are prepared and arranged for representation in a perfectly businesslike manner, the tragedy, or comedy, being always followed, as on our modern stage, by a farce,—not the least curious circumstance connected with these relics. The performance took place in the upper part of a house, and sufficient time was allowed between the play and the farce for the spectators to take refreshments; and as they returned the next day, we infer that when these entertainments were set up in a place they continued from day to day till the whole repertoire was exhausted, as in the old Roman drama, which, however, consisted of one long dramatic history that occupied seven or eight days in the delivery. M. Delapierre gives us an analysis of one of these pieces. It is the old story of a prince who, being born under an evil astrological prediction, is stolen away, and brought up as a foundling, to frustrate the prophecy, but who afterwards discovers the secret of his birth, and adjusts the balance of poetical justice by the proper distribution of rewards and punishments. A few specimens of these plays, and a critical account of their structure, would have been very desirable, and the omission is greatly to be deplored in a work of this nature. The interest of these pieces in an historical point of view cannot be overrated, considering that they were two centuries in advance of our English stage, which has hitherto been regarded as the first to lay the foundation of the romantic drama. The estimate of their value as literary innovations, or even as literary works, must, of course, depend upon an examination of their details, of which, at present, we know nothing. We presume, however, that they are chronicles in dialogue, rather than legitimate plays, and that they are not divided into scenes or acts. Upon this material point it is the more necessary that some light should be thrown, as the MSS. of which we have no particulars, is, doubtless, inaccessible to the English antiquary. Perhaps, after all, the most surprising feature in these pieces is, that their subjects are secular, turning upon real or imaginary historical incidents, and awakening interest wholly independent of Scriptural sources. The farces are described as very much of the same order as may now be seen at the Adelphi or the Haymarket, the imbecile being drawn down, with abundant breadth and coarseness, from the common every-day life of the people. We are probably, therefore, justified in assuming from M. Delapierre's account of these productions, that the dramatic literature of the old Flemish race must have already passed through the earlier stages of theatrical progress, and that before they arrived at plays of mere human interest, and farces reflecting contemporary life, they must have emancipated themselves from the primitive forms of the mysteries and moralities. The question is of manifest importance, and M. Delapierre would render good service in a future edition of his history by opening up the whole inquiry. That plays were acted in Flemish at the period to which these pieces are assigned is a matter which does not admit of controversy. The origin of the famous Chambers of Rhetoric, or societies associated for literary and dramatic purposes, cannot be positively ascertained, but they certainly flourished in the fourteenth century, and it is equally certain that at their festivals, which lasted several days, dramatic representations formed the most prominent attractions. The question is, what plays were acted on such occasions? and were these amongst them?

FOREIGN LITERATURE, ARTS, AND SCIENCES.

IS St. Petersburg has been published lately, and for the first time, a Guide to the remarkable Public Library of the Capital of the Russian Empire.* The treasures it contains have been singularly augmented since 1848, when Baron de Korff was appointed its director, a man whose name is known to the friends of the Public Library of Warsaw, but the national building which now adorns the large square "Alexandra" was only constructed in 1851-1852. It is a curious fact that the first librarian was a French *emigré* Le Comte de Choiseul-Gouffier, well known as a traveller and by his works. This library was only opened to readers and visitors in the year 1814. The latest acquisitions of importance were the Palimpsestes and Oriental MSS. of the celebrated Professor Tischendorf of Leipzig, a collection of *incunabula* and Xylographic books of the greatest rarity, bought at Augsburg, the private library of Mr. Adelung, containing a great number of valuable MSS. on the science of languages, and lastly the collection of Oriental MSS. belonging to Prince Dolgorouky, ex-minister of Russia in Prussia.

It is not to be wondered at if Italy at present has little time to give to literature. There are actually very few publications issued in that unsettled country; nevertheless, a few of them deserve special mention. The first is "I cantici d'Italia," a short national poem, which will soon be heard from the Bremer to the Rina. It is the composition of Giovanni Prati, a well-known Tyrolense poet. As it has not yet become known in England, we will here give the first stanza.

Nostro è l'araba Italia,
Nostro di sangue è piano,
La mia spaziosa porta
D'ogni lingua è aperta.

Il coronato all'oblio
Per un seggio eretto,
Ma bello, interrato un
La grande Italia vinta.

The recent publication of the "Opere inedite de Giuseppe Giusti," the great poet and patriot, has produced some sensation in Italy (where he died a few years ago), because his voluminous correspondence with all the celebrities of that country, Grossi and Torti at Milan, the Marquis d'Azeglio at Turin, Capponi and Niccolini at Florence, prove him to have been one of the great promoters of the idea of Italian unity.

The literary world in France has been recently much astonished at a decision of the Supreme Court of Cassation of Paris, in a law-suit between M. Dupanloup and M. Roussseau. The latter accused the former of having calumniated (*diffamé*) one of his relatives who died many years ago. The Court has given a verdict against M. Dupanloup, on the plea that the law punishes all suppositions on the character of a man, even after his death.

If such a principle were received and carried out, it would become impossible to write history without incurring danger of imprisonment. If any relative, however distant, of Robespierre, Marat, St. Just, Danton, or others, should take it into his head to summon you before a court of justice for calumniating these men (*diffamer*), you would certainly be condemned, because the legal rule in France is, that in cases of this sort (*diffamation*), the accused is not allowed to make good his accusation. The only proof required

against the accused is, that the alleged fact is injurious to the character of the person in question.

This is one more *monstrosity* added to the many which exist under the French régime.

We cannot omit to notice especially a very curious work by Baron Gustave de Flotte, which has just been published in Paris, and we should like to challenge the same sort of critical examinations into the writings of some of our English editors and reviewers. The Baron exposes the extraordinary mistakes made by French authors as to facts and dates, mistakes made with an assurance and *sang froid* only equalled by the amount of ignorance displayed. We will give a few extracts from this amusing volume, well worth an English translation, and show how little reliance can be placed on the assertions of even the best contemporary French authors.

Le Rêve des deux Mondes takes the lead in these blunders; and in an article by Monsieur Babinet, a member of the Institute, "De l'Application des Mathématiques Transcendentes," he says, "In the second half of the seventeenth century, called the century of Louis XIV., when Corneille, Racine, Shakespeare, and Milton, revived the literary glory of France and England, the mathematician Fermat in France, Leibnitz in Germany, and Newton in England, gave an impulse," &c. &c. "What does the reader think of this jumble of names! Racine, Milton, and Shakespeare contemporaries! Shakespeare contemporary with Leibnitz and Newton!"

In the recent numbers of the *Revue Contemporaine* the misquotations from Mirabeau, Pascal, Montesquieu, and Madame de Sévigné are equally remarkable.

The *Correspondant* is reckoned one of the first periodicals in France; we were not prepared, therefore, to detect it imputing to Madame de Sévigné an axiom emanating from Pascal; to find Laetorius quoted instead of Petronius, Mallerbe instead of Voltaire, &c. &c.; and in these passages the mistakes evidently proceed from ignorance, and not from carelessness, although we should consider that some are as inexcusable as the other.

The historical works of Michelet, Henri Martin, Granier de Cassagnac, Villain, and many others, present a rich harvest of similar blunders.

The first writer, in his "Histoire de France," says that Louis IX. was much afflicted at the death of Alphonsus, king of Castile, whereas the French king died fourteen years before Alphonsus. He states, in another place, that Mary, daughter of Henry VIII. of England, married Louis XII. of France, while every schoolboy could tell him that she was the wife of Philip II. of Spain; he has evidently confounded her with the sister of Henry VIII., who espoused the king of France.

De Cassagnac, in his "Histoire des Classes Nobles," speaks of the sister of Francois I. and the wife of Henri IV. of France as one and the same person. Monsieur de Villain mentions the Christians of the 5th century as singing "Dieu tri, Dieu ilia, &c.," while this hymn was only composed during the Middle Ages. In mentioning a hymn of the poet Prudentius in the following metre,—

Not as insouper et melle
Confus mendi et turbide

Lex intrat, alibi pulvis,
Christus venit, dactylus—

Villain asserts again, that it is written in one of the most elegant metres of Homer. But one would look in vain through all the works of the Roman poet for a metre of the sort.

Is it not surprising that so much levity and carelessness should be displayed in the writings of authors who occupy a high position in literature, and who pretend that Paris is the centre of the intellectual world? It may be so, but surely it would be difficult to find in London, in the works of authors of a similar standard as those we have mentioned, materials for a book like that of the Baron de Flotte.

* "Bévue Parisienne." Paris: Dentu. 1 vol. in 12mo. 1860.

THE RIGHT TO DISDAIN.

How shall I grin

The right to disdain?

The right to look down

With a snail-like frown

Upon sorrow and sin?

How shall I win

The right to scorn

My brother, forsooth,

Or pass him by

With repertory eyes,

As much as to say,

"Get out of the way,

"And taint me not

"With the poison spot

"That comes from thy heart, thy face, thy brow

"To me, much holier than thou!"

Were I far more bright

Than the lowliest light,

More pure than the snow

Where the glaciers grow,

And as unchafed as a little child

Dead and forgiven

And gone to heaven,

I should not grin

The right to disdain,

Or to stand apart

From my brother's heart,

Or turn my face

From a sinner's place,

Or breathe one word of hate or scorn

To the wicked wretch that e'er was born.

C. M.

* *Guide de la Bibliothèque Impériale et Publique de Saint Pétersbourg* (in French). In 12mo. St. Pétersbourg, 1860.

MIDDLE SCHOOL, PECKHAM, LONDON, S.E. FOR FIRST-CLASS MERCANTILE EDUCATION.

During the past year Pupils have been received from Antwerp, Amsterdam, Andover, Bologna (N.B.), Bonn, Bremen, Brüssel, Calcutta, Charleston, Dover (N.B.), Düsseldorf, Garmersbach, Glasgow, Harlow, Leipsic, London, Manchester, Melbourne, Montreal, Natal, Perth, Porto, Santa Maria, St. Petersburg, St. Thomas, Sierra Leone, Tientsin (N.B.), Tinsley, Waterford, Winchester, Wrotham (near Wells), and Worcester.

Every pupil is, as far as possible, well grounded in English, made to write a hand fit for business, and trained to be quick at accounts; while the Modern Languages, Chemistry, and Mechanics, are also thoroughly taught, and Greek, Latin, French, and German. Attention is paid, first, to the progress of civilization in our own country and colonies; afterwards, to that of neighbouring nations.

TERMS (inclusive of Use of Books, Stationery, and Remittances).

Under the age of Twelve Years Forty-five Pounds a year.

Above that age Fifty-five " "

(Payable in advance—bills accounts are not presented until the middle of the quarter, nor are terms raised after entrance.)

Private Room, £10 extra each pupil.

Uniform Optional. Clothing complete, except linen, 25s a year.

The Midsummer Vacation extends from June 10th to July 10th.

JOHN YEATS, LL.D., F.R.S. University of Glasgow.

July, 1860.

"More than half my boys never saw the sea, and never were in London; and it is surprising how the first of these disadvantages interfere with their understanding much of the actual poetry, while the other keeps the range of their ideas in an exceedingly narrow compass."—*Dr. ARNOLD.*

This day, post 8vo., 7s. 6d.

THE MUTINIES IN RAJPOOTANA. A Personal Narrative of the Mutiny at Munsalwar, with Residence at Jodhpore and Journey across the Desert to the East, with an Account of the Mutinies in the Punjab, the Central India, and the Punjab, and Attack on Muzul Ali. UNIVERSAL SUFFRAGE AND NAPOLEON III.

London: W. BLACKWOOD & SONS.

HAZARD'S DICTIONARY OF DATES.—NINTH EDITION.

Latest published, in One thick 8vo. Volume, price 10s., bound in cloth.

A DICTIONARY OF DATES relating to all Ages and Nations, for a Universal Reference: comprehending Remarkable Occurrences, Ancient and Modern; the Foundation, Laws, and Government of Countries; their Progress in Civilization, Industry, Literature, Arts, and Science; their Achievements in Arms; and their Civil, Military, and Religious Institutions, and particularly of the British Empire; by JOSEPH HAZARD, Ninth Edition, revised and greatly enlarged by BENJAMIN VINCENT, Assistant Secretary and Keeper of the Library of the Royal Institution of Great Britain.

"Is the greatest edition, the chronological tables have been revised and continued; about 500 hundred new articles have been inserted, and a large number of others re-written; the important dates have been continued, and such biographical, geographical, literary, and scientific information has been supplied. To afford room for these additions, the size of the page has been enlarged, and some matters of less importance have been either printed in smaller type or excluded."

"A volume containing upwards of 15,000 articles, and, perhaps, more than 10 times 15,000 facts. What the 'London Edition' has merited, the 'Dictionary of Dates' will be found to be to those who are searching after information, whether classical, political, domestic, or general."—*Times.*

MESSRS. BLACKWOOD & SONS' PUBLICATIONS.

[Price 3d.]

OUR POLICY IN CHINA.

IF the Speaker's gallery had been filled during the debate on the China War, on Friday night, with an assemblage of mandarins, we can imagine the astonishment which would have been depicted on the countenances of those dignified personages at the opinions expressed by certain honourable members who took part in the discussion, some of whom displayed about as much knowledge of China, and the policy which it is the interest of this country to pursue there, as we might expect to find in a Chinese parliament, did such an institution exist, upon the occasion of a debate to consider the expediency of invading England. Our Celestial friends would have heard Mr. Bright express his belief that "the accumulation of a large force in China increased the temptation of the authorities there to enter into warlike proceedings;" while Sir James Elphinstone, charging Mr. Bright with being the cause of the war, expressed his opinion that, although we had 17,000 men "out there, he did not see any end to it." Colonel Sykes thought that the inevitable result of a treaty, if we got one, would be a garrison at Shanghai; and the Chancellor of the Exchequer, after demanding more than three millions and a half to pay the expenses of the war, gave vent to the consolatory and original remark, that "he must frankly state that the whole matter was full of uncertainty." Lord John Manners earnestly hoped that "in the prosecution of this melancholy and miserable contest, the utmost consideration might be shown for the feelings of the Chinese people;" and Mr. T. Baring put a climax to these forcible observations by the stupendous misstatement, that "the one great mistake that we have made all along in China is, that we seem to think that country is like France, or any of the other Powers of Europe, and we must force on China the same arrangements we have established with those Powers, with which we have been for a long time connected." It would indeed have perplexed those high functionaries of the Celestial Empire to hear that we had "all along" treated China like a European Power; and it would probably occur to them that if we had hitherto pursued this policy, it would be unnecessary now to insist upon a Resident Minister at Peking,—that being quite a novel and recent demand, and one which, according to Mr. Baring, does not enter into our relations with European Powers. The facts and the truth are alike directly the converse of Mr. Baring's proposition; the one great mistake that we have made "all along" in China, has been that we have dealt with it upon altogether exceptional principles. That our diplomacy there has not been governed by the same rules which govern it elsewhere, but that inasmuch—to use the words of Mr. Baring—as "trade was our object, and not diplomacy," we have submitted to every insult and indignity, for the sake of gain; in other words, that we have hitherto been guided by the very principles upon which, according to Mr. Bright, trade is to be prosecuted in those countries. That policy, which these gentlemen seem to flatter themselves is of their own conception, is the policy originally pursued by the East-India Company, when it established its factory at Canton; it has been the policy which provoked both the Chinese wars, and it is the policy which, if it were persisted in, would lead us into endless others. So long as we have local officials at the different ports dealing with local Chinese authorities whose acts may be repudiated at pleasure by the Central Government, we shall have a perpetual series of *Arrow* cases. Had there been a minister at Peking, instead of bombarding Canton, we should have put that moral pressure upon the responsible authorities at head-

quarters which would have ensured us redress; but to expect every consul at every port to get satisfaction for every insult offered to any British subject who may fancy himself aggrieved, from the local mandarin, is to perpetuate indefinitely causes of quarrel, and to keep up a constant irritation upon the edges of the Chinese ulcer, instead of cutting it out by the roots. No better evidence can possibly be afforded of the mistaken policy we have pursued "all along," than the wars in which it has involved us. We have yet to make trial of this new system of holding the Central Government responsible for the acts of its subordinates, of insisting upon our rights as an equal Power, and of announcing our determination no longer to be treated with contempt and insolence. It is true that we are open to the charge of forcing our commercial and political intercourse upon a people who do not want it. The logical course to be pursued by a Government feeling the moral iniquity of such a course, is to withdraw its consuls and fleets, and allow merchants to trade at their own risk. The effect of this would be to throw the whole trade into the hands of the Americans, who would double their fleet, and whose consuls would take British subjects under their protection. At present we fight their battles as well as our own, and the position of the British merchant in China is incomparably superior to that of the American, in consequence. We have pursued the middle course long enough: either let us abandon diplomacy in China as immoral,—in other words, leave our merchants unprotected, which is the disinterested view of Mr. Baring, who is one of them; or else let us assert the same principle here which we do elsewhere, and confine the responsibility of making war to redress grievances to the British Minister and the Cabinet at Peking, and save us these "miserable and melancholy contests," which have all arisen out of this old-fashioned policy so strongly pressed upon the Government by gentlemen so little conversant with the subject that they believe it to be their own invention. No great change was ever effected in the subsisting relations of two countries without difficulty and annoyance. The very proof of the probable efficacy of the measure now proposed—of a resident Minister at or near Peking,—is to be found in the rigorous opposition it has met with from the Chinese themselves. They know that they will now no longer be able to send secret orders from Peking to insult us at the ports, and then repudiate them with impunity. If Mr. Baillie Cochrane, who talks so tenderly of the feelings of the Chinese, had been in the habit of taking afternoon walks in the neighbourhood of Canton four years since, and had been pelted and hoisted from one end of the western suburb to the other, he would have felt the inconvenience, on applying to the local British authority, of being told that he had no power to obtain redress. The Governor-General would only laugh at his beard, unless he threatened hostilities, and the British House of Commons would impale him if he ventured upon them. The only advice given him under these circumstances would be, never to venture beyond the British factory and Hog-lane, and never to come to the Governor-General with any complaint, upon any pretext whatever. Nor are these insults the result of ill-will on the part of the country-people themselves, for unless stimulated by the authorities, the peasantry of China are the most good-natured and amiable of rustics. It is not until a pressure is absolutely brought to bear upon them by the Central Government to render them uncivil to Europeans, in pursuance of that exclusive policy in which the people do not participate, that the strangers receive the ill-treatment to which we have alluded, all which only proves the more conclusively

how necessary it is to put the saddle on the right horse, and, instead of bombarding the cities of the southeast, and venting our spleen upon wretched subordinates, knock at the door of the imperial palace in a manner not to be misunderstood by the august personage within, and let it be clearly intimated that we are determined no longer to be considered and treated as inferiors, but that a footing of perfect equality must be established, the effect of which will be not only to strengthen the hands of the Central Government in preserving order within its own dominions, but to relieve us from the possibility of those quarrels which spring from the indignation that every Englishman feels at the novel and disagreeable position in which he stands with relation to the natives of that country. So long as Englishmen are expected to demean themselves in China as inferior to Chinamen, and this Government, by not insisting upon asserting its equality, sanctions the Chinese view of their own superiority, the irritation must be incessant. The only remedy is to be found in the establishment of a resident minister at or near Peking; and the only mode by which this great concession can be wrung from the Chinese Government is by the point of the bayonet. The sum of three millions and a half may be a high price to pay for this object, and the *modus operandi* somewhat severe; but the Chinese have brought it upon themselves, and we can assure Mr. Bright that, although we think hostilities imminent, the accumulation of troops has not the effect of encouraging the Chinese to resistance, while we hope that Sir James Elphinstone may live to see the end of the war, that Colonel Sykes may not live to see a garrison at Shanghai, and that Mr. Haring will refrain for the future from talking about China until he has acquired some knowledge of the subject.

FRENCH PAMPHLETEERING.

IN a celebrated *vaudeville*, the plot of which is thoroughly French, the *jeune premier*, a dashing young man of decided character prosecutes his suit in a manner more original than would be considered acceptable in this more prosaic country. Falling in love with the lady of his affections at first sight, he unhesitatingly announces to her his intention of marrying her on the following day. The lady, outraged at this abrupt declaration, indignantly rejects his proposal; but our gay *Lothario*, undaunted by her coldness, pertinaciously presses his attentions upon the fair one, and at the expiration of twenty-four hours has succeeded in convincing her so thoroughly of the hopelessness of resistance, that she succumbs to the sustained pressure, and becomes, at last, the blushing bride of her doting admirer. The moral of the play does not seem to have been lost upon the highest personage in the country in which it has become popular, and in the policy which has been pursued by the French Government with reference to Prussia, within the last few weeks, we perceive an audacity worthy of the hero of the *vaudeville*, and which seems likely to be attended with the same happy results. Prior to that visit to Baden which imparted an unwelcome stir to the diplomatic circles of Europe, it was the fashion in France to repudiate indignantly the notion of any design on her part to acquire the Rhine Provinces; indeed, it was only upon the occasion of the annexation of Savoy and Nice, that the question of "natural frontiers" was mooted at all. The meeting of German sovereigns at Baden, however, was preceded by a pamphlet, the burden of which was "German Unity," and the moral a "Compensation."—This compensation to take the form of the Rhenish Provinces, to be presented by the Germans themselves, of their own free consent, to their disinterested neighbour. His Imperial Majesty seems to think that by constantly impressing upon the states interested that they must make this sacrifice to French ambition, they will, at last, become reconciled to the "Napoleonic idea" themselves, like the persecuted young lady in the *vaudeville*, to their inevitable destiny. Meantime, these unhappy victims of impending spoliation are in the unfortunate predicament of being compelled to listen helplessly to the discussion of the time and the mode in which the process is to take place by which they are to be deprived of their lawful property. It has become the fashion to find plausible pretexes, which shall, at the same time, embody a cherished idea, and extend an "unnatural boundary." German Unity and the Rhenish Frontier have become convertible terms; and we really do not see any limit to the more ample development of that policy so happily inaugurated by the acquisition of a large section of the kingdom of Sardinia. French aggression has been reduced to a formula which will become more simple the oftener it is repeated. First observe in what direction it is desirable that the frontier should be extended; then implant in the neighbouring nation the idea of unity or independence, as the case may be; then discover that, in consequence of its increase of population or of power, a compensation is necessary, accord to the young Power struggling to preserve the new order of things a gracious protection in return for an extensive slice of territory of which it is to be deprived, subsidize the entire press to advocate the transference of the coveted territory to France, deluge the country itself with police agents, secure the co-operation of the Government to which it still appears to second your efforts; and when the arrangements are completed, and the people themselves thoroughly intimidated, bring into operation the

glorious and enlightened institution of Universal Suffrage, and obtain a unanimous vote in favour of that great military empire to which any small outlying province of a neighbouring state should be proud to belong. The characteristic feature of this policy is its singular audacity. To plot in secret, to conspire at Pombrières or elsewhere, to lay trains underground, into which, at a given moment, the fatal spark may be cast which is to blow up an empire, is a course of procedure which, considering the antecedents of our "august ally," would not surprise us; but to discuss deliberately in the press, and with official sanction, the propriety of appropriating the territory of a neighbouring state, is an outrage upon the moral sense of Europe, which, if practised with impunity, may lead to the most disastrous results. The object of pamphlets, such as that recently written by M. About, is to familiarize not merely the French mind, but the public of the country to be annexed, with an idea which, if too suddenly thrust upon them, would shock and disgust, but which, persistently and boldly advocated, prepares them for that final process which is the ultimate resort of French diplomacy.

Whether in the present temper of the German mind this attempt is likely to produce the effect desired is highly problematical. Doubtless there are many conflicting interests in Germany, which, in the absence of any pressure from without, may operate as discordant elements, and encourage intriguing politicians to hope that by bringing them into contact, an opening for friendly council and advice, to interpose and harmonize, may be afforded. It has been the policy to excite for the purpose of soothing, and by stimulating internal irritation to create the necessity for external sympathy. There is, however, a common sentiment in Germany far more powerful than any local jealousies or animosities, which will unite it as a common memory is awakened among the populations. The public suspicion has been roused by the Baden episode, and by the altered tone of the French and part of the German press, with reference to Rhenish annexation. The idea of 1813 is once more becoming predominant throughout Germany. What we are doing now in England with our Volunteers, Germany, led by Prussia, did then,—the *Freischutz* of those days are world-famous; the *Jeune d'Arc* of Germany was Queen Louise, called by her own countrymen, "the most German of all women." The movement which is taking place throughout Germany, in commemoration of the fiftieth anniversary of her death, is strikingly symptomatic of the unity of sentiment which is ever evoked with the name of "Fatherland," and which can never be extinguished by French pamphlets. On the 19th of this month a funeral *fête* was to have been held, in honour of this illustrious queen, throughout Prussia, and it was proposed that the commemoration should not be confined to Prussia alone, but that all Germany should unite, at the present crisis, to pronounce, by an emphatic demonstration, in favour of a common policy, the text of which should be the memorable words of Queen Louise herself, during that crisis which is but the forecast of the one now impending.—"Only resistance to the death can save us." We do not fear for unity of sentiment on the part of the people of the different states of Germany so much as on the part of their rulers. It is natural that they should be actuated by a variety of motives, some unworthy, and that they should be therefore amenable to corrupt influences. Any attempt at revolutionizing Germany must end in failure, and herein consists the difficulty of applying that policy which was so successful in Italy to Germany. With the princes, however, something in the way of a re-arrangement of states might be effected, which should bring about, by the advantages held out in certain directions, a coalition in favour of France, and secure to that empire, in return for the benefits thus rendered, the compensation she desires.

The security against any such combination on the part of the German potentates is, first, the unpopularity which a policy of this nature would entail upon the rulers themselves; secondly, the traditions of a common fatherland, which the wars of the first Napoleon only served to rivet more deeply in the breasts of its inhabitants; and thirdly, the increasing cordiality of the relations between Austria and Prussia, both of which leading states are determined to adhere to that German policy, the necessity and importance of which supersede all minor questions of difference between them, and impart into their respective councils that unity of sentiment in which must consist their strength.

In the pamphlet to which we have alluded, and in the free discussions of the question to be found in the French press, we perceive the first indications of the approaching crisis, and we can only express our earnest hope, that when the hour of her extremity arrives, Germany will be found true to herself, and prove by a united policy and determined attitude, that the patriotic fire of her sons has not yet become extinguished, but is only waiting to be kindled by a common danger into a generous and ardent flame.

FINANCIAL OPIUM EATING.

EVERY one remembers the month of February, and the flowing periods of the Chancellor of the Exchequer's speech, on introducing what was supposed to be "The Budget" of the year. And a bold Budget it was. It revealed a deficiency, to begin with, of no less

than nine millions and a half sterling; but this astounding deficiency, like much else in Mr. Gladstone's oratorical display, was merely hypothetical; and had the income tax of 7d. in the pound, to which the country was accustomed, only been allowed to go on, the real deficit that the Budget revealed was only about two millions. The 3d. which has been added to the income tax, making it 10d. in the pound, would have thus covered the deficiency, and left a million surplus besides; so that the Ways and Means of the year—including the China War (for we are now speaking of what "The Budget" ought to have been), might have been entirely provided for by the aid of the slight increase in the spirit duties now sanctioned, without borrowing a penny from the Exchequer balances.

This might have been. With a prudent Chancellor of the Exchequer, we doubt not it would have been *THE* Budget; and the luxury of French wines and a French treaty might have been well deferred, till our naval and military expenditure would bear reduction, and the *entente cordiale* had become a reality. In that case, also, the *entente cordiale* would have been maintained between the two Houses of Parliament, an evil precedent would not have been established, and (shall we add) greater harmony would have reigned in the Cabinet.

These are scarcely days for the country to indulge in expensive luxuries. With a military and naval expenditure of thirty-five millions, in addition to the sums about to be borrowed for fortifications, we cannot afford to part with hard cash for the luxury of French wine and *bon-bons*; and especially we cannot afford that most expensive of all luxuries, an imaginative Chancellor of the Exchequer, who becomes inflated with figures, but founds his Budgets upon figures of oratory.

We have seen what might have been an ample and simple provision for the year. Let us now see what Mr. Gladstone placed before us in February instead, as the financial *précis de ressource*, or Budget, and again warned up for us on Monday last, as a sort of financial hook. We need not say that such *richesses* are not liked in England. They are badly flavoured, generally lukewarm, and very often smoky; and so was Mr. Gladstone's speech. No more like his brilliant eloquence in February than the dazzling visions of the opium-eater at night are like the horrors of the following morning!

Our financial "opium-eater" thus unfolded his figurative dream:—"There is a deficiency of about two millions. (He inhales the entrancing weed.) The income tax of 7d. in the pound evaporates in April: a deficit, dark and cloudy, then appears, of nine millions and a half! (Another puff.) The House becomes excited. (Another long puff.) Four millions more vanish from the Customs and Excise,—the clouded space enlarges to thirteen millions and a half! (This is the climax.) The House holds its breath. He withdraws his pipe from his mouth, and flourishes it like a wand. The old half-million disappears, puffing off with a windfall from Spain—an old debt not properly income at all. Then a million is taken away by renewing Exchequer Bonds to that extent. Deficit reduced to twelve millions. Another million is made good by fresh duties upon stamps and packages, thus leaving eleven millions to be provided. (Again the great financier pauses—the House looks anxious—and he proceeds.) The income tax supplies about a million sterling for every 1d. in the pound levied. Eleven millions is so close upon twelve that it might almost be best at once to say let it be 1s. in the pound! (Sensation.) But, no! it shall only be 10d. (General buzz; the senators leave the House, which now breathes afresh.) And as for the remaining million or thereabouts, still to be made good, why, part of the previous figures were a little exaggerated; the *hop-growers* have had very long credit, and must be made to pay up; and the elasticity of the revenue otherwise will make up the difference! Such was Mr. Gladstone's Budget—first part—for 1860-61.

Now come the confessions of our opium-eater! On Monday last we find that he had under-estimated the expense of collecting the revenue by £200,000, and under-estimated the loss arising from the modification of the small taxes on the profits of trade by £180,000, or £400,000 in round numbers; that, in addition to the February estimate of £2,550,000 for China, another £3,800,000 is really required, making £6,350,000, which amount, however, includes £450,000 arrears expenditure of 1857, and £500,000 to be charged to 1859-60. This will leave £5,000,000 as the expenditure estimated for the present expedition—of which amount £3,300,000 was left totally unprovided! Mr. Gladstone, however, in February, expected a surplus of £464,000 on the revenue of the year ending 31st March; but £400,000 of this, from under-estimates, as before stated, disappeared, leaving £64,000 only available for this additional China expenditures, if Mr. Gladstone had had his own way!

Now come his windfalls. The loss upon the paper duty, as originally proposed to be given up by Mr. Gladstone, would have been £1,000,000, but the House of Commons, by altering his bill and deferring the proposed repeal till 5th August, added £200,000 to the £64,000 above stated; and when the House of Lords rejected the bill altogether, another £800,000 should have remained available as Ways and Means. But, unfortunately, there will be a loss of no less than £100,000, on the paper duty, arising from its being tampered with,

reducing the additional gain to the exchequer to £700,000, or £900,000 altogether for paper duty; and thus Mr. Gladstone has unexpected funds to the extent of £964,000, which leaves £2,336,000 unprovided. Of this, £1,050,000 is to be raised by increased duties on spirits, and the balance of £1,286,000 is simply to be borrowed from the exchequer balances!

Mr. Gladstone acknowledged that he could not tell the whole expense of the former China War, because much of the expenditure for the army and navy was charged to the ordinary votes for these services. We apprehend he has not nearly told us, for the same reason, what the present China War is really costing us. And in looking at our enormous expenditure for war purposes, we must not overlook the fact that the expense of 200,000 Volunteers, in addition to what is voted by Parliament, is patriotically borne by the middle classes. All things considered, probably forty millions per annum is an under-statement of our war expenditure; and there are the fortifications besides. That expense is not to be raised by taxation. It must therefore be borrowed. We know not what the sum will be, nor probably does Mr. Gladstone—or any one else. But it is evident that the system of "making things pleasant" for to-day may make them very unpleasant for to-morrow. But what care our statement! "Sufficient for the day is the evil thereof" is their maxim. We sincerely hope that neither they nor the nation will have reason to repent having acted upon it.

WORKING-MEN AND FACTORIES.

IT has long been held of industrial enterprise carried on by capitalism that "They manage these matters better in France," This boisterous, suspicious English workman, too often engaged in wrangling with his employer, or in political agitation, cannot become, it has been said, a patient member, or a prudent manager of a joint-stock enterprise, and it is hopeless to expect here the success which some such enterprises have obtained there. We have, therefore, so much the greater pleasure in now advertising to some successful joint-stock enterprises carried on by our own workmen to a greater extent than has ever, we believe, been known in France.

The New Bacup and Wastell Co-operative Company, in Rochdale, was established under the Joint-Stock Companies' Act, and has now been twelve years in existence. It started with a capital of £20,000, in shares of £12. 10s. each, which was afterwards increased to £30,000. In addition to the premises it originally occupied, it has built and enlarged a mill, and now requires engines of 140 horsepower. The large majority of the shareholders are men who work in the factory for wages and share in the profits, without taking any other part in the management than annually to elect the managers. At the end of the half-year, last October, the dividend on the paid-up capital was 44 per cent., and since then 48 per cent. has been paid—a rate of profit more than double that of the joint-stock banks of London—the most successful commercial enterprises of modern times. This rate of profit must, however, be exceptional, and should not be readily to believe even in the occasional existence of such a rate, though stated by the Factory Commissioners, had we not previously been informed that manufacturers about Manchester have, within the last three years, sometimes made as much as 50 per cent. on the capital embarked in their business.

The "Rosedale Industrial Association," another joint-stock company in the neighbourhood of Bacup, has been in existence six years, and has a subscribed capital of £40,000, in shares of £10 each. Originally, every shareholder was an operative. It has been carried on successfully; has bought and built mills, and its security is so good that it has been enabled to borrow £4,000, to extend its operations, in small sums of £100 to £150 without granting mortgages. These companies are favourite investments for the savings of the neighbourhood. More recently, the New Church Cotton Spinning and Weaving Company has been started, and has a subscribed capital of £40,000, in £10 shares, and will employ 450 persons. The Rawtenstall Cotton Manufacturing Company has a capital of £20,000, subscribed in £5 shares. In both these companies nine-tenths of the shareholders are operatives. The Old Clough Cotton Company employs only seventy-six hands, and has an engine of only 13 horsepower; but all the shareholders are of the operative class. "A new system," says Sir John Kinneil, one of the Factory Commissioners, "of small mills and owned by operatives who work in them, receiving wages and sharing profits, has sprung up in Lancashire, which will eventually lead to important changes."

In Bury alone, £300,000 will be required to put the co-operative mills there built and building into working order. The system extends into Yorkshire, and numerous companies have been formed, with shares of from £5 to £10, composed generally of operatives. Besides taking to spinning-mills, they hire and work power-looms in weaving-sheds, employ their own families, and renew, in a measure, the domestic system of manufacture so much praised by some persons in contrast with the factory system. They cultivate, too, articles of consumption; and at Rochdale and other places, joint-stock provision companies supply the operatives with unsalutiferous articles at a

reasonable rate, and give them the profit of dealers. One of these societies, Mr. Redgrave, another commissioner, says, paid its shareholders 40 per cent. last year. Thus, throughout the great manufacturing districts of the North, the improvement of the workpeople by joint-stock enterprise, which was much desired by philanthropists, but considered to be hopeless, is taking place on a large and extending scale.

The most pleasing part of the matter is, that the very people who were considered to be the least prudent and least frugal of the working classes, are continually making great savings, and employing them in the most judicious and productive manner. They do not put their capital in the national funds, but use it actively to increase the general wealth. The dictum of an eminent judge—very useful as applied to bankers, rather than a statute, or the well-established precepts of the common law,—made every partner in every concern liable to the creditors of the partnership to the extent of his entire fortune. What the Limited Liabilities Act did then, was to restore, under certain regulations, the natural liberty of each man, abridged by that dictum, publicly to limit his own engagements in any partnership concern by his own discretion. The factory operatives have taken advantage of this restoration, and have invested their savings productively. Having liberty, they have helped themselves, and, under no compulsion, have originated one of the greatest improvements in their own condition which modern times has witnessed.

The Factory Commissioners declare that trade has seldom been so brisk, especially in the cotton and woollen departments, as now. Many new mills are building, and much machinery is standing idle for want of hands. Since Ireland has ceased to supply labour, that commodity has become scarce in the manufacturing districts, though wages are very good, and though plans are organised for attracting it from the agricultural districts. Families are invited, and youths are bound apprentices, to secure their services, and receive good wages instead of paying fees. The abolition of other restrictions has enabled the operatives to save, and so the means of saving, and a great inducement to save, supplied by these companies, prevail together. The operatives prefer their savings banks; and, yielding a high rate of interest, they seem likely to diminish the favour with which benefit societies and clubs are now regarded by the working classes. Silently, but surely, therefore, they are providing the means to effect still greater changes and greater improvements in their own condition.

It is gratifying to add, that an increase in the rate of wages has accompanied the limitation of the hours of working ordained by the Factory Act; but it should be carefully remembered by those who may use this fact as an argument for further limiting the day's work, that the increase is less the consequence of the Act itself, than of the wonderful prosperity which has followed the removal of other restrictions.

SPITEFUL PHILANTHROPY.

THE meetings of the Statistical Congress have been signalized by an incident of by no means calculated to increase the kindly feeling entertained towards England by our transatlantic cousins, while the cause of negro liberty has received another blow at the hands of one of its most ardent partisans. The slow progress which Abolitionism has made in the Southern States is doubtless owing to the want of judgment and tact which has ever characterised the conduct of those who have espoused the principle in New, as well as in Old England. The letter from the ladies of England to their sisters in America inflicted a serious injury upon the cause it was designed to serve. And now the unhappy negroes are suffering from the ill-judged advocacy of their friend Lord Brougham, who seems to consider that, to be a negro, confers a higher claim upon his friendship than to be a white man. That venerable lady took occasion, in moving a vote of thanks to Prince Albert for the able and admirable address with which his Royal Highness inaugurated the session of the Congress, to admonish the company by the irrelevant announcement pointedly addressed to the American Minister, that a negro was present. However leniently we may desire to deal with the eccentricities of old age, and in one so illustrious as Lord Brougham, there is a point beyond which the license accorded cannot be pushed with impunity; and although it is due to Lord Brougham to say that he has lost no time in making an apology, it is impossible that he can thereby destroy in the United States the effect which has been already produced. Lord Brougham's excuse that his words would have applied with equal effect to the Brazilian or Spanish Minister, to whom they were not addressed, is no satisfaction to Mr. Dallas,—to whom they were; and that gentleman will beware, for the future, how he assists at a meeting at which any spiteful philanthropist who thinks a black man better than a white one, is likely to be present.

The American Minister is well known as a member of the democratic party, or he would not have been thus singled out for the remark. Either Lord Brougham's observation was utterly pointless, or it was a deliberate insult. In either case it was utterly out of place, and calculated to produce a most unfortunate impression in America, where it will be widely quoted as a specimen of the English ill-breeding. Unfortunately, the learned persons who listened to the

unwarranted observation of the noble Lord, so far from manifesting their disapproval of it, indulged in loud cheers, which were increased by the unexpected assertion of the negro alluded to, that he was "a man." When the applause which this unusual statement elicited had subsided, the meeting broke up, apparently without any consciousness being exhibited on the part of the members of any want of courtesy on their part; and Lord Brougham was encouraged by the success which attended his exploit, to renew the subject in the House of Lords on the following night, by calling the attention of the House to the fact that negroes were refused first-class passages in the Cunard line of steamers. The answer which Sir Samuel Cunard would make to this charge is, probably, that the greater portion of his passengers being Americans, he is compelled to study their prejudices, and those which he would find it most difficult to combat would be offered by the Abolitionists themselves. This inconsistency of the Northern Americans materially weakens their position, and Lord Brougham would further his object far more by privately urging a reformation in this respect, than by publicly insulting an American ambassador.

THE LAST AUSTRIAN TELEGRAM.

THE change which the system of government is undergoing in Austria, to which we adverted in our first number, is making more rapid progress than we could have anticipated. A telegram has just been received from Vienna, to the effect that on Thursday evening last a message was communicated to the Reichsrath, by which the Emperor has promised not to permit either the imposition of any new taxes, nor the augmentation of any of the direct taxes now existing, nor of any excise duties, nor of any stamp duties, nor the conclusion of any new loan, without the consent of the Reichsrath. The effect of this message is scarcely to be appreciated in England, nor the extent of the revolution which it must bring about in the entire system under which the Austrian Government has hitherto been conducted.

The power thus conferred upon the Council to discuss openly and freely the most important financial questions, does, in fact, constitute it a deliberative assembly, under conditions infinitely more consistent with real liberty than those which obtain in a neighbouring country; and in spite of the admiration professed by some liberal journals for the existing institutions of France, we maintain that this sacred principle is more likely ultimately to find a wholesome development under the constitutional pressure which public opinion in Austria is bringing to bear upon the Government of that empire, than under a purely military despotism; and that we are rendering a greater service to the cause of true freedom by supporting a popular movement, deliberately and systematically carried through, than by looking upon the overthrow of French liberty as quite natural and proper, and not to be complained of under the penalty of denunciation by false pretenders to liberal principles.

THE LEBANON MASSACRES.

To the Editor of the London Review.

SIR,—As I perceive from the very amusing and clever letter of your correspondent of last week, in defence of slang, that you permit controversy in the columns of your journal, perhaps you will allow me to say a few words in defence of that much-abused and ridiculed institution, the Turkish Government, more especially as I perceive from your notice of the tragic events which have recently transpired in the remote valleys of the Lebanon, that the writer of your historical summary has adopted the popular view of the subject; and as the public of this country are invariably in a state of profound ignorance upon all subjects beyond the usual range of their observations, the popular view is as invariably wrong. As one who has had some personal experience of Turkey, both in Europe and Asia, I venture upon the following remarks, more particularly as the recent conflict between the Druses and the Maronites contains a moral which, in the present state of European politics, should not be allowed to pass disregarded. They have evoked from the public and a great portion of the press of this country an expression of feeling based upon an entirely erroneous conception of the real facts of the case, and which is calculated to force upon the Government a course of policy which, if persevered in, must inevitably ruin the cause it is designed to serve. If those unhappy Maronites who have survived the recent atrocious massacre, are sufficiently intelligent to trace to their prime source the disasters which have overtaken them, they will find it in that system of open and undisguised interference on the part of foreign Powers in the internal administration of the supreme government, which it has become the fashion to extend to other countries besides Turkey, and which must be followed by the same result—anarchy, succeeded by a foreign protectorate, either secret or avowed. If it is in the interest of this country to preserve the integrity and independence of that Power the protection of which has cost more British blood and treasure than has been spent in acquiring and retaining the Indian Empire, it is of the utmost importance that our policy should be of a nature to strengthen and not to weaken the Government we desire to support.

If the unhappy Sultan is to be constantly subjected to the external pressure of four different foreign Powers, each with a conflicting interest, and a special pet reform in accordance with that interest to be introduced into the internal

CRYSTAL PALACE—ARRANGEMENTS for WEEK ENDING SATURDAY, JULY 29th.

MONDAY: Open at Nine. Athletic Sports and Military Dragoon, postponed from last week.
TUESDAY to FRIDAY: Open at Ten. Admission, One Shilling; Children under twelve, Sixpence.
On the WEDNESDAY, GREAT DINNER to the GRENADIER GUARDS—Billion Ascent—Military Games, &c.
SATURDAY: Open at Ten. FLORAL PROMENADE CONCERT. Admission Half a Crown; Children One Shilling; Women Tenpence.
SUNDAY: Open at Half past One, to Shareholders gratuitously, by Ticket.
The Rooms are now covered with plants, and other plants in full bloom; and the ornamental beds on the terraces and slopes are brilliant with thousands of geraniums and other flowers.

SUBSCRIPTIONS for "THE LONDON REVIEW" received by Messrs. W. H. SMITH & SON, at 105, Strand, and at all their Railway Book-stalls.

THE LONDON REVIEW.—NEWSAGENTS and the PUBLIC in LIVERPOOL DISTRICT. Will be supplied with THIS PAPER and all other NEWSPAPERS and PERIODICALS, STATIONERY, &c., by J. VAUGHAN, at 45, Broadwood Hill, near Clarence-street, Liverpool. London parcels daily.
Tuesday's Forwards, &c., on Monday Evening.

ASTRONOMICAL OBSERVATIONS on the TOTAL ECLIPSE as OBSERVED in SPAIN.—On Saturday next (July 29), we hope to lay before our readers a complete report, from our Special Correspondent in Spain, containing the results of the Astronomical Observations of the Total Eclipse of the Sun, as observed in that country, with a beautifully-executed explanatory copperplate diagram.

THE LONDON REVIEW

WEEKLY JOURNAL.

SATURDAY, JULY 21, 1860.

THE first meeting of the International Statistical Congress in England was held on Monday last, in King's College. It was attended by delegates from Austria, Bavaria, Belgium, Brazil, Denmark, France, Hamburg, Hanover, Holland, Norway, Prussia, Russia, Spain, Switzerland, Turkey, the United States, New South Wales, South Australia, Tasmania, New Zealand, Canada, Cape of Good Hope, Ceylon, the Ionian Islands, and other United European states, and British colonies. The first of these congresses was held at Brussels in 1853; the second in Paris in 1855; the third in Vienna in 1857; and this, the fourth Congress, was fittingly presided over by the Prince Consort. The address with which his Royal Highness opened its proceedings has justly been the theme of universal approbation. Nothing can be more apt, or true, as a definition of statistics, than the Prince's description, viz., that they are "the accumulation and verification of facts, unbiased by any consideration of the ulterior use which may or can be made of them." Never was the science of statistics better defended

against the rash charge of "Pantheism," and as tending to show that man was "incapable of exercising a free choice of action, but predestined to fulfil a given task, and run a prescribed course, whether for good or for evil." Such accusations have been made. "But," asked the Prince "are they true? Is the power of God destroyed or diminished by the discovery of the fact that the earth requires 365 revolutions upon its own axis to every revolution round the sun, giving us so many days to our year; and that the moon changes thirteen times during that period; that the tide changes every six hours, and water boils at a temperature of 212 degrees, according to Fahrenheit; that the nightingale sings only in April and May; that all birds lay eggs; that 106 boys are born to every 100 girls?" Most apposite also was his further vindication of the science, when he remarked that, "our statistical science does not even say that this must be so; it only states that it has been so." The whole discourse was a masterly composition; and will not be less appreciated in this country on account of the graceful compliment paid to M. Quetelet, the first president of the Statistical Congress, "from whom," said Prince Albert, "I had the privilege, now twenty-four years ago, to receive my first instructions in the higher branches of mathematics."

But one opinion is entertained with respect to the gallant behaviour of the Volunteers in their sham fight on Saturday last, in Camden Park, Bromley. Much as they were admired for their display at the review in Hyde Park, and at Wimbledon, still there were many experienced officers, who were under the impression that in the endeavour to go through the manoeuvres of an army attacking, and of a body of soldiers compelled by an overwhelming force to retreat, they were attempting too much—that ill-conceived blunders would be perpetuated—and that even serious accidents might occur. All these fears proved groundless. The Volunteers went through their task with coolness and discretion, and though a few slight errors were committed, they were on the instant perceived and repaired. The good work is going on well all over the country; for on the same day that the Volunteers were armed in this friendly emulation at Bromley, 8,000 men were under arms at Aintree, near Liverpool, whose appearance and discipline excited not only the admiration of the inspector-general of the Volunteers, but of a vast assemblage of enthusiastic spectators.

The most important subject discussed in Parliament within the last week, was the mode in which the Government proposed to raise the expenses of the impending war with China. The Chancellor of the Exchequer, finding that a formidable armament to invade China—and not a mere empty and pompous expedition to enervate the populace of Canton and Peking—is now resolved upon as absolutely necessary for the preservation of our prestige in

the far East, has been compelled to introduce a second Budget. On Monday night he made a clear exposition of his scheme. The whole amount to be raised he estimated at £5,400,000—a sum, which, although drawn, in the first instance, from the English people, may be repaid eventually by the Chinese mandarins, who have, by their stubbornness and fatuity, caused this expenditure. We have remarked elsewhere upon Mr. Gladstone's unhappy position as a financier, as exemplified by his two Budgets, and need not, in this place, make any comments upon his failure.

Several discussions have taken place on the question of the annexation of Savoy and Nice; but nothing of importance has been elicited beyond the fact that the Government intends to adhere strictly to the principle of non-intervention, under present circumstances, although the Minister of England to the Conference will record a protest against any failure, on the part of other Powers, to recognize the just claims of Switzerland, and show clearly that the policy of England will be, should any attempt be made to make farther encroachments upon existing national frontiers, and upon the independence of a high-spirited people, for whom England feels the warmest sympathy.

On Friday last Mr. Scully called the attention of the House of Commons to the system which prevails of legislating for Ireland separately from England, and to the inconvenient hours and advanced period of the session at which Irish measures are usually submitted to Parliament. The Irish members were obliged to be in the House from seventeen to eighteen hours a day, and "were compelled to sleep on the benches, but at the risk of rolling on the floor," &c., &c. During the session there had been laid on the table of the House no less than thirty bills relating peculiarly to Ireland. Now, there was no reason why all of these should not have been amalgamated with English measures. Why should there be a tramway bill for Ireland, a tramway bill for Scotland, and a locomotive bill for England, when the subjects dealt with in all these measures were precisely the same? Lord Palmerston replied, that a fair share of the attention of the House was allotted to Irish business, and that there was no fear that Irish members would either fall asleep on the benches or die on the floor in consequence of the hour at which Irish business was brought on. "Those who were in the House till four o'clock that morning must bear witness that there was a wakefulness and vitality about the Irish members which must relieve their most anxious friends from the slightest apprehension that they were either likely to fall into a state of torpor, or to end their lives in the course of one sitting of the House, on any subject whatever." He quite agreed, he said, with Mr. Scully, that the same laws should extend, where that could be done, to the whole United Kingdom; but he denied that it was possible in the cases adverted to by Mr. Scully, to make one act apply to all the three kingdoms, or that it was possible to diminish the labours of Parliament by extending a more uniform legislation to all parts of the empire.

That something, however, must be done to diminish the amount of work forced upon the House of Commons, has become quite apparent. Why should the question not be fully discussed? On several occasions it was adverted to last week. On Tuesday last, *propos* of a Title to Land (Scottish Act), about the value and importance of which there are not two opinions, Lord Brougham made the remark that it had been hung up in the House of Commons during the whole of May, June, and part of July, and could not be advanced a stage. The whole difficulty had arisen, he said, from the proceedings of the House of Commons, "which, according to the original etymology, had become a parliamentum, a colloquium,—a house for talk and nothing but talk." At the very time that these remarks were made in the Upper House, the same subject was indirectly adverted to in the Commons by the Chancellor of the Exchequer, in opposing the second reading of Mr. Adderley's Education Bill, which also embodied principles to which there seemed to be a very general assent. The ground on which it was opposed, was not that the subject was unimportant, but that the House had not time to give it that amount of attention to which it is entitled. "It is a measure," said Mr. Gladstone, "equal in importance and extent to a measure of parliamentary reform, and it would be as completely out of the question to pass the bill at a period so late in the session, as it would be to abolish the House of Commons." "The public mind," he added, "was totally unprepared for a measure of this kind." If the public mind must be prepared for any legislative measure of importance, and if Parliament can, in the course of a session, only devote its attention to a limited number of questions, why is it that some attention is not made to weed out unprofitable discussions, and to confine the attention of Parliament exclusively to legislative questions of high importance, and to provide a separate machinery for the discussion of administrative detail?

A motion made by Mr. Newdegate in the House of Commons, the day before, to shorten the period of debate, instead of diminishing, could only, if carried, have aggravated the evil. He proposed to limit the sittings of the House to one o'clock p.m., not interrupting business which arose before that time, but preventing any new question from being taken up at a later hour. Sir George Grey, looking at the late hours to which the House had not during the preceding fortnight, had doubts if this proposal would lead to a satisfactory mode of conducting public business. Any attempt to curtail the time allotted to discussion would only postpone the period to which they were all looking forward for a release from their duties. Lord Palmerston thought the Reform Bills, not only, we presume, of this, but of the preceding sessions, were the cause of all this mischief. He could

not agree with Mr. Newdegate. "Many honourable gentlemen," he said, "would be out of their beds at an early hour of the morning, even if that motion were adopted, and he thought it would be conducive to the public interests if those honourable gentlemen spent their hours in the morning in that House instead of elsewhere. He begged to remind honourable members that—

"The best of all ways,
To lighten our days,
Was to steal a few hours from the night."

The noble Lord laughed, and the House laughed; and Mr. Newdegate was induced to withdraw his motion, without the proposal of any more satisfactory method to remedy an acknowledged and growing evil.

As another and crowning instance of the great waste of time in Parliament, it must be mentioned that the measure which, next to the Reform Bill, was the grand feat of the session—the Bankruptcy and Insolvency Bill of the Attorney-General—has been abandoned. This announcement of its fate was made on the 152nd clause; that is, when there remained 302 clauses to be discussed. We last week compared Sir R. Bethel to Hercules, for undertaking, during this session, to clear out the Augean stable of bankruptcy and insolvency. We fear, however, that his present failure will cause him to be likened to Sisyphus, working at his "non expugnabile saxum," engaged in a toilsome task, which he is doomed never to bring to a conclusion.

Public feeling has manifested itself strongly during the week in various parts of the country with reference to the late aggression of the House of Lords on the privileges of the Commons. There have been meetings at Northampton, Stourport, Bristol, and other places. The subject was brought under the notice of the House of Commons by Lord Ferny, M.P. for Marylebone, who proposed, on Wednesday, a resolution to the effect that the rejection of the Paper Duties by the Lords was an encroachment on the rights and privileges of the Commons, and that it was therefore incumbent on the House to adopt a practical measure for their vindication. This motion was opposed by Lord Palmerston and Mr. Gladstone, on the ground that it was merely a repetition of resolutions already unanimously adopted, and that no "injunctive measure" was suggested. Upon a division "the previous question," moved by Lord Palmerston, was adopted; 177 members, most of whom were Conservatives, voting with the Prime Minister, and 136 with Lord Ferny.

The *Great Eastern* has safely made her first voyage to New York. The able correspondent of a daily journal who sailed in her says "she really possesses the power of making the most rapid passages that have yet been effected;" "that the passengers on board are more comfortable, and more free from disturbing causes than in any ship of a less size;" and "that when she is laden with a cargo she will be found to be the steadiest and easiest vessel that ever crossed the ocean." The reception of the giant ship in New York was most enthusiastic, and far surpassed that manifested in London when the *Great Eastern* first left her moorings.

The return of Lord Clyde to England is one of those events in which every man who feels a pride in the success of the British arm cannot fail to take an interest. This gallant veteran has fought in Spain, in America, in China, in the Crimea, twice in India. In all places victorious, he has crowned his career by the suppression of the Indian mutiny. Lord Clyde landed at Dover, on Wednesday last, amid the acclamations of a crowd of his countrymen, who rejoiced to perceive that the toils and anxieties he has undergone during the last few years had pressed but lightly upon him. In other less fortunate lands, where the monarch is a despot, the popularity of a successful general constitutes a danger to the sovereign; but in England the popularity of a military leader is an element in the strength, the greatness, and the glory of the empire.

A conversation took place in the House of Lords, on Tuesday last, on the affairs of Syria, in which were fully confirmed, upon the authority of Lord Wodehouse, the painful details previously published in the newspapers as to the massacres committed by the Druses upon the Maronites and other Christian sects. In addition to the terrible incidents mentioned last week, intelligence has been received of the massacre of 500 Christians at Damauek, the murder of the Dutch consul, and the burning of the houses of all the other consuls, with the exception of that occupied by the consular for this country. The correspondence from Beyrout and other places contains many facts that ought to be universally known. Between the 29th of May and 1st of July, the Druses had burnt and pillaged no less than 151 Christian villages, and thereby reduced to "homeless beggary" from 75,000 to 80,000 inhabitants of the Lebanon, and they had butchered and "lacked to death" 8,000 individuals, including hundreds of male children—that a sum of 50,000,000 would not pay for the towns, villages, hamlets, and silk factories destroyed; that convents, nunneries, and churches had been pulled down; and that for twenty days there had been "a wholesale massacre of Christians." Some of the deeds done by the Druses are too horrible for description; such, for instance, as the manner in which male infants were pitilessly put to death. The correspondent of a cotemporary asserts that Koorchoo Pacha, the governor of Beyrout, "has all along been cognizant of all that the Druses were about to do," and that he has "almost avowedly helped them with food, ammunition, and arms." He also accuses the Turkish Government of "connivance" at these massacres. A letter, published in another part of "THE LONDON REVIEW," from an "Eastern Traveller," will probably induce the public to pause before it comes to the conclusion that the Turkish Government could

have, either directly or indirectly, sanctioned deeds of blood and cruelty which must excite against their perpetrators the execration of Christendom. Fecklessness and incapacity are crimes that are scarcely pardonable in a government; but they are not to be identified with wilful wickedness, and predetermined ferocity. The affair of Syria may demonstrate that the Government of the Turk is no longer sustainable—but if it could be proved to have connived at or encouraged the crimes that have been committed by the Druses, such a Government would be no longer admissible.

An important change has taken place in Naples. The "Liberal" ministry, with the exception of Martino, has disappeared, and a new one, under his auspices, is about to be appointed. A collision has taken place between the troops and the populace, whose rejoicing at the return of some liberated political prisoners gave offence to the soldiers. The attack on the people was at first attributed to the machinations of the Court, but the suspicion has proved to be groundless, whilst the rumours of a reactionary policy are at least premature.

The latest accounts from Sicily show the difficulties of Garibaldi's position, and the embarrassments with which he is surrounded. Whilst his soldiers are fighting in the front, he has to guard himself against intrigues at his back. He wishes to march upon and capture Messina, but his movements are impeded by those who should be, or who pretend to be, his friends. We cannot doubt that the conviction on his mind, that intrigues injurious to the independence of Sicily were being carried on, has led Garibaldi to order the arrest and deportation from Sicily of the well-known Farini, and two Corsicans, named Grielli and Totti, supposed to be his associates. Since his return to Turin, Farini has published a statement which, though calculated to win favour from the Piedmontese minister, can only serve to increase the confidence reposed by this country in the integrity of Garibaldi. The most imminent of all dangers to Italian independence is that it may be compromised by the diplomacy of Cavour, controlled and guided as that policy is from the Tuilleries. Garibaldi has these two great objects to attain. The first, to free Sicily—a feat only to be accomplished by force of arms. The second is, that Sicily, when free, shall not be unable to bear the fruits of its victory by the massacre of those to whom the smiles of kings are of more importance than the happiness of a nation. Garibaldi is the man of the people, and those who oppose him are mere courtiers, diplomatists, time-servers, and intrigues.

In a Paris letter, published in last Wednesday's *Times*, appear the details of an application to the Government, made by a gentleman who had become the purchaser of a newspaper (*le Courrier de Paris*), to be registered as its proprietor. The question was simply one of property—who should be the owner of a particular newspaper. The Prefect refused to sanction the transfer, on the ground that the journal would become "an opposition paper, patronized by men of note and respectability (*des hommes considérables*). Such is the condition of the French press, once so bold and so able. Surely the ministers of the Emperor are drawing the bow a little too tightly, and doing their master an ill service!

SKETCHES FROM THE HOUSE.

BY THE SILENT MEMBER.

It is a fine night to see our Noble Viscount, in his seventy-seventh year, cracking jokes—and very good jokes too—until four o'clock on a July morning. At one time, the stranger in the gallery who has a hatch-key, or who has faith in the night porter of his hotel, would suspect our Noble Viscount of a state of temptation, or of taking a very questionable interest in what is going on. But see him an hour later, when some of us groan, and yawn, and point to the clock, and demand an adjournment. By this time our Noble Viscount is in his seat as a grave and experienced man. How pleasantly he taunts us with our undue worship of the drowsy god! He scouts the idea that if we went home we should go to bed. We only want to get away to play at *Acrot* or billiards, or to sup. Here, at least, we are out of harm's way. He scolds his own special minister, and says we may have some objection to show for the rest of the session. Has he not been sitting here as long as any of us? We all know that he took his seat on the Treasury bench at half-past four o'clock, and that he only once left it for half an hour. We groan, and yawn, and point to the clock more and more, and in answer to this appeal, he says give way, and allow the next bill to be taken. From this moment to the adjournment of the House, our Noble Viscount is the only man in it who is thoroughly awake. The Speaker puts the questions mechanically, and calls upon the clerk to say "Ay" like a man in a dream. He looks at the clock, and sees each other until the hour strikes, and then they all go to sleep. The occupants of the Treasury benches sit like *lotos*-men. The front opposition bench is vacant. A member now and then rises, and moves sleepily to the door, with a strange sense of non-existence. Below the gallery a score of members, however, show unmistakable symptoms of wakefulness. Mr. Newdegate is there, from which you may infer that Maynooth, or the Roman Catholic Charities Bill is low down in the orders. The other vicinities of the trans-galactic regions are either the Pope's brass band, or Irish Members whose special mission is to answer the question, "What does the Government intend to do?" They all eye Mr. Cardwell sternly; while he, with the cold and lofty superiority of a professor lecturing a class of college students, crosses his legs, leans over the red box upon both his arms, plays with his eye-glass, and lays down facts and propositions with such an air of consummate ease and mastery, that the man who does not accept them almost before they are uttered, ought to be looked after by his friends. If Farinley, instead of being the modest man of science he is known to be, ever lectured his juvenile pupils upon the A B C of chemistry, he would not have been regarded with so much respect as the lecturer which Irish members experience when the Irish Secretary moves, at half-past two, to bring in a bill to continue a Constitution-suspension Irish Bill.

Our Noble Viscount, though an Irish peer, was not born on Irish soil. Broadly he claims the honour of his birth, but not without a counter-claim on the part of Piccadilly, for the family archives are somewhat obscure on the *how* or *when*. But is not our Noble Viscount an Irish peer—and has he not all the con-

"Glorious Goodwood" is the event of next week, and generally gives the *coup de grace* to the season of the latest loafers in London. Still the season cannot be said to be quite ended till the prorogation of Parliament, which will be about the 20th of August, and which will take place without the presence of the Queen, who is in the Isle of Wight, and who has fixed her journey to Scotland for an earlier date than usual, to be followed by a visit to her daughter, the Princess of Prussia.

It is not intended in this column to trench upon political discussion—which is obviously in able hands. Confiding myself to facts, I may mention that Lord Palmerston will certainly submit to Parliament a comprehensive plan in aid of national defence on Monday night. The discussion of Tuesday, and the mild proposition of Mr. Gladstone respecting additional taxation, has freed the proposal from any anxieties about the sum that will be required. One-half the amount is all that will be asked in the first instance. The most pressing work will be the enlargement of the *entrepôt* of the dockyard and arsenals on the south, and the acquisition of ground for reserve works in the centre of the kingdom. The defence of the metropolis, though not overlooked, will probably be postponed. The various plans of a few detached forts, with connecting lines of defence, require careful consideration. The more pressing works on the coast will be first proceeded with.

In foreign affairs the latest news is the probability of troubles in Hungary, unless the concessions of Austria to that kingdom become more satisfactory. Kew is not in London, said to be engaged, through his agents, with his friends and parliament alarmed, and with higher personages, in view of concerted operations on a large scale.

Mr. Cowper's new equestrian ride in Kensington-gardens does not give universal satisfaction. There has been a large and indignant deputation from Marylebone to-day at Whitehall-place, headed by several metropolitan members, in favour of the pedestrian interest. Mr. Cowper will probably have to take his hardies down again, or remove them to another place.

Sir William Hooker has made his annual report upon Kew Gardens to the Chief Commissioner of Works. The most important improvements of the present year are the new lake of five acres, which is nearly completed, and a conservatory, or temperate greenhouse, on a large scale, destined for the reception of all trees and shrubs from extra-tropical countries, especially from our own colonies. The great conservatory and winter-garden in the pleasure grounds, and arboretum adjoining the Botanical Gardens at Kew will be a trifling sort of 700 feet in length, extending to about the same length as the *Great Eastern* steamship, and probably the largest purely horticultural building in the world. It will occupy an extensive area on the right-hand side of the grand lawn avenue, leading from the Palm-house to the Pagoda. The new lake is situated on the left of the Zion Vista. The gardens open at six p.m., and close at sunset. The Plant-house and Museum close punctually at one.

Her Majesty's ministers, foreign ambassadors, and the representatives of various states attending the International Statistical Congress, were entertained at the Mansion House on Wednesday last by the Lord Mayor. The most remarkable thing at this banquet was the assurance by Lord Palmerston that a life far more deleterious might be led by individuals than that of working by day, and sitting up till three or four o'clock in the morning in the House of Commons; "and that," said Lord Palmerston, "I would be, if every day of the week, every week of the month, and every month of the year, we were to indulge in the same splendid and luxurious repasts as that of which we have just partaken." He added, with great truth, "it is the abstinence which we are compelled to practise which enables us to get through our work."

Money-making London is always ready to turn any event, great or small, into a commercial transaction. London's new hero is Garibaldi; and as long as he "says" we shall continue to have our eyesight flattered by the shop-windows which exhibit to us the great General. Every day shows us a new portrait, and in many instances they are so very "new," that they do not recel the fact of your having seen one yesterday, and will in no way interfere with your seeing another "new" one to-morrow. We are supposed to purchase Garibaldi medals, collars, and neckties; and if we enter a tobacconist's, we are invited to buy a Garibaldi pipe, and the tobacconist can strongly recommend the Garibaldi mixture to fill it with. The snuff-taker has no cause to complain that he has been forgotten; and the latter, with every consideration for our admiration for the General, can supply us with a Garibaldi hat.

We call attention to the first dramatic performance for Robert Brough, at Drury Lane, on Wednesday, July 25th. Mr. Sala will deliver an address written by himself. It is to be hoped that the public will congregate in large numbers for the benefit of the family of this deserving man of letters.

EARLY CLOSING.—For some time exertions have been made by young men engaged in various mercantile pursuits to procure from their employers an early closing of shops and warehouses every Saturday throughout the year. It must be stated, to the credit of employers throughout London, that they have, almost universally, shown themselves disposed to accede to such wishes. The great difficulty, however, with the shopkeepers hitherto has been the necessity of complying with the convenience of their customers. That difficulty, we are glad to learn, is likely to be removed; for an association of ladies of the highest rank have declared their determination to refrain from purchasing at late hours in the day. What is sought for is to give to young men the opportunity on the Saturday evenings of exercising themselves as "Volunteers," or otherwise employing their time in a manner most conducive to their health and improvement. Such objects, it is believed, can be attained by all shops, counting-houses, and warehouses closing businesses at five o'clock every Saturday, from the 25th of March to the 29th of September; and, for the remaining half-year, from four o'clock in the afternoon. This movement has our most cordial wishes for its success.

THE GOUTY PHILOSOPHER.—No. III.

FOON "THE PIPER," AND THE NECESSITY OF FATING HIM.

WHETHER every house has its skeleton in the wardrobe, the cupboard, or elsewhere, is a proposition which I shall not undertake to discuss. Certain it is, however, that every house in the land, whether it be a hovel, a cottage, a villa, a country castle, a town mansion, or a palace, has its Piper concealed somewhere between the coal-cellar and the attic—a clamorous, inevitable Piper, who will not be despised or ignored. Considered merely as a Piper the fellow plays well. But the mischief is that he sets himself up as a domestic Nessie, who must be satisfied and propitiated, not only as a Piper for the amusement or caprice of those who listen to him, but as the arbiter of their destinies, from the cradle to the grave. His enormous pretensions are by no means unwarranted by his power. Nothing is too great or too small for him to accomplish in behalf of those who comply with his first-in-fact, his only—stipulation. Does a man desire a new suit of clothes, a new horse, a new house, a diamond tiara for his wife, some old pictures, or wines of the *premier crû*?—Does he wish to tunnel the Alps, to make a railway from New York to San Francisco, or a direct line from Boulogne to Constantinople?—The Piper is the man whose counsel is needful. Satisfy him, and the thing is done, if the project be not rendered impossible by the laws of gravitation, or chemistry, or any other decree of Omnipotence. The Piper will manage it, sooner or later, upon the sole condition that you pay him for it.

Fool and foolish men think sometimes that they can circumvent the Piper. Stupid mistake! They cannot do it. A brainless or heartless knave, inexperienced in the laws of the world and of fate, and knowing no law but that of his own indulgence, may imagine it a fine thing to cheat a tailor, a jeweller, or a wine merchant; but the Piper comes to the rescue of trade and nature, and trips up his heels. If the evil-doer have no cash of which he can be mulcted; if there be no blood to be got out of that particular stone, the Piper takes something else out of him: ruins his credit and character, lowers him in his own estimation, marks him with the mark of social degradation, and squeezes and squeezes him lower and lower down, till he occupies his befitting place among the pariahs of civilization. Law and Government, the State and the Church, Queen, Lords, and Commons, the judicial bench, the horse-hair wig, and robes woollen or silk, of the barristers; the jury-box and the jurymen, the jailer, the gaol chaplain and the policeman; the unpaid Solons of the rural districts, and the extraordinary Solons or Rhadamanthuses of Wapping or Lambeth, and—last great functionaries of all—the sheriff and his myrmidon, Jack Ketch,—all are established and set in motion to support the Piper. To see that the Piper be paid is their prime function; and were he always paid without a struggle on the part of his debtors, government and law would be reduced to their minimum, and the Golden Age would come again. A man sometimes thinks in his boy youth that he can do a wrong thing, and snap his fingers at the consequences. Such a man is but an inexperienced idiot. His crime and its punishment are born in the same breath, fly on the barbed point of the same arrow, and return to the heart whence they started, with more than the certainty of the Australian boomerang. Crime and punishment are linked each to each, like the Siamese twins, and both do the behest of the ubiquitous, the mathematical, the unmerciful, but equitable Piper. And quite as great and invincible as he now is, would the Piper be, were there no political government at all. The heavenly government would support him, were every earthly community reduced to anarchy and first chaos. He is the child of nature and necessity, and could we know all the truth that lies hidden so far beyond our ken, he might be found as despotic in the other planets as he is in this,—lord of the sun and the solar system, and of those who dwell therein.

All history is but the history of the Piper, or of the sorrows and calamities brought upon the nations and potentates who neglect to pay him. As with men and women individually, so with communities, commonwealths, kingdoms, and empires. The Piper's bill is the pivot on which everything turns. Ancient and modern empire have been alike subject to this apparently ignoble but divine necessity. Take, for instance, the history of Egypt, as far as it is known. Are not its decline and fall the direct results of the vengeance of the outraged Piper? Did he not maintain armies, and build the pyramids, and all the marvellous architecture of which the ruins still remain to mark the extravagance of the Pharaohs? And was he not refused payment? The Piper only waited his appointed hour, and then having elapsed, he sent in his bill. The Empire refused to pay, just like any common creditor of our own day, who pays a broker into the house of his debtor, and takes away his chairs and table, his bed and his silver spoons. Of a similar character, did we but know them correctly, would be found the histories of Babylon and Nineveh; and all the cuneiform inscriptions and enigmatical writings and hieroglyphs yet to be deciphered will but prove, in due time, when those secrets shall have been snatched from them by Sir Henry Rawlinson, or some one else, the part played by the Piper in the affairs of these empires, and the ruin that befel the proud sovereigns who had the folly to set him at defiance. Any aspiring author in want of a subject that shall immortalize his name, cannot do better than write the "Political History of the Piper, from the Days of Sesostris to those of Bonaparte the Third." It would fill a very large canvas, but it might be crowded with the most heroic figures that ever strutted upon the stage of the world. The "Dance Macabre" would look small and mean compared with its long procession of illustrious fools.

and victims. But, like the "Dance Macabre," it would be a "Dance of Death." Jezebel, Herodias, Cleopatra, Semiramis, Helen of Troy, Messalina, Mary Stuart, and Catherine de Medici, might lend the beauty and the passion to the story, and point its mighty moral; while Basil falling upon his sword, Sardanapalus with his blazing torch, Nero with his fiddle, Richard III. naked and dead on Bosworth Field, Charles I. with the grim headman at his side, and grimmer Cromwell and yet exultant near at hand, Louis XVI. striving to enter his last step on the scaffold amid the rude raptures of the drums of the Breton Sautterre and the shouts of the execrating rabble, Napoleon I. fretting out his soul on the melancholy rocks of St. Helena, poor Louis Philippe sneaking away disguised in a livery coach, and running when no man pursued him, and Nicholas of Russia dying of a broken heart at sight of the Piper's bill, and a thousand other kings, chiefs, and great potentates, would exemplify in as many different ways the tragedy of this great world-story. And high, towering to the clouds, his head in storm and lightning, supreme amid all these personages, but shadowy, vague, and undefined, might loom the *Piper* himself, the hero of this sublime epire,—

"As loath he be
As whom the fables name of monstrous size,
Titanic or earth-born, that warred on Jove,
Hercules, or Typhon."

—but unlike them, for he, the great, the invincible Piper, never "warred on Jove" but is, and has always been, the servant and ambassador of Heaven—doing its behests, and executing judgment upon the guilty. It is a phrase both vulgar and incorrect, to talk of the Piper as the Devil, and to hint at there being "the Devil to pay." In the Piper there is no Devil, and nothing diabolical; for, though he be inexorable, and sometimes appear cruel, he is only cruel to be kind, and is, above all things, just, and the friend and supporter of order and harmony throughout the universe. If the story, as is thus broadly indicated, be too vast for any man's lifetime, the student who desires to rank with Tacitus, Gibbon, Macaulay, or Carlyle, may confine himself to some single episode in the drama—that, for instance, which is both the latest and grandest—the episode of the French Revolution, commencing with Louis XIV., and ending with the flight of Louis Philippe in 1848. The Piper would be the central figure in the tragedy, mingled, as every tragedy should be, with some degree of comedy; if not of farce—bringing in his little bill at every convenient opportunity [his little bill, not to be disputed for ever] for the mismanagement, waste, corruption, jobbery, luxury, carelessness, extravagance, and dishonest prostitution of kings, emperors, tyrannies, and ministers—bringing it in with compound interest, and taking part-payment in September massacres, wholesale fusillades, and *noyades*, and hangings to lamp-posts, taking it out in the heads of poor Louis and luckless Marie Antoinette, and putting up with bones and blood instead of money. When Richelieu said, in that famous phrase wrongly attributed to Metternich, "After me the Deluge," he meant, "After me the Piper." Richelieu saw the Piper plainly enough, as any man of common sense might have seen him; but he had neither the power, nor perhaps the courage, to persuade the nation to pay him; and so the Piper's bill ran on, growing as it rolled, like an avalanche, till he would tolerate no longer the procrastination and false words of his debtor, and down he came upon him with a swoop. Then burst forth Richelieu's deluge—a deluge of blood and tears, that carried away an ancient monarchy, a proud aristocracy, all the landmarks and bulwarks of a thousand years, and established a new order of things in the world, of which we in our day only see the beginnings. And all for despising the Piper! The lesson was not sufficiently present to the mind of the new generation and the new man who moulded that generation to his purpose. Out of the anarchy and bankruptcy of the Revolution emerged the strong Captain—

"Le Comte d'Artois plays!"

—who made the Piper play to him to an excellent, new, and very marvellous fandango. But the Corsican forgot to pay him. The Piper, however, did not forget the bill which the Corsican owed him. He took an instalment of it at Moscow, another at Waterloo, and a final dividend—*quod* the separate estate of Bonaparte—in the miserable squabbles and untimely death of St. Helena. Thus hath it ever been—thus shall it ever be. Will no one write the history of the Piper?

THE TYPE-PLANS OF ANIMATED BEINGS AND THE SPECULATIONS OF PHILOSOPHERS.

[CONCLUDING ARTICLE.]

In our second article we illustrated, as briefly as we could, the modification of a portion of a single link in terrestrial species of the vertebrate class. Like appreciable modification, as already said, was made out in the organization of the invertebrate types. Of the mere globular animals, such as certain infusoria, the amœbas, and foraminifera, we need scarcely make a remark, for it is well known how their forms amalgamate one with another, and that the most experienced naturalist can do little more than select those marked varieties which are arbitrarily denominated species. We can trace the modifications of the one myr-like disposition of parts through the star-fish, the coral, the jelly-fish, and sea-urchin; we see it in the beautiful fossil "stone-lilies" (trilobites); in the sea- and land-worms, and their allied forms, we note the divergences of the "ringed," or anneloid, form of construction, and still farther, we can conceive its possible transmutation into the crustacean, articulated class.

When, however, we come to the molluscs the task is more difficult; indeed, at the first unsteady glance, we may see but slight similarity of construction

between the gastropods (whelks, snails, &c.) and the lamellibranchs ("plate-gills," oysters, river-mussels, &c.). And still more obscure seems the link which connects these with the mollusks—"naked-gills," such as the *Salix* which we figured in our first article. To the naturalist well versed in their organization the modifications of type-plan in this class present facts of high interest. But so far as evidence is yet produced the emergence of one type-plan into another such unperceived; nor is it necessary, for the establishment of Mr. Darwin's theory, that it should be, for the type-plan may be traced, and may be under his views, regarded as the great limits of the Tree of Life, which have branched out from the most primitive of all life-forms. When we observe cell-animals, and cell-plants, and know that cellular tissue is the chief constituent of the framework of every animal and vegetable, when we see how each cell-plants and cell-structure can be multiplied and extended by subdivision of the cells, as well as by actual generation, and see no impossibility in all Living Nature having sprung from a primal matter; but that it has done so we have not the proof.

We have, however, in this article, to do with the geological evidence in its bearings on the new doctrine of the variations of species and natural selection. However unpublishable it may be to geologists, there is much truth in the sweeping remarks of Mr. Darwin on the imperfection of the geologic record; and although we cannot go to the length of his depreciation—and by which we think he has greatly weakened his cause,—we are yet inclined to admit that we have only one volume, and that the smallest, of the earth's past history. We know only the present land-side; we know next to nothing of what is under the sea; still less of that which is in the inner depths of the globe. What we have, too, is like an old book from which a great mass of leaves has been torn, while here and there an illuminating page remains, to show how beautiful is the volume which has been lost in its perishing, and how highly interesting the knowledge that is lost. Even those fragments which have been preserved are not yet all read and interpreted.

Vast, indeed, in comparison with even all the ages which have happened since, is that lowest great Silurian age, the oldest of our geological, and strongest of our terrestrial conditions. Not a land-plant nor a land-animal of that remote period is known. Shall we say that none existed? In the new red sandstone there are footprints of birds—we cannot mistake them. They are not the prints of flying lizards which would have scrambled or shuffled along, but those of veritable birds that placed their feet on the sand springing and elastic springing tread so peculiar to their class. Yet not a bone of one of those ancient birds has been found, although their footprints have been known those twenty years.

Mr. Darwin, too, pleads great gaps or intervals of time between the stratified deposits of the geological age and another, undoubtedly a reasonable supposition, which often might be extended to the very lines of demarcation between one stratum and another. Take the passage-bed between the lower green-sand and gault,—a narrow band of phosphatic nodules, not more than six inches to a foot in thickness, containing shells of *Inoceramus* and *Conoceras*, and detrital bones of a *Leptæna* and a *Leptæna* and a *Leptæna* and found in myriads in the gault above. This narrow stratum, thus linked with the cretaceous beds above and below it by the same fossil forms, separates deposits of the most opposite nature—the one a dark-blue clay, the other a tawny-green incoherent siliceous sand; and the evidence of this remarkable change is contained within the narrow band of the gault. It is a fact which we believe that the entire record of those great intervening physical changes which separated the hitherto conditions of the ancient green-sands from the deeper sea-bed conditions of the gault, are preserved in this narrow seam! And yet, in this example there is a continuity of fossil forms which link these strata most closely together than happens in the majority of such cases.

Darwin beautifully compares the transmutations and divergences of species in the vast Past to a great tree, of which "the green and budding twigs may represent existing species; and those produced during each former year may represent the long succession of extinct species." At each period of growth all the growing twigs have tried to branch out on all sides, and to overtop and kill the surrounding twigs and branches, in the same manner as species and groups of species have tried to overmaster other species in the great battle for life. The limbs, divided into great branches, and these into lesser branches, were themselves once, when the tree was small, budding twigs; and this connection of the former and present limbs, by ramifying branches, may well represent the classification of all extinct and living species in groups subordinate to groups. Of the many twigs which flourished when the tree was a mere bush, only two or three, now grown into great branches, yet survive and bear all the other branches; so with the species which lived during long past geological periods. Some few now form the main stem, and some descendents. From the first growth of the tree, many a limb and branch has decayed and dropped off; and those lost branches of various sizes may represent those whole orders, families, and genera which have now no living representatives, and which are known to us only from having been found in a fossil state. As we here and there see a thin straggling twig springing from a fork low down in a tree, and which by some chance has been favoured and is still alive on its summit, so we occasionally see an animal like the *Orthis* or *Leptæna*, which in some small degree connects by its affinities two large branches of life, and which has apparently been saved from final competition by having inhabited a peculiar station. And it is a fact that give rise to growth to fresh buds, and these, if vigorous, branch out and overtop on all sides many a feebler branch, so, by generation I believe it to have been with the great Tree of Life, which fills with its dead and broken branches the crust of the earth, and covers the surface with its ever-branching and beautiful ramifications.

What a task for geologists is typified in this elaborate simile! It is their task, then, to re-draw, with the vivacity of the artist's pencil, the great trunk and the dead branches of the Tree of Life—a noble task, but one of deep study and greatest care. The artist, painting the scenes of past history, also falls back on the memory of the men who saw and took part in those great events, but no man saw or recorded the wonderful scenes in the earth's past history; and from every nook and corner all over the habitable world have geologists to examine, branch by branch, the dead members of the wide-spread living tree. What a work of time! It must be years before they can produce their evidence. Some may give up, and say, "I wish I could think them not so difficult if it be long before they stand up to reply to the great

might have grown out for what, of "greenness," when nettles and dandelion, and heaps of hedgehog vegetables and salads, wait the plucking; and odds and ends of beasts reckoned "conce" get put to unprofitable uses, while their legitimate function of feeding the folk is neglected as unworthy and degrading. In Ireland, during the famine, thousands of pounds of ox-liver were dried and made into mufins while men and women were dying of hunger, and emptying out on the road sacks of maize-meal, rather than live by a food which they said was "fit only for the pigs." With such an astonishing instance of prejudice as this before us, we may well say that the wisest course would be to have no dietary dislikes at all.

Assuming, then, that all substances which have certain nutritious properties are fit for human food, the next question is, the true art and science of cooking. That art which shall make pleasant, cheap, and wholesome dishes out of material which at present is only thrown away is no contemptible matter in a densely populated country, with meat close upon a shilling the pound, and scarce even at that, for the poorer classes. In it is no such very great mystery, after all; but can be reduced, like most other things, to a few simple rules. Of these the primary and the most important is, throw nothing away, but make all your refuse into soup, and let the soup-pot be the standing institution of your kitchen. Bones, gristle, bits of old meat, stalks and parings of vegetables, dry crusts, fish-bones, anything and everything makes soup; so, throw them all into the "three-legged pot"—dear to Soyer, and await the result with patient trust. Nothing need be wasted. It is only ignorance or thought which piles up the dust-heap at the expense of the tureen, and cannot turn material to double uses. Make soup with cold water, which extracts all the nutritious properties. First there is the soup, through which the juices do not escape. Soup, with the addition of fried bread, supplies all the wants of the human stomach. Here we have the essence of meat, with the salts and albumen of the vegetables; while the nourishing process, so essential to digestion, is carried on by the fried bread, which also gives the starch and gluten, otherwise wanting. The French know what they are about with their soups, both "grau" and "saugre"; and are wiser than we, when they put a small piece of inferior beef to do duty. The *pot-au-feu* with the *houllis* to follow, is a kind of epitome of food of excellent properties. First there is the soup, which has not extracted all the essence of the meat, but only enough to make itself, having still a sufficiency in the solid. This soup is eaten with bread and flavoured with herbs and vegetables. Then comes the *houllis*, the inferior piece of meat stewed down into a state of luxurious softness not unlike marrow; this piece would have been unsuitable if cooked in plain hot roast or boiled fashion; at present it is soft, rich, nutritious, and with its garnish of carrots or other vegetables, makes a dish which might content the most fastidious. An English labourer's wife would have boiled the beef to rags, or have roasted it to a cinder, or haply have left it half raw, and have relied at the bottom of all this line of dinner for its disabuse in supplying her with meat, which no one could get their teeth through when they had it. Of course not: inferior meat needs careful cooking; and that slow, cautious cooking which softens the fibres without extracting the juices, is just as possible to the poorest labourer who has three bracks and a pipkin, as it is to the magnificent *chef* of the most luxurious club. Again, another rule too often neglected, is, cover the vessel in which you boil or stew, so as to keep in all the "goodness," which else flies off with the steam and mingles with the soot in the chimney. English cooks rarely do this; they delight in open saucapans, or, if they have one with a lid, they delight still more in tilting the lid on one side, and so letting the "goodness" escape by a cranny instead of at the open door. Escape it must somehow, else the cook will never be satisfied. Again, another fallacy in which she indulges, is the need of enormous fires. Ask a friend to dinner, and order a chop and a potato, and your cook will not be induced to let you off under thrice the amount of kitchen fire absolutely required. The little Frenchman who stews and simmers half a dozen choice dishes over three or four queer little holes filled with charcoal, would cook a dinner for twenty with less fuel than your English cook demands for two. Everything in England must boil at a gallop, and roast at fever-heat. Nothing can be done slowly; which, however, is the very shibboleth of choice cooking. All meat ought to be done slowly. If it is stewed it can hardly be done with too much deliberation; if it is boiled, it simply boils itself hard and tasteless if it goes too fast; if it is roasted, how often do we not encounter a joint with the outside burnt to a cinder and the inside left raw? This is one of the commonest forms of "cook's uniformity." The virtue of a slow fire is scarcely to be exaggerated; and the value of cautious cooking scarcely to be overrated. By it you save in fuel, in nutritious properties of the food, in flavour and delicacy of taste; while the wild roaring open fire of the ordinary kitchen but runs up a coal-bill and spoils the family dinner, for no good to any one save the butcher and the coal merchant.

As a rule, salt meat is inimitable. The brine in which it swims while salting will be found, Liebig says, if tested, to contain fibrine and albumen, the nutritious properties of the meat. Salted meat, then, has always left part of its virtue; but yet it is a most valuable addition to the dietary table on occasions. Salt meat, like salt fish, needs much vegetable food to set as a balance or make-weight; and those things which instinct has made us adept, as fitting garnishes or sauces, science now proves to be the things of all others most required, because filling up the vacant spaces—supplying the needful complement. Thus, eggs and salt fish, salt fish and onion, bacon and toast, eggs and salad. Stimulating sauces, as mustard and horseradish, with rich roast beef; fruit and rice, milk and farinaceous food, potatoes, and rich meats; these, and a dozen more of the ordinary compounds, have a true scientific basis, and prove, on analysis, to be complementary substances, each supplying what the other lacks. This, too, is a mystery not difficult to understand by common sense, if beyond the power of most to reason and explain.

What we really want is a good national school of cooking. We want young girls taught the value of certain articles of food which are at present neglected, and then we want them taught the best mode of cooking those articles with skill and economy. At present the cook is a slave and the poor do neither. Yet the happiness and the health of a household depend much on the cooking. Men, especially, get sore and disappointed

by neglected, tasteless meals; and go off to the gin-shop or the club for more congenial fare. A national school of cookery would be a national benefit almost inarticulate in its results. We are not going too far in saying it would lessen the business of the Divorce Court, and lighten the labours of the police magistrates. Better cooking in private houses would thin the customers at the tavern and the loungers at the clubs; and as this is essentially a woman's question, we recommend it to the careful consideration of our lady readers and their friends.

THE SOLAR ECLIPSE OF THE 18TH OF JULY.

FROM MR. N. C. CREWHER, ROYAL OBSERVATORY, GREENWICH.

DURING the early morning the heavens gave some promise of a clear sky for the coming eclipse, and glass was smoked in large quantities by amateur astronomers, in anticipation of the approaching phenomenon. Shortly after ten p.m. there was a change in the aspect of affairs, though, and the sky assumed an appearance not altogether unlike that which proved so great a disappointment to astronomers at the eclipse of 1858, March 13-14. At eleven the grouping of the dark masses of cirro-cumulus and cumulo-stratus—the last was very dense in the N. and N.E., enshrouded as they were by the whiter cumulus, and, here and there, with blue sky—was remarkably beautiful; the clouds immediately round the sun were of the cirrus kind principally. At twenty minutes past eleven a smart shower of rain fell, which proved of use, for the clouds, about noon, took more the shape of cumulus with cirrus, and sunshine was more plentiful than we had had before—the thermometer, in the sun, showing a rapid increase. With a variable sky we approached the time of "first contact" here fortune favoured us, for just a moment before that phase of the eclipse the sun was comparatively clear, and the phenomenon was observed with tolerable accuracy. As the eclipse progressed, it was at times tolerably clear, and was seen to very good advantage between two and three o'clock, during part of which time it was perfectly cloudless for a considerable space round the sun.

During the eclipse the effect on the clouds and landscape was marked. At the greatest obscuration the darkness was about equal to that of half an hour before sunset, when looking round on the entire scene; but looking from the sun to clouds situated from north to west, it would give one the idea of a period somewhere about an hour after that time. The wind, which had been rough and gusty all the day, felt very chilly round and after the middle of the eclipse, and the thermometer fell rapidly; a bluish mist was observed, particularly in the north and west, the clouds and landscape had a blue tint, which did not change during the eclipse. There apparently was little or no effect produced upon birds, they continued singing all the time.

Shortly before the "last contact," the sun was hidden behind masses of dark cirro-cumulus, and it was doubtful whether it would again be seen before the eclipse was over; but here again fortune favoured the observer, for, for about three minutes the sun shone out and the last contact was satisfactorily observed.

(FROM ANOTHER CORRESPONDENT.)

FIG. 1.—The Eclipse as seen in London.

2. The departure.

A short telegram from one of the astronomical observers in Spain, conveys much interesting knowledge in the shortest possible space, and will have long run with a great deal of interest.

"The success was complete. We have two photographs of red flames, which prove they belong to the sun, and many photographs of other phases."

The extraordinary appearance styled "red flames" were first observed in 1773; but they were closely scrutinized by astronomers during the eclipse of 1851. What these red flames really were was one of the problems it was very desirable should be, if possible, determined; or that at least we should be able to make out whether they belonged really to the sun, or were in any way optical illusions. Some have imagined they might be gaseous emanations, perhaps forced out through those curious dark spots which are occasionally seen on the sun's disk; but whatever may be the new speculation to be now made on this interesting topic, the further information yet to be sent to us from the observers in Spain, we are assured by the telegram that the "red flames" really belong to the sun. In our

wood-cut we have given the appearance of these "red-flames" as they appeared behind the dark circle of the moon's outline; but for the sake of space the mere rays of the sun, which surrounded and extended beyond them, have been omitted in the illustration, in which the shaded portions represent the "red-flames." The drawing from which this illustration is taken is an original one in the collection of the Royal Astronomical Society, of the eclipse of 1851; and it is given that remarkable "flame" which was then seen to break or part, at the upper portion, &c., thus separated apparently floating away as a cloud.

The other singular phenomenon, known as "Baily's beads," the price of which, if our memory rightly serves us, about the years 1835 or 1836; they are considered to be produced by the mountainous contour, or, as it appears at such times, serrated edge of the moon projecting closely against the outer border of the sun's disk; so that the sun-light finds a passage through or between the moon's inequalities. Our illustrations give two of the phases of this phenomenon; the first, or linear appearance (Fig. 3) giving way to series of wheel-like cogs in the

FIG. 3.

second phase (Fig. 4), which, in their turn, during the short period of their last appearance, become rounder, and isolated from each other, like a disconnected string of beads.

BOTH SIDES OF THE GAS QUESTION.

THERE is no peace except in riddles, in coin oil, in petroleum, paraffin, and belmontine. The first may be dull, the second may be costly, and the third, fourth, and fifth may be offensive in their smell, but they are supplied without any government superintendence, any complicated machinery for measurement between producer and consumer, any parochial agitations about monopoly and illegal combination, any legislation upon the social-reform-do-everything-for-everybody principle, which is so destructive to individual energy and the progress of free trade.

Who shall hold the scales between the United Gas Companies and the Associated Parties? Who shall watch to see that, while the dividends of the metropolitan light suppliers are reduced, as proposed by another Act of Parliament, a dangerous precedent may not be established for government interference in the management of joint-stock companies? An ignorant cry about "monopolies" may be raised at any moment, and applied to any large body of traders, for any purpose. It has been raised, before now, about the brewing interest, which possesses no charter, and which may be supposed immediately by any company of extensive capital. If money is taken to mean monopoly, there are plenty of monopolies in the world to be trotted out for parliamentary inspection and interference. Such meddling legislation, however—as in the case of the cabs, has never ended in the public good. Where Government is allowed to fix the price of an article, the sellers of that article will always endeavour, in every way, to lower its quality. Who can blame them?

The new Gas Bill has been pushed by parochial delegates into the House of Commons; it has been tossed by the House into the hands of a Select Committee; it has been brought back by the Committee into the House, and sent back again into the committee-room. Its object is to confine the existing gas companies to specified districts, in which they may hereafter exercise a monopoly in the supply of gas, subject to the control of public inspectors, to be appointed by the Home Secretary. These inspectors are not to be less than three in number, and half of their salaries is to be paid by the companies. They are to have power to enter the gas manufactories, without giving notice, to inspect and to largely control the accounts of the companies, and to determine the rate of dividend which shall be paid to the proprietors; they are to have the power of examining directors and managers upon oath, and their decisions are to be received without appeal. The standard of light is to be raised one-fifth, the price of gas, 6d. per 1,000 cubic feet, at present charged in London, is to be reduced to 4s. when the profits of the companies shall reach 8 per cent. The immediate effect of this bill will be to confiscate £100,000 worth of property, by taking away dividends to that amount now paid by six out of the thirteen metropolitan companies. These dividends are paid under the former Acts of Parliament, which limited the profits of gas-making to 10 per cent. per annum, in the same way as the profits of railway and water companies are limited. To start a railway you must obtain parliamentary permission; but nothing is required to start a gas company except adequate capital, and the consent of the local vestry to the opening of the roads. The existing companies will be compelled by this bill, if it should pass in its present form, to supply gas, under severe penalties, with no power to open the public streets without this permission of the authorities. They will also have to provide service-pipes gratuitously to every consumer whose premises are situate within fifty yards of their mains, without reference to the value of the gas consumed; and to furnish meters at rents admittedly unremunerative. They are never, under any circumstances, to increase their price, unless their dividends fall, for three years, below 6 per cent. This bill will limit the price of gas, on the present cost of manufacture, without allowing any margin for the rise in the price of coal, labour, or other contingents. Six millions of money have been invested by shareholders in these gas companies, and principally upon the faith of their special Acts of Parliament, several of which were renewed in 1854 and 1855, and one only last year. Under all these acts the companies are entitled to pay a dividend of 10 1/2 per cent.

This is the substance of the new Gas Bill, and it must be confessed that never was any measure prepared so totally at variance with the principles of

free trade. Its whole tendency must be to shake the security of capital invested in many joint-stock enterprises. Five hundred millions sterling is invested in railway, water, and gas companies. As to the proposed machinery of inspection, it will be a costly and delusive sham.

On the other hand, the companies are not wholly free from blame. They started upon the principle of competition; they obtained their Acts of Parliament upon this principle; and now they are working under a system of restricting competition, but not of abolishing it. Competition, however, is good to reduce working expenses, and might easily be defeated, even in such a peculiar and exceptional manufacture as that of gas, if there was any security that the public would benefit by the economy of production and distribution. There is seldom any such security attainable, and, in the present instance, it seems that the price of gas has shown a steady rise ever since the combination and restricting.

There is another point, connected with the economy of production, which was prominently brought forward by the water companies in antagonism to the gas companies at the beginning of this present parliamentary contest: this is gas-leakage. There can be no doubt that one-third of all the gas manufactured in London is entirely lost—allowed to escape from the pipes, to deluge the earth and the Thames;—and that the public pay for it: they receive only two-thirds and pay for three. A defective system of jointing (which may be shortly described as the use of lead and hempen instead of bored and turned joints), unknown to the provinces, where the loss in manufacture is less by two-thirds, and the price consequently lower, is the cause of this excessive gas-leakage. The effect of the constant gas-escape is to destroy the cast-iron water-mains in about ten years, which would exist in common earth, and do their work for more than a century. This is another loss that falls upon the public, and we may regret it in proportion as we know that there are above one thousand acres of cast-iron surface constantly exposed in the metropolitan street-traffic to more or less active corrosion.

We—the public—are the people who pay for all these errors of management; as our gas bills include the value of all this waste of gas, and our water bills the value of all this decayed and lost pipe-work. The Company indictment framed against the gas companies by the able chemist to the New River Company is withdrawn, for the present, with the instinct of self-preservation. The water companies and the railway companies have combined in defence of the gas companies on clearly-defined, anti-government interference principles. No one can honestly blame them for so doing. We are not defending this gigantic combination of peculiar traders like the gas companies of London; we are willing to attack them on the score of their gross under-ground mismanagement, but we can find no word to say in favour of that dangerous bill which is now being torn to pieces, for the second time, by a parliamentary committee.

RESPONSIBILITY OF WOMEN.

It is but too customary for women to attribute their share of the evils common to human life to political institutions, and to men as the monopolists of political power. But if it be true that systems of polity can "cause or cure" only a small part of the ills that flesh is heir to, women must take their share of blame for any general suffering resulting from general ignorance or error. For tempests or earthquakes, whatever may be said of pestilence, none of us are responsible; for criminality; for crime, we are all to be blamed, for wars, &c., we all acknowledge that we are to blame, and admit they ought not to be. Claiming for the sex a perfect equality with men, and a full participation in all social advantages, the ladies can only enjoy this conjunction with the complete responsibility proper to every free agent. This no more implies that women are to be politicians than that men are to be generals or admirals. Different occupations are at all times assigned to different classes and individuals, by the natural circumstances which dictate division of labour; and it is remarkable that all the different occupations springing from this source, being equally necessary, are of equal rank. Of the farmer, the manufacturer, the ship-captain, the banker, and others, except as one may be richer or poorer than one is superior or inferior to the other. So women are no more injured or degraded by not being called on to fulfil the duties of politicians, than are farmers by not being required to be ship-captains. The public does not appoint men to employments, neither can it appoint women. By having, in common with all mankind, peculiar duties assigned to them, women lose none of the responsibility, bound up with life, to provide for their own welfare according to their abilities. To lessen the evils of which they complain, they must rely more on themselves, and less on our sex and on institutions.

The domestic life is paramount, and in many cases most beneficially exercised. Next to England, France is the most renowned community of the civilized world. By comparing the returns made by our own Registrar-General with those of the French census, as commented on by M. Le Geyt, it is found that there is annually in France one birth to every 28 persons; in England to every 21; 12 in France, one to every 127 persons; in England, one to every 118; in France, one death occurs to every 43 persons; and in England, one to every 45. Thus, in proportion to population, births and marriages, the significant emblems of growth, prosperity, and enjoyment, are more numerous in England than in France; while deaths, the equally significant emblems of suffering, decline, and decay, are more numerous in France than in England. In France, the balance betwixt births and deaths is slightly in favour of continued growth and prosperity; but in England, the balance in the same direction is much greater. Putting the relative difference in the increase of the 6 to 38 and of deaths (3 to 4) together, the superiority of England may be represented as equivalent to 12 per cent.; and we know that while the population of France is nearly stationary, the population of England increases at the rate of 14 per cent. per annum. The English, therefore, enjoy more and flourish more than the French; and for this, of which the statistics in the main justify us, we are indebted to the superior domestic life, and justly due to our women. Marriages in England, in proportion to population, are 7 per cent. more numerous than in France, taking the average of years; but, year by year, the number varies more in England than in France. From 164,853 marriages in England in 1853, the number fell in 1855 to 132,113, or nearly

* "Report to New River Company on Corrosion of Iron Mains." By Thomas Spencer, F.R.S. 1859.

even men. On looking over them, I was amazed at my own great ignorance, and from that hour I made every effort to educate myself, and with what success my subsequent career gives some evidence.

One item of my experience in the improvement of the human mind was the chief foundation of my great success in teaching officers and soldiers, and the management of men generally. One morning, at early drill, everything went amiss with me. I became angry, scolded, and even used my cane, which was then allowed, and, in fact, was too much used. At length I let the men stand at ease, and walked about in front, thinking of what could be the cause of the want of my usual success. When, after some time, I saw that the men were not coming to my own impatient and angry terms. At once I began to speak gently to the men, and promised to shorten the time of drill by half an hour, if they exerted themselves; after which all went well. Often, afterwards, I pretended to be angry, and scolded the men, but they would not rise. After some time, I then observed to me that I should treat the men as a lady would her piano—that is, put them in tune (good-humour) before I played upon them; and then I soon ascertained that I could lead sinners where I could not drive one.

Would that every man and woman, whether powerful or powerless, or like my brother or sister, be his station in life what it may, clerical or lay, in the school or in the field, in the nursery or in the kitchen, would treat all under them as if they were brothers and sisters.

Early pride, passion, and prejudice be rooted out from the mind of man,—or, rather, and far better, those passions be prevented from entering it at all, by early training, even in early infancy, the improvement of mankind will continue to be slow, as it hitherto has been.

The cheap press is now, however, ensuring a mighty increase of influence, which calls also for the benevolent exertions of every lover of order and happiness, to guide it wisely. The efforts that many make to prevent or delay the increase of knowledge among the masses are producing, and will more and more produce, the most unhappy results. At the present time, the masses are being taught of this press. Let the upper classes be not so much afraid of enlarging the minds of the masses. The doctrine of the depravity of mankind is a most pernicious one. I never found any man so incorrigible as not to be more or less improved by my teaching. I have heard of all sorts of experiments on refractory and ill-behaved men, and I have never once entirely failed. But the kindness must not be feigned. If it be not sincere and earnest, the perspicacity of even the most simple will soon, more or less accurately, appreciate its real character. Let the upper classes, including all who exercise any control or authority over their fellow-men, act thus over those under their influence, and they may confidently reckon on success to a very great extent.

Would to God that all parents, teachers, and persons having power, command, or authority over them, would treat those others with patient and unfeigned kindness and gentleness, and great would be their reward in the lively gratitude and affectionate obedience they would surely receive in return for such treatment.

I emphatically declare that I have no doubt that the working-men have much more sound sense and good faith than the gentlemen of the law. Let the gentlemen be seriously and benevolently cultivated, and the cultivators may as confidently reckon upon good results as the cultivators of the soil may reckon for a good harvest after the application of good husbandry.

I fear, however, that many who use this paper will think his teaching quite Utopian; but if those who have the power will act as here suggested, I have neither fear nor doubt of very happy results.

In the course of a long and most active and varied life, I have always been rewarded by religious converts. I have often said, in my early youth, I endeavoured to select for myself that kind of religion which would best satisfy my own convictions. I read the question put to the Saviour, "What shall I do to be saved?" and the answer—"Love the Lord your God with all your heart, with all your mind, and with all your strength; and love your neighbour as yourself; these two hang all the Law and the Prophets." "Then," I exclaimed, "this shall be my religion!"—and to this I have hitherto endeavoured to adhere, and hope I shall ever hereafter adhere; but I know no so efficient mode of cultivating one to God as by the honest cultivation of love to my neighbour. Without this honest cultivation I know not how I could have happiness here, or hope for my hereafter.

AN OLD SOLDIER.

PLAYS, PLAYERS, AND CRITICS.

We return to the contemporary comedy, or motleyd play, of the Haymarket, not for the purpose of objecting to its form, but of showing the kind of influence it exercises upon the stage. There is no reason why excellent plays should not be written in three acts; although valid reasons, which we will not now stop to consider, might be assigned why they do not admit of the high elaboration of five acts. Whatever may be the merits of the controversy between them, it is at least unreasonable to close the theatre upon its medical solution. There are some who are so much in the habit of the theory of three acts, as to the practice which effectually rules that there shall be nothing else. It may have been very proper, whatever we may think to the contrary, to abolish the monopoly of the old five acts by the patent houses; but what is to be said of the soundness of a revolution which, in abolishing one monopoly, has substituted a worse.

Our present inquiry, however, carries us in another direction—the relations between the stage and the existing hybrid comedy, which we must take for granted as the representative play of our time. When the structure, dialogue, or farcical extravagance of any of these pieces happens to fall under critical censure, large allowances are usually claimed on the ground that the piece was written with a view to particular actors. The apology aggravates the offence. To write for particular actors is avowedly to make the play subordinate to the players. It is a complete inversion of the whole intention and design of the drama. Instead of going to society for originals to put upon the stage, the dramatist goes to the stage for originals, and then writes. When he wants a character he studies Mr. Buckstone or Mr. Bolson. He finds his "humours," as old Shadwell used to call them, in the green-room. He writes up, not to the real life of the time, but to the artificial life of the lamps, which habitual audiences are already prepared to appreciate and applaud. Out of this nothing new is produced, but the imitation of old and familiar personal peculiarities put into new shapes. It is sometimes a quaint country lawyer, sometimes a loose fish-dabbler in troubled waters, sometimes a *globe-muscle*, and sometimes a busy-body; but it is always Mr. Buckstone, or always Mr. Bolson, or always somebody that is recognised at once, and whose specialities are remembered, and looked for, as a matter of course. The only novelty in the *rité* is to see how cleverly the actor can adapt his miserable eccentricities to new conditions.

This is a consideration altogether independent of the popularity or merits of the actors. We estimate not the full value of the talents of such comedians as Mr. Buckstone and Mr. Bolson; and what we desire is, not that they should not hold prominent positions in new plays, but that their prominence should be relative, and not absolute. This is not much to require, remembering to what small parts the Muses and the Emerys condescended before the "starring" came into vogue, by which a single performer is made to swamp a whole company. If we had the power to reform the stage, we should restore the old mode of casting every actor for every part that fell legitimately within his line, whether the part happened to be conspicuous or obscure, as they do on the French stage, where the slightest pieces and most critical in the plays are as carefully acted as the most important. Thus, and thus only, can a complete representation of the human mind be obtained.

The writing for particular actors is a vice of the modern stage. Such things have, no doubt, been done before, but they were on a different scale, and with a larger group of dramatic objects; and they were never done by the critical dramatists. For whom did Lord Shakspeare write his *Hamlet*, *Julius Cæsar*, and *Antony and Cleopatra*? Those parts, as all the world knows, were acted by men; and if Shakspeare had ever thought of accommodating himself to the stage, and bringing out its best actors into strong relief against the rest, he would assuredly have dwarfed and toned down his finite characters. But he thought of nothing of the kind. He thought only of the play, and being paramount over everything else, and he developed his characters, not according to his actors, but in spite of them.

Dramas constructed on this principle must sacrifice symmetry and probability to an exigency which, in the present state of the stage, cannot yield. The actors are to be set off for deformed plumes and elaborate costumes, and the strength lies in our comedians, not in the technical term, our comedians. We are rich in a few peculiar harmonists, and may yet pride ourselves upon having some unquestionable artists left to us. But the very excellence we possess in this way—or rather, the way in which we possess it,—creates a weakness in our comedians, and the weakness is not in the technical term, our comedians. The complete and powerful companies established in London. The two Kembles, Palmer, Sutti, Wroughton, King, Bannister, Dowton, Elliott, Lewis, Emery, Mr. Jordan, Mrs. Hopkins, Miss Duncanson, Miss Farrow, and a dozen more of high pretensions, might be found on the same night collected in the play-bills of Drury Lane, Covent Garden, and the Haymarket. That brilliant monopoly is gone with the corn laws and the rotten boroughs. The consequence of what, to carry out the analogy, we may call our free trade in theatres is, that the actors who enjoy special popularity are scattered over the metropolis; so that the dramatist who undertakes to fit himself to the stage as it is, must build up his play, not with several strong parts, but with one that shall pre-eminently over and top all the rest, and instead of having a comprehensive and diversified cast, he must be content with a particular actor. The difference to the dramatist himself is enormous between a play carefully worked out in its details, and a play in which all other considerations are sacrificed to the character of one actor. Nor is the strength of our stage lies in our comedians, there, too, must lie the strength or weakness of our drama. The text must be adapted to the interpreter, and the interpreter by nature and custom a very comical fellow, the prevailing tone must be comical also, and furthermore it must be vulgar and low. The humour of the hour is the humour of the day, and the cloth must be cut to measure in every case. It is evident, without citing examples, that pieces produced on this plan, instead of presenting general pictures of life, must, of necessity, be confined to particular portraits, and that however marked may be the personal peculiarities by which they are individually distinguished, certain broad family features must be common to them all.

The actor suffers by this mode of play-writing as much as the drama. He gets no new studies; and his range is not only becomes insensibly narrowed by being restricted to repeated variations on the same tune, but he ultimately sinks into a mannerist.

Another evil against which one constantly hears indignant protests in private, although it seems to be nobody's business to take it up in public, is to be traced to the theatrical criticisms in which the progress of managerial enterprise is chronicled from day to day. These criticisms are understood to be written, for the most part, by gentlemen who are in the habit of supplying the theatres with translations from the French, and "screaming farces." In referring to this circumstance, we do not in the least violate the reserve which is properly due to anonymous journalism, the authorship of these criticisms being so notorious that it is less caused to be regarded as one of the secrets of the trade. There are some who are some of the best critics of the day, and which, being stated, requires no further elucidation. This is one of them. To say that the critic and the playwright are two single gentlemen rolled into one, is to state the case and to point the moral in the same breath. It represents a state of things in which the exercise of unfettered judgment by individuals of any value whatever must be almost, if not quite, impossible. We may nothing about the quality of the criticisms. They may be good, or they may be bad; but whatever they are, or whatever may be the qualifications of the critic, the relative position of the two parties directly concerned in the matter is such, that the result is almost certain. We do not concern in the result taints the whole process with serious consequences. We do not intend to insinuate that a critic is ever wilfully bribed into panegyric, or that he ever avails himself of his power, in a fit of jealousy or disappointment, to take his revenge upon anybody. We do not suppose that the fact of having a piece accepted or rejected at such or such a house, influences his individual opinion of the management of that particular establishment. But we know that critics are human, and we infer that they are liable to human infirmities; and as it is a very common thing for the human mind to be biased by motives of which it is unconscious, or to which it believes itself to be superior, so the writer of "screaming farces" may persuade himself that he is incapable of being warped in his opinions of actors and actresses by personal considerations, in spite of a thousand evidences to the contrary. The fact is, that it would be unreasonable to look for strict integrity of judgment from a person in his position. How can the critic, who is not made of diviner materials than other men that live by their brains or opportunities, be expected to speak freely of the productions of his employers? He is not to be expected to speak in higher and more respectable station; that disdains endeavor when they can, to play one office into another; and why should not the face-writer, who can command the critical column

of a newspaper, do the same thing? There may be more heroic virtues in the world than our observation of life justifies us in crediting; but that men who maintain such close relations as critics and managers, and between whom there must be a large balance of obligations somewhere—past, present, or in prospect,—should act with perfect independence towards each other, is a speculation not to be entertained by any rational individual who has reached years of discretion.

But even if they could—even if we can suppose a state of critical incorruptibility which would enable the author and the censor to carry on his two employments irrespectively of each other, and to pass sentence upon plays and players with irreproachable impartiality, an insurmountable objection would still remain against committing the function of criticism to the hands of a class of playwrights whose tastes and sympathies have an inevitable tendency to lower and depress the character of our dramatic literature. We are not insensible to the importance of light and shade in the play-bill. The force is, in a certain aspect, as essential as the play; and, great as our admiration may be of Shakespeare, we would not suffer him to swamp the merry rogue who winds up the night with roars of laughter. But what is to be said of the merry rogue when he is constituted dictator, and invested with a power of surveillance over the stage? It is all very well while he is making us laugh; but the moment he begins to criticise, we tremble for high art, its examples and professors.

The remedy is difficult, but not impracticable. Reforms founded in reason and justice may be slow, but they are generally sure; and we do not despair of seeing the function of the theatrical critic elevated to its proper dignity. Nor is there any class in the community so deeply interested in this reform as the players and managers themselves;—and they know it. Liberal, honest, and open criticism is what they want, and what they most desire, because it would relieve them from that heavy oppression of favouritism, jealousy, and intrigue under which they labour at present.

ON SOME CONSPICUOUS EYESORES IN LONDON.

WHEN the people of Great Britain their Emperor an equestrian statue the other day, that illustrious potentate at once declined the honour. He observed, that this description of monument should be a posthumous mark of national gratitude, and hinted that his modesty had been much shocked when the Bordeaux lately set up his effigy on horseback without consulting him on the matter. We are now so accustomed to take our faithful ally's words at the "foot of the letter," that it may perhaps seem gratuitous and impertinent to imagine any *arrivé* pende behind the plain superiority of his meaning. Still it is just possible that, in the palace of truth at the Tuilleries, the materials from which the imperial private secretary made his modest and graceful *résumé* may have derived from the fountain of inspiration in bonnet perches, as it were thus:—"See you, my secretary, these brave Bretons have imagined themselves to make me ridiculous to horse in bronze. Few of statues to horse are possible at conditions the most favorable; and it is to fear one goes to consign me to a talent lack. Let us go, then! Say them politely, I wish not of it! I have enough of it at Bordeaux! Let them wait that I am dead, by blue! you conceive their your affair, my secretary!"

The true Briton (not of Great Britain, in the solemnity of the witness-hood, defined respectability as an attribute generally inherent in the man accustomed to drive his own gig, might very likely have sacrificed dignity as an equally inherent attribute of the rider of his own park hack. Indeed, a good seat on a haudonne quadruped in swift and easy motion, has something graceful and noble in its outward show, and chivalry originally meant horsemanship. Dagobert considered he was giving his sons a gentlemanlike education when he taught them to ride and speak the truth. Let us hope, under the able tuition of Dagobert's present successor, the little Prince Imperial may become proficient in both these liberal arts.

But the above-mentioned princely accomplishments are very differently adapted to sculpture representation on pedestals.

We are accustomed to see men in high places (on the hustings for instance) speaking, if not actually the truth, at any rate such an approximation to it as they reasonably conjecture may suit constituents ears pattered round the rostrum;—and a speaking likeness, as of Pitt on his bracket in the Abbey, or Canning on his block in the gardens, are proper enough monuments of orators. There might be some show of reason in erecting a yearly statue to the horse which wins the Derby; and the animal would of course be represented in the full stride of the gallop by which he overtook him. But what have the clumsy chargers, beset by our equestrian heroes and kings on our metropolitan monuments, done to deserve so much of our regard? For, if a given amount of metal is to be devoted to an illustrious individual's memory, why should his alacrous horse have nine-tenths of it? If your horse is simply used as a mere natural substitute for a pedestal, well and good. But then the horse should stand on nothing higher than he could spontaneously have got upon without aid of cranes and pulleys. There is something intensely absurd in a great floundering beast pretending to curvet at his ease on a few square feet of granite platform between heaven and earth. Not only absurd, but hideous. If you look up, the view which meets your eye is not the aspect of a hero, but one small corner of a hero's cocked hat emerging from a huge balgunged silhouette of horse-belly. A horse is a beautiful animal when you see him on the level; but the arch of his neck, the prick of his ears, the general contour of his body, and the flourish of his tail are lost when you see him from below. The only circumstances under which one ever really sees a living horse from below occurs when he is leaped, with his belly in a sling, off a quay on to ship-board; and how wretched and undignified the poor brute looks when his legs are lifted off their natural level, no one who has seen the operation can forget. What a horse would practically do if he suddenly found himself landed on the top of a pedestal it is difficult to conjecture. He would probably either jump off at once, or lie down to groan and howl himself in aghast terror. As respects the horse, it cannot be true art to place him in a position totally foreign to his nature; and as regards the man, if he is high enough placed not to receive a horse's back to lift him above the crowd, he is much better seen without the horse. The annexed engraving of the statue of George IV., in Trafalgar-square, will show what we mean; and our

readers—if they have ever looked at the statue—will agree that our representation of it is not a caricature.

A horse being an appliance of locomotion is a totally inappropriate accessory of a statue which mounts its pedestal with a full intention of standing there for several centuries,—unless, at least, it were the statue of some life-guardian who had become celebrated by sitting in his saddle an unprecedented length of time in one of those equestrian sentry-boxes at the Horse-Guards. Nobody but a life-guardian man sees a charger for a chair. When any other man gets on horseback, it is with a view of going somewhere. Would that our equestrian statues were going somewhere. If some magician of the Board of Works, with his wand of office, would only switch the halting abortions off their pedestals, and send them trotting in procession towards Jericho, or any other obsolete city of dust-heaps and rain-mounds, all the bellies of London ought to wag their tongues of kindred bell-metal with one peal of universal jubilee. The huge Iron Duke should lead the way, the biggest, and ugliest, and highest-mounted of his kind; the apothecary of mounted cock-pigeon. George the magnificent, with plumper-distended cheeks, anubial wig-curls, and stirrups, dangling, long-stocking legs, would fall in with his smug old bog-wigged sire from Cockspur-street. Think of the greeting between those nearly-related but unsympathetic images! And with what disdain disgust their pompous lachrymational ancestor in the peaked beard and Yaschyk collar would have to come down from his quaint medieval stand at Charing-cross, to ride in the direction of Jericho, or even Coventry, with such a pair of decedentals.

POST-OFFICE PROSECUTIONS.

On Thursday, the 12th, a Post-office servant was tried before the Lord Chief Baron, at the Central Criminal Court, for stealing a money-letter, containing two half-sovereigns. His employment was to *sort and deliver*; and the letter in question was a trap-letter, written and posted on purpose to test his honesty, upon which some suspicion had been cast. He fell into the snare; but aware that they marked coin when used for detective purposes, he, adroitly enough, took care to change the money before he got home or returned to his office, and only forgot (so imperfect are clever precautions in general to conceal guilt) to throw away the bit of card which protected the coins, and prevented them from slipping about. On the contrary, he had put it in his pocket,—it was found upon him, and, of course, he was convicted. This man had been eighteen years in the service of the Post-office, and this was his first offence (*detected and exposed*). He had a wife and six children, and his wages were a pound a week—to lodge, board, and clothe eight living souls. His duty was to walk twenty miles every lawful day, in heat or cold, sunshine or rain, fair weather or tempestuous, and he was in great poverty and distress. We believe that the authorities expect the judges always to pass sentence of penal servitude for this offence; but it seems that the learned Chief Baron, on this occasion, saw some reason to depart from the extreme severity of the punishment, as he sentenced the criminal only to eighteen months imprisonment with hard labour—a comparatively mild infliction, and, as far as we can call to mind, the first mitigation of the accustomed doom.

When an eminent lawyer, a distinguished judge, and a conscientious and humane man, takes upon himself to quit the hideous leather pack, it will occur to thoughtful observers that there must be some reason for it. On making inquiry into the statistics, we learn that forty or fifty individuals, rather more than fewer, are found guilty of breach of trust and theft in this manner every year. The expense of these prosecutions amounts to from £1,500 to £2,000, and the cost of keeping the prisoners in confinement, food, or public works (their labour being worth very little) about as much more. Now, if they would lower the charge on Post-office orders to one penny per £1, instead of threepence—a heavy mulet, especially on small fractional parts, and refuse to convey money-letters (sending them back when put into the post, with a notice that they would not be forwarded), it would be the saving great accumulating expense, and great misery and desolation would be

avoided. The poor wretches who are persecuted are generally married men with families. Money in a letter can always be felt distinctly, and, as it is a mere temptation to a man with a strong family, a pious wife, and children culling on him for bread, to feel the money in his hand with no other protection but a flimsy envelope! Without apologising for dishonesty and crime, something ought to be allowed for the weakness of human nature. Surely, the prevention of crime, if need not be reported, is of far more importance than its punishment. The present system of the Post-office appears to be to get the maximum of labour for the minimum of pay—a fair maxim, if the new be not put on too tightly; but when carried on in strict form, it cannot be too much to require that as little temptation as possible should be pushed into the notice and within the power of the recipient of a man's wages.

The tempter and the average appear "ugly" in one demanding justice; and especially if, as we think, the system may be improved so as to do away with the temptation, and with it the call for retaliation on the offence. We dwell not on the hapless destiny of wife and children, for, in Economics, as labour should be paid according to the value, and not in proportion to its encumbrances, and the married can expect no more than the single, it is but little worth while to calculate how much they must cost the parish and the country; yet when we add their sufferings to the amount of the husband's and father's, who can help dropping a tear on the destruction that has overwhelmed them?

POLITICS IN THE CONCERT-ROOM.

Two modes of political agitation are not yet exhausted. When we think that we have seen and tried everything in a heated debate of six years in the House of Lords, to the rude vigour of an "open-air" meeting on a Lancashire common, some daring and inventive genius comes before us, and shows in a novel combination that we never dreamed of. The latest novelty of the present season, in advertising phrase, is that of a political lecture mixed up with a morning concert. The genre is now credited with this invention is a lady known in fashionable circles as the Contesse Montemeri.

To those whose pleasure, whose interest, or whose duty it is to attend political gatherings, it must be painfully evident that a certain class is always absent. The kind of inquiry which may say the air—may denounce a wrong, a principle, or an opponent, with upraised finger—may flume with his notes, or plunge his hands alternately in the folds of his waistcoat, he is cheered on only by rough pulses and masculine voices, and never by long rows of crinoline, kid-gloves, female lace. The aristocracy—especially the female portion—is never present. His words may penetrate to the *boudoirs* of Belgrave and May-fair, but only in the passionless form of print and paper. The living voice, the platform attitude, the physical excitement, are not there to give force to the logic, and fire to the eloquence. What is to be done? The mountain of crinoline will not go to the political bazaar, so the political Mahomet must go to the mountain. The mountain is easily shocked, is easily offended, so the advances of the political Mahomet must be made with caution. The Contesse Montemeri is doubtless quite aware of this, for she is not only an inventive, but a discerning woman. She could select a morning concert of the highest merit, and a richly distinguished patronage—would afford a capital opportunity for instilling into not very seductive poison. So she organised a musical gathering of this kind at Campden House, Kensington, on Monday, July 10th; obtained the names, as patronesses, of four duchesses, six marchionesses, three countesses, and six baronesses; and invited, as soloists, the ladies, and one duke—his Grace the Duke of Wellington,—and she wrote a lecture, in French, upon the "Sympathy of the English towards the Italians, and the Duty of England towards Italy," which she read between the melodies of Meyerbeer and Adolphe Adam, in faultless white kid gloves, and spotless white muslin.

The audience was mostly composed of ladies, as is usual at all morning concerts, which take place at the hours, between two and five, when gentlemen are engaged at clubs, at committees, or in business. The place of meeting was hot, as it is also usual in morning concert-rooms about July, but it is satisfactory to state that no persons were observed to be groping for air on the staircases or in the passages. The theatre at Campden House is a regular theatre, with boxes, pit, stage, orchestra, and gallery, and, like all theatres, it is very dark in the daytime. The gallery audience, now and then, showed a tendency to recognize and speak to friends in the pit, as gallery audiences do at the minor theatres, and to leave seats and make a protest of attention to the soprano. This subdued tone—the mild dulness of refined society, or society acting a character which is supposed to be refined—was spread over the whole meeting. The singers were toned down, as they generally are at a morning concert—perhaps, from a want of applause.

The proceedings were opened by Bonietti, with a quartette from "Don Pasquale," and one of the "accompanists," or conductors, was called to the chair. This was the only approach to anything like the "order" of a public meeting during the whole morning. When Rossini, Martini, and a few others had had their musical exit, we arrived at the great speech of the morning—the Contesse Montemeri's lecture. She read in her discourse. Her companion in the audience she was addressing; careful not to offend their ears by any loudness of voice, and seated on a chair by the side of a small garden-table, that she might not offend their eyes by any energy of gesture. Her sentiments were sufficiently liberal, and prettily expressed, and she elegantly reserved the name of Garibaldi for the last word in her discourse. Her comparison between the Italian and the English character was comprised in that approved see-saw style which Blair and Lindley Murray so much admired:—"The Italian has vivacity, the Englishman calmness. The Italian has perception, the Englishman thought. The Italian is a creator, the Englishman perfection. The Italian finds the road, the Englishman makes it practicable. The Italian is all imagination, the Englishman all reflection. The one allows himself to be regulated by chance, the other rules himself by the most profound calculations," &c. What might be these two races accomplish if properly united, each one having exactly that quality which the other most requires! I thought, then, that unreasonable, but I had French interference in my ears, and your Italian friends and fellow-citizens! This was the burden of the Contesse Montemeri's lecture, and her sentiments, or the language in which they were

conveyed, were occasionally received with ruffled kid-glove applause. That lady was especially marked with approval which the Contesse quoted from the *Faust* of Christianity—"All men are brothers!"—the subject of the song, and the shaking of programmes may not, perhaps, have been quite so loud as when three of the vocalists sang a comely-true from one of Adolphe Adam's operas; but, no matter. It is something to have such sentiments applauded at a morning concert by an aristocratic audience, although they were delivered in the French language.

At the close of the lecture, as there was no chairman, no resolutions could be put to the meeting, and no decision could be arrived at. The majority of the audience went away, after another feast of music—in all probability, with the idea that their duty towards Italy had always been, and always would be, to spend as much money as possible in the hotels of the capital, and to skulk all its severity, to rumple at its carnivals, and to idle on the borders of its lakes. For all this the experiment of mixing politics with a morning concert was very promising, and will doubtless lead to many repetitions, that will be varied to suit the occasion. We may yet live to hear a new Reform Bill advocated by a violin solo by M. Scintato, and a fantasia by Mr. Pratten; or, after an opera, instead of seeing the ballet, we may be called upon to listen to an election candidate, who may insist upon stating his opinions.

Rebivus of Books.

THE GLACIERS OF THE ALPS.*

PARLIAMENT is nearly up. By no political necessity, or ministerial ingenuity, can its existence be spun out three weeks longer. The gross question imperatively summons the representatives of the people to a distant Conference, and the importance of the issue, the importance of the subject, is absorbing interest the settlement of the constitutional rights of the Commons. Patriots, whose willingness to make any sacrifice for their country up to the 12th of August it would be the height of ingratitude to doubt, are already turning their faces towards the moon. Regent-street is betraying the usual symptoms which indicate its intention of going out of the town. The time is come when preparations are set on foot for projected tours; when trusty alpenstocks are taken out of dusty corners, and poised and tossed in the air with exulting anticipations; when young ladies gather round *Pastorals* with that touching appeal to the blue skies of Italy, or the sunlit ups of the Jungfrau, which few know, at his cost, to be irresistible; when hand-books are explored, travelling wardrobes discussed, and arrangements entered into about dates, conveyances, and hotels. The moment is appropriate for the publication of tour-books; and Professor Tyndall has not only chosen a subject that is seasonable, but treated it in a spirit which invests it with permanent attractions.

The valuable narratives and journals of Alpine excursions published within the last two years have created an entirely new race of travellers, who undertake an infinite variety of routes—upon the map, and make the most perilous ascents—in their arm-chairs. A year hence the Alps will be as familiar as the Thames; but, unlike the River, they never can be exhausted. Mont Blanc is not the same for two seasons together. A single night may change the whole aspect of the mountain; and the guide who went up last week, and knew perfectly the state of the snow, and every step of the track, may find himself utterly at fault to-morrow. Everywhere, the character of the Alpine range of the Alps, and the variety of the phenomena produce similar incertainties, and surround every fresh expedition with fresh excitements. The utmost that can be expected from the observation of the most experienced mountaineers is a general knowledge of the ground; and even that may be baffled by the condition of the weather. Consequently, we never wear out the first charm of the Alps. They possess the fascination of eternal variety. We can never be conscious of any monotony in books that describe with fidelity personal adventures on their frozen and sublime summits. Each new romance of exploration seems with increasing power upon the imagination; for the more we extend our acquaintance with the reality of the peril, and the letter we understand it, the more intense is the interest we take in the description.

Professor Tyndall holds a prominent place amongst the distinguished men of science who have penetrated the passes of the Alps, and questioned Nature in her profoundest recesses, under the most hazardous circumstances. His contributions to the charming popular science last year by the Alpine Club was remarkable for that combination of picturesque beauty and scientific clearness of detail which constitutes the highest merit of that kind of writing; and the volume before us, in which he describes several independent excursions, is marked by the same qualities, developed more fully over a wider field of inquiry.

The visits to the Alps, of which descriptive accounts are given in this volume, were made in the years 1857, 1858, and 1859, and they comprise features at once the grandest and most difficult of access to which the attention of the traveller can be directed. Passing over the Oldenian, the Tyndal, and the Tyndal, he comparatively tame and serene, he comes to the Chaumont district, where the Mer de Glace furnishes the persevering investigator with a multitude of curious details. Every feature of the surface is explored, and the reader who has never seen a glacier cannot fail from these verbal pictures to comprehend very clearly its aspect and formation. From Montanvert Mr. Tyndall made his first ascent of Mont Blanc in 1857, which was followed up by a second ascent in 1858; and although, out of deference to chronology, these two chapters are separated from each other in the book, the marvels of that wondrous district, and the nature of the dangers encountered by the traveller, will be brought more vividly before the mind by reading them in sequence than if they were separated.

This is the first ascent of Mont Blanc in 1857, which was made in 1858, in addition to an ascent of the Finsteraarhorn, and two ascents of Monte Rosa, the first of them with a "guide"—if he can be properly called so who had never been up the mountain before. Every one of these sections contains materials over which the reader will linger in breathless eagerness, apart from the scientific particulars which are here thrown into a popular form,

* "The Glaciers of the Alps. Being a Narrative of Excursions and Ascents, an Account of the Origin and Phenomena of Glaciers, and an Exposition of the Physical Principles to which they are Subject, by J. A. Murray, London, 1860."

and those extraordinary day and night scenes which are peculiar to the High Alps, and which Mr. Tyndall knows how to paint so effectively. The book abounds in adventure, which is tracked with a thrilling interest. The hero of the adventure is a man of more than ordinary pluck and physical endurance. He is prepared for the fatigues and risks of the mountains by much training, a strong will, and a thoroughly fearless nature. Yet with all these advantages, he frequently finds himself in situations which, if they did not alarm him, appear suddenly appalling in the most graphic description, to us who know something practically of these gigantic scrambles.

We have not much space for extracts; but we must let Mr. Tyndall relate, in his own words, a passage in one of his many perils. Starting for the ascent of Mont Blanc from the Grands Mulets, the party made the serious mistake of crossing the fields of ice too far, and keeping too close to the Dôme de Gouté, which brought them to a perilous slope, up which it was necessary to cut steps. A slip on this steep mountain of ice was death,—there being a slightest precipice below, down which the unfortunate traveller would be dashed to pieces. Mr. Tyndall's companion grew giddy by merely looking at the precipice, and a cigar, which tranquillised his nerves, saved his life. The guide, who began to cut steps, became exhausted; Mr. Tyndall, who was usual, was the boldest and strongest of the party, took the axe himself.

"I heaved sixty steps upon this slope, and each step took a minute, by Hirst's watch. The Mur de la Côte was still before us, and on this the guide-books informed us two or three hundred steps were sometimes found necessary. If sixty steps cost an hour, what would be the cost of two hundred? The question was disconcerting in the extreme, for the time that I had calculated on reaching the summit was already past, while the chief difficulties remained un-compared. Having been on my way along the harder ice, we marched more. I again resorted to stamping to secure a footing, and while thus engaged became, for the first time, aware of the drain of force to which I was subjecting myself. The thought of being absolutely exhausted had never occurred to me, and from first to last I had taken no care to husband my strength. . . . While stamping forward through the ice, I felt my strength ebbing away at short intervals, then would set out again apparently fresh, to find, however, in a few minutes that my strength was gone, and that I required to rest once more. In this way I gained the summit of the Corridor, when Hirst came to the front, and I felt some relief in stopping slowly after him, making use of the holes into which his feet had sunk."

The reader must realize the surrounding scene—the height, the solitude, the terrible difficulties of movement, and the danger of remaining through the night at that elevation,—if he would fully appreciate the desperate position of the adventurer, who, under such circumstances, finds his strength giving way. The will, as Mr. Tyndall truly observes, cannot draw beyond a certain limit on muscular force. "The soul, it is true," he adds, "can stir the body to action, but its function is to excite and apply force, and not to create it."

Here is another scene. We are this time ascending Monte Rosa, and Mr. Tyndall is attended, not conducted, by a guide, who, as he advances, betrays alarm at the hazards of the ascent, and finally stops, and refuses to go any farther, leaving Mr. Tyndall alone on the mountain. Alone he perseveres, there being a party some hours before him, whose track, wherever he can find it, he is determined to follow. At last he hears a cheer, and sees the party at an immense height above him.

"A precipice of ice was now in front of me, around which I wound to the right, and in a few minutes found myself fairly at the bottom of the Kamm. I paused here for a moment, and reflected on the work before me. My head was clear, my muscles in perfect order, I felt just what I wanted, and I was ready to proceed. I passed the Kamm, and went up slowly but surely, and soon heard the cheer which announced the arrival of the party at the summit of the mountain. It was a wild, weird, intermittent sound, swelling or falling as the echoes reinforced or subdued it."

At last he reaches the summit himself. But he stands upon it alone.

"A world of clouds and mountains lay beneath me. Switzerland, with its pomp of summits, was clear and grand; Italy was also grand, but more than half obscured. Dark cumulus and dark crag vie in savagery, while at other places white snows and white clouds held equal rivalry. The scooped valleys of Monte Rosa itself were magnificent, all gleaming in the bright sunlight,—loosed and torn at intervals, and sending from their rents and walls the magical blue of the ice. Ponderosa *névra* lay upon the mountains, apparently motionless, but suggesting motion—sluggish, but indicating irresistible dynamic energy, which moved them slowly to their doom in the warmer valleys below. The thought of my position: it was the first time that a man had stood alone upon that wild peak, and were the imagination left loose amid the surrounding agencies, and permitted to dwell upon the perils which separated the climber from his kind, I dare say my curious feelings might lead me to exclaim, 'But I am alone!'—and I might have thoughts which might lessen my strength, or interfere with the calm application of it. Once, indeed, an accident made me shudder. While taking the cork from a bottle which is deposited on the top, and which contains the names of the persons who have ascended the mountain, my axe slipped from my hand, and slid some thirty feet away from me. The thought of losing it made my flesh creep, for without it descent would be utterly impossible. I regained it, and looked upon it with an affection which might be bestowed upon a living thing, for it was literally my staff of life in these circumstances."

Professor Tyndall has divided his work into two parts—the first containing the narrative, or what may, for distinction, be loosely called the popular account of his excursions; and the second, the results of his scientific researches examined and classified. In both parts the style is so lucid, and the method of treatment so felicitous, that the individual designated the "general reader," who is commonly supposed to possess the smallest possible amount of accurate information on any subject, will find himself quite as much at home with the phenomena as with the story. We have not attempted, in our narrow confines, to do more than indicate the character of the volume generally.

CEYLON.*

MANY persons who hear of these volumes without reading them, will express surprise that so much can be said of general interest about an island which seems, on looking at the map of Asia, to form but an insignificant portion of our Indian Empire. Do Bengal, the Panjab, Mysore, the Carnatic,

and a dozen other Eastern provinces, afford materials for histories as copious? If so, must facts not be repeated in this work which properly belong to a general history of India? Sir Emerson Tennent anticipates these questions. He tells us that Ceylon, although placed at the extremity of Hindustan, forms no portion of that peninsula. It does not bear to it the relation of the Isle of Wight to Hampshire, or Tierra del Fuego to South America. It is not a fragment of the Asiatic continent, isolated, by the sea or volcanic eruptions, from the Indian peninsula; although many of its rocks, and its geological continent, as is ascertained by native traditions. Much misapprehension prevailed on this subject, and in attempting to correct it, we shall best and, perhaps, most briefly, enumerate the various topics discussed in these important volumes. In the first place, then, the mountain-chains of Ceylon are not prolongations of those of the Indian peninsula; they neither correspond in direction, nor in their geological character, with the Eastern or the Western Ghats. The crystalline and metamorphic rocks which form the mountain-knot, rising in the centre of Ceylon, differ in their outward physiognomy from similar strata, not only in India, but in all parts of the globe. There is something fantastic in their shape; they are contorted into huge arcs,—the very nature of a medieval fable, or cut into blocks mountain themselves in size, which seem great boulders thrown down upon the land. All round the highlands of Ceylon there runs a strip of low alluvial plains, formed of the debris washed down from the mountains. In one respect Ceylon resembles India: the monsoons blow regularly, and at the same period over both countries,—in summer towards the heated plains of Asia, in winter towards those of Southern Africa, dividing the year into a dry and a wet season. The climate is more equable in Ceylon than on the mainland. The droughts come on towards the end of spring, and gradually increase in intensity. The great winds, the parched soil cracks, every pool in the island becomes a pit filled with leopards' red mud, and the trees, which are laden with dew, deposited upon the drooping leaves and thirsty brushwood, till every twig and spray seems charred or turned to stone. Then, the serpents, despite their dread of man, crawl up the drains to his abode; and the farmers, who quit the silted roads, and prowl around the village wells. When man himself begins to feel the effects of the drought, the weather changes at last comes. Huge dense clouds of cloud suddenly rise at sea to the eastward, and spread in a few hours over the sky. They have no sooner completely enshrouded the island than a tremendous tempest begins. The thunder rolls, and the lightning flashes among the hills, and with a crash which of old sent terror into the hearts of the natives, and even of the navigators, the monsoon bursts over the land in one close deluge, battering upon the trees and houses with a roar which drowns the human voice, covering every slope with torrents and cascades, and converting the plain into a vast sea. The trees do not hide its surface into a widespread sea. But the extreme fury of the storm lasts only a few hours, and the sun, after a few moments of intermittent pangs of less violence, the murky sky begins to clear away. For a day or two a few clouds alone survive the tempest, gathering round the evening sun, and lighting up the heavens with tints of incredible splendor. The response of nature is miraculous in its rapidity. In a single night, sunset comes, and dawn, and sunset, and dawn, and sunset, and dawn, and the red mud of the saturated ground, and the trees exhibit new shades—pale-yellow, pink, crimson, and purple, which, seen through the older and darker foliage, give, at this season, a peculiar charm to the woodland scenery. The great annual storm there succeeds a tract of balmy weather, lasting till the middle of June, and during which the island is covered with a dense forest, which climbs to the summits of the hills, and grows in over-arching mangrove thickets, far over the sea-mud and the ripple of the waves. There are fields, of course, cleared by man for cultivation, but a constant effort is needed to stem the advance of the trees, which would otherwise spring up like weeds in a neglected garden, and drive man from his business hours. There are spaces, however, over which the forest does not and will not gather, called "pataenas,"—sunny glades of open greenward, round which the trees disappear, not by sinking into a growth of underwood, but by stopping abruptly and at once, like a close-clipped hedge, as if they "enclosed an area of stone." In the magnificent woods which lie within the enclosed boundary, stopping the progress of the thorn and briar, the deer, the elks, buffaloes, elephants, bears, and panthers, congregate, as the sun goes down, and they no longer require the shelter of the woods. Strange, indeed, is the scene at dusk, when the beasts, through cave-like openings, come forth to feed, and the deer, and the panthers, and the bears, and the elephants, kind, abandon themselves to sports and uncouth games, which raise the everlasting echoes. Willingly would we follow the author into his account of animal life in Ceylon, abounding, as it does, in facts more startling than any recorded by Buffon, Goldsmith, or White of Selborne; and we commend to the reader, as the most interesting part of his work, the chapter in which he has, for the first time, described the instincts and habits of the elephant with the fulness which the importance of the subject demands.

The plants and animals of Ceylon differ from those of India, and so do also the human inhabitants of the island. The aborigines, who still survive in small numbers amid the recesses of the woods, are a race of dwarfs, and repulsive savages, wandering from spot to spot in a state of nudity, with locks of unkempt hair hanging down to their waists, armed with iron ketabets and longbows, which they pull with hands and feet, and use unskillfully. Without settled abodes, without any idea of marriage, often without even the family speech, they abate intercourse with strangers, and in bartering deposit their goods by night in an open space, where the articles given in exchange are placed by the merchants, and left to be carried away when they can again creep stealthily forth from their hiding-places. These, however, form but a trifling portion of the population. The Singhalese, emigrating from the plains of Bengal, who colonized Ceylon as early as the sixth century before Christ, form the great body of the population. In their hands the island became one of the gardens of the earth, and rapidly rose to an importance which it retained until the great maritime discoveries of the fifteenth century opened new routes to the East.

At describing the century little has been known of the early history of Ceylon. There were old records in the possession of the Buddhist priests, which were said

* "Ceylon." By Sir Emerson Tennent. Longmans. Fifth Edition.

every possible topic that will bear decoration, from garlic and cucumbers up to the passage of the Jordan. But there is a little too much familiarity, and it is likely to breed its usual consequences in the mind of the reader. The natural history of the Bible is a legitimate field for scientific illustration; but look at the red-legged parrot, quails, and coats of the Cassid Bible, and you will cease evermore to risk a device for that class of picture representation. As to higher subjects, which depend, more or less, upon the fancy of the artist, wherein battles, and trials, and sacrifices are to be depicted, the familiarity which the reader acquires with the text in these cases is not precisely of a desirable nature, and of the proceedings of mankind under the edification of the actions in which they are engaged. Left to his own imagination, he would collect from the text a certain solemn and reverential idea of the Lord speaking to Moses out of the Tabernacle; but he opens these pages, and his idea is dissipated to the winds. It will be well, indeed, if his previous conceptions of the Divine nature, and of the proceedings of mankind under the old dispensation, be not lowered and degraded beyond redemption by studying the Scriptures in an edition where his sense of the ridiculous is perpetually called into play in direct connection with the most sacred subjects. The vulgarity of the art, as art, is no less offensive, even to the least cultivated taste, than its application to Holy Writ is revolting to the mind of the least affected by religious sentiment. In this, we confess, lies our main hope of seeing the faint of such publications confined to a narrow circle; for we cannot imagine any part of the community likely to be drawn into the contemplation of biblical history by such coarse and monstrous caricatures, except that impressionable class who are the victims of the illustrations which adorn the street-ballads and the literature of the kennel.

FRENCH MEMOIRS ON LOUIS XIV.*

If there is a sovereign whose personal qualifications have been overrated, that sovereign is certainly Louis XIV., king of France. In the history of his country he has the honour of giving his name to a whole century; but this may be accounted for when we remember the many illustrious literary men associated with his reign. We are nevertheless surprised at the exaggerated amount of flattery bestowed upon a monarch who, although endowed with a certain amount of natural vigour, was degenerate, ignorant, and so abandoned to his passions that to the laxity of his morals may be traced the degeneracies which discredited the court of Louis XIV. and of the Regent. In later years history has been more carefully investigated, and the "Grand Monarque" has not escaped the scrutinizing eye of diligent research. Victor Cousin, Sainte-Beuve, the *Journal de Trévoux*, published for the first time, and many other writers, have patiently explored the public records, and thrown a new light on the era of Louis XIV. The public mind has been brought to acknowledge that until now it had only seen the surface of what is called history, and that the time and labour bestowed on a closer investigation of facts have been amply repaid.

It is well known that a national habit has existed for many centuries among the French, of throwing ridicule and censure on political measures and men by means of satirical songs. The French minister Mazarin formed a collection of these which filled forty-four volumes in 4to, and which the French press intends republishing. These expressions of popular feeling and opinion were important at a period when the nation had no other newspaper than a *Gazette Officielle*, which was of course entirely under the control of the director-general of police.

These manuscript collections give us a very bad opinion of the morality of the upper classes under Louis XIV., and we should be inclined to suppose that satirical literature had existed for long, did not the work of St. Simon, and the voluminous correspondence of the Duchess of Orleans, sister-in-law to the Grand Monarque, more than confirm the statements they contain.

The "Mémoires" which Monsieur Charles Dreyas has just published, include all the manuscripts attributed to the king; but whoever may be the real author, the private information they give on political events is very interesting, and it would be almost impossible thoroughly to understand that important period of French history without consulting them. Our object being more to make a few observations on the work itself than to analyze its contents, we will present to the reader some of the pregnant facts found in a clever Introduction occupying the half of the first volume.

These "Mémoires" include the space of three years, from the beginning of 1666 to the end of 1668. The author takes care to say, "Les auteurs que Louis XIV. n'a pas écrits sont dictés par lui," he also adds, "Il parait avoir été étranger à la trinité partie qui présente seule une ordonnance belle et harmonieuse." The fact is that the king, who was not a writer, did not actually write the Introduction; and to M. de Périgny, reader to the king, and preceptor to the Dauphin, may be attributed the remainder.

It is curious to observe what may be produced by collaboration in literary works. The greater names in the "Mémoires" absorb the lesser, and Louis XIV. is mentioned, while Périgny and Pellisson are merely recognized as the amanuenses of the king. Private history, however, gives us an insight into the truth, and it is a well-authenticated fact, that one perhaps not generally known, that, besides his official secretaries, his Majesty retained a secret scribe whose occupation and merit consisted in imitating exactly the royal handwriting. The *Président de Rose* filled this post for nearly eighteen years, from 1661 to 1678; and in the department of Historical Manuscripts at the *Bibliothèque de l'Assemblée* in Paris, there is, under No. 110, a quarto volume written by De Rose himself, which gives us some curious information respecting the peculiar duties of his office.

The author of the "Mémoires" under consideration, although he speaks highly of the talents of the king, acknowledges the difficulty of verifying the writings of him he claims the authorship, for the *Président de Rose* not only made all the necessary corrections while employed under the dictation of Louis XIV., but he composed whole pages, of which his master only suggested the idea. We must not be surprised, therefore, if *Le barbe-bleue*, after the death of a certain Secretary of State, said that the king, since this misfortune, "no longer wrote French, nor in a style becoming a sovereign."

It even sometimes happens that the writer of the "Mémoires de Louis XIV. pour l'Instruction du Dauphin," copies clumsily out of other books. Colbert

has written on "The Financial State of France," and in the memoirs of the king all the details of the year 1663 are copied from Colbert, in happy ignorance that in the original work they belong to the year 1662. With all these facts before us, can we fault the justice of the title "Les Œuvres de Louis XIV.," given by Gravelle to six octavo volumes, published in 1806?

The "Mémoires," now produced by M. Ch. Dreyas, contain the same materials, but with the addition of numerous historical notes, and an Introduction, in which are given the full particulars of the manner in which the work was written, and some very curious details of the public and private life of Louis XIV. The whole is taken from three manuscript volumes, splendidly bound in red morocco, in the Imperial Library at Paris, but they are wanting in chronological and historical arrangement.

Voltaire is the first who made any use of the information contained in our "Mémoires de Louis XIV.," since the year 1757, several editions of extracts from these papers have been published, of which the most important is that of the Abbé Millot, given to the public in 1776; 6 vols. 12mo.

To M. Charles Dreyas we are much indebted for his excellent notes, and for the correctness of a text the orthography of which is very peculiar. Kings at that period were not supposed to be bound by the rules of spelling, and Louis XIV. has not failed to avail himself of the royal prerogative.

To complete these "Mémoires de Louis XIV.," and bring them down to the eve of the French Revolution, or to the period specified as the *Régence* in French history, the best chronicle is the "Journal de M. de Matignon," a manuscript at the *Parlement de Paris*. This interesting work has been until now unpublished, but an edition is forthcoming in Paris, and will soon be available to the curious reader. We have already numerous publications narrating the events of the latter end of the seventeenth century; there still remain, however, many curious and hitherto unknown details respecting the manners and customs, private and public, of the period succeeding the death of Louis XIV. The five volumes which form the "Journal de M. de Matignon," will be invaluable for the information they afford on these points. Monsieur Tscherning, the Director of the Imperial Library in Paris, has already given in the "Revue Retrospective," some extracts which have excited much interest. The first volume of the manuscript of Matignon was considered as lost, but it has since been found, and the whole "Journal" will be published without any suppression. We shall take care to give our readers an early critical review of this curious work.

THE WORK-OUT PEN.

| I. | II. |
|---|--|
| Old stump, overgrown By toil severe, Fruit and forlorn, Wilt linger here? | Men understand A plough or wheel, A driver's whip, A mill or loom here? |
| Thy light is faint, Thy victory's won, Thy work is wrought, Thy day is done— New dawn, old sun, Have brought new men, And thou must rot, Abandoned, useless, and forgot. | But pens are things Which high and great And popes and kings Agree to hate; And when the crowd, Earth-born, earth-bored, Can scarcely know For constant food of toil and woe. |
| III. | IV. |
| In earlier time, To mould an age, Thy words sublime, On freedom's page, Made nations start With patriot fire, Or touched the heart To pity's tear. | But yet (maybe) A century later, Men who can see With keener scan May chafe to dig Thy relics old; And looking here, May cry "Behold! The pen of Might!" That leaved the light!" Thy tie reversed! Rot! poor old pen! Die! Haystack band! |

THE BATHON STAR.—We regard as an event of no slight political significance the publication in London of a new journal in the Greek language. London, as the centre of information, of political life, of wealth, of commerce, is fittingly chosen as the point from which a journal may be issued to convey information, and to spread liberal ideas in all parts of the globe where Greek is spoken. Although the prevalent language in the East is the Greek, and in some places where it is spoken there are Greek newspapers still, we believe, all are in size contemptible, in information scanty, and in the topics principally descended upon them purely local or factional. We are not aware that there ever has been a newspaper in Greek, published with a view to general circulation, nor one profusely adorned with illustrations, until the appearance of the newspaper which is entitled *The Bathon Star* (Ο Αστὴρ τῆς Βαθόνος), and should be issued to convey information, and to spread liberal ideas in all parts of the globe where Greek is spoken. CHEAP NEWSPAPERS.—The boast of our time is cheap publications, cheap books, cheap newspapers. We have daily pennyworths of *Telegraphs*, *Standards*, *Stars*, &c., and, by the by, *The Star* was the title of the first daily evening paper; and it is the philosophical Dr. Tilcock and the poetical John Mayne were the principal writers. But there were cheaper things about a hundred years ago, now forgotten. The intelligence agencies appeared, and though not less numerous than those of Dean Swift and his friend Dr. Sheridan supported it, only twenty numbers were issued at "the small price of one half-penny." In 1730 they were reprinted in a volume.

THE NATIONAL DEFENCES.

TO "make things pleasant" at all hazards, is not the only policy of the Government. Upon the question of the National Defences, the Premier has spoken out, like a brave citizen and a sound statesman, and will rally around the Government the support of Parliament, and of every unprejudiced and thoughtful man in the country. No such thing as panic enters into the consideration of this question, whatever may be said by the cowards or rizzards, or amiable zealots who "cry peace when there is no peace." The man who, when bad characters are known to be about, bolts his doors, draws the chain across his shutters, appeals to the local police, and sees that his revolver or his rifle is loaded and in proper order, is no more liable to the charge of panic than the people and Parliament of this great country are in looking to their defences at a time when all Europe is armed, either for defence or for aggression, and when no man can tell what terrible tempests of evil passion may burst forth at a day's notice. The British nation cannot be justly accused of precipitancy in this matter. We have been slow to act; and panic, as all the world knows, is as rapid as a conflagration. The illustrious Wellington, almost with his dying breath, warned his countrymen in vain of the perils they encountered, and prayed that his living eyes might not behold the catastrophe which an apathetic people refused to take the most ordinary precautions to avert. Even when the overthrow of the French Republic in 1851, and the installation of a stuporous military autocracy upon its ruins, might have opened the eyes of the people of Great Britain to the altered circumstances of Europe, as regards our island, they obstinately refused to see the peril, though day by day it loomed more ominously on the horizon. They desired to cultivate friendly relations, not only with France, but with the whole world; and judging of the feelings of others by their own, they were slow to imagine evil. Warning after warning was raised by men only less illustrious than Wellington himself, whose business and whose duty it was to study the bearings of the politics of the world; but their voices might have been lifted up in the great Desert of Sahara with about as much effect as in the Parliament or the Press of this country. No one heeded them, unless it were the pugnacious apostles of "peace at any price," who misinterpreted their motives, and denied their sanity or their honesty. But the year 1859 wrought the long needed change in public opinion, and the ostrich took its head out of the hole. The Emperor of the French, winking and manipulating an army too numerous to be necessary for the purposes of legitimate defence, plucked a gratuitous quarrel with Austria, for his own aggrandizement and the "glory" of his arms. The pretence was the liberation of Italy: no doubt a highly popular and available cry—but, in reality a matter with which France had no more right to intermeddle than with the liberation of India or of Gibraltar. Then, and then only, the shrewd and slow people of this country saw the danger, and were no longer to be deceived by false pretences, or lulled into a baseless security. Although they felt and admitted that the presence of Austria in Lombardy and Venetia was a great and increasing nuisance to Europe,—and although their warmest sympathies were excited in favour of the Italians, they were not to be hoodwinked any longer. They desired that Italy should become truly free and independent. They did not care under what king or banner,—whether it were Victor Emmanuel, or any other sovereign whom the Italians might select,—even though that sovereign might be Joseph Garibaldi, or any other brave man whom

the fortune of war might place upon the apex of the pyramid. With either of these they would have been equally satisfied. But they could not recognise the right of the French Emperor to make an unprovoked war upon Austria on such a pretext; and began to speculate upon what their own condition might be if so mighty, so irresponsible, and so capricious a potentate should unexpectedly resolve to enact the part of Liberator of India, or even of Ireland. The answer to the question was prompt and decisive. Athelstane the Unready was convinced at the eleventh hour. The Saxon intellect had grasped the position in all its bearings, and, unready no longer, called upon the youth of the country to arm for the defence of a land which, with such a neighbour, with such a policy, and with such a history, might be liable to invasion at any moment. The Volunteer movement was the result; and the speedy creation of an army of 130,000 riflemen, equal to the regular army in bravery, and almost equal to it in discipline. This army costs the nation nothing—is daily increasing in efficiency—will speedily reckon a quarter of a million of men—and, on the first day of real danger, will tread itself without difficulty.

The adoption, sooner or later, of some system of National Defences was the necessary completion of this admirable movement. Some may deny or disguise, and others may deplore the fact; but it is nevertheless the unfortunate necessity of our contiguity to France that we should be, at least as strong at sea as that nation; and that her numerical superiority in soldiers should be counterbalanced by a corresponding strength in men and in fortresses on our own soil. There is no escaping from the position. We cannot dictate to the French what form of government they shall adopt. If it please them to elect a military Emperor and irresponsible autocrat, to barter their liberty for "glory,"—to raise and maintain an army of upwards of 600,000 men without an internal or domestic necessity,—to build and equip a steam navy as effective as our own, though without colonies to protect,—and to expend a sum of nine millions sterling upon such a place as Cherbourg—which is either required for purposes of defence or aggression against Great Britain, or is worse than useless,—we have no alternative but to do as we are doing, and be prepared for all contingencies and emergencies. Those who live in close proximity to a powder-mill must pay an extra premium of fire insurance. The public law of Europe is altogether unsettled and lapsing into anarchy; and whether we like it or not we must pay the charges of the police to maintain order as long as it is possible.

Lord Palmerston only enunciated a palpable truth on Monday evening, when he declared that a Government who, with the full knowledge of the circumstances, and with the Report of the Commissioners before them, failed to ask the House of Commons for the means of defraying the necessary cost of a system of defences, would be guilty of a high crime and misdemeanour, and would deserve to meet the penalties of treason. We say nothing in this place of the particular means of defence that have been recommended by the Commissioners and supported by the Government, or of the mode in which it is proposed to pay for them: upon these subjects we shall doubtless have ample occasion to discourse hereafter. We but express for the present the general satisfaction that the Government, and a large majority of both of the great parties in the House of Commons, have at length seen fit to stir in this mighty matter; that they have remembered that we are not living in 1820, but in 1860; that the wind is no longer the sole propelling power of ships of war, and that a representative body is not the governing power of France;—but that steam is

the ruler of the waves; an autocratic Bonaparte the popular chief of the French nation; and that all Europe bristles with bayonets, and labours in the throes of a general convulsion, which may be postponed, but is not likely to be prevented.

Let not the apostles and friends of peace grieve too sorely at this result. They may find consolation in the reflection that if the Emperor of the French be really our friend, and be sincerely desirous of cultivating with this country those relations of amity and commerce which are the surest supports of his throne and dynasty, he will not take umbrage at our determination to run no further risks. The stronger we are the better he ought to love us, if he have a due appreciation of the benefits of a firm alliance with our Government, and of the friendship of our people. Ally or foe, it is equally our duty to be as strong as he is.

THE DEFENCES OF LONDON.

[In the foregoing article we have expressed our hearty approval of the policy of the Government and of the speech of Lord Palmerston in the highly-important matter of the National Defences. As the debate upon the subject will be resumed on Monday evening, we think it desirable, as a contribution towards a fuller knowledge of the task to be undertaken, to present to our readers the following observations from the pen of an officer in Her Majesty's service, who claims to speak with the authority derived from long study, and from professional opportunities of forming a correct judgment. We do not pretend to support all his views, but believe that in what he has to say, he deserves an attentive hearing.]

IN organising the defences of any country it is necessary, in the first place, to consider what are the most vital points to be guarded from attack;—secondly, what are the national means of resistance which may be made available;—and subsequently, having made the vital points the kernel of the system, to connect all the artificial barriers by which it may be deemed necessary to strengthen it, in furtherance of the one primary object; that attained, outlying strongholds may be created. But, even then, they should all lean on, and directly form outworks of one great plan.

To be convinced that London is the heart of our empire, and that with the cessation of its pulsations the entire country will cease to breathe, we neither required the ominous warnings of Lord Overstone, nor the military opinion of Sir John Burgoyne. It must simply, as the former said, "never be," unless we are prepared, as the latter tells us, to accept any terms which the generosity of an invader may choose to dictate.

On these grounds, then, we consider that any system of defence in this country which does not place the safety of London beyond doubt to be not only a gross misconception in engineering, but a misapplication of the public money. Of what use is it to raise mimic Sebastopoles at Portsmouth and Plymouth, or to fortify Portland, Pembroke, and Cork, if London is to be left to the mercy of any marauder who may effect a landing on our shores? He will not turn aside to run his head against those strongholds; he knows full well that the loss of our chief dockyards, heavy as it undoubtedly would be, could not make us surrender; but he also knows as well, that with a foreign foe in Downing-street, the only thing left for us, humiliating as it might be, would be to buy him out at his own price—unless we were prepared to make a second Moscow of the metropolis, which would be but a sorry, and in all probability an ineffectual, alternative.

Strangely enough, the attention of the "trusty and well-beloved" who formed the "Defence Commission" was directed to every point but the right one, as will be seen from the 16th paragraph of their report, where, in speaking of the defence of the capital, they say:—"There can be no doubt that the main object of an enemy invading the country would be, to push for the capital;" and, further on, "the defence of London, however, has not been brought under our consideration."

Now, though we should be rejoiced to see the scheme of the Commissioners carried out in all its integrity, we cannot agree with them in the statement that the dockyards and arsenals are the vital points of the empire, although the destruction of Portsmouth or Plymouth would be a terrible blow. The vital point is London; and on this assumption the following ideas on the subject of national defences may be found worthy of attention. The first and obvious line of defence for England is that which Providence has placed between us and our friends, and which our ancestors wisely made the arena wherein to settle their differences. That steam has in a measure operated to our disadvantage in the protection of our shores we are not inclined to deny; but of this we are certain, that it ought to be our paramount object to grapple with our enemies on our own element; and this can only be attained by a powerful navy, thoroughly organised in conjunction with a standing reserve of seamen, the whole officered and commanded by active young men of the present generation, and

not by old men of a bygone era. Then, and then only, may we hope that our homes, as of yore, will be spared the horrors of war.

But, should a landing be effected, we consider that our first object should be to raise such defensive works round the metropolis as would place the safety of the capital beyond a doubt. Of their nature and area we have not space to dilate; but a system of detached forts, with lines of earthworks traced between them, which might be easily completed by contractors, and defended by Volunteers, seems not only the cheapest, but most available. It is scarcely necessary to refer to Silbistra to exemplify the virtues of mud and musketry; and when it is considered that instead of Redifs and obsolete firearms, we should have our Volunteers and Enfield rifles, supported by heavily-armed forts, there would not only be no fear for the result, if the attempt were made, but we might be morally certain that it never would be made.

As for the cost of such an undertaking, it ought not to exceed the sum the Commissioners propose to expend on Portland and Pembroke, which is little short of a million and a half, and is three times the amount estimated for similar works in the scheme propounded for the defence of London by a distinguished officer, in the *Cornhill Magazine*. Where the expenditure is most demanded it is not necessary to state; but, cost what it may—what is expense to the state at issue? On the one side we hazard national degradation and ruin; and, on the other, we deem about a sum which, compared to a Caffre or Chinese war, is a trifle, and that at a moment when we are about to expend ten millions in the defence of our seaports. For these reasons, then, we hope soon to see the Government set about the defence of London in sober earnest, relying on our Volunteers to man the works, and fostering and encouraging that body by all the means in their power, and giving their officers, to whom the country owes so much, the same rank as their brethren in the militia.

The capital being secured from the sudden assault of an invading army, the next thing is to secure the immediate approaches. We therefore consider the next most important object to be the strengthening of the fortified places on the banks of the Thames,—viz., Sheerness, Chatham, and Woolwich, which latter place the proposed arsenal at Cannock Chase will not abolish, and which must not only be within the lines, but form part of the defence of London. Subsequently the outlying dockyards may be placed in a position to defend themselves without the aid of the fleet, which might, temporarily, have other duties to perform. Portsmouth and Plymouth should be made, comparatively speaking, impregnable, before we commence with the minor ports, which the Commissioners deem necessary to fortify.

But, before all things, it is necessary to maintain a powerful Channel fleet; and we fervently hope that our Volunteers may soon number, as we firmly believe they will, a quarter of a million of men, embodying not alone the intelligence, but the bone and sinew of the country, and forming a nucleus round which thousands of others may rally in the hour of need. Should any enemy effect a landing, we might fearlessly entrust the safety of the capital to men like these, leaving the regular army and militia to take the field, or defend the fortified places, as necessity might dictate. Thus, by preserving the heart of the empire, and enabling the country to breathe, we should gain time to cut off the retreat, and destroy the invading army, leaving to it nothing of the soil of Great Britain—but a grave, or, some—to cover it up for ever.

THE "OPPRESSED NATIONALITIES."

THE diplomacy of a constitutional government must necessarily be conducted upon principles widely different from those which regulate the foreign policy of a nation that has been contented to place the administration of its affairs at home and abroad in the hands of a single man. We are not disposed for a moment to depreciate the advantages of our own institutions, much less would we desire to see them in any degree assimilated to those systems which obtain upon the continent of Europe, and which are in some countries undergoing a reform tending to widen rather than to narrow the basis of government; but all human institutions have their drawbacks, and it is impossible for us to be blind to those which are incidental to our own. In seeking to point out their evils and correct their abuses, we are actually endeavouring to reform our system of administration. It is, unfortunately, too often the fact that the highest questions of state policy are subordinated to party considerations, and that our ministers are apt to sacrifice the interests of their country to their desire for office. In foreign affairs especially this is a most dangerous and fatal tendency, and one which cannot fail, not merely to discredit the government which is swayed by such unworthy influences, but to imperil the safety of the country itself. The cardinal principle of a successful foreign policy must consist in the right appreciation of full and accurate information of what transpires abroad, and of the various secret influences at work to produce certain contemplated results. It is evident that the Foreign Office alone can obtain these details, and apply to them earnestly. Unfortunately, however, under our present system, the Foreign Office has to consider not merely what course will best ensure for the govern-

ment the attainment of the ends it proposes, but what view the country is likely to take of that course. Now, inasmuch as the country cannot possibly be supplied with all the information upon which the Government acts, the popular view of a foreign question is as likely to be wrong as right. Indeed, considering that the public is more or less impulsive and biased by general sympathies rather than by profound considerations of international policy, the view commonly entertained is perhaps more likely to be wrong than right. The only remedy for this would be open diplomacy, by which every person who could read would be as competent to judge of the best course to be pursued as the Government itself. We are not going to discuss here the merits of such a change; we merely indicate the disadvantages which attend the system now in vogue, in dealing with governments where the directing will is not subject to popular influences. It is evident that an entirely irresponsible authority, invested with great prestige, backed by enormous material resources, and evolving in secret, combinations formed upon the best information, must possess an important vantage ground in the conduct of its foreign relations over a government composed of men of conflicting opinions, temporarily guiding the helm of state dependent for their position upon the popular will, and liable to be called upon to enunciate in public the reasons which have influenced their policy. It often happens that it is impossible, in matters of so delicate a nature, to give those in detail, and the result is that the public are called upon to judge upon half the case instead of the whole, and come to an erroneous conclusion in consequence. Under such circumstances diplomacy, in the sense of skilful intrigue and elaborate *finesse* becomes impossible. It must be conducted upon certain broad general principles, comprehensible to all the world, and consistently acted upon. Any departure from the established rules only tends to involve us in complications from which it is impossible to escape with credit. It has become of late a somewhat favourite theory, that those principles should be embodied in the word "non-intervention," but it is worth while to consider in what "non-intervention" consists. If it means, to abstain entirely from taking any cognizance of the affairs of Europe, we must dissent from any such general principle. We do not think that twenty-eight miles of salt water are sufficient to justify this apathy in the affairs of the continent to which we appertain, more especially while we own dependencies which are actually upon it. We are still old-fashioned enough to maintain that there is such a thing as the "balance of power," and that if Gibraltar and Malta were in the possession of France, that balance would be materially affected, as regards this country, even though no hostilities were landed upon our shores. In any European war, therefore, which threatened to disturb the balance of power, so as to imperil our European position, it would be wise to intervene before any one nation had acquired such an ascendancy as to render it impossible for this country to resist her overwhelming strength. The intervention of a government influenced by motives, not of aggrandizement, but of prudence and of the necessity of self-defence, would be limited to this. The policy of an aggressive government is widely different. It consists in intervention not merely as between one country and another, but as between the people and their rulers. The cardinal principle of such a policy is "intervention in the internal administration of foreign states." When the Emperor of France assumes himself to be the "champion of oppressed nationalities," he constitutes himself the exponent of this policy, though the formula is expressed in a more popular guise. It is evident that the position thus assumed involves a principle which, if widely adopted, would be entirely incompatible with peaceful international relations. If every despotic ruler is to be permitted to decide when, in his opinion, a neighbour misgoverns a portion of his own dominions, and to consider himself justified in interfering in its behalf, there is an end to all political confidence.

We are told that the freedom of Hungary is a darling project of the Emperor Napoleon; probably, if the Emperor of Austria was powerful enough, he might consider the freedom of Algeria an equally desirable object. Poland is an oppressed nationality, and in the opinion of the Czar of all the Russias, India is, doubtless, another. That antecedent disapproves of the mode in which the Sultan governs a portion of his subjects; but we question whether serious commands itself more highly to an enlightened civilization.

We have been somewhat blinded to the danger and injustice of this principle in the present, by our sympathies with the cause of Italy; and although Great Britain refrained from making war in its behalf against a Power with which it had no cause of quarrel, the British people regarded the interposition of France with the utmost satisfaction. The effects of that interposition have now become painfully evident: the greatest enemy to Italian freedom, at this juncture, is the Emperor Napoleon. The man whose determined opposition Garibaldi has most reason to dread, is that victorious General to whom Lombardy owes its deliverance, and Savoy and Nice their slavery. French interference in the political events which are now transpiring in Italy is embarrassing the efforts of the patriotic party to a degree which those only can appreciate who are in constant communication with its leaders. The abrupt dismissal of La Farina, an imperial

agent, is an indication of their determination to resist this interference; but we doubt whether the high-spirited Dictator can make head against French ambition and intrigue. The motives by which that Government is actuated are transparent. The paramount influence which has been acquired over the Cabinet at Turin is to be extended to Naples; but this cannot be done if Naples owes its freedom not to the Emperor but to Garibaldi. Hence the plan of a constitution under Bourbon auspices. Naples is a mis-governed state, which must be reconstituted and then protected. Turkey is another, and 20,000 men are to be landed in Syria by way of a commencement. With an army of French labourers making a canal in Egypt, an army of another description garrisoning Jerusalem as well as Rome, with French influence dominant as it has been for some years past in Greece, with Cavour as a French prime minister at Turin, and the Bourbon as a French viceroy at Naples, with Spain under a deep debt of obligation, and on cordial terms with its powerful neighbour, we shall find our Mediterranean possessions somewhat endangered by the success of this "oppressed nationality" policy.

Perhaps the most insidious feature in it is the appeal which it makes to the liberal sentiment of those who are only capable of taking a superficial view of foreign politics. Thus we are all anxious to see Venetia freed from the Austrian yoke—this is the stereotyped phrase; the price which the luxury is to cost is the Rhinish Provinces. Liberty is sold at rather a high figure by our ally; but then, it is such an inestimable blessing. There is an old proverbial rubbing given to pay Paul; but if our sympathies are all with Paul, what does Peter signify? France will have a natural boundary and a passport on the Adriatic. Before this event takes place, we shall have two blue-books full of protestations that France has no intention whatever of annexing the Rhine Provinces—that the Powers are to be consulted first, and the populations afterwards, together with a profusion of polite professions, which must be read by the light of our former experience, and considered so far complimentary as being the homage which successful vice pays to virtue. For it is quite evident that the champion of oppressed nationalities might continue, so far as we are concerned, to exercise his sympathies in their behalf, without for a moment considering our feelings in the matter. Sooner or later, however, the day must come when we shall be called upon to intervene to prevent this description of intervention. While sympathizing deeply with misgoverned and oppressed races, whether in Austria or China, we can neither enter upon a crusade in their behalf ourselves, nor permit others to do so from interested motives. There is in all countries a sacred right of revolution, and where the oppression becomes intolerable, the populations may rise and assert themselves without the assistance of foreign despots. It was as unjust in the last Hungarian war for the Emperor of Russia to interfere in behalf of his brother of Austria against the Hungarians, as it would have been for us to have interfered for them. The relations between a Government and its subjects are as sacred as those between a man and his wife, and are no business of anybody's except the parties concerned. It is a broad and simple doctrine, and one which should guide us in our foreign policy. Let us set our faces against all meddling, more especially when, as in the case of the Marouites, we have proof of a deliberate plot on the part of French agents to create a disturbance, for the purpose of rendering intervention necessary. Meantime, so long as other nations persist in interfering, we are reduced to the alternative either of remaining passive while they acquire political influence and perhaps territory, or of interfering also. In either case, a feeling of mutual rivalry and jealousy will be engendered, from which we augur consequences the most disastrous to the peace of Europe.

THE INDIAN ARMY BILL.

THE activity of Indian legislation, which we have witnessed within the last few days, is only to be accounted for on the hypothesis of a sudden thaw, which like that which released the tines frozen up in Munchausen's bangle, and sent them forth, one after another, in a spontaneous series, to the astonished world, has dissolved a considerable congeries of congealed Indian Bills, and alarmed both Houses of Parliament by their sudden extrusion. Last week, two new Bills burst unexpectedly forth from the ministerial well-instrument; and scarcely had their tines died away in the air, when three more were trumpeted out with a prodigality of utterance unparalleled in our experience. And in the meanwhile, two other Bills—one of which has made and may still make a noise in the world—have been waiting an audience, and obtaining it only at odd times, in intervals of more interesting business.

Of this Bill we purpose to speak. The others have either perished a few days after their birth, or are not of sufficient importance to demand from us any remarks. The one exceptional case is that of the Bill, which is modestly described as a "Bill for the Suspension of Enlistment for Her Majesty's Local Indian Forces." It is, in reality, a bill for the abolition of the local European army in India; and, as such, is too important to be passed by without serious consideration.

A few words of preliminary explanation may, however, be demanded. The Indian army question, briefly stated, is simply this:—When the superintendence of our Indian relations was placed directly under the Crown, what had before been the Company's army became a part of the military establishment of the Queen. The troops thus transferred, or sought to be transferred,—for many resisted the transfer—were called Her Majesty's Military Forces; by which name they are at present known. They are divided into two parts, European and Native; but both are strictly local troops. The service of the Europeans, like that of the natives, is strictly confined to India; and the practical question now is, whether these European forces of Her Majesty shall remain on their present footing, as an integral establishment of a purely local character, or whether they shall be incorporated with the regular army of the Crown;—in professional phraseology, whether these European troops shall continue to be local corps, or shall be converted into regiments of the line.

This may not, at first sight, appear to be a question which much concerns the people of England. It may be said to be an Indian, or a professional, rather than a popular question; and as such the discussions which it has elicited in Parliament have been passed over, except by the interested few. But although it doubtless is a question vitally affecting our Indian empire,—indeed, we believe the very stability of our rule in that country—it is easy to show that we all have a national interest in its solution. The very cogency of our military authorities to expedite a measure which will have the effect of considerably augmenting the standing army, without immediately throwing any additional burdens upon the country, is enough in itself to indicate, clearly and distinctly, the direction in which the danger lies. A vast accession of power and patronage must necessarily be thrown into the hands of the Commander-in-Chief and the Secretary of State for War, if the Indian local army, the affairs of which are now administered, not by the Imperial, but by the Indian Government, becomes a part of the Line. It is easy to understand the avidity thus displayed in ministerial and courtly circles to annihilate the local army of India. No sooner, indeed, had the East-India Company ceased to exist, than His Royal Highness the Commander-in-Chief began with eager adroitness to inculcate the small end of the Horse Guards wedge into the administration of the Indian army. It was his anxiety to set aside all intermediate authorities, and to bring the influence of the Horse Guards to bear directly upon the Indian army. Lord Stanley, who then presided over the Home Government of India, resisted the attempt; but ever since that time the usurpations of the Imperial authorities have been steadily progressing, and they will not cease until the whole of the European army of India, its patronage, and its administration, have been fairly grasped by the Commander-in-Chief and the Secretary at War.

During the old days of the East-India Company, there was an occasional outcry against the "nepotism" of the Court of Directors. The directors, of course, provided for their own sons and nephews. They would have been "unnatural parents" and "cruel uncles," had they neglected the claims of their own kindred. But the appointments thus given to the family connections of the directors were few in proportion to those bestowed upon strangers, the sons of military and other officers in India, and of professional gentlemen in England— orphan children of deceased Indian officers coming in for a large share. On the whole, the patronage was very fairly distributed among the middle classes of England—among those who had no interest at court, and none with ministers selected mainly from the aristocracy of the land. The government of India was in those days emphatically a middle-class government. The men who made their way to the front in that great nursery of heroes, were members of the middle classes—men, who but for the East-India Company would, in all human probability, have drowned away life in some obscure country town. The Malcolms, the Mauros, the Ouchterlonyes, the Pottingers, the Lawrences, the Brookes, the Nicholsons, and the Edgeworths, all spring from the middle classes. They were pushed forward, not by brilliant connections, nor by parliamentary influences, but simply by the motive power of the good staff that was in them. The system not only secured to India a constant supply of able, energetic men, but provided an admirable field of employment for the middle classes of this country. It could not be said that those classes were not fairly represented, whilst they held the principal offices in our great Indian empire. The social balance was thus fairly preserved. It was ignorantly imputed as a defect in the system, that the patronage thus bestowed was personal patronage, and that personal considerations influenced its distribution—for it was no small merit that it did no harm—that it was not employed for purposes of corruption. Parliamentary votes were not purchased by the bestowal of Indian emoluments.

We confess that we do not feel quite so secure with respect to the future. The conversion of the local European forces of India into a component part of the regular British Army can scarcely fail greatly to aggrandise the power of the Court and of the ministry of the day, and to create, therefore, a considerable disturbance of the constitutional system of the country. The House of Commons, drawn principally from the landed aristocracy, has a direct interest in the

contingent change; and, doubtless, will vote by a large majority in its favour. Many, perhaps, regarding it as a purely Indian question, which they do not quite understand, and which they look upon as one by no means bearing upon the interests of their constituencies, will vote on the side of Government, in the hope of not hearing more about the matter. But, if we are not greatly mistaken, it is more an English, more a constitutional question, than is commonly supposed. Not assuming to ourselves the possession of that preternatural power of vision which consists in seeing things out of sight, we do not pretend to know the conditions under which the Indian Army will be amalgamated with the Line. A commission of experienced officers will be appointed to determine and to report upon the best mode of procedure with respect to the internal economy of the amalgamated army, and perhaps, to some small extent, to the manner of its future administration. Upon this question of administration, including the administration of patronage, the beneficial or injurious working of the new system will entirely depend. But, judging by the avidity which the imperial authorities have already exhibited, we have very little doubt that they will contrive to sweep the patronage into their ready hands.

"MY GOOD FRIEND."

THE highest title is the absence of title. When we address a king or an emperor we say "Sire"—a mere variation in the spelling of "Sir;" and when we address the Queen, we say "Madam"—a word that any one would use to the lowest and humblest of women, if he wished to show her the respect and deference which are due to her sex. When my lord the duke treats my lady the duchess with the greatest love and affection, he does not address her as "Your Grace," or "Your Ladyship," but as "Mary," "Jane," or "Gertrude," as the case may be; for, if he were to give her all the titles that her footmen, or a begging letter writer, or the secretary of a Church-building Society might employ, the duchess might suspect that the duke was angry with her, and desired an excuse for a quarrel. When Her Majesty Queen Victoria had to write to the President of the United States on a subject so interesting as the visit of her eldest son and heir, to the North American Continent, it was doubtless a matter of grave debate, by what title and in what mode she should reciprocate the kindly courtesy of his invitation to the Prince of Wales. The Republican President had graciously acknowledged the conventional title of the Queen of England to be styled "Your Majesty." He was Her Majesty of England to reply to the man without title! To have said "Your Excellency" would have looked formal. To have said "Sir," would have appeared unfriendly, or if not unfriendly, ungracious. To have said "My Cousin," or "My Brother," as is the fashion among the kings and potentates of Europe when they have occasion to write to each other, would have appeared to recognize the President as a quasi-king, which all America would have resented as a mockery. The Queen, in her excellent letter, with a rare tact and discretion, steered clear of all these difficulties, and addressed Mr. Buchanan as "My Good Friend," a phrase neither haughty nor condescending, neither polite nor unpolite, but truthful and plain;—for good friends the two potentates and the two peoples are ought to be. Such letters as these interchange between the President and the Queen reflect honour and confer dignity upon both magistrates and upon both nations. Followed, as they will most assuredly be, by a reception of the "Baron of Rouffev" worthy of the Americans to give, and of the Prince of Wales to receive, they will, we trust, teach both Americans and Britons that, of all the alliances possible among the great potentates of the earth, theirs is the most natural and the most durable.

THE LEBANON MASSACRES.

To the Editor of "The London Review."

SIR,—I have read with interest the letter of "An Eastern Traveller" in your last number, and as it contains much truth, while it arrives at what I believe to be a very safe conclusion, I venture to request insertion of a few remarks on this subject.

As I believe the "Eastern Traveller" is mistaken in saying that the *vor Dei* expressed by popular opinion is invariably wrong, so I acknowledge that no proposition can be more self-evident than that interference of Foreign Powers in the internal administration of a country must result in anarchy. But the state of things which renders interference possible is, if it be not a sufficient excuse for the meddling, at least the condemnation of the Government which has brought it about. We can now only sigh over the needless waste of blood which the Crimean war involved, and accept our losses in money as a wholesome warning for the future not again to attempt a hopeless task. In seeking to arrest the decay of the Turkish despotism, we neglected the advice of Machiavelli, who, in his withering language, stigmatizes the short-sighted folly of seeking to tide over difficulties rather than looking them boldly in the face, and settling them once for all. We felt and still feel the inconsequence which must result from the dismemberment of the Ottoman Empire, and we gave it a support, which could not save it from ultimate ruin, but which might put off the evil day. We vainly flattered ourselves that day might be a distant one, but events march rapidly in the nineteenth century; our palliatives have lost their efficacy, and we now see that we only shut Russia out of the Danubian Provinces to open the door of Syria

for France. We neither understood the impracticable stupidity of the Turks, nor for the incurable corruption which pervades every branch of their Government. The one blinds them to their real position in Europe, that of a tolerated evil, the other makes them as hateful to the Mussulmans as to the Christian populations of the provinces. Both are equally victims of the rapacity of the Turkish pashas, and the venality of the Turkish judges; and the Mussulmans, to his hatred of his oppressor adds a theological hatred, even more bitter than that with which he regards his Christian neighbour; in his eyes the Christian is a blasphemer, a blasphemer against the Prophet, and many acts of apostasy, which are not even excused by the fact that those concessions exist only upon paper, and were never intended to do more than throw dust in the eyes of Frank ambassadors. Here again the "Eastern Traveller" is right. The Turks and other Mohammedan races are as disaffected to the Government as the Christians themselves, and, as he remarks, their condition is even more helpless, for they have not even the hope of being able to change their position. But there is a wide difference between this state of things and the pleasing dream of the imaginary Christian walking in his Turk.

The Hatti Humayun has had the effect of exasperating the Turks, but not one article of its provisions in favour of the Christians has, or ever has had, force beyond the walls of Constantinople; nay, more, the position of the Christians is now harder than it was before we undertook to obtain guarantees for their wellbeing. To give an example of what European diplomacy has accomplished, the *harach* or poll-tax, which was formerly a *hereditary* or capitation tax, which was insisted upon preliminary to the Treaty of Paris. The *harach* was a mark of inferiority which the Christian Powers insisted should be removed from their co-religionists. It was the reason which the Prophet authorized the victorious Mussulmans to impose on the infidel, and it was a mark of inferiority which the infidel could not bear. Death they were otherwise condemned to. As this subject race they have always been treated, and as a natural consequence of their position, they were not allowed to bear arms, either as soldiers of the Sultan, or even for self-defence. Now that they are declared the equals of the Turks themselves, they are still to be treated as inferior, and to be subjected to a poll-tax, or conscription. This was also urged upon the Turkish Government, and conceded, for the representations of the allies were commands to which verbal submission was imperative, it being always understood that the joke should not be carried further than mere words. The Sultan therefore repudiated military life, that they were positively frightened of fire-arms, and that in consideration of this he should exempt them from the service, in return for a small tax. He then calculated the contingent they should give him at twice the real number required, and fixed the price of a substitute somewhat higher than the value of the Government service. The result was that for every 1000 of his lives, the Christians now pay twice as much to avoid the conscription, which they do not object more than their Mussulman fellow-subjects; but these latter, more logical than their rulers, see in all this one fact—that the Christians no longer pay the legal ransom for their lives, which are therefore forfeit. The Christians of the whole of Syria, have seen the practical commentary on the Hatti Humayun.

The fatal distinctions have not their origin in religion; the difference of faith is merely the badge which distinguishes the two parties. On the field of Flodden the Scotch cry was, "Down with the Heretics!" but it was not religious zeal which led to the war—it was national hatred. So with the Maronites and Druses. But these feelings of hatred, sternly repressed by the Government, are not the cause of the present disturbances. It is the Turkish Government, which sees in them a means of bringing within its feeble grasp the hardy mountaineers who, for so many centuries, have defied their efforts to obtain more than a nominal sovereignty over them. It is singular, but true, that in proportion as the Turkish Empire has become weaker, the Druses have become stronger. They have been the cause of more tribas within its nominal limits who had resisted the attacks of its more warlike and wiser princes. Thus, in African Tripoli, a Turkish pasha has now replaced the boys who had ruled for 300 years. The last was literally kidnapped some twenty-five years ago, and England applauded, probably commiserated, and certainly did not interfere. The same has happened elsewhere, been, of course, annihilated, and each year sees partial rebellions. In Arabia, the descendant of the Prophet, whose family even the savage Selim had recognized as Princes of Mecca, has been recently deposed, and the rule of the successor they have given him has been illustrated by the massacre of Jidda. In Egypt, the Mamelukes, who have been the cause of so much trouble, have been carried on by the functionaries of the Porte to upset the (avowedly absurd) arrangement entered into after the deposition of the Emir Eschur Shehab, and to substitute for the divided rule of the Christian and Druse Emirs, imagined by the ambassadors of England and France, the authority of a single ruler, and to real to demonstrate to their Indian protectors the necessity of so salutary a measure. Governor-General Buxtehude, Damascus, encouraged by the ministers at Constantinople, have omitted no opportunity of inflaming the animosities of race, and encouraging their manifestation. The participation of the Turkish soldiery in the recent massacre of the Maronites, and the murder of the Mosamedean governor and his family, referred to by the *Standard*, have done more to excite the notion of the suspicion which exists against the Turkish Government itself. That governor, if the accounts be correct, was a member of the Shehab family, which ruled so long in the Lebanon, and therefore a probable competitor for the principality in case any new settlement were conspired to. The

In 1840, an Italian was among the first of the outbreaks which followed the deposition of the Emir Bahkr, and the evacuation by the Egyptian troops. I saw the blackened ruins of many a village, as well as of solitary cottages, the vineyards trampled down, and the mulberry trees destroyed. I spent some little time in the Turkish camps, and saw the Maronites brought in and sent to the Turkish islands, and the Christians of the Lebanon and Syria. These latter are not dangerous to the Turkish Government. They have no sympathizers in Europe; their religion is idolatry; the very tenets of their sect—their sole learning—are known only to a single member of each sect, family, and they have no arts but the simplest processes of agriculture. They are, in ritual, very similar to that of Rome, are easily duped, supporting the sultan,

tion of Europe, and this respect is far in advance of the Turks even of Constantinople. They are, therefore, a dangerous population—dangerous, I mean, to dominant barbarians; while the certainty that their complaints would find a ready hearing in the Cabinets of Europe, left the Turkish Government no way of curbing them but by the means they are now using, a means which has led to these last days being several of these outbreaks, but none of the serious nature of the one which has just occurred at the Lebanon, while this has found the Musulmans in all the cities eager to imitate the example of Candour and Jidda. It has been long in preparation, and it is no excuse for the Turkish Government to say that its troops were not sent to defend or pacify another part of the empire. The present outbreak was foreseen, and the Government ought to have been found in the consular reports to the Foreign Office; and if our consuls were alive to the danger which threatened the Christians so long beforehand, much more must it have been known to the Turkish Government. It is not surprising, that, if there were really only 400 Turks in Syria, they should be known to the consuls, but it is not surprising that they should be known to the consuls.

It can admit of no doubt in the minds of those who know the Turks, that they are instigators and abettors both of the Druses, and of the fanatical population of Damascus. It is no answer to this saying that the blow they have provoked will recoil on themselves. Their cunning has been so often successful, that they will not be deterred by a single failure. In sixty years, they might well think they could do so again. They count upon stupidity which can discover no other hand to hold the balance of the world than an Ottoman Sultan enthroned in Constantinople. The integrity of his empire has been proclaimed an article of our political creed; it is therefore a principle of our policy to support him against all his enemies. They calculate, with some reason, that a few more such massacres as those of Jidda, Der El Kaur, and Damascus, will render the Christian population unwilling slaves, as of old, and they trust to the mutual jealousies of Europe to bring forth in multi-storied possession of the advantages they have never known.

ANOTHER EASTERN TRAVELLER

RISKY NAVIGATION THE RUN OF THE "LEISTNER"—What may be called an advance in steam navigation was shown on Saturday last in the trip of the *Leistner*—one of the new mail-boats for the Holyhead and Dublin line, which runs down from Tilbury, beyond the Nore and back, with a great number of members of both Houses of Parliament, and many professional scientific gentlemen on board her. The *Leistner* was built by Messrs. York, D'Aguilar, Samuda, and Co., with engines by Messrs. Hawthorn and Co. She is 350 feet in length, 35 feet in breadth, and carries 2,600 tons. Her engines are nominally 700 horse-power, and she is capable of making 24 knots an hour. She has a diameter of 21 feet in diameter to extreme edge of flutes, which are 12 feet by 4 feet 2 inches, and on this occasion were inserted 7 feet from the water-line to the outer edge of flut-boardings. Although the weather was rather rough, with a wind two or three points before the beam, her speed was most satisfactory. The greatest velocity of the paddle-wheels was 26.82 miles per hour, the engine making twenty-eight double strokes and the pistons travelling at 364 feet per minute; the speed of the ship under these circumstances was above 21 miles per hour. With twenty-six strokes per minute, when her paddle-wheels were going at the rate of 25 miles per hour, at one knot in five minutes, the speed of the ship, tried at the measured mile, was 17.73 knots in 3 min. 23 sec., or 17.73 knots per hour. At 24 strokes per minute, the speed of the ship, tried at the measured mile, was 17.39 knots in 3 min. 40 sec., or 17.39 knots per hour. At 22 strokes per minute, the speed of the ship, was 16.97 knots in 3 min. 42 sec., being 16.97 knots per hour. At 20 strokes per minute, the speed of the ship, was 16.35 knots in 3 min. 42 sec., being 16.35 knots per hour.

UNPUBLISHED LETTERS OF LORD NELSON AND SIR WILLIAM HAMILTON.

In an early Number of "THE LONDON REVIEW" (by the kind permission of the owner of the manuscript) the suppression of the W. Hamilton, will be commenced the publication of a series of limited Letters, of extraordinary interest, from LORD NELSON to SIR WILLIAM HAMILTON, with Sir William Hamilton's Replies, together with other Documents relating to the same eminent persons.

Orders received by all Booksellers and Newsagents.

Office, 11, Southampton-street, Strand—W. LITTLE, Manager.

* A single Specimen Copy of "The Legacy Review" sent free on receipt of Four Postage Stamps.

THE LONDON REVIEW, and **WEEKLY JOURNAL**, conducted by CHARLES MACRAY, and all the other LONDON NEWSPAPERS, regularly SUPPLIED to Town, and forwarded to all parts of the UNITED KINGDOM, INDIA, CHINA, AUSTRIA, and FOREIGN DOMINIONS.

ADVERTISEMENTS, and Births, Marriages, and Deaths, INSERTED IN ALL the London and Country Newspapers, with notices, dates of publication, price, &c., free on application.

WILLIAM DAWSON & SONS,
Newspaper, Booksellers, and Stationers, 74, CANAL-STREET, City, London, E.C.
(ESTABLISHED 1806.)

SUBSCRIPTIONS for "THE LONDON REVIEW" received by Messrs. W. H. SMITH & SONS, at 186, Strand, and at all their Railway Book-stalls.

THE LONDON REVIEW—NEWSPAPERS and the PUBLIC in LIVERPOOL and DISTRICT, will be SUPPLIED with THIS PAPER and all other NEWSPAPERS and PERIODICALS, STATIONERY, &c., by J. VAUGHAN, 64, Broadway, Hill, near Cannon-street, Liverpool, and all the principal cities.

Tuesday's Periodicals, &c., on Monday Evenings.

CRYSTAL PALACE—ARRANGEMENTS FOR WEEK ENDING SATURDAY, AUGUST 3d.

MONDAY, Open at Nine, Display of the Great Foundation and Entire Series of Waterworks.
TUESDAY to FRIDAY, Open at Ten. Admission, one Shilling; children under twelve, Sixpence.

SATURDAY, Open at Ten, FLORAL PROMENADE CONCERT. Admission Half a Crown; Children One Shilling; Season Tickets free.

SUNDAY, Open at Half-past One, to shareholders gratuitously, by Tickets.

THE PICTURE GALLERY IS OPEN.
The Room is now covered with vases, and other objects in full bloom; and the ornamental beds on the terraces and slopes are brilliant with thousands of geraniums and other flowers.

THE ECLIPSE OF THE SUN.—By some accident, for which we are unable to account, we had not received up to the moment of going to press, the letter from our special correspondent in Spain, on the drawings and photographs of the Great Eclipse as seen in that country, which he undertook to send us in time for our present publication.

THE LONDON REVIEW

WEEKLY JOURNAL.

SATURDAY, JULY 28, 1860.

The latest news from the United States afford proof that splendid preparations are making in all parts of the Great Republic which the Prince of Wales is expected to visit. Within the past week the papers have published the correspondence between the President and the Queen of England, in which the former invites the Prince to visit the United States, and the latter accepts, on behalf of her son, the invitation. The correspondence affords a curious specimen of courtly epistolary etiquette. The President addresses his letter—"To her Majesty Queen Victoria," and concludes "Your Majesty's most obedient servant, James Buchanan," and Her Majesty addresses Mr. Buchanan, as "My good friend," and concludes, "I remain ever your good friend, Victoria R." One happy result may, it is hoped, be derived from all these courtesies and compliments; namely, to unite in still closer bonds of amity the two greatest and freest communities in the world.

In Canada the preparations are still more enthusiastic, for in that country to respect and deference is added—loyalty. Not even the British Isles themselves are more loyal than Canada, or more fervent in their attachment to the British crown, under the protection of which they enjoy a far greater degree of liberty, and at a less cost than any part of the American Union. All Canada was alive with excitement at the date of the last advices.

In our last number we referred to the deadlock to which Parliament has been reduced this session by the absolute impossibility of disposing of the measures brought before it. Lord Derby called the attention of the House of Lords to the subject on Friday last. "There were," he said, "a great many measures originating in the House of Commons which could not, considering the present period of the session, become law, while not one of the measures sent down to that assembly by the House of Lords had yet passed through committee. Surrounding circumstances had, in the present session, been favourable to legislation. The Thames has this summer been as offensive than had of late been its wont. The temperature had been such as to enable the members of the House of Commons to go through their labours without the feeling of absolute exhaustion. But with all these incentives to work, it is too much to suppose that a large number of independent members could go through six weeks of slavery, sitting from ten to fourteen hours daily." The only remedy Lord Derby could suggest was, that a prorogation should only be looked on as an adjournment, and that measures which had been discussed, and not passed, should be re-introduced in the following session in

the same stage in which they would have remained had the House been adjourned instead of prorogued. Mr. Ewart has since returned to this question. He would have the House for the future to be contented with a discussion on the second reading of a bill, and not to debate any question afterwards. He proposed that the majority at any time should have it in their power to decide when the arguments on any question had been exhausted, and to close the debate. His last proposal was to commence morning sittings immediately after Easter. Lord Brougham said, *apropos* of Lord Derby's speech, that a joint committee of the Lords and Commons should be appointed, to discuss the subject calmly, and to endeavour to arrive at some practical and useful result. "Parliamentary government," he said, "was on its trial at present, and never till the present session had it shown itself so incompetent for the discharge of its functions." It is unfortunate that no active measures have been taken to discover a remedy for this growing evil; but it is to be hoped that as the vast importance of the subject has been recognised, some vigorous effort will be made before the next session to restore the elasticity of our institutions, by the abolition of rigid and immaterial forms of procedure, for which there seems to exist in some minds such mistaken and absurd veneration.

On Tuesday Lord Palmerston proposed, in an admirable speech, to carry out the recommendations of the Fortification Commissioners, with a view to secure our dockyards and other vulnerable points from the attacks of all possible enemies. It was impossible to say that the future, charged as the horizon was with clouds, was free from the danger of French invasion. "If ever we lose the command of the sea," he asked, "what becomes of this country? Let us consider how dependent we are for everything that constitutes national wealth—ay, and a large portion of national food—on free communication by sea. We import about 10,000,000 quarters of corn annually, besides enormous quantities of coffee, sugar, tea, and cotton, which last is next to corn for the support of the people, by enabling them to earn their food. Our wealth depends on the exportation of the products of our industry, amounting to £100,000,000 annually. Picture to yourselves, for a moment, such places as Liverpool, Bristol, London, and the Thames blocked by a hostile force. What would become of the wealth and industry of the country in such a case?" If the French or any other enemy should succeed in landing upon our shores, Lord Palmerston thought that a large contribution might be levied upon the metropolis, or a sudden attack made upon our arsenals and dockyards, by which our naval power might be destroyed. The last operation was the one most likely to be attempted. If London should be in danger, what would be wanted was the means of fighting a battle in the field with the largest possible army. Fortifications at the dockyards would set free the regular troops, whose places could then be taken by a militia. The sum required to carry out the recommendations of the commissioners would be £11,000,000, including about £1,500,000 for armaments. He proposed to raise this amount by terminable annuities for the period of thirty years, spreading the sum over three or four years, £2,000,000 being all that would be required before next July. Lord Palmerston did not wish to take the House by surprise. He did not ask them to give their immediate assent to his resolution, and he has therefore allowed a week further for deliberation on the report, as elucidated by his own speech and that of Mr. Sidney Herbert, which followed.

Perhaps the most interesting statement in Mr. Herbert's speech was his allusion to a doctrine recently very much in vogue, to the effect that earthworks lastly erected may take the place of stone-walls in fortifications. Sebastopol had been quoted as a case in which a successful defence was made behind such erections. But the earthworks in this case were not suddenly erected. There were sea-defences—regular fortifications—which we were never able to force. He believed that had Sebastopol been defended by permanent works on the south side, to which we went, because there were stone-built fortifications on the north, it would never have been attacked at all. "Our fleets," Lord Palmerston remarked, in adverting to the same subject, "could not get near enough to Cronstadt to attack it, so effectual were its fortifications." They have been carefully strengthened last winter, during the whole of which two thousand carts were employed in conveying across the ice immense masses of stone, to the extent of 14,000 cubic fathoms, of 16 tons to the fathom, so that when the thaw came they might sink, and render the barrier in front of Cronstadt still stronger and more effectual. Similar operations were going on all over Europe, showing the faith placed in stone walls in fortifications.

A Committee of the House of Commons on the question of military organization, which had been sitting since March last year, has issued their report. It has elucidated several important questions. It shows that the Secretary of State is responsible for commands-in-chief for the nominations to colonelcies of regiments, and for all promotions. The Horse Guards have, however, the patronage of first commissions. The Duke of Cambridge wishes this system to be abolished. He proposes that there should be only one entrance to the army, and that through study at a military college. The report besides contains curious information about the manner in which Sir William Armstrong has been remunerated for his generosity in handing over his patent rights to the public. It appears that his guns are of a construction so peculiar, and depending so much on the mode of putting them together, that it would not be safe to contract for them in open market. They are all made under the superintendence of the inventor. At Woolwich, 3,000 men are now employed in manufacturing them, Sir William receiving for his services as superintendent £2,000 a year. He also makes them at a

factory of his own at Elswick, and thus contrives to manage two great concerns 300 miles apart. It is evident that there is mismanagement somewhere, and the dynamite fact comes out that there are at present only two rifled cannon in the British navy, while there are 600 on board the French fleet.

On the same evening, "the condition of the navy" was made the subject of a motion by Sir John Pakington, at one time a First Lord of the Admiralty. The motion was for a royal commission to consider the present system of promotion and retirement in the royal navy, with a view to such changes as might be considered desirable. The motion was opposed by Lord Clarence Paget, and rejected, upon a division, by a majority of 89 to 56.

An illustration of the distrust which pervades the country with respect to the administration of the Poor Law was afforded in a debate which took place on Tuesday in the House of Commons. The Government had proposed a Continuance Bill for five years. This proposal was at first met with an amendment to limit the duration of the Bill for one year. That amendment was withdrawn at the suggestion of Mr. Deedes, who proposed an amendment limiting the operation of the Bill to three years. This amendment, although strongly opposed by Ministers, was carried, 147 members voting for it and only 92 against it.

A remarkable meeting took place last week at Manchester, on a subject not even second in importance to the question of our national defence; the cultivation of cotton in India and other British dependencies. From a speech made by Dr. Forbes, who has superintended the experiments made by Government to cultivate American varieties of the cotton plant at Dharwar, it appears that they have been attended with perfect success. Already there is a great quantity of cotton produced in India, which is quite equal to American produce, and which brings a good price in England. Old habit, routine can, he says, alone explain the neglect which this cotton meets with in the market. It has not obtained a reputation, and is undervalued in consequence. The fact is certain that cotton can be produced with care in India quite equal to the best American staples, and in any quantity. All that is wanted is fair encouragement for the native cultivators. They can do the work better and cheaper than labourers placed under European superintendence, as has been found in the case of the native contractors employed on the Great Indian Peninsula Railway. Surely it is time that a serious effort should be made to direct British enterprise into this channel! Nearly half a century ago the Reverend Sidney Smith said that the vocation of the Anglo-Saxon was cotton-waving. How much more truly might he have said that now! But the Northern States of America are entering into competition with us. They can already supply their own wants with manufactured goods, and for years back they have competed with us in coarse cottons, even in our own dependencies. When labour becomes more plentiful, when the transatlantic railway system becomes more highly developed, there can be little doubt that a Lancashire will spring up in America, and that our great rivals in commercial activity will have the power of wresting from us, by stopping the supply of the raw material, the great branch of industry on which our national prosperity depends. It is to be hoped that a bigoted adherence to any formula of political economy will not prevent the legislature from using active measures to open the great cotton fields explored by Livingstone, and to encourage the investment of capital, and the formation of joint-stock companies for the organisation of native labour, and the cultivation of cotton in the Indo-Gangetic plains and the highlands of the Deccan. In all these districts a fertile soil and a numerous and apt population are brought into contact with the seaboard by railways and river navigation, and seems to await the advent of English enterprise.

An important meeting took place on the 27th instant at Toplitz, between the Emperor of Austria, the Prince of Prussia, and the Kings of Saxony and Bavaria. These potentates are the mid-European parties of the old German Empire, and upon their consultations and unanimity may be said to depend the lives of thousands—the happiness and security of millions. Let them be true to each other, and to the people over whom Providence has placed them as rulers and protectors, and they may set at defiance all the ambitious designs of crafty neighbours. It is reported that a treaty of alliance between Austria and Prussia preceded the conference.

While Mr. Gladstone was proposing his second Budget in this country, the *Corps Legislatif* was debating the French Budget. It was strongly objected to by many of the members. "If 600,000 men are asked for," said the Marquis de Pierre, "it is not, assuredly, to guard against invasion." People talked of the success of the last war, but he considered it as a proof that the army had no need of being so numerous, since, in a very short space, it obtained successes so great that Europe became alarmed. Prussia had but 150,000 men; why should France have 600,000? These remarks show that there are persons of acknowledged loyalty to the imperial régime who cannot reconcile pacific assurances with an army and navy maintained on a war footing.

We learn from Lord Palmerston's speech on the fortification question, on Tuesday, what is the actual proportion between our army and that of France. "We see in France," said he, "an army of six hundred-and-odd thousand men, of whom four hundred-and-odd thousand are actually under arms, and the remainder are merely on furlough, and can be called into the ranks in a fortnight. The army is greater than France requires for defence. No nation in the world unprovoked would think

of attacking France. But is it only on land," he continued, "that the arrangements of France are disproportionate to her necessities for defence? We know that the utmost exertions have been made, and are still making, to create a navy." Mr. Sidney Herbert completed our information on this subject on the same day. "The total of Her Majesty's forces," he said, "including 150,000 of the local European forces in India, was 245,000 men. If, then, the largest number of troops which, it was reckoned, could be required in India were maintained there, namely, 100,000, the average number required in the colonies and our military stations abroad being 30,000, that would leave a force of 125,000 regular troops in this country." In this state of matters, can we wonder at the remarks made by Lord Palmerston on the position by which we are reduced by the hostile attitude of France? "Our interests," he said, "are spread over the whole surface of the globe. Agents in every quarter are at all times liable, through an excess of zeal, or a mistaken sense of duty, to lead the nations they represent into difficulties; and no one can answer from day to day that something may not happen in some part of the world that may lead to disagreeable communications between different powers. With the utmost desire that these matters may be amicably adjusted, yet, if one country is obviously the strongest, and another country greatly the weakest, it is very difficult for any arrangement to be made."

Under such circumstances, concessions made in the absence of means of defence will be visited by the bulk of the nation on the heads of the Government, who must succumb. If this is now the state of matters, we can explain many recent events. We can explain the timid way in which we have interfered with French intrigue in Eastern Africa, in every state from Egypt to Zanzibar. A correspondent of the *Times* has directed attention to a fact which will not pass unobserved by those who have read Mr. Lyons McLeod's "Account of his Stay at Moumbyne," Dr. Krapp's "Missionary Adventures in Abyssinia and Zanzibar," and Mr. Weston's "Reunion." It was announced a week ago, that a French frigate, being refused some concessions, fired upon the town of Zanzibar, and landed marines, and that the Sultan or Imam of Muscat, a powerful Arab sovereign, whose dominions extend from the latitude of Madagascar to the Persian Gulf, and under whose immediate predecessors an important legitimate Arab trade has come into existence, has surrendered to these French intruders. The writer asks what protection there now is for British property at Zanzibar? and asserts that the Government of Queen Victoria have opposed the appointment of a consul on the African coast, without, as it seems, any better reason than that they were again receive official information of the iniquitous traffic that is carried on there clandestinely by the French and Portuguese. We know what the results were of the "excess of zeal and mistaken sense of duty" of Mr. Lyons McLeod, and we can now scarcely doubt that Lord Palmerston refers to such cases. The *Times* remarks that the present state of affairs in Syria recalls fact connected with the overthrow of the Indian railway and telegraph projects, *videlicet* the Emphrates. The consent of the Porte was obtained to these projects, the capital was subscribed under the most unequivocal assurances of support from the English Cabinet, and the shareholders commenced the requisite outlay. The scheme would have been completed in a year. "Just at that moment, however, when operations were begun, the Emperor of the French paid a visit to Osborne. The Turkish Government suddenly refused to fulfil their pledge to grant a concession, and the Company at the same time found that the English Government, which had previously stimulated them to action and expenditure, and which had, even in a Treasury minute, recorded its sense that it would be highly improper to allow the Porte to break faith in this matter, were determined to withdraw all support. This fact suggests inferences," adds the *Times*, "that the present outbreak is not merely from a wild or accidental impulse, but may have received, indirectly, no small preparation from those who are about to show such extraordinary force in putting it down." If a telegraph line had existed from Bassorah and Aleppo to Constantinople, it would not only have brought us into close contact with the races of Syria and the Syrian Desert, but, like the telegraph from Delhi to Calcutta, have saved Damascus and the villages of Lebanon from the fate which has befallen them.

Eight thousand men, with artillery and horses, are about to leave French ports for the Levant; eight thousand men are to follow; thus making a total of sixteen thousand. Marseilles and Toulon are in a state of bustle they have not known since the Crimean war; an activity which extends even to Nîmes, to which a railway is in rapid process of construction. In sending forces to Syria, the Emperor Napoleon has received the approval of the English Government; but we trust that he is not to be allowed to march his army to Aleppo and Damascus, and retain as well the ports of St. Jean d'Acre, Jaffa, and Tripoli. If so, and if a pretext is formed to remain in permanent occupation, a severe blow will be struck at our power and influence in the East, and in the Mediterranean.

The Porte has announced that a peace had been concluded between the Druses and the Maronites, on the 10th instant; but of course this will not prevent France and England from proceeding to the scene of the civil war, and from taking such precautions that such scenes shall not be repeated, either in Syria, or in the other provinces of the Turkish Empire where similar attacks are threatened. The Druses and the Maronites have no more right to proclaim peace than they had to declare war.

Under the influence of the French measures which have alarmed England, Brussels and other Belgian cities have recently been the scene of very striking demonstrations of nationality. On Saturday the Chamber of

Deputies presented an address to the King, expressing their loyalty. His Majesty's reply was received with great enthusiasm by the Chambers and Provincial Councils. Intrigues have been going on along the frontiers which have provoked this address. The hiding newspapers of Lille and other Flemish towns already absorbed by France, have asserted that although the upper classes wish to perpetuate the Belgian kingdom, universal suffrage will annex the country to France. There are French agents along the frontier who have done their best to persuade the Belgian merchant and the manufacturer that it is their interest to be admitted within the cordons of the French customs-house, and to convince the poorer class of workmen and peasants that the Emperor has a special regard and care for the "Belgians." How well the Belgian press, both Flemish and French, has protected the population from the blandishments of these intrigues has been shown in the enthusiastic demonstrations of loyalty which took place last week in various places, and more particularly at Brussels.

The King of Naples has sent orders that all Sicily shall be evacuated, to avoid the horrors of civil war. Messina, Melazzo, and Syracuse are deserted by the royalist troops, who have left for Naples in steamers. Letters of the 21st announce that Garibaldi had left Palermo with from 8,000 to 10,000 volunteers. He was expected to effect a landing on the island, and the chiefs of the revolutionary movement had caused an illumination of the whole city to take place, and crowds of people filled the streets, shouting "Garibaldi for ever." With the exception of a riot, caused by the military, on Sunday last, Naples has remained quiet since the old police were disbanded.

THE GOUFFY PHILOSOPHER.—No. IV.

MR. WAGSTAFF EXPLAINS, ON THE AUTHORITY OF GENERAL SQUASH, OF CONNEXITY, THE DIFFERENCE BETWEEN "CRITTERS" AND "CREATURES."

When I travelled in America some years ago, in search of new scenes and a newer people than the blue or France offered, I made the acquaintance of a very excellent gentleman from Connecticut. His name was Reuben Squash, and he was both a general and a judge. He was very tall, lean, and sallow; he was seldom without a quid of tobacco in his mouth, except at dinner and other meals, and I suppose, when he slept. He was a marvellously accomplished adept in the great art and mystery of spitting. I verily believe that in pacing about a room he could spit through the key-hole without impinging upon its sides, and land the deposit safely upon the outer door-mat; and that, if he took aim at any particular spot on floor or carpet within six or eight paces, were it no bigger than a parched pea, he could cover it with more than the accuracy of a chasseur de Vincennes or a Wimbledon rifleman. I have heard him deliver his judgments in open court—judgments worthy of any chief justice or lord chancellor that ever adorned Westminster Hall or Lincoln's Inn—in the midst of a shower of his own disparaging—the attorneys, the witnesses, the spectators, and even the prisoner at the bar, equipping from time to time with unconscious imitation; and thinking no more of it than of the act of respiration. General Squash— for he preferred his military to his judicial title—had no other defect, that I am aware of, and was not only a very learned but a very shrewd and sensible person. The particular Yankee dialect of the New England States was not so strongly marked in him as to attract the notice of a travelling stranger like myself, except now and then in the undue emphasis and pronunciation which he gave to the letter *I* in such words as Italian, which he pronounced *I*-talian; and engine, which was always engine-; and in the constant use which he made of the word "critter," as distinguished from "creature." The word was so often employed by him—to mark his contempt of people he did not like,—that I asked him one day to explain the exact shade of difference between the two. I was so pleased with the utility of "critter," as something less noble than "creature," that I have ever since been of opinion that, on this side of the Atlantic, we might adopt it with advantage. The General explained himself somewhat after this fashion:—"The word 'creature,'" said he, "implies a certain amount of goodness, beauty, respect, and love—as when we talk of any of God's creatures; whereas, 'critter' is always associated with some idea of inferiority in the person so designated; and of good, or even ill-natured contempt on the part of the speaker. Thus, when I tell you that Miss or Mrs. A—— is a creature, you will learn, if you do not interrupt me before she finishes speaking, that I consider her lovely either in her mind or person, or both. But were I to call her a 'critter,' and no more, you would be justified in believing that, in my opinion, she was either a slut, a scold, a scandal-monger, a fool, a tippler, or a flirt, and that I had no respect for her. If I said to you in the street, 'Look at that lovely creature!' it would probably be to direct your attention either to a fine woman or a beautiful child. But if I said, 'Look at that pretty critter!'" the words might apply to a pet poodle, or a prancing horse. If I say that Mr. B's grandmother is a good old creature, I mean that she is and has been good in the highest sense of the word, and that she is still in possession of those faculties of heart and mind which inspire respect and affection; but if I say that she is 'a good old critter,' I imply some deficiency of character or intellect which may have prevented her all her life, or be the result of old age and infirmity. So, when I call a man a 'critter,' you may be sure that I think him a cheat, a fool, or a mean fellow,—a man that I could not fight with if he challenged me, but whom I could treat, in case of need, to a taste of a cowhide. Ours is a great country, sir—a very

great country, but it swarms with critters, as you will see, if you travel much amongst us, and open your eyes as you go. They are the unwholesome growth of our overripe civilization, and of our too much liberty."

At this point I interrupted the General, and noticed that the Americans showed their own country and countrymen, but that they would not allow Englishmen to breathe a disparaging syllable. "May I say," I added, "that in my opinion you have really too much liberty?"

"Certainly not, sir; Englishmen don't understand us, and never can, until they have lived twenty years amongst us, and ceased to be Englishmen. They talk of us out of the fulness of their ignorance, and only submit upon the truth by accident; and when they have got it, hurt their shins over it, for they don't know how to turn it to the slightest advantage. But to return to our critters, who are useful in their way, no doubt, like everything else that God has created—for even snakes must be good for something if we could but discover it. In every country there are critters in private life, for every country has its shallow-pated fools, and mean or dastardly cheats, humbugs, and false pretenders; but our country has the unhappy privilege—the consequence of our ever liberty—of poisoning an amount of public criticism known to no other nation under the sun. I will cite a few examples.

"For instance: there is amongst us a class of persons, male and female, who pretend to have a mission. Now, a man who thinks he has a mission is a bore as well as a critter; but when a hundred or so of these bored and critters get together, and commence talking upon such a question, for instance, as the abolition of 'nigger' slavery, which is the favourite 'mission' of a great many of our people, who have more tongue than brains, and who are too plentifully endowed with what I call the pernicious gift of the gab—criticism is rampant and triumphant. They pretend to live nigger slavery so intensely (I am one who hate it sincerely) that they talk as if they would set all the slaves free to-morrow, even though a general massacre of the white population of the South were to be the certain result. They are so smitten with their monomania, that they not only call the black man their brother, but exalt him in speeches (though in nothing else) to a superior dignity to that of fraternity, as if a black skin were better than a white one, and to be a nigger were to be something like an unchanged. Yet these same gabblers won't let a nigger go to church with them, or dine with them; neither will they marry their daughters to them, or even allow them to sit in the same omnibus or the same theatre. The effect of such speeches, if the niggers could hear or read them, would be to create a civil war, and dissolve our glorious Union. Some would call these people 'wicked creatures,' and thus recognize, by the strength of the epithet employed, a certain amount of dignity in them, and respect due to them. I call them silly critters—critters that talk without meaning what they say, and for this reason call us much critters as mocking-birds.

"But if such critters, who think they have a mission to abolish slavery, or anything else, are distasteful to us, the women with a mission are absolutely odious. From such critters my kindly fist protect me! What business has a woman with a mission? A mission implies a sender, and she sends women out of the sphere of their families and the care of their little children—or of their old fathers and mothers—to civilize savages, to prate to their countrymen, who are not savages, on the iniquity of drinking *loggier*, or Bourbon whisky; and upon the superiority of cabbage, as an article of diet, to beef and mutton! Who sends them to preach and lecture on the reform of society in its eating and drinking, its believing and its disbelieving? Why don't they reform their own households? If they make every one happy within that little sphere, they do a great work—greater, no doubt, better than any mission they can undertake beyond its boundaries. A woman with a mission is a bore above all bores—a critter to be avoided—*ere* whose husband and children are to be pitted, and one who, if she be not married, is not likely to be married, makes the best use of her time in a prudent secret, until the unhappy victim is safely tied to her. When a woman lectures and preaches to gain her livelihood, I don't so much object—and she ceases to be a critter. But when she sports in public, in pursuance of what she calls her mission, I object to her—avoid her—desist her. She is a critter, and one of the most rampant *eris* of our free and enlightened country.

"You in England have established free trade, but we in this country (or in that benighted part of it called Ohio, for, thank Heaven, we have not yet arrived at it in Connecticut), have endeavored to establish what is called Free Love. The Free Lovers have their annual, if not monthly, meetings, and their own particular organ or newspaper, published daily or weekly. They maintain the doctrine, with much pulser, that marriage is a slavery worse than that of the niggers, and that as soon as a woman has grown weary of a man's society, and finds him too poor to pay her hoarse, erudite, and other trash, it is a strictly moral and proper act, ordained by Heaven and Nature, and only disallowed by the foolish prejudices of a spurious Christianity, that she be divorced. I suppose that in your country the police would interfere with the meetings of any shameless critters, male or female, who should have impudence and folly enough to get up in the face of day, and maintain such atrocities as these! But in our country we allow the critters to talk, and even to act, and there is no remedy, except in public opinion, for which they don't care a straw.

"Less offensive than these, but very disagreeable in their own peculiar way, are the female disciples of a critter called Bloomer, who walk about the streets in trousers, with petticoats hanging no farther down than their knees, like

after member got up and adjured him to withdraw the Bill, intending, after a certain cry, to give way. But Mr. Disraeli sat still and made no sign, and so one who took the initiative. There was "no pressure brought to bear in favour of the withdrawal of the Bill." The pressure which Lord John, it is argued, should have seen and recognized, was the pressure of time and the fair claims of other measures. That work occupied in the discussion whether we should go into committee on the Reform Bill lent us the Blackwell Bill. If Lord John had made an early and a handsome surrender of his measure, instead of waiting for Mr. Disraeli as Lord Gladstone waited for Sir Richard Strachan, the House might by this time have surrounded the non-trader classes with all necessary safeguards, and have sent this non-sensical bill to the Upper House of Parliament.

I must compliment our Noble Viscount on the way in which the public business has been conducted this Session. The latest example is the postponement of the vote on the National Defence. If the measure which had been agreed to by the Cabinet upon the National Defence had been published a day or two before in the Votes the House would have agreed to it on Monday night, and the postponement for a week would have been unnecessary. The result will be that members will have a week's time to prepare elaborate speeches, and it will be a mercy if we are not visited with the elaborate debates. This is of a piece with the rest of the Session. The Session of 1860 will be known as the Session of Adjourned Debates. One day the Budget gave way to the Reform Bill; and then, when the Reform Bill in turn gave way to the Budget, the repeated adjournments made the debates languid and desultory to the last degree. Members had time to forget what was said before, and did not hesitate to repeat the arguments that had been more forcibly urged by others. Nothing was settled out of hand, but we had half a dozen little scattered on the table that were only put into the Speaker's possession to be taken out again, and hung up for a week or two. This is not the way to get through work of any kind, and House of Commons work least of all, which requires to be served up hot, like an *olette soufflée*, or else it becomes heavy and wearisome. The Budget was again to be considered, the second reading, at the end of April, and the third at the end of May. The Paper Duty waited for a third reading (another adjourned debate), the repeal of Sir J. Harcourt's Act (prohibiting time-bargains on the Exchange) stood for a second reading (in adjourned debate), and the various other measures, and the various changes, and related bills are still to be considered, which have only just struggled into legislative existence.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

Lord Palmerston's programme of the Defence talks exactly with the view that I presented last week, namely, the enlargement of the outworks of the naval works on the southern coast, and the creation of an arsenal for warlike stores in the centre of the kingdom—Canooch Cause, in Staffordshire, being the point selected, where land is to be taken and iron stores, and where access to the rail is easy from all points. It is not likely that any substantial opposition will be offered to these propositions in the House of Commons, more especially as the money is to be raised in the least onerous manner—by loans upon annuities—and taken by instalments.

There will be only one sharp fight here in Parliament, and that will be on the small question of equalizing the Customs' Duty upon Foreign Paper to the Excise tax upon home-made, the difference being only the cost of the Excise collection beyond that of the Customs. The English papermakers object to this equalization, on the ground that the material is done here that it is abroad. Mr. Gladstone and his supporters, however, contend that the proposed change is for the benefit of that great body, the consumers; and that, in fact, it is also in accordance with the true doctrines of political economy, which soon equalize prices at home and abroad. But the main feature of the discussion will be the correct reading of the Treaty with France, to which the House of Commons has given its formal assent. This point will naturally be dwelt upon by Lord John Russell, and will probably decide the question against Mr. Disraeli and the papermakers. The Government will be guided by the opinion of the law officers on this point.

That part of the Ride in Hyde Park, lately opened into Kensington Gardens, was stopped up yesterday, and the twenty-six yards of crossing which is so much complained of by the neighbouring inhabitants, is to be closed to children and yachtsmen, is for the moment closed, and will probably be discontinued as a ride. The equestrian interests have begun to make a stir, and have got up an organization in favour of the extension of the Ride. Forms of petition are left for signature at all the Clubs in St. James's, and at other public places. It is astonishing, when one goes to see the "grand" of contention, what a small matter may excite so much local activity. It is probable that Mr. Corwer will be obliged—as we anticipated last week—to give way, and to withdraw the intended privilege from the rising community.

A more unexpected removal of the First Commissioner of Works is the withdrawal of the iron fences from the public statues. The lively little equestrian statue of George III. in Pall Mall East, looks much better since the iron palings have been removed. Workmen are now engaged in removing the "defences" from the statue of King Charles "that" at Charing Cross. If the cumbersome pile itself were removed, it would be a great advantage in every way. It could be put back in a line with George IV. (see *noble fratrum*) in Trafalgar Square, and make way for the opening of the Strand into the Mall in St. James's Park, which are in a direct line with each other. The destruction of two or three old houses would open this most necessary communication, and greatly improve the appearance of the whole neighbourhood. If this is too much at present, the opening into the Park from Spring Gardens ought to be widened by the abolition of a single house, which is Crown property, and only held by a lease of some half-dozen years.

If Mr. Corwer will effect these improvements, and finish Carlton Terrace, by pulling down the old stables of the Prince Regent, he will do much to make his edifice popular. The stables of the First Gentleman (and roof of Europe) have had a sufficiently long spell of freedom from demolition. The statue of King Charles need not be so proud of "the divinity that doth hedge a

king," seeing that it was buried during the Commonwealth, and dug up again after the Restoration. In his hot indignation against the Lords, for their recent refusal to repeal the Paper Duties, Mr. Whalley, M.P., threatened a statue of Cromwell by public subscription. Such a monument should be of bronze, at least, if not of iron-jawed. It is not likely that any site for a statue of the Great Republican (as Lord Lyndhurst called him) would be granted upon property appertaining to the Crown.

Talking of monuments and street obstructions—the Grand's Memorial at the bottom of Waterloo Place, is evidently too massive a piece of stonework for the situation. It is evidently not "the right thing in the right place." Feelings of gratitude naturally gave way to taste and public convenience, when the beauty and openness of that great thoroughfare was permitted to be destroyed by this imposing monument or mausoleum. The figures of the three generals—Trafalgar—seen on the side looking towards the Park, are decidedly full of character—hard, massive, and decisive—worthy representations of the men of the three battles who held the hill at Inkermann for ten solid hours against the whole Russian force. But the other ornaments promise ill, and report speaks any thing but favourably of the figure of Glory that is to crown the summit.

A feature has been added to dramatic affairs this last week. And, in regard of this, a pertinent—certainly not *superfluous*—question may, perhaps, be hazarded. In all gravity let us put it; since we are ready believers with even a few assurances. Are the "Zouaves" now playing at the Princess's Theatre, to certain expectations interfere of their own, presented amidst the firm of Sebastopol—same of might—of duty, to many minds!—genuine combatants, or "men in blackmen"? We would, for obvious reasons, much prefer that those were the "true men." For, besides the easy assurance that they can come thus amiably to amuse us, simply in their grotesque and calibrating manner, we have the advantage of discovering that, after all, those renowned and dreadful warriors really do not spend all their time amid rifles, crooked swords, and wild cuts; but that they have a dulcet side to their dispositions. However, apart from this reassuring assurance that these, after all, are the real men—and therefore that the Londoners have to welcome and not repel them—*ceteris*, there seems something mysterious—something of the unaccountable—in this transference of their ardour, dexterity, and dash from the battle-field of the Crimea actually to the theatres of capitals, *now* along with pleasure-courting carriages! This contemplation of Comus and of comely, instead of caricatures, is a positive relief, only less assuasive than the diversion which we may contrive to obtain here in town, out of these very unexpected exploits of our ferocious friends. We suppose we must call these representatives of the "Zouaves" a success. At all events, it is a very curious and novel exhibition, and the enterprise of Mr. A. Harris has been distinctly displayed in an importation so provocative of that very valuable commodity—wonder. Wonder, in truth, is the lower which lifts all our senses into being. From the carriage of the Gurkhas, conquering by a name alone, to an advertisement of emeralds or calicoes, *wonder* is the true talisman, leading—through the very force of the mystery—to victory.

Last week we made some general observations relative to an excellent design which, by the Council of the "Crystal Palace Company," has been laid before the public. We call, this week, earnestly, the attention of all lovers of art—and their name is not million, but millions—to the fact that, on the 31st of this present July, the lists of members will be closed.

The really great feature in these "Art Union" is, in the estimation of the "Crystal Palace Art Union," arrived to its most proper and perfect extent. We mean that of self-education. Each one chooses for himself—trusts his own taste—pleases his own fancy. And there is really a wilderness of beautiful objects to choose from. To us it appears that the difficulty will be in selection. Prizes of all kinds are doubtless delightful things; first, inasmuch as we have the surprise of success, where failure was a thing possible; secondly, because the inherent value of the thing carries its own conviction of pleasantness in the possession. Thus chance itself becomes an added element of gratification.

And at how cheap a rate do we procure that which may possibly prove to be a most agreeable chance! Each member, for every guinea subscribed, will acquire the right of selecting for himself one of the productions.

It is something in these hard, dry, barren times, to have the resources of Grecian and Roman Art, the graces and glories of sculpture, and the achievements of painting, brought, as by a lucky touch, within the reach of every one. Each person, we think, found how even a slight thing has evolved a pleasant thought. The eye, resting for a moment on a beautiful encaustic disc, will relax of its severity.

Photography and stereoscopic views, and examples of chromo-lithography, are included in the "Presentation Works," from which subscribers have the right of immediate selection.

The series of Prize Works already completed and on exhibition, comprise some very remarkable productions. They include some clever pictures, groups, and statues in marble, by W. C. Marshall, R.A., Charles, Munier, &c., of high excellence. But it is in the Art Manufacturers that this Art Union has evidenced its greatest success at present; and this is sufficient to establish its claims to public patronage.

The specimens of the modern Majolica, by Minton, both for importance in size, and merit in execution, are the finest works yet produced in this branch of Art. The large Pucella vases of the same manufacture, in the Serres style, are also that in which the Parisian ware is combined with porcelain, are remarkable examples of selectivity in design, and of the English hand. The same, Copeland's reproduction of the Limoges enamelling, is of the highest order of art.

The vases executed on the Worcester channels by Kerr and Bians uphold the reputation of that firm, and Elkington has enriched the collection by some fine works in electro-aid and gold. The fac-similes of some of the Greek vases, —earliest specimens of fertile art, by Iktanon and Son—evidence the fidelity and artistic feeling which characterize their reproduction.

But probably the greatest impulse has been given to English glass manu-

facture, as evidenced by the examples from Pellati. These are, in the highest degree, admirable, both for purity of form and refinement of style in the engraved decoration. There is a delicacy in these works quite unique. This beautiful material, whose fragility has been made the excuse for heavy and clumsy forms, is here proved capable of realising outlines of the most classical shapes, and lying in lightness with the famous products of Venice.

The concert given at St. James's Hall, on Friday evening, July 20th, in aid of the Brough Fund, was not a financial success. The finest orchestra in England—in the world,—a long list of leading vocalists, and a programme embracing numerous specimens of every school of music, vocal and instrumental, were powerless to draw an audience sufficient to pay much more than the working expenses. The ladies and gentlemen brought together by the kind exertions of Mr. Alfred Mellon, all of whom gave their gratuitous services on this occasion, represented an amount of talent which could not have been engaged under two hundred pounds. There was no deficiency of attraction, as far as we were concerned; and, unless concerts have gone out of fashion, or have lost their hold upon the general public, the thin attendance at the Hall must be attributed to had management on the part of the committee. They did their best, no doubt, according to their experience, but there must have been some errors of judgment in fixing the price, or placing the entertainment before the public. The concert alone, without any appeal to charitable feelings on behalf of the widow and children of a popular author, ought certainly to have drawn a far larger attendance.

The mixed professional and amateur dramatic performance at Drury-lane Theatre, on Wednesday evening, the 26th inst., in which services quite as valuable were freely given, produced a more favorable result. The large house was fairly filled, at advance prices, by a patient and distinguished audience. The working committee of five (acting and stage managers, secretary, and treasurer), aided by a body of volunteer check and money-takers, succeeded in getting the doors open about ten minutes after the appointed time. Those who know the height and breadth of Drury-lane Theatre, its number of bewildering staircases and tortuous passages, will understand how a small staff of amateur officers, unfamiliar with the place, had to run, and order, and shout, before the great bolts of the outer-doors could be drawn. Literary gentlemen and artists were shut up in those stifling prison-houses devoted to money-takers, to check sweepings and shuffle silver, the lookers' clocks, for several hours, and give out superfluous check-rolls, in all colors, bearing inscriptions drawn up in an unknown tongue. These are the amateur services that are purely charitable on these occasions, for no applause or publicity is obtained for them. On the stage, the complicated arrangements were carried out without any hitch or delay; the management and company of the Princess's, the Strand, the Adelphi, the Olympic, and the Haymarket, did their work charitably and well; the addresses were feelingly received, and loudly applauded; the amateur baroque was got through, aided by popular professional actresses, and the curtain fell after a full five hours' entertainment. It is impossible to say, at present, what the receipts amounted to; but they will be published, no doubt, in due time. The net proceeds to be carried to the Fund may amount to £100.

On Saturday evening next, the 28th inst., Mr. and Mrs. German Reed, in connection with Mr. John Parry, have generously volunteered to give a special performance in aid of the Fund; and there is a talk of a theatrical performance, and a subscription at Manchester; and an amateur repetition of the "Forty Thieves," by the "Savage Club," at the Theatre Royal, Liverpool. In the mean time an account has been opened at Messrs. Coutts & Co., the bankers, in the joint names of Messrs. Francis Talford and John Hollingshead, the honorary treasurers; and donations are said to be coming in slowly, but favourably. Amongst the subscribers are Mr. Charles Dickens, Mr. Dimech, and Mr. John Leech, with many other gentlemen honourably distinguished in literature and art.

The late Robert B. Brough is worthy of more eulogies than these, on behalf of his family, if only that he possessed the virtue of writing nothing that he did not believe in.

LITERARY MISCELLANIES.—No. I.

SIR HANS SLOANE AND THE BRITISH MUSEUM.

It is always interesting and generally instructive to trace back an event in history, an important discovery in science, or a great national institution, to its early origin, and connect it with the man to whom it first presented itself as an idea. This idea he may have thought capable of great development, but its future has generally been veiled in obscurity, as, indeed the future of every human aspiration must be. It happens, however, more frequently than is often supposed, that the character and history of the originator or inventor throw great and useful light on the after condition and history of the invention. His intentions are sometimes expressed, his expectations announced, his hopes indicated,—and we may judge from these how far he was worthy of his suggestion, and how completely in some cases the whole of the real value and excellence of what he had discovered were forgotten in some trifling and temporary result anticipated. With a view to illustrate this, we propose to offer to our readers, from time to time, a sketch of the early advocates and pioneers of knowledge, in connection in each case of some one subject or department, in advancing which they were especially remarkable. We begin with SIR HANS SLOANE, whose private collections formed the basis of the BRITISH MUSEUM; and we may safely say that very few men could be named whose personal exertions have produced larger results, or whose intentions have been better carried out for the benefit of their country.

He offers a remarkable instance of the advantage that may arise from the careful and intelligent accumulation and wise disposal of those various objects of interest which, in the hands of the mere collector or the careless inheritor, are so often useless to every one, but which, properly placed, and serving as a nucleus, have, in his case, grown into our national Museum. We

can assure our readers that this institution, still too little appreciated by many, contains an amount of treasures, daily increasing, compared with which almost all foreign establishments of the same kind must already be regarded as secondary and unimportant.

Hans Sloane, born in 1660, in the north of Ireland, very early devoted himself to the study of Medicine and Natural History. As a young man, he became intimate with Robert Boyle and John Ray, two of the most eminent pursuers of natural science of his day. After studying for four years in London he visited France, making an extensive tour through that country before returning to London; and shortly afterwards (in 1667) he went out to Jamaica with the Duke of Albemarle, who had been appointed governor of the British possessions in the West Indies. The duke dying almost immediately, Sloane's stay in the West Indies was limited to fifteen months; and the result was the accumulation of an enormous mass of useful objects, which he worked up and made the foundation of a great work in two thick folio volumes, admirably illustrated, containing very complete account of the whole Natural History of the island, with figures of all new species. Of these two volumes, one was published eighteen years, and the other thirty-eight years, after the date of his return. It is only fair to say that in these volumes, besides the descriptions of special objects of Natural History, there is a full, clear, and accurate account of everything that came under the notice of the author, and that very little seems to have escaped his notice. In the preface of his first volume he makes the following remarks on the advantage of such books as that he was publishing, and we quote the passage because we think it useful and applicable, not only with reference to his own book, but to the great national collection which has arisen from the foundation laid by him:—

"It may be asked to what purpose serve such accounts. I answer that the knowledge of Natural History, being observation of matters of fact, is more certain than most others, and in my slender opinion less subject to mistakes than reasoning, hypothesis, or conjecture. The great advantage of this knowledge, which I have reported of Gabriel Naude that he used to say he acquired in the Ecclesiastical History, doubted the Civil, and believed the Natural. There are things we are sure of, so far as our senses are not fallible, and which, in all probability, have been ever since the Creation, and will remain the end of the world in the same manner. They are things which they affect great number of causing the power, wisdom, and providence of Almighty God in creating and preserving the things He has created. There appears so much contrivance in the variety of beings preserved from the beginning of the world, that the more any man searches the more he will admire, and conclude them very important in the history of nature who say they were the productions of chance."

We may give a further proof of the intelligent and instructed eye with which Dr. Sloane examined the objects that came under his notice, both at home and abroad. Living at a time when the true nature of fossils was hardly admitted, and when the possibility of their being the extinct representatives of a world of vastly anterior date was not even suspected, he yet finds "another advantage" in the study of the Natural History of foreign countries, which, he says, "the knowledge which we produce from a naturally brings, namely, the consideration of the causes of some very strange but certain matters of fact. It has puzzled the philosophers of all ages to give an account, how parts of vegetables and animals, real sea-shells, and substances, should be found remote from the seas, wherein they seem to have been produced and bred. This is a phenomenon which will appear strange, when it is made out that many of the substances, as for instance, corals, *echini maris* (sea eggs), the palates and tongues of fishes beafter described, and which now live and breed in the seas adjoining to Jamaica, and no nearer than some few degrees on this side, are found in as great plenty in the inland parts of England, imbedded in the earth, clay, and sand, as if it had once been the natural place of their production and increase. This I was very much surprised to find." He adds that some of the new ferns he describes and figures, "may be discovered upon some of the stones or slates which lie in plenty in the strata over the coals in many parts of England." It is true that no absolute identity can be traced, but the diligent study of an observant naturalist, and suggests an escape from a difficulty founded on sound natural history principles as then understood.

Dr. Sloane had been admitted a member of the Royal Society in 1684, and on his return from the West Indies (in 1696), his collections, really astonishing for the value and variety of them, were deposited in a museum presented to the Society by Ray, and published in their Transactions.

Before that, however (in 1693), he had been elected secretary of the Society, and distinguished himself by continuing the publication of the Transactions, which had for some time been suspended. He continued to hold the office of secretary till 1718. In 1706 he was elected a foreign member of the Royal Academy of Paris—then, as now, one of the highest honours that a man of science can receive; and in 1716 was created a baronet. In the same year he was elected president of the College of Physicians, which position he held for sixteen years. Eleven years afterwards, on the death of Sir Isaac Newton, he became president of the Royal Society, an office which he resigned in 1740, on attaining the age of fourscore. Immediately afterwards he retired to his country-house at Chelsea, of which place he had purchased the manor about twenty years before, distinguishing the occasion by presenting to the Society of Apothecaries the statue of Trebolen of their patron saint. "He did not, however, pass into that kind of solitude which excludes man from society: he received at Chelsea, as he had done at London (in his house at Bloomsbury) the visits of people of distinction, of all learned foreigners, of the royal family, who sometimes did him the honour; and what was still more to his praise, he never refused admittance or advice to rich or poor who came to consult him concerning their health."

Although of weakly constitution, and confined to his chamber for three years, from the age of sixteen, by a spitting of blood, which interrupted the regular course of his studies, and to which he was always more or less subject, "he managed, by extreme care and temperance, to live for beyond the limits prescribed for the age of a man, being himself an example of the truth of his favourite maxim, that sobriety, temperance, and moderation are the best preservatives, and the most powerful that Nature has vouchsafed to mankind." It was not till he had entered his ninetieth year that he began to complain of pains, and to be sensible of a

universal decay. The approach of death, however, brought no terrors, and he expired, after a short illness of three days, on the 11th January, 1752.

Sir Hans Sloane is in the highest sense of the word a collector of curiosities. Nothing seems to have come amiss; and during a long and active life, having abundant means, and gifted with a large amount of intelligence, he was enabled to bring together a series of the most extensive and remarkable objects then known, in almost every department of science and art. Aware of the great value of his collection, which was admirably arranged and catalogued in thirty-eight volumes folio and eight quarto, and which, he states in his will, had cost him 50,000*l.* in money, and with his usual liberality—he he had been throughout his life liberal, not only by large benefactions in money to almost every public institution in and about London, but also by distributing from his rich stores duplicates wherever they could be most useful—he bequeathed the whole (including his manor house at Chelsea) to the British nation, on condition that the Parliament should pay over to his estate the sum of 20,000*l.*—considered to be scarcely more than the intrinsic value of the gold and silver medals, the ores and the precious stones found in it.

The country, as represented by Parliament, accepted the legacy, giving up the manor house to the trustees of his estate, and nobly fulfilled the conditions of the will, thus becoming possessed of a nucleus round which has since been accumulated those other stores placed with his original collections in the British Museum. The list of objects brought together is worthy of mention. It includes 22,000 medals and coins, 542 precious stones, 700 canoes, and infinitely more than 10,000 specimens of minerals, about as many shells, about half that number of conchs, sponges, crustaceans, and other marine animals; 1,555 fishes, 1,172 birds, 521 reptiles, 1,884 quadrupeds, 5,430 insects, 12,600 vegetable preparations, 750 anatomical preparations, upwards of 50,000 volumes of books, a large number richly illustrated; 3,506 manuscripts, 510 pictures and drawings, and between two and three thousand miscellaneous.

In the year 1753 an act of Parliament was passed for the purchase of this collection, and also of the Harleian manuscripts, and "for procuring one general repository for the better reception and more convenient use of the said collection, and adding thereto." A sum of about 100,000*l.* was raised under this act by a lottery; and, after paying the purchase of Sir Hans Sloane and of the Harleian collection, and also for the purchase and repairs of Montagu House,* there still remained a sum for investment, to provide for the supervision of these treasures.

There was, however, a condition added to them the Octonarian library, recently bequeathed by Major Arthur Edwards, who also left a reversion of a sum of 7,000*l.* The collections being moved to Montagu House, the Museum was opened there for study and public inspection on the 15th January, 1753.

It is curious to contrast the regulations of the trustees on this first occasion of rendering the collections publicly available. The Museum was to be open every day, except Saturday and public holidays, a week also being excluded at Easter and Whitmaside. "Persons desirous to see the Museum must, in writing, give in their names, condition, and place of abode, as also the day and hour they desire to see the Museum, before the day preceding the morning, or between four and eight in the evening, on the same preceding day, which he will enter in a register, to be laid every night before the principal librarian; and, if he shall judge proper, he will direct the porter to deliver tickets to them, on their applying a second time for tickets."

No more than ten persons were allowed to be present for each hour of admittance; the under librarian attended five, the assistant in each department the other five. One hour only was allowed for the whole visit, and the party must keep all together. No children were admitted. This system of admission by tickets, with some modification, continued till 1810.

Fast indeed have been the additions made within the first century, now just concluded, of the Museum's existence. The largest and most important of the single additions was undoubtedly the library of George III., presented in 1823, by his successor, and considered to have been formed at an expense of little less than £200,000. With this and other additions, the library of books and manuscripts has already become one of the largest in Europe, and is increasing at such a rate as to render it necessary to look forward to the need of increased accommodation. The collection of antiquities from Asia Minor, Egypt, and the East is altogether unapproached, and also require more space. The Natural History collections in every department are equally remarkable, and increasing in like manner, while the collection of coins and medals, and of drawings, if not occupying so much room at present, are for that reason unseen by the majority of the visitors, and for the most part are unapproachable.

Although a new and gigantic building has been constructed of late years at vast expense, yet such is the plethora of objects, that the question of the most important question has arisen among the trustees and the Government as to the mode by which increased space, now urgently needed, shall be obtained. It has unfortunately happened that the majority of those with whom the decision rests, take as active part in the management of the institution, and are altogether unacquainted, except by hearsay, of the real requirements of science and natural history in the matter. It has been proposed and recommended by a majority of the trustees, that the Natural History collections shall be separated, and shall be removed from the present site of the Museum to some new building to be erected at South Kensington. Admissible as this institution at South Kensington is, while the objects of the very different interests of art, there could hardly be a more unfortunate event for Natural History than this to remove the collections from their vicinity to the great library of reference by whose aid they are studied, and the conclusions drawn from their study brought to bear on exact science, and plant them at a distance, where they could be little more than mere objects to gaze on.

Utterly opposed to the spirit of Sir Hans Sloane's bequest, and to the experience of naturalists of all ages and countries, it would be an act of the most mischievous, if not suicidal character, to cut our national collection thus in half—to sever the present from the past—to detach literature and history, science and art, from the scenes of the very objects which have given them value from the objects themselves, which are not less valu-

able for what they once suggested than what they now suggest,—and to sever the tie between the naturalist and the philosopher. Destructive equally to the advance of philosophical Natural History and the right consideration of pure literature, such a movement, were it proposed, could not fail to be recognized and denounced.

During the century that has elapsed since the Museum was founded, the pursuits of Natural History have become elevated from a comparatively low to occupy the very highest place. Their utility has been recognized, their material results appreciated. An amount of accuracy has been introduced into their study which was scarcely dreamed of when the Museum of Sloane, and which he, not being himself able to accomplish it, not only left behind the means, but pointed out by a great example the only right way. In art, in science, in literature, and in natural history, to divide is to lose and be defeated, to combine is to conquer. The principle of Hans Sloane in collecting was living together from distinct parts of the earth all objects remarkable and interesting, and to place them in such way that they might admit of comparison. He had in his own house together the collections and the library, and each helped to explain, and illustrate, and give a natural interest to the other. For this he laboured, and with what success his memoir and the subsequent history of his collections will show. It would, indeed, be a melancholy spectacle to see that collection, the honour and pride of England while in its integrity, broken asunder, part of it carried away and separated from all means of utilizing it, and the rest—*disjecta membra*—left behind, to receive perhaps fresh accumulations from without, but having lost that vitality which can alone be communicated by the continued union of all the members in one growing body.

THE SCIENCE OF THE SEASHORE.—No. II.

THE SEA BEACH.

We have thrown out a few thoughts upon the sands, but there is another kind of shore—the Beach—which is much worse for bathers than the sands, but much better for curiosity-seekers, and particularly for pebble-hunters. Of the Pebble-Beach we shall now treat.

It might at first be supposed that all pebble-beaches were alike in their constituent pebbles, as they are in their collective appearance. It is, indeed, commonly thought that the finding of good and valuable pebbles is a mere matter of chance, and that the chances are as good on one coast as on another. Actual search, however, soon convinces us that this is an error, and that pebbles, like peoples, have their nationalities and localities; and we shall understand the cause of the fact if we consider how a beach of pebbles is aggregated together.

Daily examination of any such beach, and of the adjacent cliffs and rocky strata, shows us that the materials of the former are to a great degree derived from the latter; so that where there are flints in chalk cliffs, many flints more or less water-worn, will be found on the shore below. Where the cliffs or adjacent strata are of limestone or sandstone, the beach will mainly be of the same character. Yet there are many foreign importations among these native stones. The sea is always conveying its freight of foreigners, and unloading them upon our coasts; and probably more or less in proportion to the strength of currents and their direction and sweep. Thus it happens that we find pieces of granite and of primitive rocks on shores bounded by the later geological formations. At Yarmouth, for instance, and along the Norfolk coast, where the low cliffs are amongst the more modern formations, we have picked up rounded fragments of the earliest rocks. In such instances geological extremes meet—the oldest and the newest come into rough and rolling companionship. While, therefore, every pebble-beach possesses a certain prominence of character which is never altogether obliterated, yet every such beach is in part modified by the daily tidal contributions of the roving wanderers. It is in such maritime nations the mass of such a people is of one country and tongue, but a multitude of others is interspersed among them. At Plymouth, at Narbonne, at Genoa, and at Leshon, the people are nationally English, French, and Italian respectively; but the very cries and conversation in the streets and on the shores will attest that foreigners are scattered here and there amongst the natives.

It is by a far more remarkable process than we might suppose, without study, that a pebble-beach is commenced, and the result is equally remarkable. Underneath our feet we have here the produce of thousands of storms and the toys of millions of waves. There are specimens of many and massive rocks, reduced, rounded, selected, and partly sorted as if for a mineralogical museum. Had I gone, bannier in hand, amongst all the original sources from which these stones have been derived, I could not have produced the effects which the waves, and the collisions with other stones, have produced for me. They have been my best friends in furnishing upon this open floor specimens of every variety of native rock among them. They have likewise furnished me up the best natural breaker, and have furnished man with a model which he can never surpass. Each constituent stone is most easily moved, while the whole mass of stones is immovable at one and the same time. I have stood upon Plymouth breaker during its construction, and marvelled at the powerful masses lowered into the sea from depths with so little apparent effect. But Man can never, by all his engineering skill, equal Nature's pebble breaker. As you stand upon it beside a rough sea and an incoming tide, observe how a whole broadside of heavy sea dashes in with mad impulse upon the strand, and yet disappears but an inconceivable portion of it. The billows being loose and easy, movable in parts, the shock of the waters is met—not with unyielding resistance, but with easy compliance, and a rapid distribution of the broken billows takes place between the crevices of the rounded and rolling pebbles. The huge incoming mass of waters is divided and subdivided into a thousand little streams, which penetrate between the solid and round stones, and lose themselves in the deep sand beneath. Thus the billows that would, were they in the sides of a stream, and make up of man's bulks and bulwarks, and overturn piers and projections, though bound with iron and clamped together with strong

* The present Museum was constructed on the site of the old house.

chains, all pour themselves harmlessly upon that unmoted, yet unequalled, trophy of Nature's engineering—a pebble-beach!

One of the very best natural breakwaters is to be seen at the Chesil Bank, on the Dorsetshire coast. It extends for about seventeen miles from the mainland, which it connects with the well-known Isle of Portland. In most places it is nearly a quarter of a mile in breadth. The fundamental rocks upon which the shingle rests are met with merely at a few yards below the level of the sea; but the pebbles themselves, which are chiefly siliceous (flinty), and are loosely aggregated, rise to a height of from twenty to thirty feet above the common high-water mark, at that part which lies nearest to the Isle of Portland. Probably the formation of that part of the bank which joins Portland to the mainland is due to an original shoal or reef, or to the set of the tide so acting in the narrow channel as to arrest the pebbles always travelling in from the westward; and it is a singular proof of this course that throughout the Chesil Bank the pebbles gradually diminish in size as we walk westward,—that is towards the quarter from which they are derived. All the calcareous stones (composed of lime), rolled along from the west, are now ground into sand, and in this form they pass round Portland island. We must presume that the velocity of the waves, due to the combined influence of the winds and tides, gradually increases from north-west to south-east, and this is the direction of the beach itself.

It is curious that human art is attempting in this very vicinity to imitate Nature's work. The great breakwater near Weymouth (visible from the steam-cruisers which ply in this direction) is designed to be nearly a mile and a half in length, to afford shelter for more than 2,000 acres of Portland Bay, where the depth varies from two to upwards of five fathoms at low water. The first stone was laid by Prince Albert in July, 1839, and the quantity of stone dropped in the sea during the year 1854 amounted to 565,450 tons. Since the commencement of the works the quantity dropped has been no less than 1,743,327 tons! The total cost of this imitation of Nature has been nearly half a million of money, yet, after all, the whole will be but a mere minute minority of the long Chesil Bank. Who shall conjecture how much time has been occupied in its seventeen miles of pebbly accumulation—pebble, not block by block, every tide a little, and thus finally making the moving multitude of rounded stones an impassable barrier to the breakers of the raging Atlantic!

The pebble-hunter will now be freely prepared to admit that he must study the character of particular beaches before he can fix upon any one as likely to afford him or her the kind of pebbles generally sought after for subjects of the lapidary's art. The adjacent rocks must be known, and the set or direction of the breakers beating upon them, which will give the line of search for pebbles derived from the rocks.

If we were writing a pocket-guide for pebble-hunters, we should specify the geological character of the cliffs and strata upon most of our sea-coasts, and thus indicate the principal constituents of the several sea-beaches which loosely girdle our wave-washed island. As, however, we are only at present able to afford hints, we shall content ourselves with describing the most valued pebbles of some principal marine resorts: and we may first treat of the Kentish and Sussex coasts and their chief watering-places.

Wherever chalk cliffs and chalk deposits prevail, the greater proportion of the pebbles upon the adjacent beaches will be flints in several varieties. Large beds of flint run along the elevations of the Upper Chalk formation, and are familiar to nearly all Londoners who have at one time or other trod the shores at Margate, Ramsgate, Brighton, and Dover. Along the whole of our south-eastern coast the pebble-beaches are very much alike, and if their stones be broken, they will be found, in nine examples out of ten, to be the black flint of the chalk or some other variety of flint. With such we have nothing more to do at present.

There are fossils in flint, and, indeed, according to the notions of some geologists, every flint has an organic origin. But be this as it may, the only pebbles that will detain us here are those which contain organic remains. Formerly very few of these were found, but about forty years ago, a gentleman resident at one of our Sussex watering-places, Bognor, began to subject a pear-like kind of fossil to examination, and then to the lapidary's slicing machinery. The beauty of the pebble when polished was so remarkable as to attract much attention, and gradually this variety became a marketable commodity, appeared in curiosity shops, and finally in brochures on jewellers' counters. Diligent and continual search was henceforth made along all the Sussex shores, and numerous very fine specimens of this fossil were frequently discovered. We shall now attempt to describe it particularly, and to illustrate our description from specimens in our own cabinet.

FIG. 1.

FIG. 2.

Fig. 1 is a pebble polished outside and all round, instead of being sliced, as is generally the case; and it is seen to include a singular petrification of a radiating form. The centre of the fossil is nearly that of the pebble; but this circum-

stance is accidental, whilst it enhances the beauty of the specimen. Every radiating fibre is distinct, and pursues its course nearly without interference to the edge or outer circumference of the stone. Other fibres, but much finer, are visible between these, and seem to be cut off and across as they come to the surface. The more we look into the stone the more numerous and beautiful do the fibres appear, and we are led to imagine that we have here the petrification of a sea-anemone, with all its multitudinous feelers extended, and caught and enclosed in the siliceous at the moment of its fullest outspreading. For several years it was thought that this really was the petrification of a sea-anemone, at least by ordinary people, and such is even now the opinion of many. But a little geological knowledge is sufficient to dispel this illusion. The soft parts of an animal like the anemone do not become fossilized, but perish and vanish before petrification can take place. It was only when many hundred specimens had been collected, and polished, and carefully examined, that the true shape and character of this fossil was ascertained. It is simply a fossil sponge, which originally had a root or basis by which it was attached to stone or rock. The shape of it appears to have been like that of a funnel; and hence the scientific term given to it—*Chonites*, which is from the Greek word for a funnel.

We have endeavoured to obtain a recent sponge of a similar form, and such an one is represented in Fig. 2; but no recent sponge has the peculiar and exquisitely siliceous arms or feelers which form the distinctive features of the *Sussex chonites*. From many specimens we are inclined to think that no existing sponge is exactly like the fossil, but that the *chonites* had a central cavity or one which ran through the whole, and that the feelers were most numerous about the head or mouth of this cavity, and that Fig. 1 exhibits this head or mouth; the feelers issuing from it and leading downwards. Hence we seldom or never find these feelers so densely assembled in more than a small thickness of the pebble. If we can cut just across this thickness, or pebble, just round it, we get a fine specimen; if not, we miss the main beauty.

FIG. 3.

FIG. 4.

In Fig. 3 we have obtained a section across the feelers, and cut off a slice of the pebble that includes the central sac, which is therefore here unseen.

In Fig. 4 we have this cut-off slice with the central sac, showing its course, and the way in which the feelers are attached to it, as seen when held up and viewed by transmitted light.

There is in some specimens a curious spiral tube winding around the central cavity, the section of which is seen in two or three specimens in our collection.

Chonites are not confined to the beach; they are also found in the chalk-pits inland. We have found a few at Lewes, some in flint and some in chalk itself. When the flints containing them have been much weathered (or worn down by exposure), the *chonites* itself is often fully exposed, as to shape and structure, and it is in such cases that we discover its true character and form. Once we have seen the spiral tube winding round the central cavity, as shown in section in some pebble-beds. But in few of the *chonites* found in the chalk-pits is there the beauty and colour so admired in the beach-pebbles. In the latter the coloring so much valued by lapidaries and jewellers is due to infiltrations of iron in the siliceous, often producing a moss-like form, and accompanied with rich red or brown hues. The merely plain and uncoloured is not so much valued for sale, although it is even more interesting to the naturalist.

The very numerous and continually increasing searchers after pebbles of this kind have greatly diminished the chance of finding good examples on the Sussex beaches. Of late years we have only found one or two in our parties in these directions. It may save much time to hint to all workers that their pursuit is hopeless in the immediate vicinity of Brighton. They may find a few near to Rottingdean, and still further away. But it must be told as a secret, that not many of the best specimens now found come from any part of our coast. In winter-time the opposite coast is resorted to by lapidaries, and along the beaching from Brighton, one or two vagrant Englishmen may be found, "out of season," diligently gathering the pebbles, in hopes of pouncing upon *chonites* and "landscape agates"—(of which more in one of our following papers). These, if found, are carried home, and in due time appear in our shops as "Brighton pebbles,"—perhaps it may be ascertained "picked up yesterday upon the beach below the Battery," or, possibly, "just below the bathing-machines."

One or two old hands at this kind of thing now patronize the lapidaries, and purchase the finest examples of *chonites*. High prices are given for very superior specimens; and we know a collector who has expended £200 in one morning amongst the Sussex lapidaries. If a remarkable example is found, he is telegraphed to, and he gives coin for *chonites* forthwith; but it must be a very remarkable example to attract him now. You and I, gentle and perhaps fair reader, must be content with more ordinary specimens, and even they are not so abundant as once they were. Good pebbles, like good people, are scarce. Some few, however, may still be found in the less frequented beaches of the South-Eastern coast and the Isle of Wight.

CABS AND CABBIES.

This moment we turn our backs upon four teams as are deservedly punished for our folly. When we cease to rely upon open competition—upon unchecked, unstimulated commercial energy, and put our trust in government inspection, in government regulated prices, and in the licensing system,—we are badly and unwillingly served, and involved in endless alterations. The history and progress of gas-legislation is one proof of this; the present condition of cabs and cabbies is another.

The London cab is a vehicle upon four wheels or two, as the case may be, within the meaning of the act, and that is all. It is an abuse of language to call it a carriage. In the distribution of licences there must surely be some mistake, for cabs that are allowed to carry four persons are built to carry two, and cabs that are licensed to carry two passengers are built to carry one. It is not a question of meddling against the costume of our grandmothers; it is not a question of Daniel Lambertism against the figure of our grandfathers. The four-wheeled cab will not accommodate more than two average passengers with any degree of comfort; and the Hansom cab will not accommodate more than one.

The four-wheeled cab is not a slightly vehicle, when viewed from the outside; and it is even less slightly when examined from within. Its furniture consists of a little monthly mat, a table of fives, and a handful of damp straw, or a piece of ragged padding. Its roof is low; its seats are high and narrow, and so constructed that the sudden stopping or starting of the horse will jerk a passenger forward and his nose. At what periods they are cleaned is it difficult to imagine. The dust of summer often clings to their shabby window-frames in winter, and the mud of autumn is sometimes on their flooring in the dog-days. They are often flavoured with stale tobacco-smoke, strewn with fragments of sandwiches, walnut and pepper-kernel shells, cherries, and broken tobacco-pipes; and are frequently well supplied with those rampant insects, whose presence may be felt, but never politically acknowledged.

Though surrounded by restrictions as to the fares their drivers shall charge, the days they shall be driven, and provided at every stand with a police-woman, whose pay is fifteen shillings a week and his clothes, there is no regulation as to the passengers they shall carry; and the consequence is, that drunk or sober, healthy or sick, living or dead, all are welcome, as long as they are paid for, or can pay. The dying patient, in the last stage of a dangerous and infectious disease, is taken from house to hospital, or from hospital to house, at sixpence a mile and a little over, without a murmur, a fine, or a prohibition. There is no horror of typhus fever at two shillings an hour, and corpses are not objected to, if mixed as "extra" passengers. The driver sits outside, secure in the fresh air and his disinfectant tobacco-fumes; and the effects of such reckless carrying fall entirely on the public. No passenger is ever in a pleasant ride, but always with a full feeling that his vehicle was a sort of vomited condemned cell, into which he had been packed by Government and stern necessity. The horse (itself is always a fruitful source of anxiety to a man of sensitive humanity. It is not pleasant to feel that the creature that is to be pained by the rudely pedestrans, to hear the criticisms of unkind boys upon your cranky equine, and to account for your slow progress by seeing your cabman abandoning driving, to hold the animal up upon those forelegs that have three times as many knees in them as they are anatomically entitled to. If you blame the driver for coming out with such a vehicle, he will tell you what is generally true—that he has no choice in the matter, and is forced entirely by his employer, the owner. Dirty and feeble as the cab and horse may be, the driver contracts to pay twelve shillings a day for his team, besides all expenses, before he makes anything that he can call his own. This "day" extends from nine o'clock in the morning till about eight o'clock at night, during which, if he requires it, he is allowed another horse. If he drives a night-cab, he goes on duty at seven or eight o'clock in the evening, and works until seven or eight o'clock in the morning with one horse. These night-cabs have even more spectral cattle in their shafts than the worst of the day-cabs, as any one may see who is abroad, like state policemen, at day-break.

The Hansom cab which we are content to accept as the highest product of street-travelling-bird-hackney-governance-inspected-taxed-and-regulated-luxury, is, perhaps, always the vehicle, short of the old waggons, that a patient conservative pirate ever endured. Its wheels are high, to put on inferior horses, and to force them into a compulsory speed, and to increase the consumption of hay or corn; but what may doubtless be economy on the part of the owner, is productive of inconvenience to the unfortunate public. The floor of the cab is raised so much by the height of the axle-tree, that it requires a good stride and leap to mount in springing question, if a passenger be a lady, her dress is snared by the dirt of the wheels.

When you stand upon this narrow platform, that stretches out beyond the hood of the vehicle, it is no easy matter to open the two sticking apron-doors, and when you have difficulty in drawing back so as to allow sufficient room for your legs to turn to fall back on each side. In one large provincial town, such as Birmingham, you have no such struggle to open your vehicle, because it is much larger and the entrances are at the side. In a London Hansom your fortune is if you gain your seat without crushing your hat against the top of the hood, or leaning your forehead against the back of the seat, or a sudden starting of the horse. If you wish to direct the driver, you have to lift up a trap-door over your head, which often falls down and pinches your fingers; and when you wish to be protected from the rain, a clattering, double-jointed, hinged window is let down from the roof, dropping sometimes on your hat, passing always within a inch of your face, and never making the vehicle water-tight, after all this noise and preparation.

These things may appear small to grumble about, but life is made up of small things, and he who endeavours to make such trifles pleasant, London is not so much, where the greatest happiness of the greatest number. The cab question in London regulated vehicles are let actively loose upon the streets, the number were smaller, however, it would still involve a great principle. We have tried Government protection, as applied to hackney carriages, and this is all it can give us. It is now time, so it seems, to let this branch of human

industry loose, and see what cab owners and cab drivers can do for us, with the liberty of fixing their own prices. Manchester is able to produce a far better vehicle at about equal fares; and finds no dreadful anarchy in a system where every coach proprietor makes his own charge, the simple machinery of appeal being the Town Hall and the arbitrator. We have been taught many lessons in free trade by Manchester, before now, and it appears that it is necessary for it to teach us another.

THE ECLIPSE OF THE 28TH JULY.

For the purpose of securing full and accurate observations upon the total eclipse of the sun on the 28th of July, the British Government despatched the *Himalayas* to Santander, with several able astronomers, scientific gentlemen, artists, &c. An event so important and so interesting as a great solar eclipse is one which can in its duration be but very brief, and it is therefore necessary that persons in various places, and under different circumstances should have the opportunity of remarking it, each confining himself to that department of science in which he is most deeply versed. And yet, with this distribution of labour, the time for the observation of each must be limited—and it may be added that without the aid of others, his information must be incomplete. Amongst the peculiarities arising out of a total eclipse are the effects produced upon animals, as well as upon inanimate nature itself. Some persons are engaged with thermometers, others with photometers; others in marking the alarm and confusion of the inferior animals when the light of day is suddenly obscured and sinking into misty darkness.

A correspondent, writing from Santander, makes the following remarks:—

"The totality began at 2h. 56m. 24s., and lasted until 3h. 1m. 44s. At 3h. 1m. of the thermometer fell upon the grass had fallen from 71. deg. at 3h. to 64. deg. 5 min., and there was a perceptible chill in the air, increased, perhaps, by the wind having risen almost dead calm at 2h. 56m. During the totality the following phenomena were also observed:—At the moment in which darkness began to descend rapidly, consternation seemed to seize nature; pigeons flew about in clusters, confused and scared; poultry sought their roosts; my dog whined at his feet; small birds fluttered and twittered excitedly, as if heark was in view; a cow moaned loudly; and the deer gathered like swarms on the flowers as they dropped and closed their petals. But the most impressive moment was yet to come: as darkness deepened, and the winds grew hushed, man and beast were struck dumb with awe."

Another correspondent from Tuckers states:—

"At 4 minutes past 3 an unearthly, ghastly glow, once seen never to be forgotten, covered the whole scene, and was most evident upon the gravelly ground of my lot. The light rapidly decreased; but with the exception of this glow, which was very conspicuous upon the city hills, I could see no particular change of colour in the trees or landscape."

"At 5 minutes past 3 the western horizon was lost in darkness, and the conical hills to the north-west were invisible, while the clouds towards the east rose to form a bright glow of light, from the light of which the sun shone at this moment bright waving lines of light flickered one after another over the ground parallel to my line of sight with the sun. On looking upward from these clouds, I found that the sun had already disappeared, and that I had missed the formation of the rainbow. The black crescent of the moon was seen, and the last of the crown of glory; two stars shone brightly a few degrees from the sun; and so magnificent was the spectacle above, so glorious the spectacle below, that I could not help looking for a few moments from the one to the other. A bright light, I think of a greenish-yellow colour, which appeared to emanate from the base of the sun, shone with a brilliant glow. The darkness was not intense; the light from the corona and the distant refractions far surpassed the brightest moonlight. It would have been easy to read the smallest type."

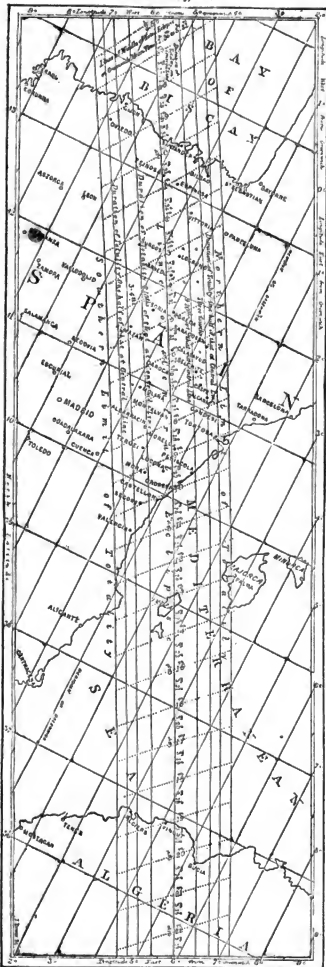

Correspondent from Parnes del Mar observes, with respect to the rapid changes in colour upon the landscape, as well as the effect on animals, caused by the eclipse:—

"Before totality commenced the colours in the sky and on the hills were magnificent beyond all description; the clear sky in N. assumed a deep indigo colour, while in W. the horizon was pitch-black (like night). In the E. the clear sky was very pale blue, with orange and red like sunrise, and the hills in S. were very red; on the shadow sweeping across, the deep blue in N. changed like magic to pale sunrise tints of orange and red, while the sunrise appearance in E. was changed to indigo. The colours increased in brilliancy near the horizon, overlaid the sun, whose white rays, as the darkness deepened, brought round, and assumed a warm yellow tint; the darkness grew deeper, the thermal rays could not be read. The countenances of men were of a livid pink. The Spaniards lay down, and their children screamed with fear; fowls hastened to roost, ducks clustered together, pigeons dashed about the sides of the houses, fowls closed their wings, and the sun shone early at 2h. 56m.; at 2h. 56m. the sun began to grow (coming at 2h. 57m., and commencing at 3h. 56m.). As darkness came on many butterflies which were seen about flow as if drunk, and at last disappeared; the air became very calm, so much so that the grass felt to one of the observers as if recently plaited up."

A correspondent from Tarragona gives the following as the result of his observations:—

"At 1h. 42m., local time, the eclipse commenced, and it was curious to observe how rapidly the sun's rays lost their power, though the light did not at first sensibly diminish. At 1h. 47m. the thermometer (dial) stood at 71° (centigrade scale), and from this it gradually went down to 10° at 2h. 57m., the centre of the eclipse. The sun was uncovered during the whole time, with the exception of a minute or so, five minutes before the totality. At about 2h. 56m. the last limb of the sun disappeared, but though the total eclipse was completed, no hot limb for 3 minutes and 30 seconds, the time seemed too short to notice all the wonderful effects, and my attention was chiefly directed to the disc of the sun, which presented a magnificent spectacle. The instant the sun was shut out, most of the men present, who were standing round the moon's circumference, which presented an orb of jet black, and almost immediately, numerous exclamations seemed to shoot out like small jets of fire from the rim of the sun. These were not constant, but seemed to keep changing; but this, probably, was the effect of the men's eyes passing over them. Two on the sun's rim were visible all the time, but one on the eastern limb soon disappeared, and the one succeeded by one on the north west limb of the sun, the most conspicuous of them all. The colour of the sky was a very deep blue, but not black, as it was clearly seen against the moon's disc; and at least three or four stars were visible to the naked eye—Jupiter and Venus, and two nearest to the sun, shining almost as brightly as on a summer night."

Path of the Moon's Shadow over the Earth during the Great Eclipse of the Sun on the 16th July, 1860.

The times at which the most important phases of the eclipse happened at the large towns within the above parallels were as follow:—

| Places. | Beginning of the Eclipse. | Beginning of Total Eclipse. | Middle of Eclipse. | End of Total Eclipse. | Ending of the Eclipse. |
|-----------------|---------------------------|-----------------------------|--------------------|-----------------------|------------------------|
| At Gijon | h. m. s. | h. m. s. | h. m. s. | h. m. s. | h. m. s. |
| Sancti | 1 30 7 p.m. | 2 33 56 p.m. | 3 35 30 p.m. | 2 37 5 p.m. | h. 44 32 p.m. |
| Burgos | 1 30 15 " | 2 48 13 " | 2 44 53 " | 2 46 33 " | 3 53 9 " |
| Bilbao | 1 30 20 " | 2 45 45 " | 2 47 23 " | 2 49 0 " | 3 55 37 " |
| Barcelo | 1 30 26 " | 2 48 84 " | 2 50 37 " | 2 51 40 " | 3 58 24 " |
| Saragossa | 1 46 31 " | 3 14 7 " | 3 5 " | 3 23 " | 4 10 2 " |
| Valencia | 1 55 18 " | 3 7 60 " | 3 8 58 " | 3 10 7 " | 4 15 43 " |
| Orleans | 1 57 10 " | 3 8 48 " | 3 10 31 " | 3 12 16 " | 4 17 4 " |
| Torres | 2 10 5 " | 3 10 5 " | 3 11 10 " | 3 13 16 " | 4 17 31 " |
| Algiers | 2 18 45 " | 3 20 43 " | 3 30 45 " | 3 31 46 " | 4 25 40 " |

In England the magnitude of the eclipse may be judged from the following considerations:—If we consider the diameter of the sun to be represented by 100, then, at all those places situated on or near a line joining London and Liverpool, 83 parts of the diameter of the sun was obscured. At places situated near lines parallel to the above drawn through Dublin and Edinburgh respectively, 87 such parts were obscured on the former and 79 on the latter; and at intermediate places the magnitude was intermediate. The greatest eclipse in the British Isles was therefore in Ireland, and the smallest in Norfolk. The point of the sun's border on which the moon first impinged, was situated on the right hand, and a little below a horizontal line drawn through his centre, and the last contact was a point on the left hand, or eastern border, above the horizontal line passing through his centre.

The following were the times of the beginning, middle, and ending of the eclipse in local time at each place:—

| Places. | The Eclipse began. | Middle of the Eclipse. | The Eclipse ended. |
|-------------------|--------------------|------------------------|--------------------|
| At London | h. m. s. | h. m. s. | h. m. s. |
| „ Oxford | 1 38 0 | 2 48 0 | 3 53 12 |
| „ Cambridge | 1 30 54 | 2 41 28 | 3 47 6 |
| „ Dublin | 1 37 36 | 2 47 12 | 3 52 6 |
| „ Edinburgh | 1 30 | 2 43 48 | 3 51 6 |
| „ Edinburgh | 1 16 12 | 2 25 6 | 3 30 6 |

Although the phenomena of this eclipse in England fell far short of those in the line of totality, yet it was the largest of any solar eclipse that will happen here till the 22nd day of December, in the year 1870; and the next and only large one in this century will be in the year 1887, on August 19th, which will be nearly total.

Prior to the eclipse of 1860, the "annular" eclipse of 1868 was the last most remarkable eclipse of the sun seen in this country. The following list of eclipses visible during the last century may be interesting at this moment to some of our readers, and will serve to render conspicuous the rarity of total eclipses:—

VISIBLE ECLIPSES OF THE SUN FROM 1700 TO 1860.

| | |

We hope next week to lay before our readers the results of our own correspondent's observations upon the eclipse, as seen by him in Spain.

The diagram in the preceding column shows that part of Spain and the Mediterranean over which the eclipse was total; the central line shows the central eclipse, and the duration of totality; the boundary lines show respectively the northern and southern limits of totality. At each boundary the totality was only of momentary duration, increasing in time towards the centre. The diagram in other respects explains itself.

NOTHING LIKE LEATHER.

THERE is nothing like leather. Some years ago we might have given the preference to spelter, or rather spelter warrants, but now the immortal J. Winkle Cole has been outdone by a few leather merchants. Shrove-day says that a tanner will last for about ten years; and it seems that a hide merchant, fed upon accommodation bills, will last about the same period. A trade in hide, it appears, is a trade of hide and seek—the hiding being performed by the debtor, and the seeking by the creditor.

The estate of Messrs. Streetfield, Laurence, Mortimore, & Co., is carried into an unformed Bankruptcy Court, to be torn to pieces by hungry officials. It represents with its collateral branches, an amount of debts and liabilities, exceeding a million sterling. Its assets are about two hundred

the First, through the medium of a red-breathed fraternity, looking it in Egypt.

But were the grey French cloud dissipated by the afore-mentioned sacrifices, there is yet that far blacker one, represented by the Quadrilateral, which, is and must ever be a standing menace, so long as it remains in the hands of the Teleschi, to the freedom and happiness of Italy, united or divided. The hour of Austria's most dire adversity has perhaps not yet arrived, and the House of Hapsburg, as of old, is biding through its difficulties; and by the resurrection of the Hungarian constitution, may yet regain its power in Europe, especially, as at the present moment common danger is drawing the German and English Cabinets into kindred alliances in maintenance of their individual existence. Considerable events are therefore tending more than ever to throw Italy into the meshes of French diplomacy, for it cannot be counselled that the only hope they have in indulging in their beads' idea, the emancipation of Venice, must be through the (magnanimous and material aid of the French Emperor.

Whether an Italian Government would be able to check an Italian nation, headed by Garibaldi, supposing him to carry out his programme in the south, from attempting to expel the Austrians from these provinces, time only can show. As it is, whatever influence the French Emperor has used at Turin to thwart the expedition, it is now almost out of the power of favour, if he wished, to control the national movement which "The Great Captain" has carried into Sicily. But there is little doubt that Victor Emmanuel and his Minister, who, whatever may be his shortcomings, has piloted North Italy into its present position with consummate craft, are heart and hand with Garibaldi. For it is idle to imagine that this crusade against the Bourbon is not sheltered and protected by the Sardinian Government, as whether French there may be between Victor Emmanuel and Cavour—who is openly cursed by his master—the former freely open his private pore to Garibaldi, and maintains a direct and frank communication with him, and the latter employs Sardinian men-of-war to convey the transports laden with volunteers and munitions of war, which are daily starting for Sicily, their cargoes being entered at the custom-houses under the head of *chiusieria*, and *ferrocini*, which soda, trinkets, and old iron, being interpreted, means saltpetre, rifles, and muskets, their passengers receiving their regular passports, though many are deserters from the Piedmontese army; the officers, nearly all, are either on leave from, or have served in, the Sardinian army, and are clothed in uniform under the noses of the authorities in the port of Genoa. Perhaps not the least remarkable amongst the numbers that are swarming south are Swiss deserters from Rome, who, having received their bounty of forty scudi from the Pope, cross the Tuscan frontier, and join the Garibaldians at Palermo or Genoa.

The chief practical difference, then, between Cavour and Garibaldi is, that one works openly and the other secretly; the former wishing to annex Sicily at once, whilst the latter desires to postpone it until the remainder of Southern Italy is in a similar position,—the latter rightly believing that with the Sardinian Government, and himself would be controlled by the former step; and it is to this which has led to the summary banishment of La Marina, Cavour's agent, from Sicily, at half an hour's notice, as he persisted in endeavouring to force the annexation.

Cavour appears evidently under diplomatic apprehensions, or, for once to have forgotten the old proverb which has hitherto carried him through safely:

"*Chi va piano va sano,
Chi va sano va lontano.*"

As for the Turin Cabinet, whatever pressure might now be brought to bear on it, with the view of checking the national crusade, no Government could exist for an hour that attempted it; and besides, Garibaldi has no present intention of relinquishing his grasp to men of the quill, and will doubtless ere long extend the area of his operations. So far from there being an alliance between Turin and Naples, the former has been waging a clandestine war with the latter for a month past, but it has not suited the Bourbons to present it; and as for a confederation, in which Austria is to be represented by Naples, Jesuitism by a bankrupt Papacy, civil and religious liberty by Piedmont, it requires no great sagacity to foresee that such diametrically opposite elements could not unite. Piedmont has determined never so far to degrade herself, or abandon her honour; and this, in the absence of French intervention, will soon be developed in a United Italy—namely through the national confidence in the honesty and ability of the foremost man in Italy—Giuseppe Garibaldi.

Reviews of Books.

PATRIOTS AND FILIBUSTERS.

A somewhat difficult task in Morals would be accurately to define the difference between a "Patriot" and a "Filibuster." In common parlance, a patriot is one who zealously defends his own country; a filibuster, one who makes an aggressive attack upon another's. It will, however, frequently happen that the most effectual method of defending one's own country is to become the aggressor—in which case, are we to consider the invader a patriot or a filibuster? When the war before us came to land, we anticipated being called upon to discuss the question in the one or the other; but, in the direction of an experienced guide. Mr. Oliphant's qualifications for such an office are well known and appreciated. He is a shrewd observer and an agreeable writer. What he sees he understands—what he understands he has the power of making comprehensible to others. Above all, he appears to be strictly veracious, possesses the art of saying what he knows, and knowing something of the subject on which he treats, and is free from conceit unduly characteristic of travellers who write their experiences.

The first portion of the work Mr. Oliphant devotes to a description of his tour in that little-known Circassian chain which, as he tells us, has so

long presented an insurmountable barrier to Russian aggression upon Persia and Turkey; a mountainous district, intersected alike by the levellers of the seas and the importance of its geographical position. After a brief disquisition on the condition and political importance of Circassia, Mr. Oliphant takes us off on a visit to Prince Michael (Hamed Bey), at Soukous, and thence upon an expedition into the interior of the country. The party, throughout their whole journey, met with the greatest civility from the inhabitants, who appear to have been warm and cordial in their hospitality; the most distressing circumstance our author has to complain of being the long period that usually elapsed between their arrival at a place and the appearance of dinner. The custom of the host was, after he had seen his guests comfortably squatted on their carpets round the fire, and had interchanged a few expressions of civility, to make a dignified exit; and then, and not before, to order a sheep to be caught, and killed for dinner. The Circassians are an isolated people, and consequently very ignorant. Many of them suppose the Sultan is "king-maker-general throughout the world, and that the origin of the late war was the consummation of one of his vessels, to wit, the Emperor of Russia, who was attempting to throw off the authority of the Padishah; and that it was to punish this powerful rebel that Turkey called in her liege subjects, the Emperor of France and the Queen of England." Their language is the most "impenetrable dialect which unfortunate travellers ever attempted to acquire—consisting of scraps which bear a greater resemblance to a succession of sneezes and coughs than to words." The last two chapters of this part treat of the progress and policy of Russia in Central Asia, and are at once interesting and instructive. The conclusion at which the author arrives is—

"That the extension of the frontier line of Russia to the east of the Caspian, must be regulated entirely by its progress to the west of that sea;—and that by transferring the war from the Crimea to the Transcaucasian Provinces, and preserving Circassian independence, it would have been in the power of this country during the last war to have checked that progress at once, and thus nipped in the bud long-continued designs upon Persia, and her dependence on the appropriation of those sources of wealth and power in the East, which have so materially contributed to raise this country to her present high position among European nations."

In the second part of the work we are taken to America—to the land of Filibusters—in the footsteps of the angelic—reverse the great patriots—cross the Delta of the Mississippi—thread its immemorial Bayous, and arrive at a land beautiful

"—with its prairies and fruit-trees;

"Under the shade a garden of flowers, and the bluest of heavens

"Resounding above, and resting its head on the walls of the forest."

We are a rice plantation—hear negro melodies—take part in conversation with a slave who prefers his present condition to freedom—visit New Orleans—get into the same boat with a band of Filibusters there—hear their adventures from their own lips—arrive with them at Georgetown—and, at last, find ourselves comfortably installed with our guide as guests on board a British man-of-war. We become acquainted with the character of the man, and get a good account of his antecedents and personal character, and, judging from our author's statements, are inclined to a much more favourable opinion of that individual—a respectable representative of his class—than we have hitherto had. Patriots and Filibusters is, altogether, one of the pleasantest and most instructive books of travel we know, and, as such, recommended to all our readers.

THE TEXT OF SHAKESPEARE.*

[FIRST ARTICLE.]

A CRITICAL edition of Shakespeare's plays, by an editor who has been able to impress a stamp of his own upon the work, is no ordinary contribution to modern literature, and demands a discriminating and generous examination. By this publication Mr. Staunton has taken a high place among the commentators. No recent editor has done so much as he, in disentangling the perplexities in the phraseology of the great dramatist that have come down to our time; and to him the honour is pre-eminently due, of introducing new readings, which are both important and indisputable. On the other hand, he has gained the respect and confidence of all Shakespeare scholars, by a scrupulous adherence to the old copies, and by the same, as far as possible. The first success that attended the publication of "Notes and Emendations," was a strong inducement to a merely clever and ambitious editor to tamper perpetually with the text of Shakespeare. We could point to many instances in the work before us, in which Mr. Staunton has resisted temptations to innovation in the text, and only a few of the most critical could have overruled. The corruption was so probable, the change he has proposed so simple, and the effect so satisfying, that remembrance was not to be anticipated, and the credit of discovery was all but secured. There can be no doubt that conservatism, in the cases alluded to, was the right—the only right—policy; and, in a few of the instances, a few of the editors who have noticed heretofore, will, we think, be abandoned in a second edition. But if the suggestions are really worthy of adoption, they will make a way for themselves soon enough; and the frequency with which Mr. Staunton himself has drawn new light upon archaisms and forgotten modes of thought, that have puzzled eminent scholars, and added to the value of his work, is a sufficient security for preserving untouched whatever is not repugnant to sense, in the expectation that further investigation will explain what is now doubtful, and clear up much that is obscuring. The new emendations and the proposed substitutions thrown out in the progress of the work, and, as we think, wisely confined to the notes, are so numerous, that, if followed, would make a place a selection will sufficiently show the ability and critical acumen which the editor has brought to the performance of his task,—a task that, besides much patient industry, requires a thorough knowledge of what has been attempted, an extensive acquaintance with the literature of the Elizabethan era, and great aptness and ingenuity in applying the acquisitions of a cultivated intellect.

To begin with the new readings actually incorporated in the text. In this list we include a very remarkable emendation, effected by the simple process of indicating how a passage should be read. Errypbody acquainted with the

* Patriots and Filibusters, or, Incidents of Political and Exploratory Travel. By Laurence Oliphant. W. Blackwood & Sons. Edinburgh & London. 1860.

* The Plays of Shakespeare. Edited by Edward Staunton. The Illustrations by John Gilbert, engraved by the Brothers Dalziel. 2 vols. London: George Routledge & Co. 1860.

"old copies," knows the prevailing absence of marginal or stage directions, and the perplexities that constantly attend the reader, until they are supplied. A short scene in "Timon of Athens" (act v. sc. 3), all spoken by a soldier before Timon's cave, and commencing—

"In all description there shall be the place:
Who's here? Speak, he!—You answer? What is this?
Timon is dead, who hath outcried this spot:
Some hearer, read this, there does not live a man."

contains, in the fourth line, taken in connection with what follows, an enigma, that in its original form, has hitherto defied solution. No commentator has been able to improve upon Warburton's emendation,—

"Some hearer read if this—"

an emendation which, as our editor says, is merely error upon absurdity. Mr. Staunton happily perceived that the second couplet should be printed with the prefix *11 lines*, to show that it was an inscription by Timon to indicate his death, and point to the epitaph on his tomb. The effect of this little light is astonishing. "Who," in the third line, has now the sense of "whoever;" all difficulties vanish, and a passage, till now in meaningless obscurity, assumes characteristic force and piquancy,—

"By all description there shall be the place
Who's here? Speak, he!—You answer? What is this?
[Edw.] Timon is dead—who hath outcried this spot—
Some hearer—read this, there does not live a man."

There can scarcely be two opinions about the propriety of an alteration of the text in "Antony and Cleopatra" (4, 3). No little ingenuity was necessary to discover an intelligible meaning in the word "*chafe*" in Cleopatra's playful ridicule of Antony's herosies. In North's "Pintarch," from which Shakespeare took the principal incidents of the drama, Mr. Staunton found an allusion to Antony's ostentatious imitation of Hercules as the chief of his house, that gave a pretty certain indication of the true reading. Retaining the old word, a meaning may indeed be extracted from the passage; but any signification that it has yet received is feeble and pointless, compared with the appropriate rallery conveyed by Mr. Staunton's well-grounded emendation—

"—Look, pyrrhic, Chastian,
How that Hercules Roman does become
The chief of his chief."

One reading, appearing in these volumes for the first time, in the "Comedy of Errors," has achieved a great success; it has already made its way into some recent editions of eminent contemporary editors. We give the lines in which it occurs, and Mr. Staunton's remarks upon the emendation:—

"Sing, boys, for yourself, and I will do:
Byrdal or the other way the play shall be,
And so a brace I'll take thee, and there be—Act iii. sc. 2."

"For byrdal I am responsible. The authentic copy reads *bed*, which was transformed to *bed* in the second folio, and this has been followed in every edition since."

The poetic refinement of this lection is evident at a glance. It is only necessary to read the scene, and the "illustrative comment" to the first act, to be convinced that the new text is as Shakespeare wrote it; and indeed the emendation seems now so easy and indispensable, that, in writings subjected to such minute and unrelenting scrutiny, it is surprising it has so long been overlooked.

In the same comedy (v. 1), Mr. Staunton has inserted a departure from the authentic copies which will not be so universally welcomed. It has long been suspected that the line,

"And therefore these errors are mine,"

contained "a small error," and it has been suggested that the word in italics should be converted into "all." Mr. Staunton's conjecture, "*mine*," is much more ingenious, and much closer to the original. If the disputed word be, as he thinks, "an incontestable misprint," he has no doubt hit upon the word that best supplies its place. As, however, up to the period of Mr. Collier's "Notes and Emendations" nearly all the best critics, Mr. Collier among the number, had decided that no change was desirable, Mr. Staunton's reading may not find a ready acceptance. It will probably be argued that the original, though somewhat grotesque, has a great deal of vigour in its unqualified simplicity, and that it is one of the irregular modes of speech of which we have another, though not exactly similar, example in "Coriolanus" (iv. 3): "You had better heard when I last saw you; I'll your favour as I self appeared by your language." The same may be said of the line in "The Merchant of Venice" (ii. 3), "Whence," in the courtier's speech (Comedy of Errors, iv. 4), and "betime" (Love's Labour Lost, iv. 3), both heretofore printed as two words, will be received as undoubted restorations. The same may be predicted of the substitution in "Timon of Athens" (iv. 3)—

"Baiter me this hoggar, and dead that lead."

"Demit," says Mr. Staunton's note, "of old spelt *demit*, is from the Latin *demitto*, to deprive or cast down." It is easy, by paraphrasing the line with Mr. Singer, to bring the old word *demit* into a kind of legitimate construction—"*Raise me this hoggar to great demit, and demit it to that lord.*" Who will rest content with this slurring of the sense, when a word is given scarcely differing in form from the original, and perfectly adapted to the antithetical necessities of the sentence? Timon did not pray for any mere denial of wealth, but for a complete reversion of condition. What he desired is compressed into the succeeding couplet:—

"The senator shall bow contempt here lying,
The hoggar shall be demit."

We must pass from this head, merely observing that the troublesome line in Polonius's "precepts" (Hamlet, i. 3), of which there are no less than four forms in the old copies, has been transformed by Mr. Staunton into—

"Are of a most select and generous shew in that,

and supported by very pertinent quotations from Ben Jonson. It is not easy to admit any proposal to remedy an error that the mind has long regarded as ineluctable; considerable favour has nevertheless been shown to this emendation since it was promulgated, by those whose opinions are entitled to the greatest deference.

The suggested emendations in these volumes are extremely numerous, and of various character. Some are estimated by the editor as unnecessary, and are merely thrown out as preferable to other unaltered suggestions; many

are regarded by us as highly valuable, and sure to gain early adoption. There is one that deserves particular notice, if, as we believe, there attaches to this elucidation much more significance than belongs to the explanation of such an unimportant passage. It occurs in that part of the short speech by Duke Vincentio, in "Measure for Measure" (4, 1), that has given rise to much discussion and many conjectural emendations: some editors thinking that a meaning was to be got only by supplying a considerable omission; others finding it in transpositions; and the "old emendator" cutting a way for it by most merciless mutilations.

COMMON READING.

"Of government the properties to unfold,
Would seem to me to affect speech and discourse;
I am put to blush,
Proceeds, in that, the lists of all advice
My strength can give you: then so more remains,
But let your audience, as just words will able,
And let them work."

What could be more hopeful and gratifying than to find all disturbance of the text highly to be deprecated, and an ample explanation afforded by Mr. Staunton's interpolated stage direction, as here given,—

"But that [folding his commission], to your sufficiency."

It seems almost certain that if the word "that" in the disputed portion had been "this," the direction would have been supplied by the early edition, and to question of corruption ever would have been entertained by anybody familiar with Shakespearean phraseology. In such a case, a phrase a few lines lower would have been "Here [just done] is our commission." Mr. Staunton's ingenious conjecture is fully substantiated by the prominence given in "Promos and Cassandra" the play on which "Measure for Measure" was founded—to the Sovereign's *letters patent*, which conferred "rule and power at large" on the deputy, had to be formally "read out; and were" layre written in connection with some great personage, it would be scarcely plain enough. Kestus required no instruction for governing in the Duke's absence: he could not, however, continue the government without the "sealed commission," like that given by Pericles to Helianus; all that could remain for the Duke to perform was the investiture of power. We regret to find that Mr. Staunton thinks a transposition also necessary. There is, no doubt, to modern ears, an incompleteness, as well as oddness, in the phrase—"as your worth is able." In Shakespeare's time these qualities probably did not belong to it, as would appear by the way in which one nearly identical is used by Anthony Munday: "But it happened to me far contrary to my desire, and I am persuaded that his favour counts him more victorious than his own force is able."

We have already noticed two important emendations in "Timon of Athens." Mr. Staunton proposes another (iii. 3), and supports it with such convincing argument, that we are persuaded it will soon displace the very inefficient attempt of the second folio to correct a palpable mistake. In All's Well that Ends Well (iv. 3), Helena's accidental response to Diana's derided protestations,—

"Yet I pray you
But with the word, the time will bring us summer,"

is, in our estimation, not improved by Sir W. Blackstone's suggestion,—"*Yet I pray you*," although some great authorities have given it their approval. It was surely in the highest degree improbable that Helena's promises of "recompense" and "dower" for Diana's easy services, accompanied with the intimation that "something" still remained to be done, could be spoken with the intention to frighten; and the eager readiness with which assistance was proffered, could not suggest to Helena the idea of fear in Diana's mind. Mr. Staunton supposes that "Yet" here has the signification of *Now*, and that "pray" is a misprint for *praise*. This slight change, produced by the expression of a single letter, makes the phrase perfectly harmonious with what precedes and follows; and the sentence so amended and interpreted is in strict conformity with old conjecture; as in the "Merchant of Venice" (ii. 9),—

"Yet (i. e. till now) I have not seen
So likely a husband of love."

The proposal to amend "The quality and hour of our attempt" (1 Henry IV., iv. 1), by transforming "hair" into "*down*," and that for correcting "Elvied against the people" (Coriolanus, iii. 3), by substituting "*inveighed* against the people," appear the more tenable the more the mind becomes familiarised with what precedes and follows; and the sentence so amended and interpreted is in strict conformity with old conjecture; as in the "Merchant of Venice" (ii. 9),—

AFRICAN EXPLORATION.*

AFRICAN exploration, within the last few years, has been prosecuted with so much vigour that the interest of the subject is becoming diminished to some extent by the rapidity with which one discovery follows another, leaving little new to be known of the once-mysterious continent. Barth, Petherick, Livingstone, Burton, and Speke are among the names most familiar to us in connection with this subject: some of these gentlemen are still engaged in pursuing the dangerous but attractive vocation to which they have devoted themselves. We may look forward to an uninterrupted series of reports as they return, and from different sources, of the progress of their journeys. The enterprising Swede, Anderson, pushing north-eastward from the Oranjo, has last heard of from the banks of a river which he had descended for some miles in the direction of Lake Ngami, but the ultimate destination still remained doubtful. Unfortunately the account which this penetrating traveller gave of his own health leads us to fear that he is not likely to prosecute his interesting discovery. Livingstone on the opposite side, but in about the same latitude, is opening up one lake after another, ascending rivers which he describes as navigable, and investigating the natural resources of this unknown country, which he paints in most glowing colours. Petherick, whose journey into the interior of Africa are equal to ours in point of interest and novelty, is about to start again, to push once more up the White Nile, until he shakes hands with his old friend Captain Speke, under the equator. That hardy and energetic officer, in company with Captain Grant, is now on his way to Zanzibar, with the view of entering the continent from

* The Lake Regions of Central Africa. By Captain R. F. Burton. London: Longman & Co. 1860.

that point, following the route already traversed by himself and Captain Burton, as far as Kaeh, in the 32nd parallel of longitude, thence running almost northward to the great lake Nyanza, which he had the satisfaction of discovering two years ago, and from whence he now anxiously hoped he will be able to sail down the White Nile to Cairo. Captain Burton's book, which has just made its appearance, has come out at an opportune moment, and will enable us to appreciate more accurately the difficulties to be encountered, and the nature of the project proposed to be achieved by his late companion. Beyond the interest which must always attach to every account of unknown people and country, there is very little of a really attractive character in the scene of these explorations. There are no great features of scenery, no striking peculiarities of barbarism or an unknown civilization. The climate is detestable, the people are extortionable and impracticable, but not dangerous, and the practical obstacles to progress in the last degree trying. It took Captains Burton and Speke eight months to reach the Tanganyika Lake, a distance of 600 miles through almost unexplored country, and when they arrived at this much-longed-for result, one of them had partially lost the use of his limbs, the other of his eyesight and hearing, both had been repeatedly prostrated by fever, and had surmounted incredible hardships to attain this sin dilute *triumph* of African discovery, a sheet of water about 250 miles long with an average breadth of from twenty to thirty miles.

The country through which our traveller passed is inhabited by a great variety of tribes differing immaterially in manners and customs from each other. In the maritime region, which intervenes between the seacoast and the East African continental chain, the principal tribes are the Wamamora, the Wakho, and the Wado. From Captain Burton's graphic description of the former, a general idea may be formed of their neighbours. A Wamamora outfit must be effective. "The thick wool is plastered over with a cap-like coating of ochre and micones clay, brought from the hills, and attached to the remaining honey-combed surface of the head by the use of the carter's loam. The pomatum, before drying, is pulled out with the fingers, to the ends of many little twists, which circle the head horizontally, and the mass is separated into a single or double line of knots, the upper being above, and the lower below the ears; both look stiff and matted, as if affected with some phlegmatic ailment. Some of the Wamamora train along in their head-rises above the region of their countenances, and very exactly simulate bears' ears. The face is usually lousenage-shaped, the eyes are somewhat oblique, the nose is flat and patulated, the lips turned and everted, the jaw prognathous, and the beard, except in a few individuals, is scanty. The sebaceous odor is overpowering, the expression of the countenance wild and astringent, the features are coarse and harsh, and the gait loose and lurching." This is a very fair sample of an East African tribe, and is described by our traveller as one of the most prepossessing. The Wado, for instance, add to their elegance of toilet various inconvenient habits. During a late struggle with a neighbouring tribe "the prisoners, in protest of the ransom to be demanded, were cut from the bodies of the fallen. The manœuvre was successful. The Wakamba could dare to die, but they could not face the idea of becoming food. They are wild in appearance, dress in softened skins, drink out of human skulls, which are not polished or prepared for the purpose; are buried almost naked, but retaining the ornaments of a narrow girdle, and so that the forefinger can project above the ground. With each man are interred slave and a female slave, the former holding a bilbock, with which to cut fuel for his lord in the cold death-world; and the latter, who is mated upon a little stool, supports his head in her lap." Passing over the Ugogo chain, which attains the height of seven thousand feet, and affords some fine scenery and a refreshing climate after the miasmatic influences of the plains, our travellers descend into the country of Ugogo, inhabited by the Wagogo and Wambania, and more healthy but less fertile than the maritime region. The estimation in which the people of the country stand may be gathered from the following graphic speech of the leader of Captain Burton's caravan—"Listen, O ye Whites, and ye children of Sayyidi Majidi, and ye sons of Ramji! Hearken to my words, O ye offspring of the night! The journey enteth Ugogo—Ugogo [he onrth threw out his arm westward]. Beware, and again beware [he made violent gesticulations]! ye don't know the Wagogo: they are a bad and a [he stammered]! Speak not to those Wadwadi pagans; enter not into their houses [he pointed grimly to the ground]; have no dealings with them; show no cloth, wire, nor beads [speaking with increasing excitement]; eat not with them, drink not with them, and make not love to their women [here the speaker became a scream]. Winoagot of the Wamawendi, restrain your souls. Suffer them to stray into the villages, to buy and sell of you, to sell their produce, to release their beer, not to sit by the wells." Traversing this inhospitable district, our travellers enter the Unyamweini—the far-famed land of the Moon. Here they rest to recruit, at Kaeh, a station which has become a centre of commerce since the Arab merchants have fixed upon it as theemporium of their merchandise.

But the physical obstacles which the country presented were not the only ones with which the explorers had to contend. The most extravagant reports had been circulated about them. "They had had one eye each, and four arms; were full of knowledge, which in these lands means magic; they came rain to rain in advance, and left clouds in their rear; they could vanquish winds, and throw away the seeds, thereby generating small-pox; they beatened and harried milk, thus breeding a murmur among the cattle; and their wire, cloth, and beads caused a variety of misfortune; they were kings of the sea, and therefore white-skinned and straight-haired," &c. Arrived at the Tanganyika Lake, our adventurous explorers embarked upon its waters in the rude bark of the natives, and spent a month in investigating its unknown mysteries. The opposition of the tribes which inhabit its shores prevented them from reaching its extreme limits, either in a northerly or southerly direction. They ascertained the important fact, however, that no river descended from the lake, but that the level of the water was almost constant, which flowed both from the north and south. The head of the lake is encircled by a chain of mountains, which seem to form spurs of the range which have been popularly called by geographers the Mountains of the Moon.

The most effective explorers of these regions at present are Arab traders, who carry away ivory and the products of the country, such as ostrich feathers, beads, precious goods, and other objects of barter. The establishment of stations by these enterprising merchants will greatly facilitate the progress of future

travellers. Meantime the native companions of Captains Burton and Speke became impatient to return. These consisted of Bedoch soldiers, furnished by Sayid Majidi, the ruler of Zanzibar; some slaves which had been supplied by a merchant of the same place; and a party of porters gathered from the native tribes. With the exception of a few donkeys, our party was entirely dependent upon their own shoulders for transport—camels, oxen, or other beasts of burden being entirely wanting. This inconvenient arrangement retarded their progress very materially, the more especially as the chief of each tribe passed through demanded a large tribute in the shape of black mail, involving the portage of great quantities of beads, cloths, &c., for the purpose of satisfying the native rapacity of these tribesmen. Retained at Kaeh, Captain Speke determined to strike off to the north, for the purpose of reaching, if possible, a great lake said to be in that direction. After three weeks of hard travel, his exertions were rewarded by the discovery of a large lake, more extensive and important, on geographical grounds, than that which had already been previously visited. This lake he has named the Victoria Nyanza, and, in the opinion of its discoverer, it in all probability gives rise to the waters of the Nile. Captain Speke's success in reaching this magnificent sheet of water, the extent of which is not yet known, is an unparadiseable sin in the eyes of Captain Burton, whose book is tainted by a most unworthy jealousy of his more fortunate, and, as he himself invites the comparison, we must say, more enterprising companion. On the Tanganyika Lake Captain Speke jeered his explorations further than Captain Burton, although suffering from severe illness. "My companion," says our author, "who, when arriving at the Tanganyika Lake, was almost as 'grubby' upon his person as I suffered from, passed the night in a hut, and, in the morning, at the distention of face, which made him sideways, like a rumbler." In this condition he spent a month exploring its unknown shores, suffering great hardships, and overcoming many difficulties. "During my twenty-seven days of solitude," says Captain Burton, "the time sped quickly; it was chiefly spent in eating and drinking, and in the pursuit of the mission of this time Captain Speke returns. 'The Masika had done little or nothing upon him; I never saw a man so thoroughly moist and mildewed. He justified even the French phrase—wet to the bone. I was sorely disappointed: he had literally done nothing.' Probably Capt. Speke would have considered eating and drinking and doing nothing as the best mode of proceeding to discovering Lake Nyanza, he returns, having done something, our author on this occasion having spent six weeks idly at Kaeh, his indignation vents itself in an energetic protest against the White Nile, Lake Nyanza, and Captain Speke, who, he contends, "has stultified the results of the expedition by putting forth a claim which no geographer can admit, and which is at the same time weak and flimsy that no geographer has yet taken the trouble to contradict it." Considering that the Government, at the instance of the Geographical Society, have granted Captain Speke the sum of £2,500 for the purpose of verifying the truth of his suggestion, and with express instructions to enquire whether the White Nile has its rise in the Nyanza or not, this assertion of Captain Burton may be classed with those native reports which he finds so much fault with his companion for believing.

Mr. Petherick, who has ascended the White Nile to within two degrees of the equator, is so strongly of the same opinion as Captain Speke, that he expects to meet that distinguished explorer by pushing further up the river. We should not be inclined to the supposition that Mr. Petherick, who is one of Burton's book had not Captain Speke been absent from the country, and unable to defend himself. Although the journal of this officer has already appeared in *Blackwood's Magazine*, he scrupulously abstains from any discreditable allusion to his brother officer. It would only have been generous, under these circumstances, in Captain Burton, to have stated his grievances while Captain Speke was still in England, instead of tampering him in a work likely to become of standard value, and stating facts which Captain Speke will not be able to deny for two years at least, if, indeed, he ever returns to us at all.

Fortunately for Captain Speke, Captain Burton's general tone of ill-humour is not confined to him alone; he accuses Captain Playfair of "three distinct and wilful deviations from fact in five lines"; and insults Captain Richy, our consul at Zanzibar, by comparing him to a native called "Seedy Mubarak, whose honest face appeared at that moment by contrast [with that of Captain Richy] peculiarly attractive." Captain Frost is incidentally accused of having contrived to procure the materials to Captain Hamerton's death, as well as of having buried despatches; while the East-India Company is roundly abused at every convenient season. This is, perhaps, not to be wondered at, considering the severe rebuke administered to Captain Burton in a despatch from the Secretary of State for India, relative to some pecuniary transactions which our author has unwisely included in his narrative. As to our friend on finishing the perusal of Captain Burton's work, not to feel that his talents, no less than his disposition, fit him rather for a barometer than a civilized state of society, where, to use his own words, "post offices do not exist," where those courts martial to which he so feelingly alludes as having nearly wrecked his reputation, have not yet been instituted; and the standard of morality, if not lower, is, at all events, founded upon different principles. We should had with pleasure every new work from his graphic pen if it was dated from the centre of Africa, and congratulate ourselves upon being able to enjoy the advantages of his versatile genius, without having to endure from the inconsistency of his unfortunate temper.

Dr. Beke, a gentleman who has been engaged for some time in African exploration, and whose opinions are therefore of the highest value, has recently published an interesting compilation of the most recent information upon the history of Nilotic discovery. The conclusion to which this distinguished African geographer arrives gives great weight to the hypothesis of Captain Speke that the waters of the White Nile have their origin in Lake Nyanza. As Dr. Beke dates his work from the Mauritius, he does so apparently in ignorance of the more recent discoveries of Mr. Consul Petherick. It is a singular and most remarkable fact, in the absence of the more strong and confirmatory testimony of Mr. Petherick, Dr. Beke should have arrived at so nearly the same result with reference to the much-vexed question of the Sources of the Nile.

*The Sources of the Nile; being a General Survey of the Basins of that River, and of its Head-waters, with the History of Nilotic Discovery. By Charles T. Beke, Ph.D. London: James Macmillan & Co. Leadenhall-street, 1860.

PERSONAL TRAITS OF FAMOUS PEOPLE.*

THE desire to see celebrated people, or to learn something about their personal characteristics, habits, and associations, is common, under different modifications, to all mankind. The eagerness with which the ladies of Bologna forced their way through the crowd, at no little risk of being trampled to death, in the hope of obtaining a glimpse of Victor Emmanuel, is one of the many forms of the same instinct which leads the antiquary to delve in dusty libraries, and the art-student to make pilgrimages to galleries and cathedrals. The lore of sight-seeing may be considered the vulgar development of the universal desire of exploring things that are out of the reach of every-day experience. The difference is only in degree between the curiosity of the idle gossamer that gather upon the pavement to see the ladies step out of their carriages at the door of the Opera, and that of the chess club, when its members rose en masse to greet Mr. Morphy, or of the thousands of educated and sentimental travellers who pay reverential visits to the birthplace of Shakespeare.

Of all the celebrities to whom the homage of popular curiosity is paid, authors, perhaps, receive the largest share. Distinguished generals, statesmen, and politicians are surrounded for a time by a certain amount of public interest, arising, in most cases, from their notoriety rather than from any certain or special knowledge which the world at large possesses concerning them; and kings and people of rank "draw crowds" by the sheer force of that attraction which has in all ages resided in the glitter and pomp of station. But the author is a widely known as his language, and known too, not by vague report, but by the actual achievement of his work, entered into the house of all classes of the people; he has instructed, amused, and delighted young and old. There is nobody so secluded to whose retreat he has not penetrated; nobody so lofty to whose height he has not reached; nobody so humble to whose depth he has not descended. He is the familiar of the domestic circle—the friend of the scholar, the playfellow of the companion in retirement; he is constantly talked of, quoted, and discussed. Everybody knows him in his public function as a writer of books; and everybody is anxious to know more about him, to know what manner of man he is in his private relations, what sort of life he leads, how he is, and his peculiarities, and whether he is like or unlike the ideal that had been formed of him from his works.

The materials by which this curiosity is to be gratified are to biography what descriptions of the in-door and out-of-door life of the people, their passions and occupations, customs, and usages, are to history. Like them, they must not be rendered, and care must be taken to subordinate them to the higher purposes of the narrative. The wood must not be hidden by the leaves. The general fidelity of the portrait must not be sacrificed to a microscopic detail of noles and freckles. The whole value of small personal items lies in their illustrative significance. It affords no help, for example, towards an estimate of the great Duke of Marlborough, to be informed that he carried a green pane; but we see a long way into his character when we learn that he used to walk alone at night from parties, to save the expense of a chair. We collect nothing which can be turned to profit from the fact that Pope thought he looked best in a wig; just it is something to reflect upon the fact that the Duke of Devonshire did not add up a column of figures. Swift lives in that description of his "particular eyes" which tells us that they were "quite as azure as the heavens;" but we are in no way advanced towards a closer knowledge of Marshall Turenne by being informed that he used to have a new pair of stockings every week.

The literary habits and occupations of the great writers of the past; although the results rarely yield the expected clue to the secrets of inspiration. After we have ascertained that Swift always lay in bed till noon, that Scott wrote his novels before breakfast, that Waverley used to read himself to sleep, and unconsciously initiate in the morning what he had read at night, that Young wrote nearly the whole of his "Night Thoughts" at night, and the rest on horseback, the mystery of genius remains as great a mystery to us as it was before. The contrasts that may frequently be found to exist between the personal traits of the author and the character of his works, suggest a wider and more fruitful field of investigation. Like the French comic actor who, while he made everybody else laugh, was himself consumed by melancholy, the dispositions of the writer are not to be judged by his works. The satirist may be a man blushing over goodnature and kindness; the grave historian may be one of the pleasantest dinner-table wits; and the humorous novelist may write a most serious work. It may turn out in conversation to be the dullard of mankind. The Grammarian who dictated the pleasantest and most agreeable of all gossiping books, is described, at the very time when he was composing it, as being cross and unpleasant in his manners, and out of all reason besides. To be sure, he was then old, and infirmities may be excused in old people. But remember how Addison kept up his character on his deathbed; how gracefully Keats appeared, with his vanity in full bloom; and how euphuistically the last words of Chesterfield marked the man of form and etiquette.

Stenhouse and Sterne, in different ways, came to ends strangely at odds with their literary characters. Stenhouse, the poetical and moral poet, whose imagination kept company only with the flames and Phidias, is known to have held relations with his housekeeper which threw his domestic life into shadow. Notwithstanding his verses to the contrary, it was not all rural felicity between the poet and his mistress; and the lady was sometimes too much for him. On one occasion, being offended with her, he went out of the house in a fit of vexation, and cast himself up in his postchaise, where he passed the night. The consequence was he caught a cold, which brought on worse ailments that terminated in his death. Sterne shed under circumstances hardly less at variance with the promise of his life. He who had displayed so much tenderness and sympathy in his writings, expired in a mean lodging in London, without a single friend to close his eyes except, all honour to his craft! Becket, the publisher, who was the only person that attended the author of "Tristram Shandy" to his grave. More remains to be told. Sterne was buried near Tyburn, at that time a defenceless situation; and the resurrection-men having noted the spot, disinterred the body at night, and carried it to a private anatomy at Gower-street. A gentleman who was present at the dissection recognised the face of poor Yorick!

No man ever disappointed the expectations raised by his writings more completely than Dr. Hawkeworth, who flourished in the Johnsonian period. Hawkeworth, indeed, may be regarded in some degree as a literary impostor. By imitating the manner of Johnson, he rapidly got credit for the elegance of his diction and the purity of his sentiments. Even Johnson himself was taken in for a time, and concurred in the general opinion that Hawkeworth was a sound moralist, and a master of English style. His "Almonar and Humes" had a great success; and Archbishop Herring, on inspecting his papers in the "Adventurer" and elsewhere, that he conferred upon him the degree of Doctor of Civil Law. This sudden elevation to a position of honour which he was unable to sustain, led at once to the exposure of his pretensions. He was so swollen with conceit that he put on airs of affluence as a result of letters, which rendered them almost insupportable so long as he kept still, all went well; but, thrown off his guard by having been created a Doctor of Laws, he seems to have begun to defend himself to what he had all along known very well he was not. The fact is, that Hawkeworth was an utterly illiterate man. Anecdotes are related of his ignorance which might not justly regarded as incredible, if they had not come down to us on respectable authority. He was originally a watchmaker, and never appears to have received any systematic instruction whatever. That he should have written so skillfully as to deceive the public into the notion that he was a scholar and a thinker, is marvellous enough; but a careful examination of his writings, by the light which the discovery of his real deficiencies throws upon them, will dispense a good deal of the wonder. Their modesty will be found to be as shallow as their structure is artificial; and the want of scholarship will become conspicuously apparent. But the essays were written for the sake of seeing what excellent imitations they may be made of; the first object of the writer was to show that he was a critical power. This estimate of the value of his writings determines the true place of Hawkeworth in English literature. He bears the same relation to the Addison and Johnsons as that clever mimic, the late Mr. Yates, bore to Keble and Young.

With a taste of genius, a comparatively slender amount of research often answers the purpose of large stores of knowledge, and sometimes does better. Hume was a remarkable example of the great results that may sometimes be produced from a small capital; and in this respect he offers a striking contrast to Gibbon. Hume took very little trouble about ancient chronicles or records; he seldom looked into them, and never went through any display in the way of investigating or collating old authorities. He had a certain facility in dipping for what he wanted, which was in reality nothing more than some vivid materials here and there, to help him to build up an agreeable narrative. His actual acquisitions in historical knowledge, excepting only what related to the Statute, which he was never weary of collecting out of a kind of inexplicable habit, were neither extensive nor profound. He is said to have been extremely companionable and unaffected before he went to Paris as secretary to Lord Hertford; after which he became a literary reclus. It is not to be overlooked in such a man that he could not resist Shakespeare; and that thought as ill of him as George II., who could not read him, "he was such a *bonnet fellow*!" Hume did not look altogether like the historian of England, for although he gave you an idea of vigor and strength, he wanted elasticity of movement and brightness of expression. He was a very large, tall man, close upon six feet in height, with a vacant face.

His mind was in some respects the reverse of all this. He was crammed with learning, and his passion for enlarging his wealth of knowledge grew with what it fed on. It was probably because of his studious habits that he never married, but continued to live amongst his books to the last. But he had none of the usual marks of the book-worm upon him. He was fond of cards and company; and, without possessing much conversational power, he had a special talent for telling anecdotes effectively. He did not particularly relish literary society, because it generated discussion, and had a tendency to impede the flow of general enjoyment; and, like Congress, he desired to be received rather as a man of the world than as a scholar, and consequently did not care to make any display of his erudition. One very obvious reason for his reserve on this point was his dislike to arguments, in which few men were less qualified to engage, either by inclination or habits of mind. He cannot be said to have failed in Parliament, for he never spoke there. In his appearance there was nothing remarkable, except his head. He had a very large face, about which an anecdote is related, with a blind lady for the heroine, more grotesque than true.

Place in opposition to these bold and stalwart figures the diminutive person of Pope, and you get the extremes of the scale. Sir Joshua says: "one once; it was at an auction, and the people were so much attracted by him, that he went along, dressed in a black coat, with a tiny sword, bowing like a Lilliputian king. He was not more than four feet six inches high, and was hump-backed; but his dwarfish stature acquired force from his large fierce eyes, and long handsome nose, features in which we suspect he closely resembled the late Edmund Kean." Pope's mouth betrayed the constant and painful straining of the muscles, like cords, which are peculiar to deformed people. Boscawine, who made a bust of him, said that he should have known how much he had suffered from headaches by the contraction of the skin between the eyebrows. He was the most irritable of all men, the most easily offended at trifles, and the most intolerant of anything coming in the way of them. He was, however, far from being so malicious, nor so unkind, as his generous instincts, it is to be found in that poor crazy body which was the theatre of almost every physical calamity.

FOREIGN LITERATURE, ARTS, AND SCIENCES.

IT MAY afford another example of the utter impossibility of preserving the vitality of human intelligence under restrictions of liberty of thought and conscience. "Car la première chose que Dieu enlève aux hommes avec la liberté c'est le bon sens," says M. de Montesquieu, in his last philosophical work. Since the yoke of Austria has been put upon the Italian mind, and since Italy has been ruled by the French, Italy has again awoken to literary life. King Victor Emmanuel, desiring of giving a helping hand to this intellectual movement, and being warmly seconded by his minister, Mamiani, has within these few days reorganised the Universities of Bologna and of Milan. Prati and Mercantini, men already well known by their

* The Table Talk of John B. Alden. Third edition. 1860.

Samuel Rogers's Recollections. Edited by his Nephew. Second edition. 1860.

Memoirs [of Edmund Malone]. By Sir James Kaye. 1860.

literary labours, have been appointed professors, the first of eloquence, the latter of history, at Bologna, and Auguste Voss, the commentator on the Philosophy of Hegel, who published last year divers works in English and in French, on his favourite topic, is appointed professor of philosophy at Milan. In Tuscany, the Abbé Tugri has published a beautiful volume of *Conti Popolari*. A cleric and learned introduction to the book explains the nature of these compositions, which differ entirely from the national songs of our country. They represent the *"Bisbetto di Sordani,"* *"Stornello,"* or *"Romanzetto,"* and *"Stornello,"* originating in Sicily, but now become quite popular in Tuscany, are all successively represented in this collection, where their source and origin are explained. The author has not forgotten to mention the contemporary celebrities who have published poetical effusions of the same nature, Cantù, Tommasi, Carrara, &c.

The late political changes in Italy have also been a theme of inspiration to two excellent Florentine poets, Endrio Frullani and Gisone Carducci. If impediments are not thrown in the way, to stifle the existence of *il regno Italiano*, we may soon expect to see arise under the inspiring atmosphere of political liberty, worthy successors to the great Italian authors of old.

The recent discovery of a painting in oils of the fifteenth century, on the walls of the old meat-market in Ghent, has again raised the long *querita* question of the origin of this style of painting. A very legible inscription tells us that this mural work of art was executed in 1448—some years, therefore, before oil-painting by John Van Eyck, who is generally acknowledged to be the first who attempted and succeeded in mixing oils with colours according to our modern system. Mr. Edmond de Busscher, in an able article in the *"Messager des Sciences Historiques,"* examines with much care all the data collected with this picture, and arrives, through authentic records, at the conclusion that it is the work of Netherland Masters, or of John Martin. The article affords valuable information, not only on the Painters' Corporations during the Middle Ages, but also on the actual period at which oil-painting was first introduced, between the years 1339-1353, at Ghent, and of the rapid progress of this art from 1411 to 1434, before the two brothers Van Eyck made their first great conquest in this style of painting.

While we are speaking of Belgium, let us mention a history, just published, of Charles V.—the most complete that has yet been written.

English, French, and German authors, in latter times, have lauded themselves much with the eulogistic ring of this extraordinary monarch, on whose dominions, according to the well-known saying, "the sun never went down," and who, after a noble abstinence, died miserably in a monastery, pining for his lost power. The author has employed fourteen years of his life in collecting documents for his work, which presents a very faithful picture, historical, political, and literary, of the long reign of Charles Quint. The influence of oligarchy of York, and of Marguerite di Austria, on the young prince, is carefully portrayed. The rivalry between Charles V. and Francis I. of France, and the various incidents connected with the election of the former to the Empire, are given in more detail than in any other history of that period. We regret that the author should not have followed up the subject to the end. The life of the Emperor is a picture of interesting and philosophic study, after his abdication, than while he was in the zenith of his greatness.

A notice of the various modern works on his monastic life would have made a more complete and satisfactory book, but this omission is fortunately supplied by the able notices of that time, written by Mr. W. Stirling, M.P., and by Monsieur Schacht. The Spanish records published by the latter form the archives of Symonides, which have until now remained almost unexplored, prove how the weakness of human nature asserts its rights even in those whom the world called great.

Among the important works just published in Paris, one of the most useful and at the same time the most carefully-edited, is the *"Annuaire Encyclopédique,"* in which is given a sketch of the history, literature, politics, commerce, arts and sciences of all nations, from the beginning of 1850 to May, 1860.

It is difficult to convey an idea of the vast amount of information contained in this volume. One point especially worthy of mention, is the general accuracy of the statements, all written by men residing in the country which they describe, and consequently much better able to afford reliable information than is generally the case in books of this nature. Each article, arranged in alphabetical order, gives an excellent résumé of the actual position of the nation of the world, as to their government, institutions, statistics, and commerce. We may form an opinion of the exactitude and impartiality of these statements by the long article on England, which is very able, and comes from the pen of Monsieur Esquiade, already well known in this country as a political writer.

All the statistical portions are taken from official sources, and comprise seven columns. The article "France" has some interesting details on the daily and weekly newspapers, and the number of copies issued.

Then follows a sketch of twelve columns on the political history of England during the last eighteen months, with worth reading, for its completeness, and especially for the spirit in which the writer expresses the utility of a good understanding between France and England.

The article on English literature is far from being satisfactory: it is superficial and imperfect, although written by an author who has published many pleasant works on England, Monsieur Philastre Chasles. Among other desiderata, it is rather surprising not to find the least mention of the history, the most elaborate and remarkable books published in the last five-and-twenty years, Darwin's *"On Species,"* and *"The History of Civilization,"* by Buckle.

In the biographical notices on deceased English celebrities, there is neither both for blame and praise. The sketch of Lord Macaulay, by Monsieur Esquiade, is a most judicious and well-written appreciation of the political and literary career of this great historian; but many eminent persons, among others Lady Morgan, have been altogether omitted. Notwithstanding these defects, the *"Annuaire Encyclopédique,"* is a remarkable compendium, where every department of human intelligence finds its place, and which may be consulted as a book of reference, not only for the great progress of political and literary science, but also for the intellectual existence of France at the present day cannot fail to strike a calm observer. Irregularity is acknowledged to be rapidly on the increase, and yet by a singular contradiction, works on

Religious Philosophy are published every year by the best writers in France, thus proving how unsatisfactory to their restless minds are the systems laid down by Voltaire and Rousseau, and yet how unwilling they are to adopt Christianity itself. "Ernest Renan," who at first declared that religion was only useful for the ignorant or *à pitié*, returned afterwards to a more rational way of thinking, and his *"Etudes d'Histoire Religieuse,"* are based on a true belief in the moral necessity of a religious creed. After Renan came "Edgard Quinet," who refuted the Hegelian theories and dispelled the system of Strauss, but was nevertheless not more disposed to accept Christianity. Year by year the same conflicting discussions go on, and Monsieur Alaux, a learned French professor, feeling all the importance of this religious question, has just published his *"Essai sur l'Avenir de la Philosophie,"* in which he examines the facts of the history of religious belief in France. The object of his system is to achieve certain reforms without touching the basis of Christianity. Religion in M. Alaux's opinion, is Catholicism in its true sense, that is to say, universal dogma; but he denies that the adoption of this dogma necessarily precludes development and progress.

The delusions drawn by M. Alaux in his system of religious philosophy are not always clear, but they must be welcomed as showing a desire to resist the current of paganism so prevalent now in the country for which he writes.

THE LITTLE SNOB.

"There's nothing right but what I think,
"There's nothing good but what I want and drink,
"There's nothing to compare with 'clink,'"
Said the dirty little snob.
"And won't be the greatest 'how' I know,
"And learning's dirt, and school's a bore,
"So, fast shall be the road I'll go!"
Said the dirty little snob:
Devil of sense,
The sun intense,
And dirty little snob.
"I'd like to know the use of friends,
"Unless they serve one's pleasant ends;
"The best is he who gives no hands,"
Said the dirty little snob.
"Your learned men are heavy 'awfuls,'
"Your moral youths tremendous 'sells,'
"And shan't the only speech that 'tells,'"
Said the dirty little snob:
The smirking slave,
The homeless knave,
And dirty little snob.
"However chaste and pure she be,
"And bright and beautiful to see,
"No woman can say 'No' to me,"
Said the dirty little snob.
Is there no husband, son, or sire,
To dare this creature thrust his mire,
And kick it till she too shall tire,
The dirty little snob?
The fool and crass
Conceited ass,
And odious little snob?

POST-OFFICE PROSECUTIONS.—Our remarks last week upon Post Office prosecutions seem to have hit a critical time. On Friday, William Wyatt, a young man, and a Public letter-carrier, was placed before the magistrate for having stolen a "test letter," and the marked copies being found upon him, he was committed for trial. He had nineteen shillings a week, had been a year in the service, and married six months. John Juce, another, whose locality for delinquency was at Camden Town, was caught by a similar process of temptation, the appropriation of the marked gold, also proven by being found in his pocket, and he, too, was committed for trial. His indictment to be dishonest might be somewhat more promising, as he had been married a year, and had a child just born. On Saturday, William Woodcock was brought up on the charge of abstracting two half-sovereigns from a letter which he (in his round of duty) had taken from a pillar-box in Stepney, and which, after getting of the money, he had re-deposited in another pillar-box in the same quarter. Upon him, too, the marked coins were found; and here, already, unless the honest precedent of the Lord Chief Baron is followed by other judges (as we trust it will be), are three more pitiable cases for penal servitude and utter misery. Now, we have to repeat that we are no apologists for breach of trust, or palliators of theft or dishonesty of any description. We respect the poor man who steals his bread, and his honesty, and prefers it to the law. (However hard and ill-requited) with constancy and integrity. But we cannot resist the emotion of pity which flows upon us when we look upon the fate of those who fall, and who, in the conditions obvious before our eyes, appear not to be treated as they ought to be, but to be exposed to greater temptation than any other class of the community, and to be entangled by contrivances of a very miserable and unworthy nature. So strong, indeed, is our impression of the error of the entire course of employment, remuneration, and action to detect and punish the guilty, that we almost forget the victim in the victim. The Post Office should remember the Lord's Prayer, "Lead us not into temptation." There is something odious and repulsive to good feelings, in the idea of guaranteeing the public security by no other means than the heaviest sacrifice of so many fellow creatures per annum—fairly misled by want (for no other causes are assigned, no other disincentives, no other lapse from the right path), to break the commandment, "Thou shalt not steal." It has been forcibly said that "an empty stomach has no conscience." We will not impute all these offences to the Post Office, but we can readily believe that most of them are induced by pressing necessities. And in this belief we would respectfully insist, as there is a large surplus revenue from the department, that the pay of Post Office servants should be augmented, and their condition improved; and that the Post Office should refuse to employ or bank-note in letters, and give facilities at a penny for conveying Post Office Orders for sums under twenty shillings. What remedy might this be applied, we cannot decide; but if this we feel assured, that clearly insufficient pay, exceedingly laborious duty, and the vile consequences of a "test letter" system, to tempt wretched creatures into crime, are alike ill-judged economy, practical injustice, and unchristian policy.

[PRICE 3d.]

THE EMPEROR'S LETTER.

IT is a great thing to be strong. No man so often escapes insult, and goes through the world so peacefully, as the strong, true man, who is able to punish aggression, and who never courts it. So with Great Britain. Lord Palmerston's patriotic speech, on the introduction of the scheme for the National Defences, has elicited a letter from the Emperor Napoleon, which might have been written long ago, but which was not written until Lord Palmerston's speech made it clear, alike to the most daring ambitions and to the obtusest intellects of the Continent, that the British nation was thoroughly in earnest in preparing for all contingencies of European warfare. It is no small triumph for any man to have extorted such a letter from such a potentate as the Emperor,—one of the most remarkable letters ever written, both for its matter and for its manner,—and which cannot fail to have a weighty influence upon the politics of our time. We present it in *extenso* :—

“St. Cloud, 25th July, 1860.

“MY DEAR PERSIGNY,—Affairs appear to me to be so complicated —thanks to the mistrust excited everywhere since the war in Italy —that I write to you in the hope that a conversation, in perfect frankness, with Lord Palmerston, will remedy the existing evil. Lord Palmerston knows me, and when I affirm a thing he will believe me. Well, you can tell him from me, in the most explicit manner, that since the Peace of Villafranca I have had but one thought, one object—to inaugurate a new era of peace, and to live on “the best terms with all my neighbours, and especially with England. I had returned Savoy and Nice; the extraordinary additions to Piedmont alone caused me to resume the desire to see re-united to France provinces essentially French. But it will be objected, ‘You wish for peace, and you increase, immoderately, the military forces of France.’ I deny the fact, in every sense. My army and my fleet have in them nothing of a threatening character. My steam navy is even far from being adequate to our requirements, and the number of steamers does not nearly equal that of sailing-ships deemed necessary in the time of King Louis Philippe. I have 400,000 men under arms; but deduct from this amount 60,000 in Algeria, 6,000 at Rome, 8,000 in China, 20,000 gendarmes, the sick, and the new conscripts, and you will see—what is the truth—that my regiments are of smaller effective strength than during the preceding reign. The only addition to the army-list has been made by the creation of the Imperial Guard. Moreover, while wishing for peace, I desire also to organize the forces of the country on the best possible footing; for, if foreigners have only seen the bright side of the last war, I myself, close at hand, have witnessed the defects, and I wish to remedy them. Having said thus much, I have, since Villafranca, neither done, nor even thought anything which could alarm any one. When Lavalette started for Constantinople, the instructions which I gave him were confined to this:—“Use every effort to maintain the *status quo*; the interest of France is that Turkey should live as long as possible.”

“Now, then, occur the massacres in Syria; and it is asserted that I am very glad to find a new occasion of making a little war, or of playing a new part. Really, people give me credit for very little common sense. If I instantly proposed an expedition, it was because my feelings were those of the people which has put me at its head, and the intelligence from Syria transported me with indignation. My first thought, nevertheless, was to come to an

“understanding with England. What other interest than that of humanity could induce me to send troops into that country? Could it be that the possession of it would increase my strength? Can I conceal from myself that Algeria, notwithstanding its future advantages, is a source of weakness to France, which for thirty years has devoted to it the purest of its blood and its gold! I said it, in 1852, at Bordeaux, and my opinion is still the same—I have great conquests to make, but only in France. Her interior organization, her moral development, the increase of her resources, have still immense progress to make. There a field exists vast enough for my ambition, and sufficient to satisfy it.

“It was difficult for me to come to an understanding with England on the subject of Central Italy, because I was bound by the Peace of Villafranca. As to Southern Italy, I am free from engagements, and I ask no better than a concert with England on this point, as on others; but, in Heaven's name, let the eminent men who are placed at the head of the English Government lay aside petty jealousies and unjust mistrusts.

“Let us understand one another in good faith, like honest men as we are, and not like thieves who desire to cheat each other.

“To sum up, this is my innermost thought. I desire that Italy should obtain peace, no matter how, but without foreign intervention; and that my troops should be able to quit Rome without compromising the security of the Pope. I could very much wish not to be obliged to undertake the Syrian expedition, and, in any case, not to undertake it alone: firstly, because it will be a great expense; and secondly, because I fear that this intervention may involve the Eastern question; but, on the other hand, I do not see how to resist public opinion in my country, which will never understand that we can leave unpunished, not only the massacre of Christians, but the burning of our consulates, the insult to our flag, and the pillage of the monasteries which were under our protection.

“I have told you all I think, without disguising or omitting anything. Make what use you may think advisable of my letter.

“Believe in my sincere friendship.

“NAPOLEON.”

We thoroughly believe that the Emperor means exactly what he says,—that for the present he desires peace, that he is loyal to the British alliance, and that he sees in that alliance and in the consequent development of the vast internal resources of France, the surest support to his throne and dynasty. He knows England well, and understands the English people better, perhaps, than any living Frenchman, unless it be M. de Persigny; but we are nevertheless afraid that he cannot see or understand why and how it is, that since the Italian war, the English people have held it to be their imperative and immediate duty to arm themselves, and to defend their coasts and their soil against any and all comers. It is not Louis Napoleon Bonaparte the man, in whose word and in whose honesty the British people have ceased to feel confidence. On the contrary, they believe that as a man and a gentleman he is anxious to maintain and perpetuate the most amicable relations with them. But it is the Emperor Napoleon, the irresponsible military chief of an aspiring military nation, separated only by twenty-two miles of water from our shores, of whom they are distrustful. They know that the chief of an ambitious nation, which was defeated and humiliated in the last great European convulsion, may be compelled by the spirit of his army and his people to undertake projects which he might scorn as a statesman, but accept as a soldier. They know,

moreover, that such power as he wields is not safe to its own possessor; that in undertaking all functions and all responsibilities, even to fixing the price of the poor man's loaf and the rich man's cigar, he overtaxes human nature, and that the brain may give way under the pressure, as that of the Emperor Nicholas did when, on his sole responsibility, he undertook the dismemberment of the Turkish empire. Without disrespect to the Emperor, they feel that the system of government of which he is the representative, is neither stable in itself, nor safe as regards the nations which are geographically near to him, and they reckon it incumbent upon them to be prepared for the commotions affecting all Europe, which must inevitably follow any break-out of the Imperial system beyond the line of the French frontier. If England had been without 130,000 Volunteers, an increasing fleet, and a system of fortifications and defences to be immediately commenced, would Napoleon III. have written such a letter? Or would he have thought it worth his while to parody, through M. de Persigny, with Lord Palmerston and the British people?

We rejoice that the Emperor has written and published so excellent an epistle; but we rejoice to know, at the same time, that the scheme for the National Defence of Great Britain will not, in any way, be affected by it; that our navy will be placed on as effective a footing as if these great thoughts were still enshrouded in the secrecy of the imperial mind; and that not a single British Volunteer will abandon his drill or rifle, in consequence of the praiseworthy sentiments so timely expressed.

THE SYRIAN AND TURKISH QUESTION.

THE letter of the Emperor of the French to M. de Persigny has not changed the aspect of the Eastern Question. The French Government, in direct terms, as well as through its recognised channels in the Press, is loud in the expression of its satisfaction at the view taken, both officially and popularly, in England, of the Syrian massacres. It is rather to our credit that there is no difficulty in luring the great British public, with the Government at its head, into any trap, so long as it is baited in such a manner as to appeal either to our humanitarian sentiments, our religious opinions, or our commercial interests. The Commercial Treaty, and the insults at different times offered to the Pope, were incidents in French diplomacy peculiarly gratifying to our national feelings; and now we are called upon in the name of humanity to "cut up" the Sultan; and our leading journals and our Foreign Minister do not hesitate to applaud the preliminary measures of the principal career. The Emperor, in defiance of all treaty-rights, has resolved to invade the territory of a friendly Power with a force of 20,000 men, in spite of the earnest supplications of the Turkish Government to be allowed to manage its own affairs; and the British people and Government, so far from protesting against a measure not one whit more justifiable, morally, than the crossing of the Pruthi by the armies of the Emperor Nicholas, announce the intention of partially co-operating with him. Did we do this with an army of 20,000 men also, we might compensate ourselves for this outrage to international law which it involves, by sharing the spoil. But we are either too innocent, too honest, or too timid for so decided a line of action; and, blinded to all questions of justice or policy by our sympathies, we assist the Emperor of the French in the development of that policy which was plotted at St. Petersburg not long since, and which is contained in a convention similar to that signed at Plombières, by which the fate of Turkey is settled, as that of Italy was, there. The existence of this convention has never been officially denied by the French Government; nay, more, the French Government could not deny, if they adhered to truth, that simultaneously with the outbreak planned by them in the Lebanon, and which has just terminated so disastrously to the Maronites, a rising of the Slavonic populations, instigated by Russian emissaries, was to have taken place in Servia, Bosnia, and Montenegro. The Turkish Government better informed with reference to the latter part of this arrangement than the former, although aware that 8,000 mine rifles had been forwarded by France to the Lebanon, despatched so large a share of its troops, many of them drawn from Syria, to the provinces, that it succeeded in keeping order there, at the sacrifice of leaving the Lebanon undefended. The consequence was that the Belgrade plot ended in a *fiasco*, and the Maronites, encouraged by the absence of troops, and relying upon their superior numbers, attacked the Druses sooner than was intended, and were massacred accordingly.

Let the public mark our words. The Slavonic rising is only postponed, and not renounced. The presence of European troops in Syria, and the humiliating treatment to which the Sultan's Government is now exposed, will encourage the population of the provinces to such a degree, that we may safely prophesy an almost immediate outbreak. We shall then have a repetition of the old story of the creation of a Slavonic empire, to form a barrier to Russian aggression. A train of gunpowder to arrest the progress of a fire, would answer the purpose about as well. We seemed alive to this fact six years ago, and sent thousands of the bravest of our sons to be slaughtered in the Crimea in consequence. Either they were

uselessly sacrificed, or our present policy is fatally wrong. A more skilful diplomatist than the late open-hearted Emperor of Russia has planned this "crossing of the Pruthi," and has gained our moral support, while he reserves to himself the material advantages. It is useless to appeal to the principle of non-intervention now in the affairs of Turkey. It is true that it is the only one which could save her, and the withdrawal of every foreign agent from the empire, from an ambassador to a vice-consul, might yet restore the "Sick Man" to health; but we have to deal with the question as we find it, and have ourselves interfered, and allowed others to interfere, so much, that we venture upon resisting foreign intrigue in this manner, while we cannot counteract it. We made a treaty under pressure in 1856, admitting this radically false principle, when we undertook to arrange the affairs of the Principalities. We have all along proceeded upon it, and there is no alternative but to look the disagreeable necessity boldly in the face, and take all we want of the Turkish empire, without a moment's delay. Either our Government should protest at once against the French expedition to Syria, or accompany it by one to Egypt on an equal force. There is a small political section of Turks in Constantinople who call themselves the "party of despair;" their view is to make the best possible bargain with the Russians (whom they regard as likely to be more easily satisfied than their professed friends), and to evacuate Europe altogether. It would not be a bad party for us to join, under the circumstances. We might yet appeal to the Christian religion which Russia is so fond of invoking, and beg her to return good for evil, and to remember us in the partition of the spoil.

If we expect to hold our own in this progressive age, we really must look about for an "oppressed nationality" somewhere, which we could monopolize. As no treaty made with a country which contains more than one nationality is held to be valid, there would be nothing immoral in it, according to the latest interpretation of international law. We would suggest the Jews, for instance, as a nation pretty widely scattered, and suffering considerable wrong under various governments. A Jew proconsul would open a wide door for our intervention, and would have the advantage of contributing a religious element, without which a thoroughly aggressive policy loses half its charm. A very long article appeared on Saturday last in the *Journal des Débats*, openly announcing the policy which the French Government intends to pursue in the East. "This policy is, as we know, very impartial, and thoroughly disinterested. It seeks to concentrate nationalities everywhere, to develop them, and to make states of them more or less dependent upon the Porte." Probably rather "less" than "more." The writer concludes by saying that France would prefer European co-operation in pursuance of this policy; "but if European concert becomes embarrassed and delayed, we are happy to know that France has decided upon acting alone, calling upon everybody, but waiting for no one, because, where blood flows, humanity cannot wait." In other words, whether the disorders are put down or not, there must be a French occupation; and to prevent any immediate pacific termination, only a few weeks ago the Maronites, at foreign instigation, refused to sign the treaty of peace with the Druses, and rejected the terms which the latter, at the instance of the Turkish Government, had offered them.

The "humanity" to which the Emperor alludes in his letter to M. de Persigny, and which, in the shape of 20,000 French soldiers, is about to sail for Syria, will cause far more blood to flow than if it "waited" altogether, and we shall soon have more massacres to record. Two years ago, when the Montenegrin Christians massacred and roasted Turks alive, neither France nor Great Britain had any sympathy with the victims. The Christian nations of the West can regard a roasted Turk with equanimity, but "humanity" cries aloud in behalf of a massacred Maronite. To a certain extent the British public are not to blame for this. They obtain their information through Greek sources, sometimes even descended for intelligence to the French newspapers—both thoroughly polluted channels. The Turks not being in the habit of reading the newspapers, much less corresponding with them, have no means of defending themselves. It would be an endless task to detail the various fabrications which are now going the round of the French papers, with reference to the Syrian massacres. That Abdel Kader is at the head of 3,000 Algerians is at this moment firmly believed, though how he came by his Algerians in Syria remains a mystery. Abdel Kader is to provide over one of the new nationalities, under French protection—that is understood to be settled. Indeed, we seem to be in a fair way of carrying out the programme sketched in "the Map of Europe in 1860." It is there proposed that the King of Hanover should reside at Constantinople; considering the black chaos which is likely to reign there, we could not have a better man. Our Government appears to have resigned itself to accept the new geographical arrangements to be imposed by the arbiter of the destinies of Europe. Indeed, our policy may for the moment be best defined by the word "resignation." Unfortunately, the day will come when Great Britain shall have but too much reason to regret that it did not, by a timely remonstrance, avert the calamities which a bloody and protracted struggle must sooner or later involve.

THE APPROACHING COLLAPSE OF THE EUROPEAN SYSTEM.

EUROPE, through all its length and breadth, has been haunted for years by a vague fear of some great approaching convulsion. Nobody seemed to know exactly what was wrong, or where the pent-up mischief would first explode; but every one saw the dark shadow that brooded over the Continent, and filled the minds of kings, emperors, and smaller potentates with unguessed alarm. Rulers, both temporal and spiritual, were at their wits' end to know what was best to do, or to leave undone. "They reeled to and fro, and staggered like drunken men," and had, waking as well as sleeping visions of vindictive multitudes clamouring for equality and fraternity, and repeating over again the ghastly spectacle of hygienic days, when Liberty degenerated into lawlessness, and Terror became the great and sole Anarchus of the world. With the exception of the fifteen halcyon years between the final overthrow of the first Napoleon and the enthronement of Louis Philippe as the *locum tenens* of the third, there has been no period during seventy years when the Continent has really been at peace with itself, or undisturbed by the fears and the omens of change. What are the reasons of this state of feeling? They are twofold. First, the approaching death of the long-ailing "sick man," and the fall of the Turkish power in Europe; and second, the unnatural system of military despotism under which the people of Europe all groan, with no less or less of reason—except Great Britain, Belgium, Holland, Sweden, Portugal, Spain, and the Hanseatic towns of Germany.

The first of these difficulties broke out with violence in 1855, when the Emperor of the French made his unavailing claim upon the Sultan for the protectorate of the Holy Places of the Latin Church in Judea,—a claim that led to a similar proceeding on the part of the Empress Nicholas for the protectorate of the Greek Holy Places, and consequently to the unslayable and bloodless war in the Crimea. Europe has had no peace since peace was made at Paris after the taking of Sebastopol. The "sick man" has grown worse instead of better; and within the last few weeks a new sore has broken out in Syria between the Druses and the Maronites, which, if not very tenderly and skilfully treated will kill the patient outright. Friends and enemies seem, by an unhappy fatality, to be able to do nothing for the Sultan except to damage and weaken him. If they attack, they imperil him; if they support, they imperil him still further. He can neither be knocked down nor propped up, without injury to himself and his neighbours, and his empire has become so rotten—even while still alive and breathing—as to enable all the cultures of Europe to "nose" it from afar, and to wet their beaks in anticipation of the final partition of and feast upon the carcass.

This is the immediate evil that now threatens the world. The second evil is scarcely less imminent. All that is taking place on the Continent shows that the Printing Press and all the other great agencies of civilization are engaged at this moment in doing for the continental nations the work which they accomplished for Great Britain in the seventeenth century. France, Germany, Italy, and Austria are a hundred years in arrears. Russia is still farther back in the gloom of antiquity. The Continent may have made as much progress in the various arts of life, and in all the external graces and adornments of civilization; but the principal nations have not attained that amount of constitutional liberty which was won for Englishmen by their forefathers in the days of Hampden and Cromwell. Old and effete forms of government are at war with a new civilization; and though there may at times be a truce between the combatants, there never can be peace until one or the other becomes the conqueror. Europe must either be governed by the strong and relentless hand of a military despotism, or it must achieve the civil and religious liberty of which England and the United States of America have set the example. The strife may appear to relax, from the exhaustion of the combatants; but it is as certain to be renewed as the sun that sets to-night is to reappear in our skies to-morrow.

It is a mistake for kings and emperors, popes and cardinals, diplomats and generals, to imagine that the mighty Revolution inaugurated in 1789, and rolling over the Continent ever since that time with greater or less velocity, has run itself out. Its original force is not spent, and whirls it along with a rapidity which, though it seems slow to living men, will seem fast enough to the eyes of historians three hundred years hence. We, in our day, who live in the very midst of the commotion, are apt to mistake the apparent quietude of the axle on which we stand for the normal condition of the spokes and the tire, and all that lies between. But even the men of this living generation are startled at intervals by the roar of the great whirlwind. In 1847 the European world was asleep, and dreamed of no evil; but in 1848 it was aroused from its security, and made painfully aware that the Revolution was still running. The year 1852 gave Europe another startling shake, by replacing upon the throne of the first Napoleon the inheritor of his name, his principles, and his mission; and by taking up the real history of the French Revolution of 1789 at the point where it was cut asunder by Wellington and Blucher on the bloody field of Waterloo. Disguise it as we may, this too to the condition of the Ottoman Empire, is the

real danger of the world at the present time. The knot has been re-tied, and the entanglement is worse than ever. The Emperor of the French—despot as he may be, *quod* the people who elected him to power and who maintain him in it—is the representative of the Great Revolution of 1789; and his accession to the chieftainship of the French army and nation was as much a signal of liberty to Germany, Italy, and Austria, as the abdication of Louis Philippe. It is the misfortune of France to prefer military glory to domestic liberty; but that preference, though it adds another danger to the many which beset the continental sovereigns, in no wise tends to lessen the magnitude of the peril which they incur in resisting the righteous demands of their subjects. Far more than the dissatisfaction of France with the settlement of 1815—with her actual boundaries—and with herself generally—it is the dissatisfaction of the European people that affords perpetual aliment for the unconscious which prevails in every part of the Continent, troubling the pillows of kings, and inspiring the multitudes with hopes of a deliverance—long promised and long withheld, but yet inevitable.

Napoleon III. uttered no idle boast when he said that if France was satisfied Europe might be at rest. The questions for kings and statesmen to consider are, whether France can be satisfied; and if she cannot, whether she can be again created and bound over to keep the peace. If neither of these things can be done, it surely behoves the several nations of Europe to consider whether there be not something so rotten and dangerous in their own internal condition, and in their relationship to each other, as to invest France with a factitious influence over them. If France has such power for mischief, the cause must lie in others as well as in herself. A nuisance may run about the streets of a great city with a lighted torch, and do no great evil; but if he run about with it into the parlours, and penetrate into the very recesses of gunpowder magazines and vaults of naphtha, there is no knowing what calamities he may not occasion. France is in this position. When she brandishes her lighted torch, the danger arises not so much from her behaviour as from the fact that all her neighbours, great and small, are proprietors of powder magazines, and that a spark may at any moment fall upon one of them, and set the whole in a blaze. And it is because the neighbours of France, powerless as they are to wrest the torch from her hands, obstinately persist in keeping combustible materials within reach of such a dangerous visitor, that quiet people live in constant dread of an explosion. But with a free and constitutional Italy, a free Germany, and a free Austria, France would take her proper place in the world. The dangerous ambition of her people, her army, and her Emperor, would have nothing to feed upon, and it would be of as little consequence to Europe whether she were satisfied as it is at the present moment whether Spain is contented with herself or her neighbours. The influence of France in Europe is paramount; and Europe never can repose until that influence is kept within legitimate boundaries. This great result is not to be obtained by coercion. The world foolishly thought it was in 1815; but in 1848 the dream was dispelled. As long as France is the representative of Revolution on the Continent—in other words, until the revolutions of Germany, Italy, and Austria complete themselves,—no soul will the dictum of Napoleon III. be an absolute truth. There may be an occasional truce and cessation of hostilities, but the great struggle will continue to rage—sometimes between kings and their people, and sometimes between rival emperors and potentates. Great Britain, wiser than she was from 1789 to 1815, will hold aloof from the battle. Her business will be to throw the whole weight of her moral influence in favour of every king and every nation that desire to establish a government more in accordance with the spirit of a reading, thinking, and trading age, than a government of wasteful, savage, and unreasoning military power. Italy will be first to be free, and other nations will follow the lead. France herself, hopeless as her case now seems, will not escape the contagion of that liberty which she preaches but does not practise. And with true liberty and an increasing commerce, her thirst for military glory will disappear, and she will cease to be a trouble to herself or a danger to others.

THE MANAGEMENT OF PUBLIC COMPANIES.

EXCEPT as illustrations of the lives of remarkable criminals, it seems now rather late to inquire into the antecedents and connections of such men as Robson, Redpath, and Pullinger. To ascertain by what agency they obtained their responsible situations might throw light on their companions, but cannot alter the public opinion of their guilt. A contemporary, however, has mentioned us "a singular thing," that the chief auditor of the Great Northern Railway never saw Redpath, though he was absent the office for ten years; and this same gentleman was a director of the Union Bank, at which Redpath kept an account, and which Pullinger defrauded. We may, therefore, add as "a singular thing," disclaiming the idea of attaching blame to any parties, that the same solicitors were employed by all the three companies which were respectively plundered by Robson, Redpath, and Pullinger. Careless confidence is one

element of deceit, as unscrupulousness is the other. Violence and war are lessened—ultimately, it is hoped, to be annihilated—by armed resistance; in like manner, fraud can only be prevented by watchful suspicion, though irksome to generous minds. Our present intention, however, is less to urge on shareholders great caution, if they would be well served, than to call attention to the preventive machinery which honesty should employ to defend fraud.

The number of persons interested as shareholders, and the amount of their property are immense, and both are continually augmenting. Only about thirty-four years have elapsed since the obstacles in the way of forming joint-stock companies were removed, and facilities to form them were given. Now share companies are numbered by hundreds. The joint-stock banks of London alone have a paid-up capital of £3,961,303, and are entrusted with deposits to the amount of £40,000,000. In railways at home nearly £400,000,000 are invested. In our colonies, and throughout the civilized world, joint-stock companies, for the management of railways and other purposes, are numerous. They are necessities of modern society, and constitute one of its most remarkable features. They are the means of accomplishing great and new works, and should diffuse the advantages of increasing wealth over the multitude, if they succeed, without inflicting injury on any of their component parts. Embracing vast interests, and being essential to progress, the public has seen with consternation the frauds by which they have been disgraced. Robson, Redpath, and Pullinger, whose united plunder amounts to nearly three-quarters of a million, have been watched by the Schneylers and others in the United States, with the consequence so numerous almost as to be regarded as shameful, and to save the system, means must be found to prevent the recurrence.

It should be remembered that the continuance for a long period of restrictions on the formation of joint-stock companies prevented the public from gradually acquiring the knowledge and habits proper to form and manage them. When the success of the first railway hurried such companies into existence, neither shareholders nor directors were prepared to organize them judiciously, and the wonder is that they should have accomplished so much, not that examples of incapacity and fraud amongst them should have been numerous. As the rule, the shareholders chose for directors the persons chiefly instrumental in getting up a company, adding some gentlemen whose names and characters were public guarantees. These found their advantage in the success of the company, and almost nominal pay sufficed to remunerate them. The directors were at once so numerous as to destroy individual responsibility, and so poorly paid as to make retention of the office and attention to their duties a matter of indifference. Now that more knowledge is acquired, and companies can be regulated at leisure, the old system is continued. The directors are still too numerous, and not sufficiently well paid. It is necessary, therefore, to diminish the number of them, and by increasing their remuneration, secure efficient management for the vast interests embarked in joint-stock enterprise.

Conjoined, however, with this, there must be a complete change in the system of audit. The duties of the auditor should be continuous, and not capriciously exercised, as at present. It is impossible for shareholders to scrutinize all the accounts, but they can appoint an individual to perform this business for them, and to do so seems the most effectual way of escaping a Government audit, with which they have been threatened. A considerable number of persons have made themselves well acquainted with the working of joint-stock companies, and from them it would not be difficult for each company to elect an efficient auditor. He should be well paid, in proportion to the magnitude of the company, should be elected exclusively by the shareholders, and be removable by them; he should be responsible to them, and wholly independent of the directors. Such an officer, having no interest of any kind in mismanagement, would be a guarantee to the shareholders against it. He should have power to call them together whenever he pleased.

Companies have now an annual audit by professional accountants, with which the proposed auditor should not interfere. His audit should be continual from week to week, or even from day to day. He should have access to all the books of the company, and a seat at the board of directors; but he should have no right to interfere with the arrangements of the directors. They should continue on their own responsibility, to give motion to the machine; but he should observe, and, for the satisfaction of the shareholders, should record its action. He would, as their representative, be present at the secret doings of the directors, and they would be secret no more. He would in no degree fetter their movements, but would keep them alive to their responsibility. He would connect shareholders and directors, and keep them in harmony. Not hampered by the cares and responsibilities of management, yet with full knowledge of all the company's affairs, and ready access to every book and document, it would hardly be possible that such an auditor could fail to detect the slightest irregularity. He would be responsible that no wrong should be so shuffling between capital and revenue, and no tinkering of accounts. Stopping luxury at head-quarters, he would prevent the infection from spreading through the whole body. He would make such frauds as issuing shares of a

company without authority, or forging entries in a pass-book, for a continuance, impossible. Present at every board meeting, requiring from every subordinate department a summary of its proceedings or a balance of its accounts week by week, he would stifle irregularities in their germ. His services should, we think, be equally acceptable to directors and shareholders, and if the presence of such an officer could not secure the success of an undertaking, it would prevent it from being a dishonest or disgraceful failure. In some of the continental companies there is already such an officer, but he is called an inspector. We should prefer making him a continual auditor, and he would be the safeguard of the company.

"JAVELIN-MEN."

THERE is lamentation in Staffordshire for the loss of the "javelin-men," the high sheriffs of that county having determined to supply, by an equal number of active and efficient policemen, the place of those venerable servants "in buckram," bearing spears, and clad in fantastic costume.

The abolition of these useless "javelin-men" is a sign of the practical spirit of the age, and of the popular determination to abolish all unmeaning sham. The world is sick of idle pageantry and make-believe, and will tolerate them no longer, especially if they cost money.

"Javelin-men," "being chosen for the prince's watch," like the followers of Dogberry, are to be found providing about in every department of the state, and, from the favour they enjoy, they act with the prudence of "neighbour Seacole," "give God thanks, and make no boast of it." It was the "javelin-men" in high office who let a valiant army perish of cold, hunger, and sickness in the Crimea, because they did not know where fuel, food, and medicine were to be found. There is still a strong muster of "javelin-men" in the Admiralty, and they have proved their influential incapacity by rotten gun-boats, the appointment of crazy old admirals, and the frequent mutinies of men-of-war's crews. What a regiment of "javelin-men" exists in the Horse-Guards has been demonstrated by the Weedon Inquiry, the confusion of the military accounts, and the jobbing in soldiers' clothing.

The wholesale spirit displayed in 1832 cleared the House of Commons of the "javelin-men" who represented, not the people, but the "pocket boroughs" of a few plutocratic noble lords, and shattered the maces and other paraphernalia of hundreds of close corporations.

"The Black Rod" in the Lords is a "javelin-man." "The Sergeant-at-Arms" and "the Deputy Sergeant" are two lareafold "javelin-men." And then, if we look a little higher, what is to be said of "the Master of the Buckhounds," "the Gold Stick in Waiting," "the Silver Stick in Waiting," "the Lord Steward," "the Lord Chamberlain," "the Lords of the Bedchamber," "the Gentlemen in Waiting," "the Gentlemen at Large," "the Gentlemen Pensioners," "the State Trumpeters," "the Beef Eaters," and all the other parasites that gather and flourish around the throne? What are they all but so many "javelin-men?"

What were all our old Chancery, Ecclesiastical, and Law Courts, but nests of "javelin-men," in which offices without duties, and payments without services, were secured for generations of sinecurists and jobbers? What is my Lord Ellenborough—drawing between £7,000 and £8,000 for a sinecure in the Queen's Bench—but a flagrant "javelin-man?"

What is the London Corporation but a nest of "javelin-men?"—engaged in a struggle to retain its "javelin-men," its "men in armour," its luxurious feasts, its water parties, its "bridge" dinners, its self-elected guilds, their mysterious accounts, and their manifold mismanagement of "the Irish estates."

What was the Rev. Bryan King, just gone abroad for the benefit of St. George's-in-the-East, but a pertinacious "javelin-man," palming off upon the public other pet "javelin-men,"—"the choristers in white surplices, with bells, flowers, wax candles, altar-cloths, and inharmonious chanting?"

For what has Austria been wasting life, wealth, and reputation, but in the vain struggle to retain its Italian dominions, and those crowned "javelin-men," the princes and dukes of Tuscany, Parma, and Modena, upon the thrones they were unworthy to occupy?

And what is at this epoch the whole aim and object of the heroic Garibaldi, but to rid his beloved Italy, now and for evermore, of its effete and worthless "javelin-men," spies, police, Swiss mercenaries, Bourbon princes, king and kaiser?

It is a weary task—this war against the "javelin-men"; it is like battling with a Hydra; for no sooner is the head of one race of vipers sliced off by the sword of Reform, than the soil teems with a fresh brood. But though the task be weary, it is one in conformity with the feelings of the age, and must be gone on with until there is an end to all the Javelins.

Even then assassinations were taking place daily, and yet the Turkish authorities used no efforts to restore the public peace. The Christians of the Lebanon addressed a memorial to Kossab Pasha, complaining of the impunity with which these assassinations were committed, and more particularly adverting to the murder of several ecclesiastics which had then recently taken place. They reminded him that the Druses had not been punished for former outrages, and especially "for the horrible acts which Sheik Youssef Abd-el-Melek ventured to commit last year in burning and sacking dwellings, and killing innocent Christians, without being called to account." Warnings from the European Consuls followed this memorial to the Pasha, and yet he took no steps to restrain the Druses. Accordingly, on the 1st of June, the English, French, and Austrian Consuls at Beyrout repaired to the camp of the Pasha, which was within an hour's distance of the town. He seems to have treated his visitors with true Turkish insolence, declaring that, if they would check the intrigues of the Christian bishops, and put a stop to the incursions of a pretended committee of Christians organized and sitting at Beyrout, he would be responsible for the Druses. On the following day, the capture of Jbeil-el-Kannar, the chief Maronite town, took place, without any attempt on the part of the Pasha to interfere or even to prevent the Turkish troops from taking part in the foray against the Christians. By the 9th of June the towns of Rasheya and Hasheya were destroyed. "The male children," we now learn from an official report, "of six or eight years of age and upwards were sought out and killed, but the younger were spared." While these events were going forward, the European Consuls used every effort to induce the Turkish authorities to interfere, but in vain. "I repeatedly entreated the Pasha," says Mr. Brant, of Damascus, "to send out an escort to bring in the people of Rasheya and Hasheya, but he heeded nothing, though he promised he would. He waited until the catastrophe was consummated, and then pleaded its being too late."

The magnificent city of Damascus lies, as we all know, near the scene of these events. It has often been described—and by no one better than by the eloquent author of "Tancréd." Every one has heard that it is the richest and most magnificent city of the East. Every one has read of the beautiful and highly-cultivated country which surrounds it; of its rich corn-fields and olive-grounds; its gardens, avenues, canals, and rivers; its graceful palaces and sublime pyramids; its spacious streets and public buildings; and, above all, of its "five hundred palaces," magnificent beyond any private abodes elsewhere in the world. Travellers who speak without hyperbole, declare that the value of the furniture in one of these mansions often exceeds £25,000, and that even this sum does not include the ornaments and rich mosaics which adorn courts, terraces, and galleries. Damascus is situated in an oasis of the Syrian Desert. It lies amid extensive plains, the shade of wild Belonins, and wilder and fiercer Kurds. The city itself is inhabited, besides, by an outcast population, of whose depth of degradation the dangerous classes of European towns can give no adequate idea. It was feared, then, that as matters stood, these dangerous classes—the remnants of law being removed—would take the opportunity of plundering the city. The greatest alarm began to prevail when the conduct of the Pasha was known. It was, of course, ascribed to that insane and ferocious thirst of blood by which the Eastern Christians believe their Turkish persecutors to be actuated. It was reported that he meant to stir up a tumult in Damascus; and that in the event of the Druses getting possession of the city, he would shut himself up in the castle, and leave the Christians to the mercy of their assassins. How these forebodings were realized is now fully told. On Sunday the 28th, a mob of Moslem lads were seen near the doors of the Christian churches, making crosses upon the walls in chalk, and then spitting at them. No notice was, however, taken of these attempts to stir up the Christian population. What was the surprise, then, of the inhabitants when these very lads were apprehended and sent in chains next day, to sweep the streets in the Christian quarter. A riot was at once excited by this display. At two o'clock in the afternoon 300 Moslems of the lowest class rushed into the Christian district of the city, calling out, "Slay the Christian dogs!" The work of plunder then began. Before evening the whole Christian quarter, including some of the finest palaces in the East, was in flames. As the Christians tried to escape they were met by the bayonets of the Turkish soldiery, and driven relentlessly back among the burning embers.

"A sober-minded Englishman," who was present, says, "all the last fearful night Turkish soldiers and Moslems, men, women, and children, continued to pass my door in an unbroken stream, all laden with spoil, drunk with blood and rapine, and all blaspheming the name of Christ." The mob continued to shout out, "Do not spare one Christian dog; burn their houses, plunder their goods, dismember the wives, tear their children in pieces." Three thousand Christians took refuge in the castle, which was occupied by the Algerines under Abd-el-Kader, others sought refuge in the English consulate, which was not in the Christian quarter. The amount of property destroyed is estimated at more than a million sterling, while the number of victims is computed at from three to four thousand, but this may be an exaggerated statement. The terror which prevailed would not allow of its being verified. The Lazarist Sisters of Charity, and other women of Damascus, who had sought had arrived in safety at Beyrout, under an escort furnished by Abd-el-Kader. There were 500 regulars in the garrison and several field-pieces at their disposal when the insurrection broke out, but they have remained throughout either inactive or hostile. The new governor of Damascus has arrived

with 1,200 soldiers; but on the 13th anarchy still reigned, and the massacres had not been stopped.

In this state of anarchy on the northern and Asiatic part of the Turkish empire, an insurrection of a similar character has broken out in the north-western provinces. Official intelligence has been received at Vienna on the 1st of August from Constantinople, that in Bulgaria and in the neighbouring provinces massacres of the Christians have been organized, and that the Porte had taken all necessary measures for arresting in the most efficacious manner these criminal attempts.

The last accounts from Constantinople state that there is a general alarm entertained in that city of a collision taking place between the soldiery and Christian population.

On the 17th of last month the Schismatic Armenians had risen en masse to prevent the burial of a Protestant Armenian in a cemetery to which they claimed exclusive right. The greatest dread was entertained that an outbreak would be the result. For two days the body had remained unburied, and a crowd of five hundred persons collected to oppose the funeral; but the authorities abstained from interference, dreading the consequences of a collision. Under these circumstances Sir Henry Bulwer repaired to the Grand Vizier, and subsequently to the Armenian Patriarch, and with their assistance the body was at last interred by the police, two hundred of whom were present. The latest telegrams describe matters as being still critical. Great precautionary measures, however, have been used. The bridges of Galata and Pera are raised every night. The Sisters of Charity have dismissed all their pupils; and several Christians have been waylaid in the streets, insulted, and beaten.

Important news has been received from Sicily since our last publication. Garibaldi has gained a decisive victory over the Neapolitan troops at Melazzo, in which he displayed more than even his wonted heroism, and received a wound in the foot, which is not, however, serious. He had entered into a military convention, under which the Neapolitans were to remain in possession of the forts of Syracuse, Agostino, and Messina, there being at the same time a complete cessation of hostilities. Letters from Naples state that Garibaldi has refused to conclude the armistice advised by King Victor Emmanuel, and had replied that he himself could alone judge concerning the real state of things in Sicily and Naples. He asked, it is said, that he would not name until the cause of national unity had triumphed. The disembarkation of Garibaldi on the mainland was expected daily at Naples, where no attempt was made to check demonstrations in his favour, a Naples paper having assumed the name of "Garibaldi." The city was quiet, but there was agitation in the provinces, and the Minister of the Interior had issued a circular authorizing the functionaries to use all exceptional means for maintaining public order. Garibaldi is said to have more than 20,000 Italians enlisted in his army, without counting Sicilians, and volunteers are every day flocking to his standard. He has, besides, three steamers of the Transatlantic Company at his disposal. The king has resolved to make a vigorous effort to oppose the invasion, but desertions are constantly taking place of persons who hold offices of trust in both the army and navy, and it is very evident that neither service will do battle with much heart against the invaders.

A preparatory meeting of the ambassadors of the great powers took place on Monday, on the invitation of the Turkish Ambassador, who wished to explain that if the Sultan authorized him to adhere to the convention, under certain conditions, it was only because he did not wish to be the cause of a conflict between France and England. The essential reason which the Porte wished to make was, that before adopting the terms of the convention for regulating foreign intervention in Syria, mention should be made in it of the spontaneous desire of the Sultan to arrest the effusion of blood in Syria, and to accept the co-operation of his allies to that end. The convention having been greatly modified in consequence of this demand, the representatives will refer to their respective courts before definitively signing it. It has therefore been adjourned *sine die*, in order that all the ambassadors may be able in the mean time to receive full powers for the signature of the convention, which must necessarily precede the despatch of troops.

THE FIGHT AT MELAZZO.

(FROM OUR SPECIAL CORRESPONDENT.)

MELAZZO, July 31st.

On the morning of the 21st of July commenced the fiercest struggle which has yet taken place in Sicily. Seven thousand Neapolitan troops, chiefly Swiss and Bavarian, under Bacco—who has the reputation of being their fighting general,—had taken up their position in the fortress and town of Melazzo, distant about twenty-four miles from Messina, with the view of checking the advance of the columns, under Medici and Cosens, in that direction.

Situated on a rocky peninsula, the position is admirably adapted for defence, especially against any land attack. Partial skirmishing had taken place for two days, when, on the evening of the 20th, Garibaldi arrived from Palermo, reviewed his 2,500 followers, and prepared to attack the town at dawn, in which a large portion of the Neapolitans had entrenched themselves; the remainder, with the guns of the fortress, which thoroughly commanded the town, offered a safe retreat. As for the wretched inhabitants, they were all huddled together on the extremity of the promontory—some under tents, others in the numerous caves on the seashore.

Malenchini commanded the extreme left, Medici and Cosens the centre, the right being only composed of a few companies to prevent surprise in that direction. As for Garibaldi, he placed himself in the centre, rightly judging that there would be the hottest work. The fight commenced a short distance out of the town, where the Neapolitan advance-posts were well posted and sheltered by the many detached houses, walls, and large trees;—the former, individually, fortresses in the hands of resolute men,—against an enemy with nothing but musketry—for the Garibaldians had no artillery. Clearing the advance-positions, the right and centre found themselves opposed to about 6,000 men, whilst they did not number as many hundred, and, consequently, received a considerable check, and lost many men. Medici's horse was killed under him, and Cosens hit in the neck.

Finding it almost impossible to advance farther under this murderous fire, Garibaldi then placed himself at the head of the Genoese Carabines and his guides, and endeavored to take the Neapolitans in flank; but here he found himself face to face with a masked battery, which opened on his small column at twenty paces, and nearly all the assailants were placed hors de combat. The sole of Garibaldi's boot being taken away by a cannon-ball, and his horse becoming utterly unmanageable, he abandoned it, and with his six unscattered followers he was driven back, but only to organize a more successful attack. He then ordered Colonel Diani, commanding the Palermitan regiment, to make a flank attack on the battery, and, himself leading on foot, these *genies* of Palermo took the guns with the bayonet, but not without considerable loss. The ground being a little more open, a squadron of Neapolitan cavalry endeavored to retake the battery, and a temporary panic seizing these young soldiers, they cheered and rushed on, but finding themselves opposed to a double line of fire, they endeavored to retire.

However, in the narrowest part, Garibaldi, with Misori, Starella, and half a dozen old *Cacciatori*, barred the way, though on foot. The General leapt at the bridle of the Neapolitan officer's horse, and jarring his blow, cut him down, wounding another. In this death-grapple revolvers did their work, and few of this handful of cavalry escaped. The Garibaldians, now gradually advancing, though every foot of ground was contested, worthily seconded their noble leader, ever in the thickest of the fray, and ultimately, with the layonet, drove the enemy into the town. The Swiss and Bavarians made a good fight for it; but eventually had to yield to the extraordinary audacity and daring of the Garibaldians, of whom nearly every man seemed inspired by their chief.

Here the cannon of the fort came into play, and the scene of action was gradually transferred from the eastern side of the peninsula, where it had commenced, to the west, where the fort is situated. Here lay the *Talieri*, formerly *Falci*, and Garibaldi temporarily transferred himself to her deck, to direct the fire of her sixty-pounders. Having succeeded in drawing the fire of the fort on the steamers, he immediately landed, and placing himself at the head of the valiant and battered remnant of troops, led a general attack on the town. Here house by house was disputed, and towards evening the Neapolitans were all driven into the castle, which was then invested by the Garibaldians, who in this hard fight, lost upwards of a fifth of their number—they killed and wounded amounting to nearly 600 men. One of the singular features of this combat was that the only Sicilian officer on either side was Bosco, who commanded the Neapolitan; Garibaldi's Palermitan regiment being officered by Englishmen and Piedmontese.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

The private letter of the Emperor Napoleon—made public by his friend and ambassador, to whom it is addressed—is the talk of all circles. Some late events have made the powerful writer more distressed than ever, in England and elsewhere, whilst there is so much to quarrel with him, or his dynasty, or his form of government, about which we have our strong opinions, but no desire to go to war for our "ideas." But whilst we do not wish to go to war, we are unanimous in providing such a defensive force as shall deter others from going to war with us. Lord Palmerston's speech on the National Defence has already borne good fruit. What is important for the nation to know is, that the National Defences will be carried on with as much vigour as if that letter had not been written.

And yet the letter is an excellent one in many respects. It is plain and unaffected—almost English—in its manner. In its matter there are many salient points. Chief amongst these are the complete accord in our non-intervention policy in Italy—which is all the Italians want—and in the more temperate propositions for the settlement of the Syrian difficulty, as well as the general expressions of good-will, and the sound appreciation of the value of the English alliance. It is fortunate that those professions can be subjected to an immediate test, in the affairs of Italy and the East. With regard to the more general professions, we have only to reciprocate them with good faith, and go on with the "Defences," which have already produced such gratifying results.

In the matter of the Defences, the Review in the Park at Holyrood on Tuesday next, promises to vie with that in Hyde-park, as nobly as "throughout did vie with Cumbus Kenneth." The "approximate numbers"—in the language of the War-office—in Hyde-park, were 21,000. Already the Scotch men—swelled from the Border counties, in friendly rivalry—comes up to 20,000 in round numbers, armed and resolute men.

The "Faction-fight," to which I referred in my last as likely to take place next Monday in the House of Commons, has developed during the week these events that "out their shadows before." There are strongnings about

serious results from so small a matter as the seven-eighths of a penny upon foreign paper. There is strong talk about a change of Government, a dissolution of Parliament, and other grave disturbances, rather out of place in the present state of Europe. Mr. Gladstone and Mr. D'Israeli are both brilliant men, but they ought not to be allowed to set Europe in a blaze. In the beginning of the week the political atmosphere was dark. It has brightened up a little during the last two days, in some degree owing to the state of "Foreign Affairs," and also—so they say—from some benevolent and patriotic influence in high quarters at home.

Trouble majeure venez. Municipal matters have made some progress in Parliament during the week. The Metropolitan Board of King Thwaites, and his minor divisions of the vestries, have had larger powers given to them, by the vote of Mr. Tit, which is allowed to pass, although considerably shrivelled. Danger is left, moreover, to take away from them all cause for not proceeding with the necessary improvements of the metropolis. Amongst these one of the foremost is the so long-neglected task of opening up the thoroughfares. Many existing routes require enlargement, and many new roads are urgently demanded, especially those running from east to west. Why not open the Turnstile from Lincoln's-Inn to Holborn, make a viaduct across Farringdon-street, and give us an outlet to the north-east of London? Why not carry a new thoroughfare from Covent Garden to the Post Office, using a part of the site of the old Fleet Prison, which will not be wanted for the Dover and Chatham Railway Terminus? The Metropolitan Railway, now secure, will relieve much of the traffic from Paddington to the Bank. But the Strand and Fleet Street are as crowded as ever. Some relief may be had by the prospect of the "Thames Embankment," which looks better since the Report of Sir Joseph Paxton's Committee, ordered to be printed on Friday last, but which has not yet emerged from the hands of the authoritative Mr. Haanard.

Every one asks if the two great guns on the "Guards' Memorial" are to be left in their present unsightly and ridiculous position? Ought they to be there at all? I am told that the cost is something like £150 a ton. Would not a *franc-tireur* in Mr. Gladstone's paper merit to be just as effective, and much more easily placed? But the whole thing is more fit for Salisbury Plain than for Waterloo-place. It looks scarce less enduring than Stonehenge. It is not ornamental, and certainly is not useful.

The publishing season has been very indifferent in London on the whole. It is by no means an easy task to trace the causes. There has doubtless been considerable dulness in readers. Little in the way of a sensation could be prepared for anything, except a sort of lively (or naively) wonder at the strange weather. Perhaps the universal gloom caused by the endless rain may have had more to do with this slowness. We are—the "Scylla and Charybdis"—of the circulating libraries, has worn, through the book-buying period, a distrustful, disaffected—even, altogether, infidel air! Small conversation had been made, in his literally incredulous mind, to even the best titles. Not that anything like a remarkable look, title, or, indeed, a remarkable anything else, has appeared this season. A strange literary sign is the sinking—almost cessation—of interest in the great "work of fiction," with which the reading campaign was supposedly inaugurated. What look should we mean but George Eliot's? Owing to unlocked-for adverse circumstances in the interruptions to public attention, we more than half fear that this name usually bristled with of the "Mall on the Floor" has been but a languid whiff, producing, for some reason to suppose, but half the golden measure of grist which were looked for from it.

But there is a new feature in the "circulation" of books every way worthy of notice, and which promises to work every way advantageously. In fact, authors and publishers generally are interested in its success, no less than the reading public. We allude to the new plan of Messrs. W. H. Smith and Sons to convert their stalls at all the leading stations, into so many circulating-library centres. The thought is "novel"—something new, we hope, in the sense of solid literature. Monopoly is odious at all times, and in all places. The interests of authors—and of publishers, as the middlemen of literature—will be consulted by thus multiplying the avenues of access to the great market of literature.

How is it that all our certainly many attempts at statuary, in the metropolis, should be so poor, and insufficient? We invite all our readers—in confirmation of our assertion that it is so—to notice carefully the so-called "drinking fountains," which, as our peregrinations about the streets, we are all assailing—certainly not pleasing—the sight. Niches, betraying crude notions, etna; attempts at idealizing, rough carving—all sorts of faults, in fact; these are our "fountains!" Mainly, they are stuck in walls, or they are raised in any odd and out-of-the-way position; sometimes under a gas-lamp—or where nothing at all—would seem more appropriate. Are Quakers the architects of these things, equally so, in many instances, they are the heretic individuals who donate them? A little heathen art—if it were good—would even assist the exorcism of the water. For regarding this latter point of the innocence of the water, we have, certainly, not the slightest doubt. In the interest of the masses—and no derogation to the cold water—we could wish that there might be certain special and enjoyable national occasions, on which these stony and unwholesome means of administration of the "water cure" might run with something bricker than that treble-virtuous, and "oldest of all" ale.

Opera—grand opera—has nearly retired its last, in London, for this season. Her Majesty's Theatre closed on Saturday night, with a continued musical entertainment of rare abundance, though not of distinguished excellence. For some reason—or, as we might say, to apply Mr. E. T. Smith's taste, that it should have been so—*Ballet* is a flower which has not flourished this season at the old, famous, choreographic house in the Haymarket. How is it? *Ballet* is always the lighter—and, we boldly say, the more daintily and successfully captivating—sister of Opera. We seriously suspect that the truth regarding all these mysteries of production, or of non-production, at Her Majesty's Theatre will be found in the fact that the manager has possessed such abundant, and even embarrassing, stage means, that he has not known how to expend them. Like Caslin, in the famous

cave of the "Forty Thieves," he has been so puzzled with the rival solicitations of his rich thieving, that he has missed the opportunity of presenting many. But, like a much-frequented door, the "Old Opera" only closes to open again. A brief breathing-time—a slight "folding of the hands"—and the great West-end musical establishment, like a versatile actor in a new walk, and in a new part, recommences. We doubt the policy of this so swift shifting of the scenes. We are promised "English Opera" on a grand scale, and the temptation, to the management of Her Majesty's Theatre, has been to rival the native operatic representations which have proved so successful—shall we say—dare we say—will we say—at a sister house? Under the circumstances of this operatic conflict, we fear that we can scarcely predicate such harmony as should prevail in this sisterly-feminine relationship. But the true tale of success, where Opera are in the field against each other, is not *Old* in the advertising columns, nor, we fear, in any "column," or "half-column," but in the empty or "containing" money-chest.

Convent Garden closes with this week, after a more quietly managed, but, we believe, a more successful—and decidedly more fashionable—season than the better-pleased house in the Haymarket.

Flowers and foliage are half of the Royal Italian Opera. And no slight or ignoble half, too, we may say. We are glad to learn that Mr. Gyo is quite satisfied with the results of his season. We wish him excellent speed.

One of the remarkable men of Brighton—the Rev. James Sartin—has closed his mortal career. Mr. Sartin was minister of Lady Huntingdon's Chapel—a preacher at Brighton for twenty-eight years,—and one gifted with eloquence so peculiar, so true and so genuine as to win for himself the attendance of all persons of taste and judgment who, for that long period of time, visited this celebrated watering-place. It is in contemplation to erect a statue in his honour.

THE GOUTY PHILOSOPHER.—No. V.

MR. WAGSTAFF SPEAKS HIS MIND ABOUT "SLOP."

It always has been a fashion—it was so in Athens and Rome—it is so in London and Paris—for the living to accuse their own age of having degenerated from the high perfection of the past. If we knew anything of the private life that men lived three thousand years ago in Egypt and Euphratia, of the gossip that amused the idle in Nineveh or Palmyra, we might discover that philosophers and fools prattled pleasantly in the afternoon about a golden age of their grandfathers, and vilified their own as one of inferior metal—of brass, or iron, or, perhaps, even of mud and clay. But I am not daunted by that. I build my present theory, not upon any bygone theory, but upon the result of my own experience. Guided by that, I most emphatically declare that the actual age in which we live has palpably and visibly deteriorated and degenerated. I assert it as a fact. It is of no use for any objector to say that time has dulled my perceptions and blunted the edge of my enjoyments. I know all the force and the weakness of the argument. I know that peaches and grapes are not less palatable than they were, because old men, with jaded appetites or no appetites at all, do not enjoy them as vividly as they did when they were children or young men. That is not the point. The fruits always ripen; the seasons always follow in their order; and the voice of Nature ever sings the ancient music. What I assert is, that within fifty years, especially in our realm of Britain, there has been a great moral deterioration, a lowering of the standard of thought and life. The people of all classes and degrees have ceased to be the solid, proud, and honest people that they were. We have changed, in almost every respect, for the worse. I do not mean to say that gas, steam, railways, and electricity have done nothing to improve man and society; far from it. I am only sorry that I am too old to have any reasonable chance of living a half, or even a quarter of a century longer, to witness the further triumphs of these marvellous agencies. But what I affirm is, that there has been a sensible deterioration of thoughts and things, that the ancient massiveness and truth of character, which distinguished the Briton above all the rest of the world, have given place to false pretence and flaccidity. The nuggets of gold, so to speak, that formerly existed, have been hammered out into gold-leaf, covering a larger surface, and looking, doubtless, very shiny and showy, but lacking altogether the old intrinsic weight and value. Fineliness, and not strength, pervades everything amongst us, in us, and about us. We all strive to show the tinsel, to make believe that there is solid gold underneath it. The poor man takes a sheet of this very thin tissue, and spreads it out to hide his poverty of the real metal,—as if it were a crime to be poor. The manufacturer hastens to be rich by unfair practices, ashamed of his gilding, and desiring the solid gold, and not scrupling to do mean, cowardly, and dishonest things, that he may become a bigger man than his neighbours. The shopkeeper lies, cheats, adulterates, and gives false weight and measure for the same reason; and Slop reigns the monarch of our civilisation. Slop—the all-pervading Slop—is the lord of our trade and commerce, the genius of our time, the beloved of our people. Look around, and you will see slop houses, slop furniture, slop raiment, slop food, slop drink, slop philosophy, slop philanthropy, slop literature, slop criticism, a slop drama, a slop House of Commons; and if we have not slop judges, a slop House of Lords, and slop Royalty, it is only because the people have nothing to do with the nomination of judges, the creation of Peers, or the choice of the Sovereign. You deny these facts? I proceed to prove them.

First, of Slop Houses. There was, when a house was built to stand for two hundred years, and a church for five hundred—or a thousand. Ask any architect who knows his business and he will tell you, if your own eyes do not convince you, that the walls built by our forefathers were thick

and massive, and impervious to the elements; that the floors were of such solidity that if the hall or chamber were but large enough, a thousand guests might dance within it, without fear that their measured motions would shatter the edifice, and bring it down in fragments over their ears. But what is the case now? and what is the average duration of a house in London? Will it last for thirty years without continual propping up and renovation—amounting in the thirty years to about as much as the prime cost of the building? No: our houses are slop Houses, planned by slop architects, built by slop builders—showy enough, but thin and unsubstantial; tumbled of lath and plaster. In the palaces of Belgravia or Tyburnia, sitting in your study or your dining-room, you can hear paterfamilias on the right hand, whom you do not know even by sight, sneezing or coughing, or poking the fire; and materfamilias on the left, equally unknown to you, scolding her servants. You can hear Jones, on one side, striding over his carpet, out of temper with himself and with the world; and on the other, Smith's daughter, torturing the pianoforte, and running over the scales in a manner agonising to the nerves. An Englishman's house is not his castle. The proverb lies. There is no castle for the modern Englishman, unless it be a detached villa, with a large garden, orchard, or park around it: in which he can be entrenched from the abominable noises of his neighbours. Besides, if a man have a castle, be, as its undoubted lord, may surely be allowed to give a hall in it, if he be so disposed. But the modern Englishman dares not. He is forbidden by his lease, and by a regard for the lives of his guests, if he be a tenant; and if he be the proprietor of the lath and plaster shell, to which universal Slop has doomed him, he is forbidden by a regard for his property, and by common mercy, from allowing above a hundred or so of people to keep time to music with their feet, on the balancing, oscillating boards of his drawing-room. A ball of three hundred persons, all dancing together, would drag down not only a house, but a whole terrace in some parts of Tyburnia.

If you want to see the kind of structures that adorned England ere the age of Slop began, look at the ruins of Kenilworth or Rochester Castles, or at the noble cathedrals of Westminster, York, Canterbury, Worcester, Lincoln, and Peterborough. Compared with Windsor Castle, what is Buckingham Palace? A globe of crystal to a globe of soapstone. St. Paul's Cathedral, with all its beauty, has a slop dome, which, proudly as it rises, is a false pretence—a mere scaffolding of wood covered over with a thin integument of metal. Compare it with Westminster Abbey, if you would see the mighty difference between the honest architecture of our early forefathers and the slop workmanship of their degenerate sons. These glorious abbeys stand all the wear and tear of time and the abrasions of the atmosphere; but look at the Palace of Westminster, where sit the Lords and Commons of the realm, commenced only five-and-twenty years ago, and you will find that it is in a state of decay even before it is completed, and that it is mouldering outwardly ere it is finished inwardly,—old in its first parts ere its last have been cemented.

There was, not many months ago, a very large house in Lincoln's Inn Fields, on the south side, which was once inhabited by Lord Chancellor Erskine. The rooms were lofty and spacious, constructed to suit the tastes of an age which was guiltless of Slop, and of a man who would have scorned it had he known it. After fashion had left the neighbourhood the house was divided into two. One-half of it still remains in its ancient dignity; the other half, which was three stories in height, has been remodelled and reconstructed, and, without any great increase of altitude, has been converted into a dwelling of six stories; and Lord Erskine's library, dining, drawing-rooms, and bed-rooms have disappeared, and given place to little sets of chambers, neither half as lofty, half as wide, or half as long as the noble apartments which they have superseded. The lawyers of this age could not transact business in such magnificent rooms as lodged an Erskine. For smaller souls, smaller dwelling-places. A lawyer might possibly imbibe a great idea if offices were as large as the library of an Erskine, and as that might ruin his business, he does well to betake himself to a smaller den, like the soul of King Charles, that the poet affirmed to live in an alley.

As regards furniture, I know that in the days of my grandfather, nay, of my own youth, a fat man, such as Falstaff, could sit him down in an easy chair without breaking it by his weight; but I ask you, as observant Englishmen, if a man of Falstaff's rotundity of paunch and ponderosity of figure, can safely sit on a modern chair, without a previous guarantee that it came of an honest maker! Fat men and women in our days, must buy their chairs, their sofas, and their beds, of men they know, and not go loosely into the market, or they may break both their furniture and their bones the first time they sit or lie down. No doubt strong and durable furniture is made, but it must be to order, and of an assured maker. It is not to be had in the open market, where show, not strength, is the quality that finds most favour, both with the dealer and with the customer. The dealer loves the showy goods, because there is a large profit upon the inferior commodity; and the customer likes them because they please the eye, make no large immediate demand on his purse, look cheap, and will do for a short time for eye-service as well as a better article. And as with furniture, so with plate and jewellery. Who can tell, in this second half of the nineteenth century, the real jewellery from the sham! the solid silver from the electro-plated counterfeit! The spoons and forks of many a pretentious household are Slop, as well as the tables on which they are laid; and a plated epigone in the centre does duty for one of silver, or for the simple flowers in a vase, which would be cheaper and in better taste—alike more beautiful and more truthful.

Slop raiment is even a greater scandal. It is a robbery of the poor and

industries, into whose slender joints the anglers for huge fortunes dip with the tempting bait of a cheating champagne; and they catch what they fish for. But at what a cost to the public happiness and morality! Outlets, vests, trousers, shirts, and shoes,—what misery there is in the manufacture of every one of these articles, and what fraud and villainy besides. The manufacturer, determined that these commodities, all of prime necessity, shall be made as cheaply as possible, grinds the faces of the poor workpeople, drives them out of the market if they will not work at women's prices, and squeezes them down so ruthlessly, taking such advantage of their numbers and their necessities—all competing one with the other, and with their own wives, daughters, and sisters,—that the hard-working man can scarcely gain sufficient to keep himself at the point of efficiency or even of life. The tailor, who formerly earned twenty-four shillings a week, working ten hours a day, for making strong garments that would last a reasonable time, cannot in our day now alone eleven or twelve, working fourteen hours a day, and half of the Sunday besides, making garments that will scarcely hold together for a month. The master manufacturer, hasty to grow rich, pays as little as he can; and the workman, as a necessary consequence, does his work as ill as he dares. Long stitches supersede short ones, and buttons hold on for a week, instead of half a year, as formerly. I ask you, as candid Englishmen, if there were any Shop tailors in the days of Blake, MacIntosh, Nelson, or even of Wellington, at his last great battle? Be assured that honest workers make dare-die soldiers and sailors; and that a man who does such work, becomes in due course a sham fellow altogether, and loses his pith and his courage, in proportion as he loses his respect for the man who employs him, and the commodity he manufactures.

Nor are we better served in our food and drink than in our houses and our attire. Who knows what he eats in our result of England? It bread made of wheat?—or only of a medium of wheat, mixed with bean or pea-flour, and powdered bones, chemically whitened to deceive the eye? Is the poor man's beef really beef, or lard? Are his sausages not the product of the knacker's yard, made up of the stringy flesh of defunct cab-horses and donkeys? Is his butter not lard, flour, and oil? Is his porter not a filthy compound of drugs and treacle?—and his ale all but innocent of hops and hops, and largely guilty of intoxicating and poisonous chemicals? Does his tea not grow upon the hedges in the green lanes of his native land? and his coffee in Buckinghamshire—or any other shire where the cultivation of chicory will pay the gardener or the farmer? Oh for one twelvemonth of some wise and beneficent despot, armed with a threefold Napoleonic power, and tenacity of purpose, who should do us justice upon the smug villains of our large cities—the mean rogues who poison us in our food and drink! If there be anything good in Turkey or in Turke, or anything we might copy with advantage from Bagdad or Samarra, it is the excellent fashion of mailing the ears of such rascals to their shop-doors, with a label on their breasts setting forth their offence. In England, a man's ears were formerly cut off, if he libelled Queen Elizabeth. Pity that the ears of rogues cannot be cut off in our age, if they are guilty of the nefarious crime of adulteration of food, a crime that unites in it the meanness of swindling and the cowardice of assassination. Hypocrites that they are! They go to church or chapel—mostly by chapel—on the Sunday, and turn up the whites of their eyes—the humbugs,—striving to look holy, idolizing perhaps with their prototype Holy Willie, in Burns' immortal satire:—

Oh Lord, remember me and widow,
Wh' murtherers tempt, rail and din,
That I for pure and grace may shine,
Exalted by name,
And all the glory shall be thine,
Amen! Amen!

If a poor starving boy, driven to desperation by hunger and misery, robbed a shopkeeping Mawworm of his kind, of his pocket-handkerchief, or stole a fourpenny-piece from his till, the arch-knave and master thief would have him up at the Old Bailey, and prosecute him duly, for the sake of example. Example, quotha! Were I the depest that I have portrayed, and had power to manage these little matters, master adulterator and prime blackguard should hang as high as Haman, though not until his ears had been cut off, as warning to the age, and a befitting sacrifice to the Demon of Slop!

MODERN YOUNG-LADYISM.

THERE have been revolutions in all things—revolutions in travelling, in writing, in thinking; revolutions in kind and in present; revolutions in dress, in manners, in style; but no revolution has been so entire as that in women. The hearty, lusty maid-of-honour in Queen Elizabeth's time drank beer and ate breakfasts for breakfast, played coarse practical jokes about the court, and bantered jests, not always of the nicest, with the courtiers; her country cousin wrought even-handed with the serving-maids, and gave her mind to pickles and preserves; if inclined to learning, doing a little in the way of Latin and the Virgins; but, for the most part, content with the material duties of her station. Later, Queen Anne's ladies gave themselves up to play and patches, including the high family pew at church, where they slept through their religion with dignified indifference. So they went on, gradually softening as they progressed, until they culminated in the ultra refinement fashionable a few years ago, when a spouse was not a spouse, but something else; for non-embellishment were vulgar and only to be used paraplasmatically; and when the life of relaxed ease and beer, which without end the handling of the country cousin's nerves gave place to one of all nerves and sensibilities, wherein nature had to be assisted to live. And now the last change in the magic mirror of womanhood has been in this exquisite

refinement which could not away with honest Saxon, and which dressed vulgarity more than vice,—to the careless bonnet that rattles gossamer's slang like its native tongue, goes to Crenmore on the sly, and boasts of it afterwards; makes up betting-books for the Derby, and wins grapes on the Oaks; wears the shortest and reddest of petticoats in the winter, and the jumble of hair in the summer; jumps to the water's edge, and is never sent to the water; and apes from man his noise without his strength, and his fastness without his passion. This is the modern *belle*—the latest fashion in which the world's id is has thought fit to deck itself. But we cannot say that we think the fashion a good one, or hold the affectation of masculinity much higher than the affectation of femininity. Both are bad; and it is quite an open question whether coarseness in woman is preferable to weakness.

This kind of thing has gone into all classes, even the highest; and where we once had Lawrence's noble ladies, or Leslie's sweet and teaching beauties for our aristocracy of womanhood, we have now "stunning fine girls," with petticoats bordered from the Edinburgh fishwives, and hair from the Irish navvies, and hats from the renowned Jim Crow—wide-awake and angles as his. Of course this outside revolution must have a corresponding moral circumstance; and accordingly we find that never, since the time when Mary Wollstonecraft and Frances Wright first leached the subject, has the question of Women's Rights been in such full activity as now. The gradual driving of the male population to distant countries—to large cities, the colonies, the army, the navy, and the like—gives a greater weight to this question now than formerly, and the fact that more women are unmarried, and fewer are provided for by their parents than used to be, renders it doubly necessary that they should take out an active career for themselves, and set themselves fairly to right with Nature and Society. But Nature has run to form yet, and not a little to unlearn, both of folly and wrongheadedness.

The greatest barrier to the fit settlement of this Woman's Question is, it seems to us, her own want of guiding judgment. Does she ask for freedom and equality with man?—she is content if she be like him in the way of vests and short-skirts, cropped hair, jackets, and gloves, and in the use of and dainty cigarettes. When she has her outside paraphernalia cut on the same plan as his, can go to his special places of amusement, and adopt his special forms of social life, she has done what she had a mind for, and thinks she has attained her destination. Does she demand a higher mental and intellectual life than the mere drudgery of housekeeping, or the slavish care of a populous nursery?—straightway she renounces marriage as a humiliation, and speaks of the degrading conditions of maternity, finding an exaggerated notion between herself and the lower animals, and holding that Nature did her infinite despair when it laid on her the need of wifely submission and the previous burdens of a mother. Does she seek an outlet for her unsung energies, and an honourable subsistence by her own toil?—she is not satisfied until she can thrust the men out of the places which they have won by virtue of their manhood, and on which Nature has set the seal of exclusive sex; she must undertake work for which she has neither physical capability nor the requisite educational training; she undertakes work of which she has no own life upon her back, she must for ever aim at those which, when she attains, she cannot discharge either fully or satisfactorily. This is one reason also why she is always underpaid. She works without the previous training to which men have been submitted; taking up, as the amusement of leisure hours, the work to which men are put to which they have been subjected the same rate of remuneration as those who have bought their mastery by long years of apprenticeship. Women rarely study with real zeal. Look at them as artist-utensils: what hard work, as work, can be got out of them? Here and there, of course, is a noble exception and a bright example, but, as a rule, the female classes work with very little of this holding, serious application which is to be found on the men's farms. The reason is obvious. To the man it is his; all his hope of fame, of assistance, of position, of family, of independence; to the girl it is either a simple accomplishment which is to make her more attractive, or, at the best, but a professional profession, "if she does not marry." And what is true of art of literature, true of business, and true of mechanical employment. Women rush at all these things without previous training; then complain if they are set aside in favour of the superior qualifications of the perfected learner. In their frantic endeavours to liken themselves to men, they have not yet attempted to imitate the thorough, careful, steady education for any special art or branch of art which is the first requisite for success in life. However, when they have determined what they can best do, and set themselves earnestly to learn the best way of doing it, they will not find themselves so backward in the race as now. Meanwhile, they cut their silky locks close to their pretty heads, and stick their fingers into their jacket pockets when they speak, rejoice when, in the crowd that throngs their petticoats, they see their shirt-collars and black silk ties visible, they are addressed as "young sir" by old-fashioned fathers who have never seen an Emancipated Woman before, and believe that all these pleasant courtesies are substantial improvements in their condition, and that they want little more to make them perfect in the art of manhood.

These, then, are the two phases of the modern masculine young lady: the one which aims at the imitation of outward and material forms; the other which aims at higher game, and would borrow the circumstances of the inner life as well, seeking, though, to gain the prize without undergoing the sacrifice, to win the crown without the struggle. The latter is the crown, and another way out of the difficulty, which we hope to see fairly tried, and which will, we think, set at rest all the objections which have hitherto been made to woman's work and woman's rights; and that is, not to let her work interfere with her external position—not to let her rights blind her to her duties.

We want no special corps of Amazons, physical or intellectual; we want no women who deem it necessary to caricature their sex to fit them for their place in the world, or who find their womanhood, and all that this entails on them, a drawback and humiliation. Any work which demands this abnegation of natural conditions is, we may be sure, a tremendous fallacy. A woman's proper sphere is home; her proper life is the life of domesticity, maternity; and what outward duties never she may undertake should be subordinate to these primal necessities of her existence. It is not necessary that her marriage should include her slavery, or that the fulfilment of her holiest instincts and affections should shut her out from a full intellectual life. On the contrary, the mingled experience of the home and the world, the wider sympathies and a clearer insight into the hearts of others, for wisdom

is never so wise as when taught of love. Who would not rather take counsel of the grand large-hearted mother, full of the best experience and richest love humanity can know, than of even the most intellectual of the women who subordinate love to intellect, and hold as the sign and symbol of a curse that which nature gave them as a blessed privilege of their covering honour! The Emancipated Woman who despises the royal joys of motherhood, and would rather a lonely life of solitary thought than the gracious self-satisfaction of marriage, has set herself towards the carrying out of the dreariest falsehood which ever afflicted the human race. Come in what shape it may,—in young maidens full of talk and life,—in the assumption of masculine work and privileges,—in the practical denial of the peculiar gifts of womanhood,—it is equally a fallacy which can lead society to nothing wise or wholesome, and which must end in the still greater confusion of an already tangled skein. No; let women keep themselves distinctly womanlike, both in life and work. Let them be increased freedom in a wider influence, they must get it by their sex, and not in spite of it; they must get it by being women before all, not mock men; by uniting thought with love, strength with delicacy, work with duty, and such outside occupations as may be in their way with the most jealous regard for home, and the quiet, loving, unobtrusive charities of that sacred precinct. Fast women, manish women,—women to whom the cradle-side is no haven of peace, to whom household duties seem wearisome and degrading, women, in short, who seek to unsex themselves, and are ashamed of what they are, will never solve the problem now set before them, nor help forward the world's work in the way of nobleness and truth. The greatest blessing to the fullest, and an unwomanly woman is about the most misbegotten of God's creatures.

THE METROPOLITAN BOARD OF WORKS.

THERE are few things that the general public are less acquainted with than the personal appearance, the numbers, constitution, and place of meeting of their representative governors. Thousands have paid taxes to no trifling extent, without ever seeing a member who helped to impose those burdens. Thousands have died, in different parts of the country, without ever looking upon the Houses of Parliament, where the metropolises are so few, and the hours of voting are so inconvenient for those who are tied down to certain hours of employment, that hundreds of men are prevented from recording the votes they possess, and their supposed apathy is artfully pointed out to excuse the disfranchisement of others.

In matters of parochial government the ignorance of the general public is even greater. A notion has got abroad that everything connected with a parish must necessarily be mean and small; and "comic" authors, with their allies, the caricaturists, have done all in their power to foster such opinions. Little Peggibon has been an easy subject of ridicule to writers who deal only with the surface of things, and thus have been danced round in their own until we cry aloud for a change of puppets. The evil of such writing is that it causes the best people in a parish to stand aloof from parochial business. They hardly know that they possess a vestry-hall; they seldom vote in a parochial election; and they never stand as candidates for a seat in the vestry. The result is that the whole management of such elections is left in the hands of a local and selfish clique, and representative government exists only in name. In the mean time the parishes grow in wealth and importance. In principle they were never very small; in power of taxation they become enormous. The local taxes of England are stated at from fifteen to twenty millions sterling, and the imperial revenues of the whole country were (excluding the interest of the national debt) in 1792—the reign of George III. The management of sewers, drainage, paving, cleansing, and lighting, seems so much contemptible thing, after all, when tried by the money-test. "The spouting cheeseburger," or the traditional "soap boiler," whom we are asked to listen to, may have for more power, for good or evil, than a hungry Grand Duke of Medling-Beggar-Seidlitz, or a ragged-coated Elector of Idle-Beggar on the Rhine.

In the autumn of 1855, an Act of Parliament was passed for the better local management of the metropolis, and under this Act was created that affixed, upper-parish Parliament called the Metropolitan Board of Works. The general public are familiar enough with its name, and that, perhaps, is all. They have paid extra sewer-rates, when demanded by its collectors, but probably without knowing very clearly who their rate-makers were, or to what purpose the money would be applied. A total ignorance of the nature, powers, destiny, and even existence of the body which local or imperial may be safely assumed as existing amongst the human race, is in which it gives courage to Chancellors of the Exchequer, and saddles the country with enormous budgets. We are not now dealing with the highways of legislation, but with the by-ways of administration.

At the risk of being considered bores by some of our readers, and of teaching many grandiloquent to much else, we are determined to give a short description of the Metropolitan Board of Works.

It is an institution entirely parochial, and must not be confounded (as it often is) with the Government Board of Works. Its members number forty-six, and are picked representatives sent by the respective vestries. As vestries are elected by the ratepayers, the root of its power is, or ought to be, representative. The City sends three members, the parishes of St. Marylebone, St. Pancras, Lambeth, St. George Hanover-square, St. Mary Islington, and St. Leonard Shoreditch, send two each; a group of seventeen other metropolitan parishes, from Paddington to Woolwich, and from Camberwell to Hampstead, send one member each; and fourteen districts, including some fifty-five small or outlying parishes, send fourteen members more. No member can hold office, without re-election, more than three years, and once a year one-third of the board retires by lot. The chairman is chosen by a majority of his fellow-members, and may be turned out of office, at any time, by two-thirds of a specially convened assembly of the members. His salary is fifteen hundred a year, and he is assisted by a paid staff, chosen in a similar manner, consisting of secretary, engineer, solicitor, clerks, messengers, &c.

This is the constitution, in the main, of the Metropolitan Board of Works, and its powers may be best broadly to include a sewer, a water supply, a drainage, and metropolitan improvements. It takes the place of the old Commissioners of Sewers, in Greek-street, Soho, and something more. Its working offices are in the same building looking on to Soho-square; and here

it is that a select committee of its body sits and forms the only court of appeal from the general decisions of the Board. The Board came into its property when it started in business, and this property consists chiefly of the main sewers of the metropolis. These are all marked, described, and mapped out, with their numerous small tributaries, like valuable beds of coal; and it is to the preservation, enlargement, and improvement of these necessary veins of society that their energies are mostly directed. While they labour, however, in a useful way, underground, they devote to ornamental work on the earth above. When the proprietor of a dwelling-house wishes to run out a Grecian portico—like a four-post bedstead—on to the pathway, the Board often objects to it as an obstruction; and as they are incorporated with power to use it (a fearful power!) their objection sometimes means mischief. They may alter the names of public thoroughfares, so that the staunch Whig who fancy he was settled for life in "Fox-place," may wake up an angry mob, and find himself and his property in the middle of the street obstructions, caused by opening the roadway for laying down gas-pipes, water-pipes, and even railways, they have a voice, and they are often exhorted to use it. The injury inflicted on the trade of a neighbourhood by the slightest obstruction to the thoroughfare (as is the case now in Euston-road) is a matter of serious importance to the local shopkeepers.

This parish parliament hold their sittings for a few hours every Friday, in the Chamber of the Common Council at the Guildhall, City. They select there, upon suffrage until they get a building of their own, and are looked upon as troublesome interlopers by the corporation bodies. They assemble each twelve o'clock in the day—fair or foul, and in all weathers—into the House of Commons to a very peremptory degree. The hall in which they sit is fitted up with green leather seats, busts, and pictures; the Queen looks down upon their deliberations in oil and marble; and a stony-faced Nelson peeps at them from a corner. The chairman, Mr. Thwaites, sits aloft on a raised platform, behind a writing-table, and presides in a general way over George the Third. The King's arm is held out in a favourite oratorical position, so that Mr. Thwaites's short, calm, businesslike remarks appear to come from His Majesty. The average attendance of members is about two-thirds of the full number, and four or five men appear to be favoured with the gift of speech. The chairman, Mr. Thwaites, is a stout, middle-aged man, as good characters are bound to do, and the business of the meeting is despatched without much oratory. In this respect it forms a useful model for "another" and "a higher" place, and also in its gallery—open to the public, but thence visited,—where suits may be freely taken without opposition. In the House of Commons, however, the speakers or the non-speakers, to be honest, with a curl, a pernick, or a piece of paper in your hand, is to be expelled by a doorkeeper, as if the debates in that once popular assembly were private and confidential. The Metropolitan Board of Works—the Parish Parliament—have not yet got to the pitch of exclusiveness, and it would be better if they and the public if their proceedings were made more generally known. Few people know that they are doing better for some few people than can be known. London exists, the ugliest, the most crowded, and the most heavily-taxed city in the world, although it boasts of the greatest multitude of councils.

THE SPOTS ON THE SUN.

WHEN the sun rises all nature wakes up into life and beauty. Light and life seem linked together; darkness and death go hand in hand. Men, of old, worshipped the "glorious orb of day," and paid homage to it as a god. The moderns, however, are more scientific, and have sought to discover the laws for a few minutes of time, and we send our cleverest men some hundreds of miles to observe the effects of a world in darkness. What is that great luminary, equal in bulk to fourteen hundred thousands of earths rolled into one, five hundred times bigger than the totality of all the worlds that exist? It is a globe of fire and flames, or a great electric light! Ninety-six millions of miles extends the vast gulf which it is, and tremendous events extending over 50,000 miles of its surface are barely noticeable to educated, and unknown to the uneducated eye; the world goes on without a thought of them—flowers grow and bloom and fade, *Eucalyptus* trees, you may be, it is only seen and then you can endure its fiery glances. And yet there may be that upon its glorious face well worth your noting. Few of us have had not heard of the spots on the sun; we apply the facts as a simile in our daily talk, and yet how few of us have seen these sun-spots; and yet how few of us have seen them better than we see the spots on the earth, but a common-sense glass will show them, and sometimes you may see them with the eye alone. If it is a globe of fire and flames, or a great electric light, Ninety-six millions of miles extends the vast gulf which it is, and tremendous events extending over 50,000 miles of its surface are barely noticeable to educated, and unknown to the uneducated eye; the world goes on without a thought of them—flowers grow and bloom and fade, *Eucalyptus* trees, you may be, it is only seen and then you can endure its fiery glances. And yet there may be that upon its glorious face well worth your noting. Few of us have had not heard of the spots on the sun; we apply the facts as a simile in our daily talk, and yet how few of us have seen these sun-spots; and yet how few of us have seen them better than we see the spots on the earth, but a common-sense glass will show them, and sometimes you may see them with the eye alone. If it is a globe of fire and flames, or a great electric light, Ninety-six millions of miles extends the vast gulf which it is, and tremendous events extending over 50,000 miles of its surface are barely noticeable to educated, and unknown to the uneducated eye; the world goes on without a thought of them—flowers grow and bloom and fade, *Eucalyptus* trees, you may be, it is only seen and then you can endure its fiery glances. And yet there may be that upon its glorious face well worth your noting. Few of us have had not heard of the spots on the sun; we apply the facts as a simile in our daily talk, and yet how few of us have seen these sun-spots; and yet how few of us have seen them better than we see the spots on the earth, but a common-sense glass will show them, and sometimes you may see them with the eye alone. If it is a globe of fire and flames, or a great electric light, Ninety-six millions of miles extends the vast gulf which it is, and tremendous events extending over 50,000 miles of its surface are barely noticeable to educated, and unknown to the uneducated eye; the world goes on without a thought of them—flowers grow and bloom and fade, *Eucalyptus* trees, you may be, it is only seen and then you can endure its fiery glances. And yet there may be that upon its glorious face well worth your noting. Few of us have had not heard of the spots on the sun; we apply the facts as a simile in our daily talk, and yet how few of us have seen these sun-spots; and yet how few of us have seen them better than we see the spots on the earth, but a common-sense glass will show them, and sometimes you may see them with the eye alone. If it is a globe of fire and flames, or a great electric light, Ninety-six millions of miles extends the vast gulf which it is, and tremendous events extending over 50,000 miles of its surface are barely noticeable to educated, and unknown to the uneducated eye; the world goes on without a thought of them—flowers grow and bloom and fade, *Eucalyptus* trees, you may be, it is only seen and then you can endure its fiery glances. And yet there may be that upon its glorious face well worth your noting. Few of us have had not heard of the spots on the sun; we apply the facts as a simile in our daily talk, and yet how few of us have seen these sun-spots; and yet how few of us have seen them better than we see the spots on the earth, but a common-sense glass will show them, and sometimes you may see them with the eye alone. And yet there may be that upon its glorious face well worth your noting. Few of us have had not heard of the spots on the sun; we apply the facts as a simile in our daily talk, and yet

We figure a sun-spot—not a little one, either,—of the size it appears on a reflected image of the sun's disc, of about 8 foot in diameter. It consists of a central dark spot, or nucleus, and a surrounding penumbra of a pearly tinge, which seems to have but slight, if, indeed, any relation in its form to that of the central nucleus. If one had an orange wrapped in white paper, and were to cut into it a circular, or rather funnel-shaped hole, with a peaklike, paper wrapping, the thick rind, and the substance of the orange itself; so, if a cavity existed through the two atmospheres of the sun, we should see the general luminous envelope of the sun, the penumbra or rind of inner atmosphere, surrounding the central exposed portion of the sun's globe or central dark nucleus. Such is the familiar idea of sun-spots; for most astronomers are agreed that they are cavities or openings, and not projecting masses, or mountains, as was once thought, and as we find them delineated on the crumpled suns decorating some of the quaint maps of the seventeenth century.

Another curious circumstance respecting the sun-spots, is that the region of these singular phenomena is restricted within a band of about 35° or 40°

Fig. 1.—Nucleus, or Solar Spot, with Penumbra.

Fig. 2.—Zones of Macula, 10th Jan., 1857.

on either side of the sun's equator, and they have never been observed in either pole. To this, however, we shall refer again; but first, we would briefly draw attention to the size of some of the solar spots, as well as to the periodical maximum and minimum developments of the spots. The example we figure was observed by Herschel on the 29th of March,

Fig. 3.—Solar Spot of 26th March, 1857. Area equal to 3,740,000,000 square miles.

1857. A magnified image, accompanied and crossed by the black images of the threads of the micrometer (adjusted to zero of position and opened to five revolutions of the screw, or 2° or $23'$), was formed on a screen at a convenient distance from the eye-piece of a seven-feet achromatic, and brought to sharp definition by adjustment of the movable lens of the eye-piece. Now the area of these spots, and their penumbra, exclusive of those outlying, as the extremity of the figure, was nearly five square minutes. In linear dimension a minute on the sun is equal to 27,500 miles, and a square minute, therefore, 756,000,000. We have, then, in this one vast region of disturbance an area of 3,740,000,000 square miles. The dark spot of the 25th of May of the same year, which we have figured, to show the remarkable streaks converging towards its centre, would have allowed the globe of the earth to fall through, leaving a clear space of a thousand miles all round it.

Nor must it be imagined that these sun-spots, although comparatively dark and black, are in reality so; for, the brilliant light of quicklime, under the compound blowpipe, appears in front of the sun's disc as dark as the spots

themselves; and the deceptive appearance of a weaker against the stronger light may be easily tested by an ordinary lighted candle. The sun-spots, too, are variable and fleeting in character; many disappear from the face of the sun presented to us, that is, within the period of half a revolution, while few are, indeed, returned to our view when the same face is again presented after the lapse of the twenty-seven days, in which the sun has completely turned round on its axis. Some have appeared and disappeared in a day; others are believed to have endured for nine or ten weeks. Perhaps their most remarkable features are presented in their disruptive and disappearance. The velocity of motion exhibited by the surrounding luminous penumbra in closing over the spot has been in some cases truly enormous, and such as would be inconsistent with the known laws of motion of any merely fluid medium. A spot, of the apparent breadth of $90''$, or 41,940 miles, was observed by Mayer to close in about forty days, giving for the progressive contraction of the spot an average of 1,650 miles daily, or 44 miles an hour, a rate seemingly compatible only with an elastic gaseous condition. This rapidity of their disruptive was early remarked by Galilee. Wollaston says, in a memoir, in 1774, that, while observing the sun he saw a spot break up into small fractions, as when a mass of ice is hurled on the surface of a frozen pond, the different fragments into which it divides slide off in all directions. There are other and bright spots and streaks on the sun's disc which astronomers call *faculae* and *luculi*. These luminous spots were also observed by Galilee, who, in his letter to Welser, in 1612, says, "Sometimes we see at the surface of the sun various white parts, brighter than the rest of the surface."

The detection of the faculae was due to Scheiner, the discoverer of *lupulodant*. He noticed that, besides the bright spots dotted here and there, the entire surface of the sun was constantly covered with luminous points, or with extremely slender streaks of light and dark, crossing each other in every direction from east to west, and from pole to pole. It is these luminous streaks which are called *faculae*. We have referred to them because the faculae seem to be intimately connected with the dark sun-spots which form the subject of this communication. The bright faculae very commonly precede the appearance of the dark solar spots which often, subsequently, occupy the former luminous spaces. Derham records having seen through his telescope, in October, 1706, a black spot appear and disappear several times in the centre of a brilliant facula; and Cassini also states that spots are sometimes transformed into faculae, and again become spots. Wollaston, the elder Herschel, and others observed the like phenomena.

We have already referred to the limitation of the regions within which the solar spots appear, and that they have never been seen at the poles. The direct line of the equator seems to be usually exempted, at any rate, spots on the equatorial line are somewhat rare. Galilee assigned the twenty-ninth degree of declination, north and south from the solar equator, as the limit of their appearance, but modern observations have extended the "royal zone," as it was called by Scheiner. The spots appear also to be sometimes more conspicuously developed in our hemisphere than in the other, the preponderance being sometimes in the northern and sometimes in the southern portion of the sun's globe; while sometimes they are seen in two nearly equal belts at comparatively corresponding distances from the meridian line. These facts have formed the groundwork of an ingenious theory by Sir John Herschel, who regards all the phenomena of the solar spots as being dynamical. The fluctuations of our own atmosphere are clearly due to the external heating power of the sun; but fluctuations in the meteorological conditions of the solar atmosphere cannot be due to any similar external cause. We know of no external object or circumstances which could produce elevations and depressions of temperature, altering its specific gravity, and disturbing the equilibrium of the solar atmospheric strata. We must conceive all the solar meteoric conditions to be passive and equal, unless there be any disturbance due to internal forces.

Reflecting, then, on the possible causes which might, from what was known of the sun's economy, give rise to circulatory movements to and from its poles in the fluids or gases which surround it, Sir John has come to these conclusions: that if there be any physical difference in the constitution of the polar and equatorial regions tending to repress the escape of heat in the one and to favour it in the other, the effect will be the same as if those regions were unequally heated from without, and all the effects of the trade-winds would arise.

It has been a matter of doubt amongst astronomers whether, externally to the luminous envelope, there was still a transparent atmosphere around the sun. The deficiency of light at the borders of the disc, when viewed through coloured glasses, or in its image projected through a good telescope on white paper, and the extraordinary rose-coloured solar disc seen during the total eclipse of 1842, are, in Herschel's opinion, sufficient evidence of its existence, although to what distance around such an atmosphere may extend there are at present no means of judging. Upon the laws of equilibrium, such an atmosphere must form an oblate spheroid, the ellipticity of the strata of which would differ from each other and from that of the nucleus; and consequently the equatorial would be of a greater thickness than the polar portions, and therefore different obstacles would be presented to the outward passage of central heat, and the equatorial would be habitually maintained at a different temperature from the polar regions. The zones of solar spots, under this view of the subject, would be assimilated to those zones of our earth's atmosphere in which hurricanes and tornadoes prevail. The upper atmospheric stratum being carried downwards, would displace by its impetus the luminous and sub-luminous strata beneath, the upper or luminous being "affected to a greater extent than the lower, and thus wholly or partially denuded of the opaque surface of the sun below. Such processes cannot be unaccompanied with vertiginous motion, which, led to dissipation, die away by degrees, and dissipate, with this peculiarity, that their lower portions come to rest more speedily than their upper, by reason of the greater resistance below as well as the remoteness from the point of action, which lies in a higher region; so that their centre (as seen in our waterpots, which are nothing but small *cornues*) appears to retreat towards the nearest point, the space with which it is occupied during the obliteration of the solar spot, which appear as if filled in by the collapse of their sides, the penumbra closing in upon the spot and disappearing after it.

It will have been gathered from what we have already said, that there are maximum and minimum periods in the number of maculae on the sun's disc. The maximum periods occur every seven or ten years, and have been followed by some as coincident with periodical electrical disturbances, or magnetic storms;

Fig. 4.—Macula, with Penumbra, 25th May, 1857.

and although very much yet remains to be observed in those fields, a most interesting topic is here opened out for investigation. The minimum period is also dreamed, reckoned from each fifth year intermediate between the maximum periods. Some astronomers have also supposed that coincident with the maximum period of the development of solar spots there was a period of minimum atmospheric temperature on our globe; and William Herschel constructed a curious table, based upon the mean prices of the betel-nut of which the Ojibwa have considered, however, that there of an unusual equivalent period of heat at such times, and additional observations on this topic would therefore be very desirable; for small as the spots appear, in respect to the whole disc of the sun, yet as some are really of considerable magnitude, they may be the cause of a synanthropic connection in the thermal and meteorological condition of our atmosphere.

The present year has been very remarkable for the prolific development of the solar spots, and has certainly been equally, or even more singularly, marked by unusual atmospheric and meteorological phenomena, the average temperature of the air being much cooler, and the rain-fall much greater, than in many preceding years.

We present our readers, here, with the portrait of the sun's speckled face, as seen on the 18th July last, at the hour of the great solar eclipse, for which we are indebted to the kindness of Mr. R. C. Carrington, of Redhill. Since

Fig. 5. Solar Spots, as seen at Redhill, July 18, 2 o'clock p.m. Geographical mean time.
Red flares were seen (4) during the eclipse of July 18.

that day the maculae have increased, both in number and size; and the group (d) represented by nearly straight lines at the eastern limb have, in the ordinary progress of the sun's rotation, come more fully into view.

We have already indicated the apparent connection between the luminous and the dark spots, and suggestions have been thrown out of the probable connection of the "red flares" observable during eclipses with the former, or faculae. Kutecki, in his notice of the total eclipse in August, 1859, says:—"I find, in this very observation at Honolulu, a circumstance which supports it, and may perhaps prove it positively. The east protuberance was so situated that the region which it occupied was necessarily brought on to the disc some days after the eclipse, by the rotation of the sun. I took care then to examine the disc of the sun, on the east side, for several consecutive days after the eclipse. On the 9th of August, in the morning, I thought I could trace on this east side, and, as exactly as it was possible to judge by the eye, on the part corresponding to the position of the protuberance, a large facula. The inspection of the telescope, which made it impossible to see the facula very distinctly, throws some doubts on the assertion."

Kutecki again saw the same facula advancing towards the sun on the 10th and 11th August, but on each occasion with too little distinctness to amount to positive conviction.

The recent observations in Spain during the eclipse, with others effected since, have tended to confirm his views. Space, however, confines us, on this interesting subject, to one other remark; namely, that the linear form of the maculae, when first brought into view by the rotation of the sun, or in disappearing, is the natural perspective effect produced by our looking at the near and opposite edges of the cavities at the same time.

THE REWARDS OF LITERATURE.

In all professions, it so happens that a few reach the top, and flourish greatly; a considerable number get to occupy middle places, more or less comfortable, as the case may be; and many fall short of that position, and sink slowly into the dead-level of disappointment and distress. Thus we have soldiers from field-marshal to private, sailors from admirals to ordinary seamen, lawyers from lord chancellors and titled judges to briefcase barristers and petty attorneys, medical men from eminent physicians and surgeons to struggling practitioners and starving apothecaries, clergy from archbishops and bishops to miserable incumbents and puerer curates (the hierarchy and the lower-archy of the Church), in short, the wheel of fortune rolls to and fro, and the various cottle, some fat and pampered, and many more lean and hungry. The literary class, of course, has to encounter its destinies, like the others—with this difference, that, so far as material elevation or wealth are attainable, there are no very high or profitable pinnacles within its utmost condense bounds. If fame is coveted, it is of an unsubstantial, usually a posthumous nature, and unproductive of worldly advantages; and if failure comes, it is attended by being suffering and wretchedness than can wound the humiliation and poverty of any other description of humanity. No doubt affliction is common to all, but the peculiar sensitiveness of the literary elements, education thrown away, aspirations humbled, and hopes and prospects

ruined, constitute an amount of sorrows hardly to be conceived under any other circumstances.

But ours is a great country. The English people are a noble, a civilized, an enlightened, and a generous people. They can taste the fruits of literature, they can enjoy the delights which talent and genius spread out for them. They revel in the luxuries; they benefit by the utilities; they are grateful to the providers, whether of intellectual ambrosia or physical manna. If the Government of this favoured land allows no less than twelve hundred pounds sterling a year in pensions, out of the Civil List, to succeed (as is said) the unfortunate beings who have been overthrown in the vain struggle to find, in the phantom pursuit of literature, Westminster Abbey or a crust of bread.

The appropriation of this small fund, between June 30, 1859, and June 30, 1860, has just been published. It is a saddening document, and yet we believe must have cost the First Minister of the Crown more trouble and difficulty to arrange with any degree of satisfaction than any measure of a thousand times greater national importance which comes under his consideration. The candidates are exceedingly numerous; the interest made for them is a politically puzzling; and the wants—even in some quarters the desolation—praying for this paltry relief, are of a kind that would fill the coldest heart with the warmest feelings of compassion. But, thinking well of this list on the whole, as creditable to the minister, we must observe that it cannot be right, and is, indeed, disgraceful, to divert any portion of this trifling annual sum from the purpose it pretends to fulfil. Yet, on perusing it, we notice that the first £50 are granted to three ladies, in consideration of their late father's services in the War Office. Then follow the daughter of a portrait-painter, whose husband was a consul, and performed good services at Naples, £100; Mrs. Beecroft, in consideration of her late husband's services for the suppression of the slave trade, £20; Lady Rigaud, the widow of the Bishop of Antigua, £150; two ladies, daughters of a person who made great improvements in the manufacture of iron, £100; a lady, for her benevolent labours among the seafaring population of London, £50; a daughter of Sir S. Besham, for services in naval science, £100; and here is one-half of the fund disposed of, no doubt, in a most judicious direction, with the smallest possible regard to literature. The remaining portion may be well earned and justly apportioned; but we confess to perfect ignorance of the literary claims of the recipients, whose very names here meet our eyes for the first time. The six sisters of Dr. Lardner, Mr. Atherton (who many years ago published an epic poem, *Miss Fardoe*, and the relatives of the late Mr. Rowcroft (to whom a royal debt was otherwise due), are the only cases distinctly connected with literature, and they have been rewarded with £375; while, a few years ago two several pensions of £500 each were given, out of the same sacred fund, to one person—the widow of the late Lord Chancellor Truro. Glorious country! Wonderful acknowledgment of literature!

SOCIAL BAROMETERS.

By the time your case is worn out, you know pretty well whether it is made of good cloth or bad; and this sort of acquaintance with woollen textiles is too common to rank you among expert dryers. Can you take it up in the piece, stretch it, rub the gloss off it knowingly with your thumb-knuckle, and say decidedly, "This is West Riding, not Saxony, and should not be more than stretched and washed one yard?"

You know the characters of your friends, as you know the cloth of your order; but the most difficult sample of new material to pronounce upon off-hand is a fresh piece of humanity. Its mixed fibre is a cottony-linsy-cwooley of passion, mind, and soul, in unknown proportions compounded. Its warp and weft, of nature and circumstances, of consciousness and experience, woven by the shuttle days in the loom of life, brushed by the teasles of trial, and smoothed in the press of business—who shall take up a chance corner of this magic web and say authoritatively, "This is such or such a quality of human being, good only for such and such use?" Who! why, no one save the Divine manufacturer. But the most grateful of all, a man is a faint and vague approximation to this kind of knowledge. The rapid power of discovering men's different values, marballing them into their right places, and getting the maximum of value to the commonwealth out of each member of it, is the Divine commission and signature of appointment for the man so gifted to rule over his fellows.

Some of our calm philosophers hold the comfortable creed, that the natural motion of the earth, under a judicious disposition of letting things take their course, is sufficient to shake men gradually into their right places. And no doubt there resides in the body politic a *vis gubernatrix* Fortune, which like the river and the sea in the physical frame, is a beneficent and wise providence of incompetent reformers, and brings the world (which they are always so busy squaring to their own Mercator's projection) eventually round again. Nevertheless, there is a vast proportion of the world's wealth of human faculties unemployed, misapplied, ignored and frittered away; what should be floating capital, equivalent to life interest. And this waste arises very mainly from our mutual enmities, clamourous and timidity in appreciating the mutual advantage we might derive from our fellow-men, if we only knew how to trust confidently, and how to make the most of their various gifts.

The proverb characteristic of men's thoughts about other men is, perhaps, their universal disposition, as far as in them lies, to shuffle out of the trouble of thinking for themselves about one another at all, and to take their fellow-men's characters only as a second-hand article. Opulent art purchasers, conscious of possessing neither taste nor judgment of their own, will give three times as much for a picture out of a celebrated collection, as they would for the same specimen of the same master at the sale of the late Mr. John Doe or Richard Roe, whose names are only connected with drawing so far as conveyances are works of art; unless, indeed, in the palmy days of those ancient worthies, a "View of Parkland" may have been some obsolete form of landscape.

What "collectors" do to the commonplace art purchaser "sees" are to the average appraiser of human beings. He is disposed to take them as he finds them, and treat them as he sees them treated. If he meets you at a dinner of wit, he laughs at your joke, without, perhaps, precisely seeing the point of it; for the blunt end of your joke is sharp enough to tickle him.

if he has quaffed laughter to start him and back him. If he finds you at the humble but hospitable board of Jones, whom in town he instructs as a country neighbour, and who, to say the truth, is only distinguished for his good-humour and choice old port (as well he may, for was not Jones *pare* a notable wine merchant of Bristol?), he extends a collateral patronage to you as the college friend of Jones. If he meets you next week coming out of White's, arm in arm with the Marquis of Mount Eban, he patronises him as a country neighbour, his reputation has not quite the same flavour. Still, you will never be quite the same man to him as if he had first met you in St. James's-street, and the Lord Lieutenant of his county had introduced him to you as "a man whose influence near Truckport is worth attending to—useful if you go down these directions, you know." These words are not supposed to be his Lordship's text, nor, your average man appraiser, but hearty footnotes for your private ear before and after what the A.M.A. looks on as a mere fashionable introduction in the simplicity of his aristocratic heart. He will be surprised when he stumbles on you canvassing in the High-street, Truckport.

But if you had first found him holding his county member by the button in the supper room at Cambridge House, and Mr. Estreat M.P. had grasped your hand, and welcomed you to the rescue on the wine list, or the international point of law touching Sardinia and the Sicilies, and had simulated great interest in your exposition, in order the more civilly to turn over his influential buttonholder to your conversational mercies,—that individual (as he parted with you murmuring complacently to himself, "My own views to a T—very clever fellow—rising man") would have hung you, the selfsame picture, on quite a different hook, and set you off with quite a different frame in his acquaintance gallery. Indeed, he might, on further acquaintance, have himself suggested the notice.

This is all very well, says anybody; but how do you happen to know your marquis and county member, and how do you get into the inside drawing-room dedicated to cakes and loaves in Cambridge House? *Tout arrive!* Perhaps Mr. Estreat, M.P., is my wife's first cousin once removed. Perhaps I shared my last letter with him as well as my marquis at Palmyra.

And it is no longer a secret, that Cambridge House encourages the Press. Almost all minerals crop out somewhere at the bottom of the sea, and many samples of soil are held in suspension where the shoal-waters are troubled, but only the rock-salt of the earth remains in permanent solution. So in the air of life, everybody has his chance, and those who are fit for good society mix with it and become a part of it, adding a particle to the favour of it. If society receives you *en vosseur*, well if not, you sink with the grains of sand. Indeed, I am sorry to say my cards from Cambridge House have been discontinued, and my marquis has not asked me to dinner since my last *flâne* at Truckport. Life has its ups and downs; you get on by accidents, and you fall off by accidents. Hardly any man's position remains at a regular static level. Nobody judges of us by what we are, but by the little temporary hits and misses of success and failure in the trifles we do or don't. It is perhaps lucky it should be so, that the stimulus to do one's best should never flag, even if we have no higher or other aim than social distinction.

Who precisely knows his own level in other men's estimation? Or how should a man learn it in order to treat himself at his market value.

There are, fortunately, social barometers of the hiped form, walking precociously, cold-blooded thermometers, who, by mercurial instinct, mark the variations of the social temperature. There are a class of men for whom there is no exact name or language. They need not be counted with the vulgar loud-enters, being, nevertheless, a sublimer and more gigantic variety of that tribe. If the huge batrachian were not extinct they might not despise labyrinthine outlets *à la chrysopage*. Their virtue is, that they systematically and designedly carry to its ultimate ratio that second-hand manufacturing process which society in general only falls into casually. They know the value of social accidents. They take great pains to walk with their marquis at the right time and place to meet influential persons who will be properly affected. Be neither civil nor uncivil to such a man. Look him in the face blankly, and observe the level of his esteem. If your reputation is at nought, he will cut you; if it is at changeable, he may possibly give you an insolent nod; if it be fair, he will lift his umbrella with a patronizing flourish; if it be set-fair, he will shake hands with you and make a remark about the weather; but if it be "very dry," he will stop you in a public place and tell you confidentially something he has just had from the First Lord of the Treasury in a manner which shows his dignity as a writer himself in living conversation, and take timely warning: for to this complexion it is tending, as long as he is carelessly and lazily continues to form his opinion of his fellow-men vicariously.

Reviews of Books.

DOMESTIC LIFE OF ENGLAND.*

AS account of our English civilisation, in the way of household habits and interior economy, compiled with care, and presented in a lively and familiar form, would be an acceptable contribution to a description of her which everybody likes, when it is pleasantly executed. The subject is attempted in the volume before us, in a manner which shows the writer's ability as a writer may fall with excellent matter, simply from not knowing how to do it with. The book is not wanting in information, but it lacks the essential element of success—popular treatment. The author has collected ample material for his purpose, which he has rendered so dry and dull in manner and arrangement, that his research will be unavailing to the work, whereas if his instruction or amusement it may be presumed to have been specially intended. Critical inquirers will find out faults of another order. Although, by beginning at the beginning, with the habitation of the Britons, and proceeding, with apparent regularity, through subsequent times, a certain air of historical sequence is imparted to the work, chronology is, nevertheless, utterly confounded, by the loose way in which dates are given or omitted, and the confused grouping into a single view of illustrative particulars that belong to different periods. These objections are not mitigated by the plan

or style, which are intolerably dreary. Throughout nearly 200 pages, the loose sheets of waxy type succeed each other without a salutary break. There is no attempt at a division into ages or subjects, or at any kind of relief in the way of episode or description. "We miss, everywhere, the pictorial hand, the vivacity of expression, the capacity for seizing upon the character of a period, and inspiring it with vitality—which are necessary to bring before us the domestic history of a people lighted up with the glow of life. The book is, in fact, the literary labour of a patient antiquary, and nothing more. We see the fire in the centre of the old hall, and the hole in the roof to let the smoke out, and we can strain our imagination to include the hounds lying about, and eating up the refuse flung to them by the guests; but there is no movement in the scene to enable us to enter into its reality as fully as we should desire to do. The method, we may catalogue as a failure."

The sources from whence notices of the early periods are derived must be, to some extent, of questionable value, and should be adopted cautiously. Many of them are of no more valid authority than a slight allusion in a barbaric poem. Such allusions are curious, and are entitled to be admitted in support of some evidence; but it is not safe to trust to them solely, and will less to draw general inferences from them. When Sir John Carr concluded that the peasantry of Ireland were red breeches, because he saw one man in that costume, he committed exactly the sort of error in reasoning into which antiquaries fall when they make universal deductions from particular facts, references, or suggestions. We suppose that it is by some such process our author arrives at the sweeping conclusion that "the drunken revel was almost a religious rite amongst the Anglo-Saxons, with whom to be drunk was to be godlike." It is curious that in a book which, to do it justice, abounds in references to authorities, there is no authority given for a statement which is not only a little more than a century old, but is inconsistent with the fact that, amongst the Anglo-Saxons, the average rate of mortality was remarkably high. The monks, whose bills of mortality are more accessible than those of any other class of the community, attained to almost patriarchal years. The united ages of two monks in the eighth century amounted to 120 years, and in the tenth century the average was 100 years; extraordinary; but upwards of 100 was of common occurrence. The religious rites alluded to are those of what is called *Pagan Saxondom*; but the time is indefinite, and the monks cannot be regarded as the founders of longevity in England.

Our authority which, in this case, is worse than worthless it is stated that King Alfred invented the lantern, being driven thereto by the great waste his candles suffered from the wind. Were there no lanterns in Rome? And what of China? Did the Celestials pirate King Alfred's patent? It is also said that glass windows were unknown to the Anglo-Saxon chiefs, and did not come into general use till the sixteenth century. Although it is certain, else we thought, notorious, that Benedict the abbot of Wexmouth, introduced them in the seventh century, and taught the Anglo-Saxons the art of making them, and of fabricating lamps and a variety of other useful articles in glass. Trades and handicrafts were cultivated much more extensively than by our author seems to be aware. Still, we can only say, that the prevalent character of the civilisation of the people, and was intimately mixed up with their home life. Dunsan was an excellent mechanic and draughtsman, and could work in metals, and make patterns for ladies' dresses—accomplishments which he taught to others; and the encouragement of practical industry was carried so far that there was a law by which every priest was compelled to learn a handicraft, and the monks were not only engaged in the work of making glass, and of fabricating it into drinking-vessels. But there were other shapes of drinking-vessels than that of the glass wood-cup, described by our author, as there were other drinks besides mead, such as ale, the knowledge of which came from the Germans; wine, which was imported; pigment, a sweet liquor; cider; and most, composed of honey diluted with the juice of mulberries.

The education of the Anglo-Saxons, however deficient in other respects, undoubtedly embraced a wider range of industrial pursuits than the people get credit for in this volume. Bakers, smiths, carpenters, millers, and other callings, connected chiefly with agriculture and the fisheries, were extensively cultivated; and weaving and embroidery afforded constant sources of employment to the upper classes. It excited no astonishment, says our author, for a queen to spend hours with her maids at the spinning-wheel. The remark would seem to imply that there was something to be surprised at in a queen doing a housewife's work, and it is hardly deniable that she was. The great families. The spinning-wheel was, in fact, the common occupation of the Anglo-Saxon ladies. Edward the elder had his daughter taught the use of the needle and distaff, and Alfred calls the female part of his family the "spindle-side," a term by which the women of a household were distinguished from the males, or "spear-side."

The minstrel's gallery was sometimes called the choir, says our author. By whom? Surely this is one of the cases in which the compiler finds a careless phrase somewhere, and adopts it as trustworthy testimony. The gallery where the minstrels played was built, probably without a single exception, on a plan exactly the reverse of the choir. Out of so inadequate a detail, we must make allowances for slips of this kind; but it is not the less necessary to enforce the importance of accuracy. There are many passages in the book, which, in spite of its archaeological dullness as a whole, will be read with interest apart from their connection with the rest of the treatise. In this description may be gathered some passages that relate to the social customs of the country, such, for example, as the old solemnity of laying the cloth for dinner.

"During the middle ages, the ceremony of spreading the cloth was one in the performance of which much curious etiquette was to be observed. Two servers entered the hall; they both knelt down, and, unfolding the cloth, commenced spreading it on the table as the Lord of the manor, who sat at the middle of the board, they again made a low obeisance; and on arriving at the top, they knelt a third time, with the most profound reverence."

The table-cloths were amongst the choicest treasures of the household, and were generally of costly material, the most prized being of diaper, a name which, our author tells us, was derived from the way in which they were manufactured, but the interstice that was at an early period carried on between this country and Flanders.

The bringing in of the dishes, which was not performed till after the guests were seated, is well designated as a "domestic pageantry."

* Our English Home, its Early History and Progress. With Notes on the Introduction of Domestic Inventions. London: J. H. and James Parker.

"The servants first arranged the dishes on a slab, called the 'dressing board,' or 'table of scrumptious,' usually placed behind the screen, and where they had received the approval of the steward or butler, the process was formed. The marshal of the hall led the train, holding the grace-cup and rice-pot of the lord, the almoner carried the alms-dish, and the assayer, holding the assay-cup, was followed by the carver, around whose neck was slung a towel—

To-day he is to eat that beef in his hole."

The cook or the server bore the first dish, decorated with a grand device. A body of yeomen followed, each carrying a savory banner, and the waiter with bears' heads in cutlets, and other wondrous 'entailies' of 'mobile corks' devices; increased and adorned the festive procession. It was welcomed into the hall with the music of chimes and bagpipes.

We traced our ancestors in the refinements of cookery. Fiancellini would justly consider himself ill-used to be compared with the artist who built up a boar's head into fortifications; but it must be conceded to the old barons that they knew how to give excellent dinners after a highly-imposing fashion. The very setting down of the guests, the lurch of expectation, the blowing of trumpets, and the march of the procession up the hall, gave a tone of magnificent emotion to the feast, which throws into condign shadow our tame way of dining. How insignificant is the descent of a flight of stairs, with a lullion of crimson on one's arm, and a formal movement into our chairs, conscious of a row of powdered lackeys behind us, contrasted with that grand ceremony of marshals, almoners, and carvers. But there is a grain of comfort in all things. If we are less sublime than our ancestors, we are more secure. We have not a death's-head at our banquet, in the ghastly shape of the assayer, whose business it was to assay every dish before it was tasted, as a guarantee against poison. With all their blowing of trumpets, our forefathers, from the days of the Norman Conquest to the sixteenth century, never sat down to dinner without the fear of assassination. We know that our modern dinner is shockingly prosaic; but it is something that we can eat our mutton with confidence.

CHARACTER OF THE LATE SIR R. PEEL.*

THE name of the late Sir Robert Peel is indelibly inscribed on a glorious page in the history of England. The study of his character is exceedingly important, whether considered with regard to his individuality or his political life—whether viewed as a man or a statesman. To us it appears that his near relative has here presented the public with a fair and impartial statement, from which it can form its own estimate of him in both of these capacities. There may be a natural leaning to the favourable side, and a liberal construction of disputed passages in party warfare; but if so, the comeliness of candour in narrating the circumstances and conditions of the case, and the sound judgment in drawing the conclusions, afford to equally candid and judicious readers a perfect assurance of the justice of the whole picture.

In his mid-career Sir Robert Peel was accused of duplicity and cowardice. He was said to be Bluff or Joseph Surface of diplomacy and intrigue. But his memory has never been despatched by such suspicions as were cast into his teeth in the heat and strife of the struggle in which he was so heartily engaged. The grave and steady course of his life, his calmness, his dispassionate and unexaggerated, and the Person and the Minister stand before us in a more sober and far clearer light than when looked at through the stormy clouds which enveloped no inconsiderable portion of the living presence. Sir Robert's posthumous memoirs have furnished his own explanation of his conduct while thus misrepresented; and the volume now given to the world supplements that publication so ably that, in our opinion, there can be little left for future writers wherein to vary the decision we may honestly arrive at on the premises before us.

The three grand events—the epochs within twenty-five years—which link the measures of the political with the destiny of his country, and having profound influence upon those destinies, were the readjustment of the currency, the removal of Roman Catholic disabilities, and the enactment of Free Trade. In the two latter, especially, he severed himself from the great Conservative body, with which he had previously acted not only in the most cordial manner, but with the real zeal of a leader, and it is to account for such striking changes of policy that the true character of the individual becomes so essential to be ascertained. We think Sir Laurence Peel's story affords a satisfactory solution of the question.

Sir Robert Peel inherited from his forefathers—and, as is commonly said, man in the blood—an insatiable self-love, and almost extreme caution. These were the elements of his greatness. "His mind," says his biographer, "was well gifted, but not richly endowed with rare gifts: a sound mind in a sound body; a fair jewel in a fine setting." His father educated him distinctly with the object of manufacturing him into another William Pitt, and the author observes, "Here, then, was the fortunate, it may be wise union, of high endowments with training. Next came the higher advantage of an early aim; culture steadily directed to one certain and not unreasoned end." That end was accomplished, but not without sacrifices. First of all was the "divorce from childish nature which is inseparable from all early culture severely applied. The mind treated as the hand of the artisan, and forced to execute the application of the faculty; and the mind, a more absorbing pursuit; a reason, in its infancy, put to man's work; a memory over-cultivated; a fluency of speech too early acquired, brought their ordinary results: an imagination starved, a diction correct and flowing, but without spots of varied beauty—the level laws of language." What, asks Sir Laurence, was to be foreseen from this condition of things? "What, lofty, nothing imposed—coolness, calculation, and changes, of course according as the weighing-machine varied, and the balance inclined one way or other. "Change, then, was inevitable; but in such a nature as his it was also sure to be timid and reluctant; to new birth or sudden conversion, but the gradual slow development of growing stature. An honest conservatism to a growing world." Outlast has had of him, "It naught Tory," and so he did; but it was in moderate Toryism, and his disposition was so deeply tinged with what is, perhaps, entirely deemed the opposite principle, that Sir Laurence draws his portrait with perfect fidelity when he says he was "tentative, labouring, cautious, slow in adopting, but steady in the pursuit of

a new course; fearful lest the new wine should burst the old bottles; standing in the old way; proud to be of the people—their friend, and never their better; justly sensible of the value of slow gradations in a new rule; clinging to prescription and ancient usage; a mixture in his origin and fortune of two conditions in life—a Tory and a Democrat in one;—and, adds our author, "no incommensurate unattractive union."

In a production of this class, where the chief bearing lies in the moral example and the political interest, we are not called upon to go into the family history and antecedents of the Peels. They were substantial statesmen—the writer's father was wont to "push" to himself over the super-scription of his letters, half playfully and half peevishly muttering to himself, "a pretty Equire, truly!"—and they sprung up and rose with cotton to be magnates in the land, to reform manners and prejudices, and to hold order, industry, sobriety, and integrity, to be above ancestry, and the noblest legacy they could leave to their descendants. Yet, observes the author, "I am unable to ascribe to industry alone all that the late Sir Robert Peel became. The raw material was more than commonly good—it was excellent. He was a quiet clever boy, and also a thinking boy, naturally observant and reflective. He was no prodigy, certainly. His parts and his promise were such as many boys have and give;—nothing, however, is more deceptive than the early promise of a youth. A girl commonly beats all her brothers in their early lessons, and I have seen no young people so quick of apprehension as the young Hindoo (could not a valuable application be made of this sub-stratum in forming our Indian Government?). though the after progress is not proportionate to the early excellence. Byron seems to have given a correct account of his school-fellow. He nowhere speaks of Peel as a genius, neither does he describe him as a boy of moderate capacity, and superior only by dint of fagging. He was so, and also always knew it, and never flattered himself with the idea of severe discipline had also some drawbacks. Peel seems never to have tasted the sweets of childhood, nor enjoyed the careless pastimes of boyhood. "The originality and freedom of his mind, though not destroyed, were impaired by it. He grew up graver than becomes a boy. His thoughts, as his manners, were cast into a groove, in an artificial and even tinged, by a certain formality." In short, geniality was wanting. His youth was overstrained, and his early induction into office confirmed his aptitude to become "a too much of a case statesman." Yet he was ever the friend to progress, and when once quite sure of his footing he advanced, even sacrificing, most painfully, his personal and party connections, for that line which a sense of his duty pointed out as a national benefit.

"I pique myself (he declared) on never having proposed anything which I have not carried." What a contrast to, what a commentary upon the session of our Parliament, now, it is to be hoped, drawing to a close, that the Cabinet should contemplate a Government of the Emperor of Russia, out of season. It would be very hard, after all the long sittings and interminable debates, to have that tavern bill postponed to "this day six months," or the first rating thrown overboard altogether. Surely, this would be worse than to have the exchange—

* Peel on Peel crumbled horribly.
"Convolving heaven and earth."

—shown up as the very converse of what has been done—or rather left undone—for the legislation of 1860. The beginning of Peel's personal knowledge of the Duke of Wellington is an anecdote, and may well be placed with more playful considerations. "One day, when the people were assembled in the hall to watch for the Emperor of Russia (1814), Sir Peel, who was on horseback, hearing that a crowd was assembled before the house of the Duke of Wellington, expecting him to come forth, exclaimed with eagerness, 'I never saw him in my life,' and rode off instantly to take his chance of a sight of the man with whom, of all statesmen, he was destined to be afterwards most intimately connected. There are few anecdotes in the volume. The following comparison may, however, pass among them for originality. The author is treating of the adage, 'De mortuis nil nisi bonum,' and says of the dead, "the 'primal sympathy,' the soothing thoughts that spring out of human sufferings, more in to enchain their memories, as bodies are enchaind by burying their offf, and by the application of sweet odours." But to return for a few minutes to our more immediate task.

Sir Laurence considers the decision on the currency to have been the redemption of a pledge to relieve the country from an abnormal condition, rather than a new measure to institute a system of security in economic policy. From the character we have described we have little to expect in his remarks and quotations, he contends that Sir Robert's defection from his friends and the great Conservative party on the Roman Catholic Emancipation and Protection Abolition or Free-Trade questions, was the result of his peculiar idiosyncrasy, or, if we may use the phrase, constriction of mind, evidenced by nature, and has never been, and built up. There are few anecdotes in the volume. He looked on every side, he pondered over every contingency; and on the balance of good to be expected, and evils to be avoided, including this way or that, he made his choice, like Hercules, and went to his labours. Apparently, he could not avoid. Lord Hardinge, one of his most attached friends, lamented his constitutional shyness, or acquired shyness, under the pregnant description of "Peel's uncommunicativeness," being very injurious to the party which he confided in his leading; and Croker, in like characteristic language, complained, "If it is delectation pass; and the unloquacious himself was a reserve which impaired his usefulness and hurt the Conservative interest." The separation of Peel from his friends, which was loudly and deeply wounded his sensitive mind, and his posthumous vindication is regretted, as "no happily" reasoned, by Sir Laurence. But, as we may reach, his mortification was grievously enhanced by several extraneous accessories. It was not that his recent convictions severed him from the creed of his father's religion and his church and his opinions as well as from the side of the vast majority of those with whom he had acted throughout his entire career, but there were personal considerations of a bitter taste mixed up with the parting cup. Where his closest and most valued intimacies had been cherished, his change was not only viewed as political treachery, but as gratuitously dishonest; the way in which he turned his back was more indignantly resented than the thing done. That reserve which the author has described prevailed in these instances, and led to the belief that matured perfidy was superadded to the betrayal of trust, in abandoning the principles

pillar of "Kirk," and lines from Chaucer and his Scotch imitators, undoubtedly the greatest of our poets in the period anterior to Shakespeare, and therefore very properly pointed to by Mr. Wyatt as a quarry for thoughts quaintly expressed and well adapted to modern illumination.

ROGUES AND VAGABONDS.*

HUMAN nature is the same in all countries and in all ages. The "Arabian Nights" is perhaps the oldest book of fiction in the world, yet, after discarding a few details which are mere matters of dress and scenery, the characters are the living men and women of to-day, and will be the living men and women of to-morrow. The barbers in that wonderful book are the same light, glib, glibulous beings who now cut the same true hair, shave us, and discourse upon the weather,—who cut our hair and suggest the purchase of restoratives. Shakespeare understood this, with true dramatic instinct. His mob in "Coriolanus"—his servants in the same play,—may always be taken for our barbers or our waiters. They are not wooden. They are not constructed upon any system. They have no "humour" of the author's brain about them,—no passing eccentricities of the hour. They were either drawn from actual life, or with a logical perception of what life was or must be, and the consequence is, that, instead of being pushed on one side by history and material progress, both these things, and especially history, only prove their enduring fidelity as portraits.

Books that have remained for centuries known only to small knots of industrious antiquaries, are often brought into the full glare of public reading by enthusiastic translators. If they place before us anything that we were not closely acquainted with before, they tell us nothing that we might not have arrived at by a process of reasoning. The first book at the head of this article is one of these. It is an account of German vagabonds and beggars, with a dictionary of cant language (the father of slang), edited by the great religious reformer, Martin Luther. Many well-meaning persons will be shocked to find the hero of the Reformation aspect even of touching a slang dictionary, much less of editing it; but Luther, like all great men of past times—as well as past times themselves,—has two characters—the real and the ideal. In the ideal character it is that he lives in the minds of most of his admirers,—an attitudinizing statue, cold and motionless, purified of most things that belong to every-day humanity. In the real character it was that he lived, and got his living, performed his work, and secured his immortality. Shakespeare was not always writing plays, and never stood in that ridiculous listening posture in which he has been represented, with one elbow on a short column, supporting the finger placed upon his brow, and with his body possibly bent like his own Orestes. This is the ideal Shakespeare; the real Shakespeare ate and drank, and poshed, and played at skittles; and so did the great Luther,—with the exception of punching. There is nothing marvellous in the fact, or supposed fact, that the old Reformer edited a "Book of Vagabonds," any more than in that of Chaucer being an excellent accountant.

This "Book of Vagabonds" (discarding the antiquarian details, printed at Wittemberg in the year 1529, shows us, what we might fully expect,—that the tricks of beggars and impostors, as practised in Germany in Luther's time, were the same tricks known in England a few years later, and still known amongst existing rogues and tramps. Whether we look to Thomas Harpman's book, which was a translation of Andrew Boorde's "The Booke of the Properties of Simple Medecines," or to Harriens's Description of England, prefixed to Holinshed's Chronicle,—to Greene,—to Decker, or Henry Mayhew, we have still the same record; there are the rogues with patched cloaks, who begged with their wives; those with forged licences and letters, who pretended to collect for hospitals; those afflicted with the falling sickness,—fresh-water mariners, with tales of a dreadful shipwreck; and many more who are now howling under our windows. It wants no elaborate discourse, no army of authorities, to prove that idleness, or that moderate industry which does nothing but tramp gently from place to place, will always be attractive as long as it yields a living. The number of beggars keeps pace with the population,—for begging is not an unprofitable calling. The "distressed family," who move slowly along the middle of the road, bellowing that intermittent port-song, as they glance upwards with the keenness of monkeys, at the windows, will visit a hundred London streets in the course of the day, and, perhaps, a penny from some kindly passer-by will keep them a year. This it is that nourishes beggars and vagabonds, and causes them to run neck-and-neck with the growth of civilization.

Luther's "Book of Vagabonds" begins by describing the Stabblers, or Bread-Gatherers,—who tramp through the country from one saint to another, with their wives and children, and their long hanging tails of signs of all the saints,—their cloaks being made out of a hundred pieces. They go to the peasants, who give them bread, and each of these Stabblers has six or seven knaves, and carries with him a pot, plate, spoon, flask, and whatever is needed for the journey. These same Stabblers never leave off begging, nor do their children, from infancy until the day of their death, for the beggar's staff keeps the fingers warm, and they neither will nor can work.

Next come the Lousers, or liberated prisoners,—knaves, who say they have lain in prison six or seven years, and carry chains with them wherein, they say, they were confined for years in infidel for their Christian faith.

Then follow the Klenkers, or Squeepers,—beggars who sit at church-doors, and attend fairs with sore and broken legs: one has no foot, another no shank, a third no hand or arm. Many a one ties a leg up, or besmears an arm with sulver, and all the while as little aids him as other men. They can run, when kicked, as fast as horses.

After this come Debasers, or chibb-mendicants—who "toech" for diseases; Kamseneries, or learned beggars—who (like Baupfield Moore Carew) are naught young men of good education, who have taken to a tramping life—vagrant strollers, or small conjurers; Grantners, or knaves pretending a deadly sickness; Deeters, or false pilgrims; Schepplers, or false begging priests; Guckiers, or blind beggars; Scheufelders, or false and shivering mendicants; Voppers, or pretended maniacs; and a hundred other impostors.

As the translator of this book observes (and he knows something of his subject, having compiled the best and most curious slang Dictionary ever published), "the Stroller, or master of the black art, is yet heard of in our rural districts. The simple farmer believes him to be weatherwise, and should his crops go wrong, he crosses the fellow's hand with a piece of silver, in order that things may be righted." The Withners, or finders of pretended silver fingers, are now a-days represented by the "famey diggers," who dig up counterfeit gold rings. Toners, or card-sharppers, are, unfortunately, still to be met with on public maces,—cozens, and the Over-Sonnen-goers, or pretended distressed gentry, who went about "neatly-dressed," with false letters, would seem to have been the originals of our modern "begging-letter writers." Those half-damned-looking impostors with white, and the bing, or carefully-brushed threadbare coats, who stand on the curbs of our public thoroughfares and beg, with a few sticks of sealing-wax in their hands, were known in Luther's time as Goose-sharers." Another class, known amongst London street-folk as "Shivering Jemmins," were found in Germany under the title of Schwanfilders; and men who main children, then carry them about to excite pity; borrowers of children for the same purpose; beggars who pretend to suffer from fits, with their mouths crammed full of soap to produce foam; travelling quack doctors, and tinkers who mend one hole in a kettle and make two, are all to be found in Luther's "Book of Vagabonds."

This volume is, in a great measure, an antiquarian book, and it got up with the most careful attention to binding and type; but the subject it deals with must interest a very wide circle of readers. In the former book, alluded to by the same author (the "Dictionary of Modern Cant, Slang, and Vulgar Terms"), those half-damned-looking vagabonds were called upon to write in cyphers, and used by tramps and thieves were carefully given. As shown in Mr. Rawlinson's "Report to the General Board of Health, Parish of Havant, Hampshire," the vagrant's marks and pantomimic signs, with the use of cant terms, form together a secret language extremely useful to rogues and vagabonds, who, as we have seen, are to be seen throughout our country, in streets, and house-steps, and they inform the initiated beggar of all he requires to know. A simple cross X means "no good; they are too poor and too knowing;" a mark like the prongs of a pitchfork means "go in this direction, there is nothing the other way;" a diamond Δ means "good, safe for a potato, if you like;" a triangle Δ means "spelt by too many tramps;" a square □ means "unfavourable—mind the dog;" a circle with a spile in its centre ○ means "dangerous—sure of a month in prison;" and a circle with a cross in it ⊕ means "religious, but tidy on the whole."

Since the above work was published, and its information circulated, many country gentry have placed the square upon their gates, and the beggar, who has once had a singular immunity from alms-seekers in consequence. Apart from the historical interest attached to such books, they appear, from this, to have a certain utilitarian value.

EARLY WRITINGS OF DOUGLAS JERROLD.*

UNDER the title of "Brownrigg Papers," Mr. Blanchard Jerrold has collected some of the scattered writings published by his father between 1830 and 1840. Its title is adopted from the *nom de plume* of Henry Brownrigg, originally attached to some of the articles, and, we think, to be regretted, as it certainly fails to convey to the public the slightest intimation either of the contents, or the authorship of the papers. It is a pity, especially, who would be eager to read anything that bore the name of Douglas Jerrold, will pass by the "Brownrigg Papers" with indifference.

The Papers, which consist of tales and sketches contributed to annuals and magazines, are strikingly characteristic of that special manner of verbal playfulness, with a purpose under it, which the writer afterwards cultivated more earnestly, but more successfully. We have here the germs of his wit and his taste; the first flavour of a style which subsequent practice sharpened and brightened rather than mellowed, and which, if it be advantage and less vivid in these early specimens than in later works, has the advantage, upon the whole, of being simpler and quieter. The difference is only the difference of age. Even without the assistance of the title-page it would be impossible to mistake the hand of Douglas Jerrold in these pages. The rapid seizure of grotesque contrasts and similitudes, the instinctive abhorrence of alms and pretences of all kinds, the prodigality with which brilliant word-paradoxes are scattered about, the tendency to eccentric ways of representing the virtues, and the sparkling and airy and cheerful pleasantness which a trait, or a nickname, or a mark of humorous scorn is burned in for ever, are as thickly sown in this volume as in almost any of its author's productions. But it is here that we discover, even more than in most of his publications, the secret of his peculiar way of writing.

Jerrold, as a dramatist—as a writer of the stage, dramatist,—who undertook for a salary to produce plays as fast as they were wanted, for a theatre-troupe establishment, in the days of rough-and-ready stage government. His first laborious experiences as a writer were in the production of pieces in which action was the predominant element, modelled over with the light and shade of local humour, and no less true to the scene than the scene itself, with a dialogue of corresponding variety. It might be supposed that this kind of training would generate a loose and disorderly style of expression. Quite the contrary. Dramatic language, if we may employ such a phrase, is an art in itself. They must be packed into such pieces as we have described an infinite deal of rubbish, so far as sentiment, truth, and common-sense are concerned, and the best of them, as literary exercises, will not bear the test of perusal. We are speaking of them not in this point of view, but merely as vehicles of dialogue, without reference to the quality of the matter. It is obvious that where the movement of the play is paramount to everything else, there cannot be much room for making long speeches. The talk must be dense within the narrowest compass consistent with clearness, and it must keep close to the actual business going forward. The first lesson, then, that the impatient dramatist learns is the art of suppression—a wholesome lesson in all crafts, and one which, in this particular craft, brings severe hardly less useful corrections to the truth. He has to learn to be absolute, and necessity of keeping within certain limits; of resisting all temptations to indulge in displays of eloquence that might disturb the equilibrium of the

* The Brownrigg Papers. By Douglas Jerrold. London: J. C. Hotten.

plot; and, being thus restricted in what he is to say, of condensing what he says into the fewest possible number of words. He finds out precisely the profound meaning of the Shakespearean aim, that "brevity is the soul of wit;" and in the progress to this discovery he incessantly acquires a method of presenting his ideas with a degree of pungency and force unknown to him when he began. This is what may be called dramatic language. Not only is every superfluous word weeded out, but the structure of the sentence is framed with a view to get at the result by the shortest route. Every mode of expression that does not tend to this intention instantaneously is avoided. The habit of mind which is generated by the practice of this kind of writing drops unconsciously upon the key-words of a sentence, and comes at length to cast its ideas intuitively in this form. The ear of an audience must be carried at once, or all is lost. There is no possibility of remedying a blunder, no going back to clear up an obscurity, no time for reflection; the language of the dramatist must be explicit, dense, and brief. To accomplish his ends he cultivates assiduously all the figures of composition adapted to his purpose. No man knows so well as the dramatist the value of descending swiftly upon his climax, and hurrying it up for his last word, so that it shall not be anticipated by the audience, and the laugh come before its time. He is equally dexterous and cunning in the use of the antithesis, the most important of all devices in the architecture of stage dialogue. Sometimes these resources are rather overworked, as in Holcroft's "Road to Ruin," where the dialogue is the subtlest extract of expression, and in Sheridan's comedies, where the artifice of the writing is perpetually peeping out. As an instance of the extremity to which Sheridan carried his balance of sound in the formation of an antithesis, take the famous speech of Charles Surface to Sir Oliver. "Mr. Premium, the plain state of the matter is this: I am an extravagant young fellow, who wants money to borrow; you I take to be a prudent old fellow, who has money to lend; you and I, therefore, ought to give fifty per cent. sooner than not have it; and you, I presume, are ready enough to take a hundred, if you can get it."

To the early study of this art of concise expression, of giving the pith and purpose of a sentence the necessary incisive effect, we apprehend Douglas Jerrold owed not only much of his literary success, but the success of his career. In the volume before us we have innumerable examples of the stage habit coming into play in prose, where writers who are not dramatists would consider it out of place. One or two instances will abundantly illustrate what we mean.

Here is a reversed doctor, in the country, writing to his former pupil, who has sunk his whole fortune; at the doctor's instigation, in the purchase of the appointment of gentleman-at-arms, which the doctor considers a military position of high rank.

"I cannot disguise to myself (writes the doctor) the pleasing fact, that it was I who fanned within your youthful breast the warlike spark with which the indolent Mr. Noddy, your father, endeavored to smother you. I will not shrink from the confession, it was I who, remembering your lady pension for scarlet morocco shoes, predicted your martial propensities; it was I who, anxiously watching the growing development of that preference, proposed that there was something in it and that you should be a soldier."

The passage is more expanded than it would have been had it been written for delivery from the stage; but the *method*, and the manner of marshalling the points, are entirely in the dramatic spirit, down to the telling climax on the word "leather." Nothing can be more unlikely probability than that such a passage should occur in a letter from a tutor to his pupil; and nothing can be more consistent with the extravagant and preposterous humor of a farce. The misuse of the means only shows in what grove the fancy of the writer was most accustomed to run.

Jerrold might have thrown off in conversation, as he did a thousand better things, the following joke on a cold-blooded journal that never praised anything—

"It is a positive fact that, even at Midsummer, the printers' devil, when the 'wet blanket' is 'got up,' save the copy, and, laying it upon the floor, shake over it."

In a more serious vein, but still rising up to its epigrammatic close, is what he says about Wieland, the famous actor of stage devils:—

"It is to be regretted that he ever

"To the physicians gave up what was meant for mankind."

"It is, and must ever be, a matter of sorrow, not only to his best wishes, but to the friends of the world at large, that those high qualifications, those surpassing powers of dactylic plagues, viracity, and impudence, which have made Mr. Wieland's devils the *chef-d'œuvre* of the infernal, had not been suffered to ripen in the genial climate of diplomacy."

The line above cited was a favorite quotation with Jerrold. He once applied it much more felicitously to poor Launton Blanchard, who at that time used to go out a great deal into society. Blanchard, said Jerrold,

"To parties gave up what was meant for mankind."

FRENCH LITERATURE AND RUSSIAN LITERARY SCANDAL.

In the French field widely in politics, manners, and customs, from the English, there is, at least, one field in which they have no superiority: the Epics of the Middle Ages, and in particular the traditions concerning King Arthur and the Knights of the Round Table.*

For the space of three or four centuries, Chaucerian and the adventures of King Arthur have been the favorite theme among poets, and one to which they have indulged the full powers of their imagination, and the whole range of their poetical fancies.

But although it is clear, at first sight, that the various legends of King Arthur and his companions owe their origin to Great Britain, and particularly to Wales, the French writers, who to absorbing spirit of appropriation which characterizes them, have long maintained that this romantic history emanated from the brains of French poets.

In vain has Walter Scott asserted facts in favor of a Welsh origin; in vain has a learned Frenchman, better informed than his countrymen, affirmed that this legend was the most ancient and the least contestable

tradition of the Anglo-Britons,—the French would not yield their claim, and Raynoud, Danson, Faurel, and others, still denied that this epic owed its origin to the Cambrians, and all this despite the old and well-known historical and romantic history of Geoffrey of Monmouth—*Geoffrey of Monmouth's* *Historia Regum Britannie*.

It is curious that the German critics, W. Schlegel, Gervinus, and Wilmar, concurred in this opinion with the French.

The author of the work we are reviewing, well acquainted with the legends of Wales and French writers, has examined carefully the sources, and has proved most satisfactorily the Celtic origin of the history of King Arthur.

Foreign philology is generally a difficult study for the French, as they are not so well versed in languages as the Northern nations; but lately great progress has been made, and M. Housset, de la Villemarqué, has shown himself perfectly acquainted with the curious subject he examines. The Welsh author, Owen, was one of the first in the *Cambrian Register* and the *Cambrian Magazine*, to give a translation of some of the legendary tales, romances of the Welsh Britons. Lady Charlotte Guest, making use of the same manuscript at the beginning of the fourteenth century which had been previously examined by Owen, in *Jessu College*, Oxford, published the well-known "Mabinogion," wherein the manners, customs, ideas, and traditions are evidently all belonging to the old Welsh or Celtic literature.

The authenticity of these legendary traditions cannot be doubted, as they are attested from the beginning of the twelfth century by irrefragable witnesses.

The Welsh bishop, Gerald de Barry, the famous GILBERT CAMERON, mentions these tales as being written, even at that time, in the language of the country; "Cauldric scripta in libris eorum antiquis et authenticis." Marie de France not only confirms this, but her own history in Wales where she found the originals of these legends: it was in the unknown monastery of St. Asaph, in the town of Carleau, Glamorganshire. But even had they not been mentioned as so early a date, it would be sufficient to compare them with the oldest French tales, to demonstrate that they are much anterior to these. The legend of King Arthur, the starting point of the romances of the Round Table, was first put into French verse by Robert Wace, in 1155. At the same period appeared another version in prose, by Eilic de Borron and Rusticien de Pise. Since then it has been amplified and paraphrased in all the languages of Europe.

M. de Villemarqué proves, by comparing all the principal characters in King Arthur's history in the Welsh and in the French tradition, that long before 1155 the Cambrian bard had made this legend popular.

In "Myrridan" (Archæology of Wales), Falestin, one of the bards, is represented in the seventh or eighth century, as being the author of a poem wherein King Arthur already appears as the hero. It is well known, moreover, that centuries before the French *romances* and *trouvades* language had been formed out of corrupt Latin, the Armorican of Gaul and the Britons of Albion had a national idiom and a national popular poetry.

It is very curious and interesting to observe in M. de Villemarqué's book the comparison he draws between the various characters of King Arthur's story, according to their Welsh or Breton origin, and the French principal heroes, Gervais, or Gervaisier, wife of the king, is curiously enough represented by both nations as quarrelsome, haughty, and very unamiable, although beautiful.

In the "Myrridan" quoted before, there is a remarkable dialogue between the Queen and Arthur, written in the twelfth century, wherein the former makes a point of asserting at everything the King says, and contradicting him on every question, which is far from characteristic of the tender, loving Gervais who we have been in the habit of picturing to ourselves.

Arthur, on his side, appears under two different aspects. As late as the year 888, the Cambrian bard Neuen, who affirms that he has consulted the ancient traditions of the Britons, describes him as the son of "Ulther with the Dragon's Head," the invincible warrior, but somewhat Pagan in his ideas; while a little later he is represented as a Christian hero, who, predecessor of Geoffrey of Bouillon, visits the Holy Sepulchre.

M. de Villemarqué renders the period of all these different traditions very attractive, by long quotations from the various original works, so that the history of the principal personages of the mythological as well as of the poetical tradition relating to King Arthur, is passed in review, and gives us complete information upon every subject connected with them. The chapters on Merlin and Vivien, on Launcelot and Gervais, on Tristan and Isolt, are especially interesting, and so clear and English in style, that they would be very acceptable to the general reader, and might even elicit some new information on the popular subject of King Arthur and his court.

Prince Pierre Dolgoukoff, who published, some months ago, a book called "The Truth on Russia," a book which gave great offence to the *Usars*, has recently printed in London a pamphlet of six hundred pages, which contains many curious facts, and wherein he announces the publication of other works likely to be highly exciting to public curiosity.

This correspondence contains a letter from the Prince to Count Kisselev, the Russian ambassador in Paris, who had requested him to answer three questions:—1. If the prince objects to withdraw his work, "The Truth on Russia," from public circulation? 2. If he objected to leave Paris? 3. If he still considered himself a Russian subject? The prince replied that he neither intends to withdraw his work, nor to leave Paris, and answers in the affirmative on the last point. After having given his reasons for so doing, he announces, moreover, to Count Kisselev, his intention of publishing, as soon as convenient:—1. The History of Russia from 1847 to 1859; 2. Memoirs on Russia from 1832 to 1834; 3. A Biographical and Genealogical Dictionary of the Russian Families; and lastly, his personal memoirs, which he began in 1834, and which escaped the vigilance of the police, who, in 1843, seized all his papers.

Such a list of books from the pen of a man like Prince Dolgoukoff, promises a fine field of scandal concerning Russia and the Russians. There has also been an exchange of letters between him and the Russian consul-general in London, who, according to the instructions he had received from the emperor, invited the prince to return immediately to Russia. The latter

Sir Claude Scott, Bart. Henry Farnall, Esq.

MANAGERS.

Chairman—Lieut.-Col. Lord Arthur Lennox.

Deputy-Chairman—Sir James Carnichael, Bart.

John Ashbourne, Esq., M.D. John Gaskell, Esq.,

T. M. B. Butler, Esq. W. W. Holliston, Esq., Q.C.

Lawrence Col. Balfour. Charles Osborn, Esq.

Business—Sir Charles Hall, Bart. and Co.

Solicitors—Messrs. Davies, Son, Campbell, and Co.

Capital £500,000

Landed Funds 110,000

Annual Income £40,000

To the security thus afforded, the Office adds the advantage

of moderate rates and of liberal terms.

The Bonuses declared have been unusually large, and amount

in some cases to a return of four-fifths of the premium paid.

No charges whatever are made beyond the premium.

For those who desire to provide for themselves in old age,

none can be so assured of attaining a good age, as 80,

85, or 90, or at death, if it occur previously.

Endowments for Children are payable on attaining the ages

of 15, 18, or 21, or as to meet the demands which education

or settlement in life may create. By the payment of a

slightly increased rate of premium are returned in the event

of previous death.

The Tables of Rates here given are of necessity very limited,

but every information will be readily afforded on application.

HENRY D. DAVENPORT, Sec.

ATLAS FIRE AND LIFE ASSURANCE

OFFICE

50, Chancery, London.

ESTABLISHED 1805.

Act of Parliament of 54th Geo. III. c. 78.

Directors.

Chairman—J. O'Brien Lawson, Esq.

Deputy-Chairman—Wm. Geo. Prescott, Esq.

Sir William Bouverie, Esq.

Arthur Edward Campbell, Esq.

Thomas Chapman, Esq., F.R.S.

Benjamin Buck Green, Esq.

John George Manners, Esq.

Samuel Estlin Magon, Esq.

Capt. J. H. Montgomery, R.N.

Joseph Palmer, Esq.

Arthur Angellus Smith, Esq.

Andrius-John Rivers, Esq., and Philip Ainslie

Folker, Esq.

Actuary—Charles Buxton, Esq., F.R.S.

Secretary—Richard Bay, Esq.

Solicitor—Thomas Bouverie, Esq.

Medical Officer—Wm. Codrington, Esq., M.R.C.S.

Business—Messrs. Prescott, Groves, Carr & Carr.

This Office having been established upwards of 55 years,

more than sufficient time has elapsed to test the sound-

ness of the principles on which it has been conducted. During

that period its prosperity and the magnitude of its operations

have been constantly increasing.

LIFE DEPARTMENT.

The Accumulated Premiums are over £1,700,000, and the

Annual Income exceeds £190,000.

Bonuses have been declared on every Policy to an amount

greater than the sum originally secured.

Premiums have been returned, where the parties assured

have applied the Bonus in reduction of the Annual Premium.

At the valuation on 31st December, 1859, the Office had

a Surplus of £275,356—the whole of which belonged to the Policy

Holders.

The next valuation will be made up to Christmas, 1860.

Policies on the Participating Scale, in England or Ireland

respectively, which may be secured by the Assured as their choice, will,

if the parties be then alive, participate in the surplus in proportion

to the time that they have been insured.

The sum of upwards of £3,500,000 has been paid during the

existence of the Office for claims under Life Policies, of which

amount a very considerable sum has been for Bonuses.

Persons assuring in Great Britain have the option of Part-

icipating Rates of Premium only, or of Non-Participating Rates.

The Directors beg to announce that the rates of Premium

have been revised and re-adjusted in accordance with

along experience, and that

The New Scale will be found very advantageous to persons

desiring to commence assuring early in life.

The Non-Participating Scale is particularly adapted to parties

wishing to secure a fixed sum only, at a fixed rate of Premium,

and on low terms.

Premiums may be paid Annually, Half-yearly, or by a limited

number of Annual Payments.

FIRE DEPARTMENT.

This Company undertakes the Assurance of almost every

species of Property in the United Kingdom, at Rates of Premium

and upon principles which will be found equal to ad-

vantages to the insured, and the Assured as their offer by any

other Office. The Directors can confidently refer to the well-

known character of the Company's liberality and promptitude

in the discharge of claims made upon it during the many years

it has been established.

Re-insurances should be paid within fifteen days after the respec-

tive Quarter-days when they become due.

Tables of Rates, forms of proposal, and any information

needed to effect Life or Fire Assurances, may be obtained on

application to the Office, No. 50, Chancery, London, or to any

of the Company's Agents.

THE RENT GUARANTEE SOCIETY,
3, CHARLOTTE-BOW, MANSHION-HOUSE.
Established 1859.

GOVERNMENT SECURITY LIFE POLICIES.

The only Life Policies dependent on Government Securities, and which entitle Insured to withdraw at any time ON DEMAND nearly One-Half of all Premiums paid, are those issued by the CONSOLS INSURANCE ASSOCIATION, 6th Street, London.

CONSOLS POLICIES CONTRASTED WITH ORDINARY POLICIES.

THE DIFFERENCE BETWEEN CONSOLS POLICIES AND THOSE OF OTHER COMPANIES IS THIS:—

1. Their Annual Current Values are defined and reduced upon them, and they rest upon Government Securities, &c.
2. They are available in any respectable First-class Society.
3. They entitle the Insured to withdraw, on Demand, about One-Half of all his premiums on depositing his policy, and under any circumstances can be forthwith any portion of its Current Value.

These are some of the advantages offered to Insurers by the Consols Society of Life Insurance, prepared by Dr. F. A. of the General Register Office, Somerset House.

The Association has been most successful in its career. A large amount of Capital has been subscribed by more than three hundred highly respectable shareholders, and its principles of business have attracted much attention.

Intending Insurers, parties desirous of becoming Agents, and Investors of Capital, wishing to connect with a successful, safe, and promising channel for employing and improving Money, are invited to peruse the prospectus and other documents issued by the Association, to be obtained of any of the Agents, or of

THOMAS H. BATLIS, Managing Director.

KEAY & Co., Paternoster-row.

With a Portrait, 600 pp., 11s.

CURIOSITIES OF LONDON.

By JOHN TINSLEY, F.R.S.

Of the large edition (5000) of this popular work very few copies remain unsold.

KEAY & Co., Paternoster-row.

New ready, with Frontispiece and Vignette, price 8s.

PAINTING POPULARLY EXPLAINED.

Illustrated by F. W. M. Tinsley, Esq. Tempera, Encaustic, Water-Colours, Miniature, Mosaic, and Painting on Pottery, Porcelain, Enamel, &c. With Historical Sketches of the Progress of the Art.

By THOMAS J. GELFING, Painter; and JOHN TINSLEY, F.R.S.

This Work has been adopted as a Text-Book in the Schools of Art at North Kensington, in connection with the Science and Art Department of the Government on Education.

KEAY & Co. (late Rogers), Fleet-street.

ROBERT B. BROUGH.

This day.—Price 2s., ornamental boards, falcotype 8s.

"MARSTON LYNCH;" his Life and Times.

By the late Mr. Lynch, his Son, Mr. Lynch, and Mr. Lynch, his Sons and Daughters. A Personal Biography, by ROBERT B. BROUGH. With Portrait and a Memoir of the Author, by George Augustine Smith.

London: WARD & LOCK, 110, Fleet-street.

This day.—Illustrated by Herbert Foster, price 2s. falcotype 8s.

MONT BLANC. By ALBERT SMITH.

With Memoir of the Author, by Edmund Yates.

"Whoever has had the gratification of having heard Albert Smith speak, will be able to appreciate the great amount of his Acrostic, its incidents, anecdotes and peculiarities."

London: WARD & LOCK, 110, Fleet-street.

THE IMPROVED PATENT HARMONIUMS, MANUFACTURED BY ALEXANDRE & SON, OF PARIS.

Chief Wholesale Agents:

METZLER & Co.

37, 38, & 35, GREAT MARLBOROUGH STREET, LONDON,—W.

ALEXANDRE'S HARMONIUMS are universally admitted to excel all others in durability, and in the power and quality of their tone; and as they rarely require tuning, and give no trouble in their management, they are coming daily into more general use.

The following is a complete List of all the Instruments manufactured by them, forming a large Assortment, suitable for either the Church, School, or Drawing-Room.

PRICES.

| | | | |
|------------------------|---------------------------|--|------------|
| No. 1.—In Oak Case, | Four Octaves, | One Row of Vibrators ... | 6 Guineas. |
| " 2.—Mahogany Case, | ditto | ditto ... | 7 " |
| " 3.—Oak Case, | Five Octaves, One Stop, | ditto (Wind Indicator), | 10 " |
| " 4.—Mahogany Case, | ditto | ditto (ditto), | 12 " |
| " 5.—Oak Case, | ditto | ditto (ditto), | 13 " |
| " 6.—Ditto | Three Stops, | Two Rows of Vibrators ... | 22 " |
| " 7.—Ditto | ditto | ditto ... | 25 " |
| " 8.—Ditto | Five Stops, | Four Rows of Vibrators ... | 35 " |
| " 9.—In Rosewood Case, | Nine Stops, | One Row of Vibrators ... | 13 " |
| " 10.—Ditto | Thirteen Stops, | ditto (Wind Indicator), | 15 " |
| " 11.—Ditto | One Stop, | Two Rows of Vibrators, ... | 24 " |
| " 12.—Ditto | Three Stops, | ditto ... | 27 " |
| " 13.—Ditto | Five Stops | Fourteen Stops (Tremolo), Four Rows of Vibrators ... | 37 " |
| | Ten Stops (Tremolo), | | |
| | Fourteen Stops (Tremolo), | | |

WITH THE PATENT PERCUSSION, OR PIANOFORTE HAMMER ACTION.

The invention of the PATENT PERCUSSION ACTION has entirely removed the sole objection to these admired instruments—want of rapidity of articulation, when used for Pianoforte Music. It consists of a set of hammers which strike the vibrators at the same moment that the air is admitted, thus facilitating the execution of the most brilliant and rapid passages, and also producing a fuller and very superior quality of tone, and imparting to this Instrument all the advantages of the Pianoforte.

| | | | |
|---------------------------|-----------------|--|-------------|
| No. 14.—In Rosewood Case, | Three Stops, | One Row of Vibrators ... | 20 Guineas. |
| " 15.—Ditto | Nine Stops, | Two complete Rows of Vibrators ... | 32 " |
| " 16.—Ditto | Thirteen Stops, | Four complete Rows of Vibrators ... | 45 " |
| " 17.—Ditto | Twelve Stops, | and 1½-octave of Pedals (separate Vibrators) with Bellows Handle | 60 " |

NEW DRAWING-ROOM MODEL, WITH KNEE SWELL, SEPARATE HANDLE TO WORK THE BELLOWS, AND PERCUSSION ACTION

(THE MOST PERFECT KIND YET MADE).

| | | | | |
|---------------------------|---------------|----------------|--------------------------------|-------------|
| No. 18.—In Rosewood Case, | Five Octaves, | Three Stops, | One Row of Vibrators ... | 24 Guineas. |
| " 19.—Ditto | ditto | Eight Stops, | Two Rows of ditto ... | 36 " |
| " 20.—Ditto | ditto | Sixteen Stops, | Four and a half Rows ditto ... | 60 " |

HARMONIUMS ESPECIALLY ADAPTED FOR CHURCHES AND CHAPELS.

| | | |
|----------------------|---|-------------|
| No. 21.—In Oak Case, | with Gothic Organ Front and Gilt Pipes, rich full tone, Eight Stops (Two complete Rows of Vibrators) ... | 33 Guineas. |
| " 22.—Ditto | ditto ... with Twelve Stops (Four complete Rows of Vibrators) ... | 43 " |
| " 23.—Ditto | Polished ditto ... with Percussion ... | 53 " |
| " 24.—Ditto | with Twelve Stops (Four Complete Rows of Vibrators), with 1½-Octave of Pedals (separate Vibrators) ... | 50 " |
| " 25.—Ditto | with Sixteen Stops (Six complete Rows of Vibrators in the Treble, and Four in the Bass), Transposing Action ... | 45 " |

A large assortment of the above-named Instruments always on hand.—N.B. No extra charge for packing.

TUTORIALS FOR THE HARMONIUM.

| | |
|---|-----|
| Engel's Complete Instructions (with or without Stops) ... | 3 0 |
| " Complete Instructions for the Drawing-Room Model ... | 2 0 |
| Robinson's Complete Instructions, intended for those not acquainted with Music ... | 2 6 |
| Frelon's Method, containing a full explanation of the use of the different Stops, &c. ... | 6 0 |

And a variety of Harmonium Music by well-known Composers.

METZLER & CO.

London:—Printed by WILLIAM LITTLE, at the Printing Office of Cox & Wyman, 71 & 73, Great Queen-street, Lincoln's-inn-Fields, in the Parish of St. Giles-in-the-Fields; and published by the said WILLIAM LITTLE, at the Office of "THE LONDON REVIEW," No. 11, Southampton-street, Strand, in the Parish of St. Paul, Covent Garden, both in the County of Middlesex.—SATURDAY, AUGUST 4, 1860.

THE LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 6.]

SATURDAY, AUGUST 11, 1860.

[PRICE 3d.]

THE GREAT POOH-POOH!

WE live in the age of the great PooH-PooH! Talleyrand's advice to a young diplomatist was, above all things, to avoid zeal. The Tories and Whigs—or Conservatives and Liberals of our islands—as represented by their leaders in Parliament, act upon Talleyrand's dictum. If they ever show zeal, it is in the struggle for office; and the earnestness which they sometimes display is not in the discussion of public questions, but in the desire to keep their places. Earnestness in the management of public affairs went out of fashion when, amid a burst of excitement too hot to last, the first Reform Bill was carried. Lord Melbourne—good easy man—set the example of PooH-curantism, and installed the great PooH-PooH on the Treasury benches, where it has ever since been enthroned as the guide and the exemplar of all our Ministers, actual or expectant. The last of the earnest ministers was Sir Robert Peel, and his earnestness ruined his party and saved his country. Nowadays, to elicit laughter in the House is the highest achievement of the governmental mind; or, if laughter be not always to be had, personal invective—keen and polished—supplies its place. But principle—or a real light in its support—is not to be thought of. Principle is troublesome. Its pursuit may involve personal or party sacrifice. It may make things unpleasant; and is it not wiser to adjourn unpleasantness to the Greek Kalends, and do homage to the great PooH-PooH, king of men and solver of difficulties?

Yet, even in this unearnest age, it is astonishing what an amount of work a little earnestness may accomplish. The country was earnest in its determination to crush the Indian rebellion—and it was crushed. The last Ministry was not in earnest in introducing a Reform Bill, and Reform was postponed *sine die*. The present Ministry cared as little for the question as its predecessors,—paraded a measure of reform before the country, and then abandoned it without a pang, in deference to the authority of the great and invincible PooH-PooH. The present Administration also introduced a flaring budget, about which no one but Mr. Gladstone, its unhappy parent, seemed to care a straw; and month after month the occupants of the Treasury benches held its principal provisions altered, neutralized, or defeated, by friends and foes, as if it were quite legitimate for any outsider to take indecent liberties with ministerial measures, and as if it were the sole business of Ministers to worship PooH-PooH—and keep their places. For want of a little earnestness on the part both of the Ministers and of the Commons, the House of Lords was allowed to introduce the wedge of a Revolution into the privileges and functions of the popular branch of the Legislature, and to assert a claim to open or shut the purse of the nation. Had any other principle than PooH-PooH been acknowledged by our Administration, battle would have been offered to the Lords upon this vital principle; a little wholesome energy would have been displayed throughout the land, and the Lords would have been defeated so thoroughly, as to have removed from their minds for fifty years to come the idea of any renewal of such an unwise and unconstitutional attempt.

Within the last two or three weeks, it would seem as if the great PooH-PooH had been losing favour in the ministerial ranks, and as if a conviction had been silently springing up in that uncongenial soil, that, after all, earnestness in the right cause is not only not a vice, but may actually become a virtue. Lord Palmerston took the lead, and upon the subject of the National Defence, spoke out as a

man of the seventeenth or eighteenth century would have spoken, or as William Pitt would have spoken in the early days of the nineteenth. The nation was and is indubitably in earnest on this subject, as its noble army of 130,000 Volunteers and Riflemen is sufficient to prove; and the Prime Minister, lighting his torch at this national blaze, waved it aloft in the face of Parliament and the world. No PooH-PooH entered into his speech or his purpose, on that occasion; and the result was that earnestness carried the day, forced the great Emperor of the French to speak out more plainly in favour of peace and of the British alliance than ever he had spoken before; and to exalt, by his so doing, the moral power and influence of this country, not alone in France, but in every part of Europe.

This earnestness having answered so well, the Ministry resolved to display a little more of it in another direction. Though the Lords had been foolishly suffered, on account of the deference paid to the great PooH-PooH, to mutilate Mr. Gladstone's Budget, and reimpose the Excise Duty upon Paper, which the Commons, in the exercise of their rightful prerogative, had abolished, it was resolved to make a stand upon the Treaty with France, and to abolish, in accordance with the spirit and the letter of that treaty, as well as with the recognized principles of Free Trade, the Customs Duty upon the importation of foreign paper—a duty not levied for the purposes of revenue, when it does not admit the principle of protection in any other article or commodity whatsoever. The hostile parties arrayed themselves in battle order. But as it was felt by every member that the Government had temporarily, if not permanently, renounced its allegiance to PooH-PooH, and had resolved not to be defeated without passing upon the House the sentence of dissolution—the Government carried the day, as a matter of course. If earnestness had been as much the rule of ministerial conduct at the commencement and in the middle of the Session as it seems to be at its close, the House of Lords would have been as easily dealt with as the House of Commons, and the Government would have stood much higher than it does in the estimation of the country.

Let us hope that the great PooH-PooH is not to be reinstated during the short remainder of the Session, and that we shall hear no more of him in the conduct of the affairs of this nation. Nero fiddled when Rome was burning, in honour of the PooH-PooH of that epoch, and history tells us the result. Louis XVI. and his advisers danced, and sang, and feasted, in 1787, 1788, and 1789,—all in honour of PooH-PooH; but a few short years made an end alike of PooH-PooH and of his whole system of Government, and inaugurated a terrible, but perhaps necessary earnestness in its place. There are serious times coming for Europe; states and kingdoms to be overthrown and created; and popular liberty and despotic authority marshalling their hosts for a sharp and sanguinary conflict. The two foremost men in Europe—the Emperor of the French and Joseph Garibaldi—are the two most earnest men in it. If one of them does not always mean what he says, he has a meaning in the depths of his mind; and when he acts, his actions have a more terrible earnestness than that of any other potentate of our time. Garibaldi, earnest alike in word and in deed, has made himself what he is by this great virtue. There is no PooH-curantism, or sham, about him. No postponement of the truth, to serve the purposes of the moment, is discoverable in his career. And without this earnestness neither of these remarkable persons would

have reached the pinnacle of power upon which they severally stand—the one the incarnation of pure patriotism as the other is of a lofty ambition. While such actors for good or for evil are playing their parts in the mighty drama of contemporaneous history, we must have earnest men at the head of affairs in this country, or mischief both abroad and at home will be the certain consequence. It will not do for the people or the existing race of statesmen to ignore great questions because they are troublesome. Such questions must be looked at face to face, and settled, not according to Poot-Poot, but by earnest and honest work, or the meanest amongst us may live to rue the day.

THE SYRIAN INTERVENTION.

EVENTS are marching rapidly towards the downfall of the Turkish Empire. The Emperor Napoleon has despatched his legatus to Syria, to aid the unwilling Sultan in the restoration of order, and in the punishment of the Druses for the massacre of the Christians. "A great cause precedes the French flag," as the Emperor says to his army, "and a great people follow it." The fine words are but too true; but it is a misfortune alike for Turkey and for Europe, and perhaps for France, that they are so. They inaugurate a new Crusade, the course and conclusion of which no man can predict or foresee; but which, to the imagination as well as to the judgment of all who have studied what is called the Eastern Question, look ominously like the precursor of the general war which will follow, if it do not precede, the expulsion of the Turks from Europe. A sovereign who requires the assistance of a foreign power to bring back the obedience of any portion of his subjects, commits both a blunder and a crime. His allies may prop up his falling power, for a time, by such an expedient, but the prop becomes, at a later period, the instrument of a mightier evil. The remedy is worse than the disease; as Austria found to her cost in accepting, in an evil hour, the assistance of Russia against Kosuth. It will be still worse with Turkey; for the Sultan is weaker than the Kaiser; and French aid will be more dearly bought. The happiest thing that could happen either to Turkey or to Europe, in the present menacing position of affairs, would be the punishment of the Druses by the Sultan himself, before the arrival of the French, and the restoration of peace and tranquillity to Syria, by means and measures under the sole control of the Ottoman Government. But such a result is not to be expected; and if the "sick man" do not go off in strong convulsions, it will not be for want of maladies in that decaying frame, or for want of expectant heirs or plunders to seize upon the estate, ere the breath is out of the body. Because Russia desired to protect the Christians in 1853, the Western Powers of Europe coalesced to support the independence of the Sultan; and because in 1860 the Sultan cannot himself protect the Christians, the same Western Powers combine to render his authority despised by his own people—to do for him what he ought to have done for himself—and to proclaim to Turks as well as Christians, and to all the greedy and insatiable Powers upon his frontiers, that his dignity is a sham—his throne not worth a straw—and his whole empire a falling house, which may be shored up to-day, but is certain to tumble to-morrow.

The partition of Poland was a mighty wrong, which has never yet been atoned for. What shall we say of the partition of Turkey? Nothing, at present, beyond stating the fact that the sanguinary and terrible conflict between the Druses and the Maronites was pre-arranged by cunning heads, to work out a foregone conclusion. These barbarous tribes are puppets, but the strings that move them are worked by dexterous hands. The downfall of Turkey may be salutary, and even necessary, but those who expel the catastrophe for their own selfish ends, are none the less conspirators and murderers.

FULFILLED PREDICTIONS AND HINTS FOR THE FUTURE.

IT is sometimes thought that the astuteness of the Emperor of the French lies in his habit of planning an enterprise with a secrecy that defies detection. There is truth in this supposition to some extent; but still it is not the whole truth. There are instances enough on record in which Louis Napoleon has let transpire not merely a general outline of the policy he intended to pursue, but has even allowed the whole secret of his ambition to lie naked before men's eyes. Even in his long ago days of exile he seems to have made this manner of proceeding a part of his very system. The *Ries Napoléonienne*, written by him when in banishment, and in which we can at present trace by far the greater portion of his subsequent doings, are a striking proof of this peculiarity. Those who know something of his former life in London, remember many of the *dicta* in which he clearly sketched out his future proceedings in matters where one might think he would have considered it prudent to keep silence. Thus he is reported to have foretold that if in power he would not rest until the city of Paris had been cut up into rectangular sections, divided by large streets on a broad statistical plan. The *overcrowded* class, he added, would thereby be driven, by the dearth of lodgings, to the outskirts of Paris, and thus the political character of

the turbulent city would be altered. We know that, since the *coup d'état*, nothing has been left undone to carry out this pet plan of his early musings.

The *coup d'état* itself is another proof of our assertion. How often had that event been predicted with boasting confidence by Louis Napoleon's own adherents! How often, from 1850 to 1851 was the public opinion of France startled by the ghastly spectre which the hand of the future Decembrists chalked on the walls of the Constitution! It is true, no sooner had a panic been created than Government hastened to discontinue itself from its authors. A moment of sudden terror was thus always followed by an increased movement of public confidence. Men became disgusted with their own anxiety. They voted their better political instinct a deception, and the "alarmist party" a bore. They fell asleep on the brink of a precipice; and when a sneaking at the sound of the booming cannon, were hurried into the abyss which engulfed the Empire of France. This, in fact, was the system of Louis Napoleon: so to wear out the alarm-ery of an impending *coup d'état* as to render it almost a subject of ridicule, and at the same time to take off, in prospective, the edge of public indignation for the real event whenever he should be able to bring it about. In this way, strange as it may seem, the very publication of his secret became, by its reiteration, the best means of rendering all the world incredulous to it. Men said—"If he really intended a *coup d'état*, would he bid his agents to tell us beforehand! No! Therefore the assertion must be absurd, and the whole thing a bugbear." But, nevertheless, the 2nd of December came in due time, and with it the answer to all that.

In foreign politics as well there have been remarkable predictions, which must be traced to a pronounced indiscretion on his part. So far back as January, 1852, there appeared in a continental journal, which from time to time has received early news from Paris, a sketch of the whole foreign policy as pursued since then by the French Emperor. We allude to the *Gazette de Cologne*. One of the Paris correspondents of that paper, in January, 1852, wrote the following remarkable communication:—

"If I am correctly informed, and I think I have every reason to believe that I am, Louis Napoleon intends (at home as well as abroad) to replace, by a more active policy, the merely negative one which is at present in vogue. For such an active and bold policy, Louis Napoleon thinks Lord Palmerston would be the only willing ally. The President, if enabled to be known, desires to press the solution of the Eastern question—to stand in this question on the side of England—then to claim England's support in Italy, where, in alliance with Piedmont, he intends to proceed against Austria. The Republic (France) will be augmented by Savoy and Nice. Saxony will be undertaken for it by the assistance of Prussia, the Emperor, Göttingen, Modena, and Lecce; and in order to carry out this plan against the opposition of Austria, no war will be avoided; whilst England will take care that the Italian war shall not enlarge itself into a European one."

Here, in 1852, a few weeks after the assumption of irresponsible power by Louis Napoleon, is sketched out the Lovatlette mission, the Anglo-French alliance, the Russian war, the attack upon Austria, the aggrandizement of Piedmont, the annexation of Savoy and Nice, together with the neutrality of England, and the localization of the Italian war—all this in the order as it happened!—surely a startling revelation, which may well set men thinking, now that the prediction has been fulfilled in its entirety. With such a guide at our elbow, in what light must we read the honeyed letter, full of peaceful asseverations, which the Emperor of the French has in the last few days addressed to his ambassador in London. Would that in the present juncture we had a similar reliable guide for his future movements!

However, if we carefully dig in the past, we may come upon some further remarkable hints, thrown out at an early time on projects the execution of which seems at present upon the verge of being attempted. Thus, as early as 1849, we find the Minister of Foreign Affairs of Louis Napoleon openly justifying the arrest and prosecution of the envoys of the popular governments of Baden and the Palatinate, by declaring that they were "the bitter enemies of that tendency of the French people to extend their frontiers to the Rhine!" This extraordinary statement was made in full sitting of the Assembly Legislative, and the words we have put in marks of quotation are contained in the official report of the *Moniteur*.

In Germany, the eyes of whose patriots are at present watchfully directed on the Rhenish intrigues of the French Government, a small pamphlet has recently been published, giving startling facts on this particular point. Amongst other curiosities, it contains an Appeal, written in 1853, of a pretended German Revolutionary Committee at Paris, to the German soldiers, urging upon these latter to make common cause with Louis Napoleon when he shall appear on the Rhine! We need not say that the so-called Revolutionary Committee was merely a sham—nothing but an affiliate body of the French Prefecture. The real German democracy never has dreamt of entering into the plans of the French Emperor. On the contrary, it has always been, as Louis Napoleon's Foreign Minister correctly stated in 1849, the bitter enemy of that tendency of France to "extend the frontier to the Rhine."

Remarkable, in the Appeal before mentioned, is the fact that it contains (in 1853!) a phrase which is to be found almost literally in

the Milan Manifesto of 1859. It is one of the favourite sophisms of Louis Napoleon, and runs to this effect—"He who is the enemy of your princes must needs be your friend." Of the text of that Appeal a translation may be found in *The Times* of March 24, 1853. We will only transcribe a solitary passage—"Support, therefore," says the writer, to the German soldiers,—"support that which at any rate you cannot prevent! Offer the hand of friendship to the *grande armée* of France, when, led by its august Emperor, it shall cross the Rhine, and drive over to its right bank those miscreant princes who are the enemies of your national unity!" This was written in 1853. The authors of that manifesto are renegades from their common country,—men in the pay of the French Government. Their names are notorious as those of spies and *agents provocateurs*, who write from "official inspiration." Perhaps their lucubrations will, however, one day become similarly significant with the prophecy above quoted, touching the wars of Louis Napoleon in Russia and Italy.

THE BADEN CONFERENCE—AND AN OLD PROJECT NEWLY REVIVED.

AFTER the preceding article was written, and in type, we received from a correspondent in Germany, who derives his information from sources of unquestionable authority, the following remarkable letter. Whether the statements it makes be true or untrue, they are worthy of anxious note, as showing the distrust of Germany, and the deep-rooted conviction that whatever may be said to the contrary in France or elsewhere, Napoleonism means in 1860 what it did in the days of its founder—a Rhinish frontier for the French Empire. The statement made by Mr Berlin correspondent will certainly be contradicted;—but let it be contradicted as often as it may, and by whatever authority, the Germans, we suspect, will believe it to be true, and act as much upon the defensive as if the fact were avowed.

"BERLIN, Aug. 2, 1860.

"Truly we are in the era of revolutions. Our history is like an old Spanish comedy of intrigue, of which every scene is a surprise. At every turn a *Deus ex machina*, which I think you call in English 'a devil-in-the-box,' jumps out upon us,—not to unravel but to complicate the plot. Mr. Kinkel edited the Parliament with details of the meeting of Verona; Lord Palmerston electrified it by his tardy-defiant speech; the male *béglés* of politics then comes forward to scold nervous financiers with one of his inimitable epistles, and still the tangled comedy has not reached its *dénouement*.

"The secrets of Fribourg and Vienna have transpired, and I am in a position to offer you some authentic details of the projects broached at Baden. The conference was initiated upon for the purpose of bringing that mesmeric influence—on which Louis Napoleon prides himself—to bear upon the Prince Regent, and thus to exert his assent to a more splendid offer than Prussian ambition ever dreamed of. The proposed dates from the late Baron de Böttger's journey to Paris, and it was made in the joint names of Russia and France. In turning a deaf ear to so magnificent an offer, the Prince proved himself either a hero or a fool, according as we estimate political rectitude to be a positive or a negative quantity.

"To Prussia was offered the whole of Germany, from the frontiers of Austria and Switzerland to the extremity of Jutland, on the simple condition of aiding Russia in the East, and of ceding the left bank of the Rhine to France. In the original it runs thus—'*La Prusse aura l'Allemagne (de la frontière d'Autriche et de Suisse jusqu'au bord de Jutland) l'Allemagne tout entière . . . peut être Vienne . . . mais elle aidera la Russie en Orient, et elle cèdera le l'Alsace et toute la rive gauche du Rhin à la France.*'

"There are many points to be remarked in these few lines, and each of them brings into relief the talent of their author. The Schopenhauer-Holstein question is set at rest by the words 'to the extremity of Jutland'—the chief cause of distrust which has kept the German people separated from Prussia is thus removed. 'Perhaps Vienna'—as once a liege and a menace! It is a grand idea to make Prussia cede to France the Palatinate, which belongs to Bavaria, proving how the real artist improves each time that he repeats a picture. Nicot and Savoy belonged to Victor Emmanuel when he promised them to his great ally. The poor Scandinavians will perhaps be astonished in their French syndicates at finding that bit of Jutland thrown into the bargain, but they will doubtless be compensated by recovering Norway, or seeing the rest of Denmark united to Sweden.

"All these arrangements have been brought to nought, or postponed, by the countess of the Prince Regent, whose old-fashioned dose of right is sadly behind his times. He saw in them only the means of gratifying his English friends by a reconciliation with Austria. It was at the suggestion of England that the meeting at Tübingen was agreed to—a meeting which alarmed the Liberal party here, and which threatens to be more fatal to the Prince's influence than the most serious mistakes in internal policy could have been. You do not understand in England that Prussia is stronger alone than in alliance with Austria. Such an alliance can never be sincere, for Austria cannot forget her prince were once sovereigns of Germany; and while her vital interests have ceased to be German, she still pretends to be the directing power. The German people has long been tired of this supremacy, and the mere suggestion of its revival would suffice to produce a general insurrection. Even the loss of the Rhine Provinces, with a compact Germany, would be more palatable than this. Yet our friends seek to push us back into this Austrian vortex, out of which we have been so painfully struggling, while our enemies offer us the imperial crown!"

A VERY IGNORANT TEACHER.

AN article published in the *Cornhill Magazine*, bearing the initials of "J. R.," known to be by Mr. Ruskin, is of such an extraordinary nature that it is impossible to allow it to pass unnoticed. Coming from a man of such high reputation, we hold it to be our duty to the public to expose some of its inaccuracies.

The great and continual prosperity enjoyed by England since 1842, when the principles of Political Economy were practically applied to commercial reform, is the triumph of that science. It has recommended more strongly than arguments, however forcible and eloquent, a similar course to other nations; and at present the principles of Political Economy have an influence in the councils of sovereigns which the works of the masters of the science never before obtained. Every kind of success, however, is followed by envy and detraction, and political economy is now more impugned by little minds, and more insidiously counteracted by some practical statesmen than ever.

Under such circumstances, Mr. Ruskin, by far the ablest of its assailants, has undertaken to discredit and demolish it altogether. Regardless of the testimony of facts, and of the high character of the men who, in every country of Europe, have devoted themselves to cultivate it, he does not hesitate to stigmatize "the modern *soi-disant* science of Political Economy" as "perhaps the most curious, and certainly the least credible," "among the delusions which, at different periods, have possessed themselves of the minds of large masses of the human race." Either this professed teacher of the public is grossly ignorant and grossly in error, or the legislation which the nation has of late most valued and most promoted is altogether wrong, and we must "sworn the economic principles taught to our multitudes," in order to avoid "national destruction."

We shall satisfy our readers, we hope, that this skilful writer presumptuously condemns a science which he has never studied, and which he does not in the least comprehend. He says that the "science of Political Economy is based on the idea that an advantageous code of social action may be determined irrespectively of the influence of social affections;" and that the political economist affirms "these affections to be accidental and disturbing elements in human nature, while avarice and the desire of progress are constant elements." Political Economy is not based on an idea, but on the great fact that life is sustained by labour. It is the science of industry and its consequences, bearing a similar relation to the whole of the affections and duties of society as the science of anatomy bears to the whole of animated nature. It is by no means perfect; but, considering that scarcely a century has elapsed since the first rationally attained, and that its losses are opposed to many prejudices and many sinister interests, it has made astonishing progress.

The economist assumes, because nature is at once harmonious and uniform, that the production of wealth, which includes food, and therefore includes the amount and increase or decrease of population, is an index to the general wellbeing; but he does not therefore disregard the social affections, any more than the chemist disregards the medicinal properties of matter, though he says nothing of them. All men, including legislators, regulate their actions by the widest possible survey they can take of all the circumstances of every case; but the scientific man expressly limits his attention to a special class of facts. By the consequences of the great fact on which the science of political economy is founded, the economist tests, and has tested, many political acts, and has pronounced them to be right or wrong. Some economists have advocated particular regulations, but no economist has ever said that a code of social action could be determined irrespectively of the social affections, or thought of eliminating them from consideration as disturbing elements. Mr. Ruskin's description of the science is a complete misrepresentation, born of a fancy so lively that it has been impossible to chain it to a sober consideration of the facts and principles he ignorantly and vehemently condemns.

He is "uninterested in the conclusions of the science," and has never studied it. He has in consequence fallen into a series of palpable errors, from which a knowledge of Political Economy would have saved him. In the interest of the labourers, for example, he asserts that "the natural and right system is that all labour should be paid at a fixed rate." Now, Political Economy has brought the fact very distinctly under the notice of the public that the workers in new arts, as they arise, naturally obtain higher wages than the workers in old arts. Gas-fitters, mule-spinners, and engine-drivers are everywhere better paid than agricultural labourers, handloom weavers, and vine-dressers. At present, higher wages continually attract men from the rural districts into the towns, and by that means those who remain behind are better paid. The gradual introduction, then, of new arts, which was notoriously the chief means of converting the serfs of Europe into free and well-paid artisans, has a constant tendency to keep up and to raise the wages of labour. A fixed rate—as, in fact, the legislator, by the Statute of Labourers, endeavoured in vain to fix—would have stopped this beneficent progress, and, could Mr. Ruskin's design be now carried out, it would prevent hereafter any rise in the rate of wages. However variable may be the produce of labour, all labour ought to be paid, he says, quite contrary to nature, "by an invariable standard." The

labourer is, therefore, never to have the benefit of improvements in art. A proposition more destructive of freedom, and more injurious to the labourer, stopping short of again reducing him to serfdom, which seems agreeable to the patriarchal ideas of this writer, can scarcely be conceived. It has not, however, the merit of originality; for it is nothing more, in substance, than the price-list of certain operatives which has doomed them, in Spitalfields and Coventry, to continued poverty and degradation in the midst of general improvement.

At the same time the proposition is an invasion of the rights of employers; and so much by mere fancy, that the passage in the Gospel of Matthew from which he has borrowed a text and the title of his article, is an emphatic vindication of the right he dears to invade. Our readers will remember the parable of the kingdom of heaven being like a householder who went out early in the morning to hire labourers for his vineyard. He agreed with them for a penny a day, but he gave a penny to those whom he hired, or was obliged to hire, at the eleventh hour, as to those who were hired at first. The first hired thought they should receive more, and they murmured against the good man of the house,—

"Saying, these last have wrought but one hour, and thou hast made them equal unto us which have borne the heat and best of the day."

"But he answered one of them and said, Friend, I do thee no wrong; didst thou not agree with me for a penny?"

"That that thing is, and go thy way; I will give unto thee as thou shalt think."

"Is it not lawful for me to do what I will with mine own?"

It is scarcely possible to find the employer's right to agree with whom he requires, to help him, and to pay them according to the terms of his agreement, more clearly set forth. Mr. Ruskin quotes one line of this passage, and using the words "*unto this last*" as the title of his paper, founds on it—utterly disregarding every other part of the passage—his grand proposition that all labour should be paid at a fixed rate. Is not this to garble or pervert Scripture, in order to justify a gross invasion of the rights both of employers and labourers? At least, he uses Scripture to enforce a plan which Scripture condemns. He has obviously read the passage as he has read the writings of the Economists—so imperfectly, that he can only misconstrue and misrepresent.

Besides fixing the rate of wages, Mr. Ruskin thinks it desirable to establish means "of maintaining constant numbers of workmen in employment, whatever may be the accidental demand for the articles they produce." Now, Political Economy has ascertained and pointed out that the true and proper corrective for variations in any accidental demand for services are variations in the prices of commodities. These show at once the points where labour is and where it is not required. "Money price has been justly described as the nicely-poised balance with which Nature weighs and distributes to her children their respective shares of her gifts, to prevent waste, and make them last till reproduced. It is more even than this: it is the index to the wants of society, or the finger of Heaven indicating to all men how they may employ their time and talents most profitably for themselves and most beneficially for the whole society." Mr. Ruskin would substitute an artificial rule for this natural guide—would keep people in an employment which no longer paid, and prevent them engaging in some other employment which did pay, and where their service would be in demand. We have in modern times heard of many wild schemes, to secure for each and every man an equality of wealth and enjoyment; but of all such schemes, this of maintaining people in an employment where services are no longer required, seems to us the wildest. We reluctantly pardon or excuse something like it in the shape of compensation to an individual suffering from the suppression of a public office no longer useful; but this necessarily has very narrow limits in the comparatively small portion of society to which it can possibly be applied. To provide compensation for, or maintain every man in any thing temporarily thrown out of work, would put an end to the responsibility of individuals to provide for themselves—would dam up the running stream of labour in stagnant pools, and stifle the life of society.

Mr. Ruskin's extreme ignorance or perversity, which can now see no applicability in Political Economy to "the present phase of the world," after it has done so much to improve our laws, and when statesmen and public writers are everywhere looking to it for guidance, merely because it has "no solution for the difficulty" of strikes, is very remarkable. There are a great many other political problems of which Political Economy can find no solution. On this point religion and government are as "helpless" as Political Economy. It has, indeed, pointed out with great clearness and precision the evil consequences of strikes, and has trusted to the knowledge of consequences, as we all must trust—for nothing superior can be had as a guide of conduct—to correct the mischief; but it never pretends to reform the wrong-headedness either of individuals or of classes, whether they be workmen, masters, or writers of Mr. Ruskin's school. This duty is performed by Government and religion. The latter has had less influence over strikes than Political Economy; and the former, which has essayed continually and repeatedly to prevent them, has only succeeded by utterly destroying, as in several states on the Continent, the freedom of workmen, and extinguishing energy and

enterprise. If Political Economy recommends perfect freedom of competition as the best means of bringing both masters and men to a just view of their interest, and a faithful performance of their duty, it is simply justified by the success which has followed from acting in many cases on such a recommendation, and by the general opinion, that the best way of neutralizing the effects of impulses which cannot be ignored is, to let them come out freely, in whatever way may be their nakedness, face to face. Before they can be corrected they must be known.

Political Economy, which observes but does not dictate, has brought distinctly under the public eye the important fact, that, as commerce expands, it equalizes supply and demand throughout society; tends to make wages steady and profit regular and certain; to prevent alike gluts and famines; so that where it prevails most completely the community is most regularly fed, and is totally unacquainted with the hunger and the glutony that were frequently the lot of men before commerce was extensive. The gold discoveries maddened half the world, and reminded the political economist that the supply of all things, from wild animals, the food of hunters, to wheat, the chief food of civilized man, is, as we are convinced by the present unfavourable season, naturally variable and unequal. But those natural and inequalities are neutralized and corrected by those mercantile operations which cause the produce of Russia, America, and England, to sell at about the same price in the London markets. The daily provision for all is uniformly supplied almost without variation in price by mercantile operations. Thoroughly unacquainted with these important facts, however, and having an imagination inflamed by some special sufferings, Mr. Ruskin asserts that the "tendency of all modern mercantile operations is to throw both wages and trade into the form of a lottery, and to make the workman's pay depend on intermittent exertion, and the principal's profit on dexterously-used chance." He ascribes to mercantile operations the variations which they correct. All wages and all profit depend on what is produced; and the greater the quantity, and the more equally it is supplied, the greater will be the amount of wages and profit, and the less they will partake of the character of a lottery. Commerce both increases the quantity and the regularity of the supplies. We may charitably suppose that Mr. Ruskin, like many other men who look by fits and starts at the working of society, and catch firm hold of some petty details, has been affected by the temporary fluctuations lately caused by wars and political events, and has wrongly attributed them to those modern mercantile operations which are only successful as they lessen such fluctuations. His sweeping and erroneous statement shows the almost inconceivable presumption and ignorance with which he writes about great subjects in which he takes "no interest," and will not labour to understand.

We have devoted more space to this extraordinary paper than its intrinsic merits warrant, and must have many of its amazing statements wholly untouched. We agree with Mr. Ruskin that there must be a class to teach, as there is a class to defend, society; but the class which now teaches the multitude uses the press for this purpose, and for one of the most prominent of this class to be scandalously ignorant of what he ought best to know, is a public misfortune. Whether we are acquainted with mathematics, chemistry, natural history, and painting, or not, is comparatively unimportant. We may safely trust all these branches of study to those who take a peculiar interest in them; but we all have duties to perform to one another and to the state, and we cannot be ignorant or misinformed as to them without doing great wrong and suffering grievous injury. It becomes, in consequence, imperative on those who find a professed teacher profoundly ignorant of the very nature of the great science of industry to point this out; and it is the more necessary in proportion as the writer is popular, and puts forth his strange doctrines with all the presumption and fervency of a sincere enthusiast.

LETTERS FROM WALTER SAVAGE LANDOR TO KOSSUTH AND GARIBOLDI.

TO KOSSUTH.

THERE are now in existence two men whose glory will be eternal. I would not offend your delicacy by naming one of them; the other is Garibaldi. A portion of pride and self-complacency may fairly be allotted to the heroism who has once been permitted to converse familiarly with either; and the privilege, I trust, will be granted me in writing.

It is reported that you have recently left England for France. This is consideration to the last degree; for it is well remembered in what manner you were received in that country when you quitted your own, betrayed by a general in whose honour and patriotism you confided, and whom you raised to a chief command.

Half the world is carried toward the powerful and prosperous; the other half presses with all its weight on the fallen and unsupported. Mythology and fable, if well studied, may be as advantageous to the adult as they are amusing to the child, in whose hands they are usually placed. We read of a hero who was condemned to carry the world on his shoulders; we have seen a patriot who was called, and who consented to bear a weighty section of it on his. He bore it well equipped; he bore it steadily, and upright under it, until it was shored off by such malicious and irresistible Powers as riveted the chain round Prometheus

for bringing down fire from heaven. Twin stars are now in the ascendant which will guide Hungary with Italy through the tempest.

Man's arm is invigorated by labour, and his heart is fortified by adversity. Again the venerated name of Kosciuszko will be heard from the Vistula to the Carpathians; and the right hand of Italy will be extended to Sarmatia across the Adriatic. The spirit of Mainz rises over the Lagunes, and dispels the darkness of surrounding night.

TO GARIBOLDI.

You have little or no leisure at present to read those observations which come to you in the form of a letter; yet others may, perhaps, who speculate on your proceedings—past, present, and future. Your plans are wisely kept within your own bosom; every day, every hour modifies them. Yet there is scarcely a scribbler who lays not down other plans for you. It is only men of moderate capacity who think it commensurate with yours, which even the wisest gauge imperfectly. All acknowledge your military skill, your correct far-sighted views, your promptitude in taking every advantage of an enemy, your forbearance to retaliate, and, above all, in the sight of Humanity, your solicitude to alleviate, not only the sufferings of your own wounded, but also of your ferocious captives. Each of these noble qualities has been attributed to more than one commander-in-chief of all thrones to none. History shows us only two, Scipio and Frederick of Prussia, who performed such exploits with means apparently so inadequate. Deprived of your station, deprived of your humble domicile, deprived of your native land, you hastened with a few followers to rescue Sicily. And in whose name? In his who had tricked away these. All kings may be ungrateful, but all men are not. Some perhaps would never have abandoned the brave and faithful man of whose throne he had been the main support.

I have lived beyond the half-way between my eightieth and ninetieth year without any stopping propitiously towards royalty; but experience and reflection have taught me that royalty, in some respects and places, may be the best form of government; it is so in England,—it would be so in Sicily, with its modifications and restraints. The movements of a time-piece must have immovability to work in; it must be solid, central, upright, and independent. The genius and habits of a people are to be taken into consideration. We have an aristocracy, and we find it commodious. Few members of it are of ancient family, or possessors of large hereditary estates. Some have mounted from their money-bags, others from services to the state in the administration of the laws. Territorial possessions won by Norman chivalry constitute the Sicilian aristocracy. A descendant from it was that virtuous and patriotic Filangieri, whose writings should be its textbook. How different is that country who claims the leadership of the family, an associate of unwarlike, torturers, incendiaries, and traitors! When he is delivered up to you let him taste of freedom, although from others he has dashed away the cup; let him enjoy life, although to others he has forbidden the enjoyment. Such creatures cling to it on their knees; pardon to them is no humiliation.

Only a crown can consolidate the ruinous state of Sicily, and only one man has proved that he is worthy of wearing it. The nation calls on him, if not in columns, yet in sobriety; no forested and fortified soldier, to exploit and delude the people, but all the noble, all the virtuous, all the industrious, all the pious, all the lovers of peace rush in rivalry to carry to a distant man every the brow of the deliverer. In him alone they trust; they remember the invader of Rome in the mask of friendship; they remember the instalment of a fugitive priest by him; and, O Garibaldi! hast thou forgotten the labours thou hast undergone in vain; the valiant men slaughtered at thy side; the feeble companion of thy flight from slavery; her exhaustion; her untimely death?

Italy has been twice betrayed and twice dismembered by two of the same race. It seems now an Imperial decree that discord and confusion, strife and struggle, shall alone be permanent on the continent of Europe. There are two islands, one of which it behoves you to guard against fraud and violence; we will take care of the other. The British Channel shall retain its name and character; it never shall be a Hellespont bridged over by a Xerxes. Ships are ready on the other side; on ours, after long delays and fruitless reconnoissances, a Napier has prevailed on the Government to prepare an equal armament against the worst, which it requires no sharp sight to foresee. America will aid you with a naval force. She will listen to no quibbles about intervention, on which France insists. Did not France interfere when Piedmont was but threatened? Did she not send an army into that country? Has not Austria been aiding the Pope and Naples since the race of Villafraña? England is obliged by treaty to defend the liberty of Sicily. But England seems to be moved, for the first time; may it be the last, and may it be of short continuance!

The rich in Central Italy are profuse of praises, but poor in contributions. I could mention a noble of Florence who, with twenty thousand crowns of annual income, spends less than two thousand, and who contributes less than is sufficient for the purchase of two rifles. You will raise more readily a million of men than a million of these. In no country have the people at large ever been so patriotic, so prompt to assemble round the banner you have raised so high. Do not deem it a condescension to accept a crown merely because the most unworthy have worn one. No potentate has any right or plea to contravene it. France, in our own day, has a third time chosen her sovereign. Belgium, Holland, Sweden, Greece, have done the like. Trust no stranger. Urge England to support your independence, and let her do no more, if ever desirous, which she is not. Sicily can well support thirty thousand men in arms. Malta is at hand to defend her against aggression. America, and all the other free states, would hasten to the rescue, and the population of your island is known but imperfectly. Certain it is that it formerly contained threefold or fourfold as many as at present. Syracuse was larger and wealthier than Paris was in the reign of Louis XIV, the most potent of her monarchs. She, single-handed, contended against both Rome and Carthage in the plenitude of her power. No country has safer harbours or a richer soil. Jealousy will rise against these advantages—the same jealousy which has always been busy that Italy should never be one and indivisible, but the eternally

discontented, under a multiplicity of cumbersome princes. The kitchen sold the monkey to deliver her from flea; the monkey comes, carcases her, and bites off her tail.

Italy will be strong enough with her twenty-two millions without the two or three of Sicily. Louis Napoleon laughed in Europe's face when he told her that another million and half were necessary for the security of France. Already, no Pyrenees obstructed his progress; and now the Alps melted like his snows before him. Your own little quiet Nice lay like a nightmare on his breast; it must never more disturb him. Did he not declare that Italy should be free from the Alps to the Adriatic? In what manner has that promise been kept? Turin, Parma, Modena, had no invader or enemy for him to expel. They had no enemies to deliver themselves by their own strength, had formed in peace and unanimity their own constitution, and appointed their own prince. That prince was not permitted to govern them until a second time universal suffrage was given, until there had been time for corruption and intimidation. These, however, did not prevail. A foreign Power had no right to interfere. It is believed, I will not say known, for in diplomacy nothing is known with certainty, but it is believed that the disinclination of Etruria to receive as her sovereign a certain prince of the Imperial family, caused the delay in annexation to Piedmont. When Italy and Helvetia lay at the feet of France by the transfer of Nice and Savoy, these also no longer felt herself in danger. After she had precipitated the Peace of Villafranca, she began to be aware that it was the interest of Prussia to remain at peace with her, rejecting Austria's humiliation. Prussia has wise ministers, neither to be daunted by presentations nor deluded by flattery. She will always be armed, not always on the defensive. Sicily, for her own security, must adopt the same policy as Prussia. At present, she has only one enemy. "Traditional," "misericordia," "defiance,"—leading stars,—all these, in conjunction, may suddenly bring another. "Incorruptible logic" proves that the equilibrium of Europe is only to be settled permanently by the preponderance of France.

The whole of Italy, excepting the Venetian curule, is greatly more under the influence of France than it ever was under the influence of Russia, when the great and little dukes occupied their baby thrones. Piedmont was reconquered, and the passes of the Alps were occupied by a brave people, now sold with a halter round their necks, and thrown into the balance of Europe. To maintain this "balance," France declares that her preponderance is necessary. Her safety, her dignity, her mission, all require it. Whence came this mission? Formerly there was somewhat sacred in the name, and nations and their rulers held it so. In our days less are not only words and wind, but take bodily form, and come forth into action.

WALTER SAVAGE LANDOR.

LORD CLYDE'S RETIRE.—There are many songs in high eulogy upon the gay life of a soldier, and many more exalted strains upon his warlike exploits and triumphs; but, nevertheless, even the most fortunate and victorious have severe trials and considerable disappointments to endure, and are often, in the end, defeated of the desert and the deep. Let us hope, though long delayed, it will not be so with our illustrious compatriot, Colin Campbell (Lord Clyde), whose return to his native land of a anonymous people is now hailed with an enthusiastic welcome. If report speaks the truth (and we understand it does), the veteran warrior is about to be rewarded for his brave Crimean toils and splendid Indian achievements, by a happy union with one long endeared to him,—hoping and faithful throughout all the dangers of his daring career, and whose inspiration, it may well be imagined, urged him on like a Presence in all his noble feats, and was his shield and protection in the direst strife of battle. The hero! may he for many years yet enjoy the recompense of steadfast affection, even more grateful than the admiration of his country and the applause of the world.

VACCINATION.—The medical reports, now heard of on every hand, of the increased prevalence of small pox after vaccination, and the serious and often fatal consequences that have ensued, are chiefly referred to the imperfect performance of the necessary operation. Connected with this unsatisfactory state of things, it may be curious to observe that all attempts originally made to carry out the vaccine matter to India by sea failed, and that the protective disease could not be propagated there till the virus was sent overland, *via* Vienna, Constantinople, and Bagdad.

THE LATE LADY BLENHEIM.—Lady Blenheim's first essay in print was called "The Auctioneer," and described the sale of a family's household goods in a very touching manner. Three days after she left England the writer of this paragraph laid her farewell in Gore House, where the auctioneer and his clerks and porters were tugging all her splendid furniture topsy-turvy, and underselling every article for public sale. Also, for the vanity of human views and human wishes! In the "Journal of a Tour," Sept., 1822, by the same unhappy lady, we write,—"I confess I have as much of the natural John Bull feeling about me that I would prefer having my grave in the most secluded somber spot that could be found, to leaving my bones in the fashionable, sentimental Père-la-Chaise." It was her fate and that they should be laid there.

THE OLD SONG ADAPT.—Amant T. Hood's solitary song (not of "The Shirt"), a correspondent writes:—"The verses of the ballad are almost as numerous as there are fishes in the sea; and every singer, if so disposed, could extemporise a stave of his. One of the original, I remember, was—and it is worth preserving for its prettiness—

"'Tis like the whale, the biggest of all,
Crying, Man-of-gallop-a-ho, why don't ye haul,
In stormy weather, and hail together,
When the wind blows it is stormy weather."

INTERIOR.—Written in a room of a Temperance hotel, in Edinburgh, the walls of which were decorated with paper of a decided carpet-pattern, and the ceiling of which was painted to resemble floor-cloth.

Is this a Temperance hotel,
In which no drink is never sold?
Or is it a temperance sham—
Is tea with brandy blended?

Though drinking tea, I'm surely drunk,
My eyes and brain are reeling;
The Turkey carpet on the walls,
The floor-cloth on the ceiling!

CRYSTAL PALACE.—ARRANGEMENTS FOR WEEK ENDING

MONDAY, AUGUST 14th.
CRYSTAL PALACE. Open at Nine. **NATIONAL HOLLYHOCK SHOW.** The first annual show of HOLLYHOCKS and HALF-PINT FLOWERS will be held on SATURDAY and MONDAY, AUGUST 18th and 20th. Six Silver Cups and several Money Prizes will be given.
Admission, Saturday, Half a Crown; Children, One Shilling. Monday, One Shilling; Children Sixpence.
NOTICE.—THE SUMMER PICTURE SHOW will be held on the 25th to the 26th AUGUST.

CRYSTAL PALACE.—NATIONAL HOLLYHOCK SHOW.
 The first annual show of HOLLYHOCKS and HALF-PINT FLOWERS will be held on SATURDAY and MONDAY, AUGUST 18th and 20th. Six Silver Cups and several Money Prizes will be given.
Admission, Saturday, Half a Crown; Children, One Shilling. Monday, One Shilling; Children Sixpence.
NOTICE.—THE SUMMER PICTURE SHOW will be held on the 25th to the 26th AUGUST.

THEATRE ROYAL, HAYMARKET.—Lessee, Mr. BUCKSTONE.
 On MONDAY, and during the Week, the highly-esteemed Comedienne, Miss Julia Dally, of the OVERLAND ROUTE, Operatic, by Messrs. Charles Mathews, Buckstone, Compton, Chappell, Rogers, Clark; Melodrama Charles Mathews, Wilkins, Forster, Tompkins, &c. The new Comedienne, entitled *HER EXCELLENCY*. Mr. and Mrs. Charles Mathews. To conclude with *THE CHRISTIAN*.

NEW THEATRE ROYAL, ALBEMARLE.—Sole Proprietor and Manager, Mr. F. WEBSTER.—Last Two Weeks of the popular Comedienne Miss Julia Dally, on MONDAY, and during the Week, *JANE FRIED*. Richard Ford (his original Character), Mr. F. Webster, &c. To conclude with *THE POOL OF THE FAMILIA*. Miss Julia Dally, Messrs. Paul, Bedford, Esquire, Smith, &c.

ROYAL STRAND THEATRE.—Lessee and Directress, Miss SWAN.
 BORNAGE.—On MONDAY, and during the Week, *A FLEETIN' RAIL*. Mr. J. C. Cook, After which, *COVENTRY AND FLUTATION*. Mr. W. H. Swallow, Miss M. O'Neil, With a Ballet Intermezzo. To conclude with *THE MAID AND THE MAGPIE*. Miss Marie Wilson, Miss O'Neil, &c.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr. W. B. BATTY.—On MONDAY, and during the Week, *A FLEETIN' RAIL*. Mr. J. C. Cook, After which, *COVENTRY AND FLUTATION*. Mr. W. H. Swallow, Miss M. O'Neil, With a Ballet Intermezzo. To conclude with *THE MAID AND THE MAGPIE*. Miss Marie Wilson, Miss O'Neil, &c.

ROYAL ITALIAN OPERA, COVENT-GARDEN.—FLORAL HALL.
 CONCERTS.—Mr. ALFRED MELLON has the honour to announce that he has entered into arrangements with Mr. Tye to read the New York Fall Concerts, for a short period, and that it is his intention to give them a series of VOCAL and INSTRUMENTAL CONCERTS. These Concerts will commence on MONDAY NEXT, AUGUST 13th, and continue for One Month only, terminating on SATURDAY, SEPTEMBER 8th. Artists Messrs. Mr. EDWARD MURRAY.

THE LONDON REVIEWAND
WEEKLY JOURNAL.**SATURDAY, AUGUST 11, 1860.**

ACCORDING to a telegram, dated Malta, August 4th, the city of Damascus is quiet; but murders continue to be committed in the surrounding country. No less than three thousand Christian women are said to have been sold at twenty-five piastres each, and to be detained in the harems. Private letters corroborate the narrative of the events at Damascus recorded in our last number, and add fresh details of the horrors perpetrated by the infuriated mob. Mr. Brant, the English consul, was the only European who ventured out of doors during the tumult. He went frequently to the Pacha's house, to remonstrate with him, and had he not gone fearlessly among the mob of insurgents, Europeans would have been much more barbarously treated than they were. It is a remarkable fact that at Damascus not a word has been spoken against the English. Mr. Brant's house, situated in the Turkish quarter of the city, has not been injured.

The Rev. Dr. Thomson, an American missionary in Syria, in a letter written from Beyrout on the 18th, states that authentic accounts, official and private, from Damascus, which had just been received there, raise the number of the slaughtered in Damascus alone to 5,000. He adds that the number of houseless victims amounts nearer to 20,000 than 10,000. He makes an appeal to the British public for subscriptions, to be forwarded through the Syrian Relief Committee in London. Great excitement prevails in the island of Crete, in Rhodes, in various towns of Anatolia, and on the Arabian shores of the Red Sea.

In consequence of these events, the British Government has united with France in taking prompt measures to force the Turkish Government into more active exertions to restore tranquillity. On Wednesday the Emperor, who had proceeded from St. Cloud to Châlons, reviewed the 5th and 10th regiments of the line and the 1st regiment of Hussars, which together form about one-half of the Syrian expedition, and delivered the following address, which was received with immense enthusiasm:—

"Soldiers! you have for Syria. France hails with joy an expedition the sole aim of which is to cause the rights of justice and humanity to triumph. You do not make war against any Foreign Power, but to assist the Sultan in bringing back the obedience of his subjects who are blinded by the fanaticism of a former century. On that distant land, rich in great reminiscences, fulfil your duty; show yourselves the worthy children of those who once gloriously carried into that country the banner of Christ. You do not leave in great numbers, but your courage and your prestige will best supply the deficiency; because wherever the French flag is seen to pass, nations know that a great cause precedes it, and a great people follows it."

In the House of Lords, on Monday, Lord Shaftesbury asked the Government if the forces about to be sent to Syria were to be employed solely in putting down the disturbances, or would be allowed in any way to interfere in the civil or religious administration of the country? The Sultan, by the advice of Lord Stratford de Redcliffe, had made large concessions to Christians and Turks in the matter of religious liberty, which had resulted in many Greeks and Mahometans becoming Protestants. Lord Wodehouse, in reply, alleged that if many Mussulmans joined the Latin Church, that they might secure French protection, others had become Protestants to secure the patronage of Great Britain. He referred to the first clause of the protocol as evidence that no attempt would be made to affect the civil and religious administration of Syria.

Abd-el-Kader, in consequence of the dissatisfaction which his recent conduct has given to the Mussulman populace, has been obliged to leave Damascus, as he has received, as was anticipated, the Grand Cross of the Legion of Honour, from the French Government.

The conclusion of the Conference and the departure of the French expedition, have not had a favourable effect upon the Bourse of Paris. Instead of rising, on the announcement of an event so auspicious for France as the Syrian Intervention, the routes actually went down. Nevertheless, there is much enthusiasm about the war, and it gives *élan* to the preparations now making everywhere for the celebration of the Emperor's birthday.

There is as yet no confirmation of the report circulated by the *Patrie* that a landing of 1,500 Garibaldians had been effected at Scylla, in Calabria; but a letter from Rome states that on the 1st inst. a body of 1,500 Piedmontese volunteers landed at San Stefano, on the Papal territory. They intended to march on Corinto, and General Geyon had immediately sent orders to the commanders of the battalion of Chasseurs stationed at Civita Vecchia to detach a part of his force for the protection of the threatened town. We moreover learn from Naples that active measures have been taken to prepare for an invasion. The Minister of War had despatched troops into Calabria, and had withdrawn others from the Abruzzi, in order to concentrate the principal part of the army round Naples. All attempts to conclude an armistice with Garibaldi appear to have failed, whilst large numbers of volunteers continue to arrive at Palermo. Three hundred soldiers have been arrested at Naples on the suspicion that they meditated desertion to Garibaldi. The agents of the Queen Dowager swear all over the kingdom. At Reggio, and at Avellino two reactionary attempts had been made, the initiative at the latter place having been taken by the foreign newspapers. The country people flocked in crowds to the town, using successfully axes, scythes, and volleys of stones, to drive out the Royalist troops; they being encouraged by the clergy of the provinces, who are staunch supporters of the liberal cause. The people of Naples continue to exhibit their sympathy with the Sicilians, and Garibaldi's hymn is sung openly in the streets; but from the popular enthusiasm the aristocracy and the middle classes stand apart, being full of apprehensions, which make them cling to the constitution and the Bourbon dynasty. This state of affairs has not prevented the Minister of Public Works from concluding an agreement with the Company Telgraf for the construction of three great lines of railway from Naples to Rome, Salerno, and Taranto, with a branch line through Calabria, the cost of these undertakings amounting to £2,500,000. In Sicily, the Sardeian constitution was to have been proclaimed on Sunday.

On Thursday, Sir G. Poyser, in the House of Commons, asked the Secretary of State for Foreign Affairs whether Government had received any information that the inhabitants of Melazzo resisted the attack of the revolutionary troops, and that Garibaldi, having taken possession of the town, punished with death thirty-nine of the inhabitants? Lord John Russell replied that he had received no authentic intelligence on the subject. The official journal of Sicily, of the 30th, denies the report as totally without foundation. The stories circulated to the effect that several inhabitants of Melazzo, portions of the Bourbons, had thrown boiling water and boiling oil on the Garibaldians, and that thirty-nine inhabitants of Melazzo, or disguised police agents, had been shot by Garibaldi, are equally false. A few shots were fired from some houses on the patriot troops who had penetrated into the town; but they proceeded exclusively from the Royalist soldiers, who were successively dislodged, at the point of the bayonet.

A telegram of the 4th, dated from Rome, states that the inhabitants of Montepulciano, near Frascati, excited by anonymous proclamations coming from Naples, had begun to divide the landed property of Prince Borghese; that men, women, and children had taken part in the distribution of lots, and that a detachment of *gendarmes* had been called in to re-establish order.

The presidential campaign now going on in the United States seems to excite very little interest, judging from the diminished attendance of the contesting parties, and the languidness of the demonstrations. The crops were never better than they are this year, both in Canada and the United States. There has been very little rain. The farmers of the Mississippi Valley are hurrying on their last year's crop to the American seaboard for exportation, and the increased traffic returns on the western railways prove the immense extent of the supply of wheat ready for exportation. A demand for European manufactures, the beneficial effects of which will be felt all over Europe, will soon follow.

The Volunteer Review at Edinburgh has proved the most magnificent display of the kind ever witnessed in Scotland. The actual number of

Volunteers reviewed, according to the official returns, was 21,455, whilst between 2,000 and 3,000 Volunteers were present without taking part in the review. The number of spectators who crowded the heights of the Queen's Park, Salisbury Crags, and the Colton Hill, was not less than 200,000, a prodigious crowd, considering the population of Scotland. After the review was over, and when various bodies were leaving the ground, Lord Elcho was recognized, and a cheer proposed for him. In a few minutes he was hemmed in by a crowd of enthusiastic riflemen. When tranquillity was restored, he acknowledged the personal compliment paid him, and linked it with an earnest desire to see the movement not only effective at present, but permanently enduring. He had no doubt that the glorious scene of the day, in no way inferior to that in Hyde Park, would animate many to join the Volunteers. Visibly affected, he then rode away, amid deafening acclamations. The march off the ground was the most imposing part of the whole ceremony.

First came the Fifeshire Mounted Rifles, men accustomed to ride from their infancy, who sat their steeds with an ease and elegance unequalled even by the regular Dragoons. Then came the first Artillery Brigade, composed of Edinburgh, North of England, and Lanarkshire forces. The march of some of the companies was superb, especially of the Lanarkshire men, between whose double file a line might have been drawn and exhibited no man a hair's breadth out of step. The Engineers next approached, and their attractive appearance and steady march, in which Lanarkshire again excelled, gained for them general applause. To those succeeded the Rifles, headed by those of Edinburgh, followed by those of East Lothian, Forfarshire, Fifeshire, and the men from England; then Stirlingshire and the Northern Counties; Renfrewshire and Ayrshire, Glasgow, Lanarkshire, and Dumfriesshire bringing up the rear. The uniforms ranged from the plain, sombre-gray, black belts and cartouche-box which the Edinburgh corps have chosen, to the light-gray and buff belts of the men of Annapdale; the facings and bindings being of all hues and designs. The Highland companies, which marched past the Queen to the music of the bagpipes, were received with great favour by the audience.

The defiling of the troops, which commenced at four o'clock, lasted until twenty minutes past five, the total number who passed Her Majesty in that time being 21,455. During the whole time a dense dust, at some times giving the spectators an idea of an African simoom, was driven by the west wind right into the faces of the Volunteers. Otherwise the weather was all that could have been desired.

Where all was so excellent as to call forth the high approval of Her Majesty, it would be invidious almost to particularize corps, but the general opinion was, that Glasgow, alike for numbers and steadiness of march, was entitled to "bear the glee" while the uniform of the Edinburgh Rifles was the one, perhaps, most generally admired.

On Monday last the Liberal party met at the official residence of the Premier, in reference to the great question to be debated the same night, regarding the Customs duties on the admission of French and other foreign grain. No special resolution was proposed for the adoption of the meeting; but the object for which it had been convened having been explained by Lord Palmerston, a discussion ensued, from which it appeared to be the unanimous feeling that the honour of the country, no less than the principle of free trade, demanded the adoption of the resolution by the House of Commons. The debate on the Paper Duties the same night, highly described by the "Silent Member," in another portion of "THE LONDON REVIEW," ended in a majority for the Government of 366 against 333.

The Prince of Wales has been received with great enthusiasm in St. John's, Newfoundland. On the 25th of July he held a levee, at which six persons were presented, representing the various trades and societies. The city was illuminated and a ball given, at which the Prince remained till half-past two in the morning. A splendid regatta took place on Lake Quividi, near the city, where there were boat-races, at which His Royal Highness was present. The crowd was very large, and the genial and unprejudiced disposition of the Prince gained him all hearts wherever he went.

TOWN AND TABLE TALK.

(From our Fall Mall Correspondent.)

THURSDAY EVENING.

THE great Faction Fight in the House of Commons came off, as all the world anticipated, on Monday; and has ended also as most people expected. The Opposition, in their attempt to ruin Mr. Gladstone, have only met him on his legs again. The debate was not remarkably interesting. The division was a thoroughly party one: not above six on either side voted against their party, and the House was unusually full. The accession of about twenty of the Irish Roman Catholic party seemed to jeopardize the Ministry for a moment. Those gentlemen have just found a very lame excuse for their cowardly retreat. They wished, foremost, to vote for Free Trade—but the foreign policy of the Government alarmed them. For what? for the Pope? It would have been better for them if they had voted, and protested, if they had so chosen, against Garibaldi and the Italian people. But it would seem as if the Irish mind were always destined to be either illogical or insincere.

What a contrast is afforded by the splendid gathering of the Volunteers of Scotland and of the North, at Edinburgh, on the following day. There the brave and intelligent people of Scotland welcomed their English friends—forgetful of the bloody Border Feuds of former days, and united to honour the Queen and

defend their beloved native land. The numbers exceeded 20,000 "real and stalwart men."

The Parliamentary Session may be expected to end on the 26th—the last party fight being over—and the last Irish job, the Gateway Contract, being expected to pass to-night.

The National Defence make the progress which all true Britons desire. The Indian Finance Statement, fixed for Monday, will be a heavy business. But our City friends, we think, are needlessly alarmed at the talk about an Indian Loan.

The signs of the waning of the season, in London, are numerous. The streets present a wretched aspect. The noise of carriages is growing less frequent, and lighted bonfires, as you walk thoughtfully home from Club, House of Commons, dinner, business, City, Kensington, or elsewhere, are scattered and few and far between. Signs of the "upper ten thousand" are now scanty there, where, in the great world west of Regent-street, they were once abundant. Less tempting objects fill the shops. Gravity succeeds gaiety in most of the fashionable public ways. The tokens and hints of a move "country-ward," in the shape of vans and post-carriages, are to be encountered in the squares. That annual sort of yearning which sets in for the green fields, for the seaside, for rocks and mountains, for streams and sierras, for the free air with a clear, silent atmosphere about you, has assumed its usual epidemic form. And is it wonderful that the imprisoned Londoner chafes in his chains, and longs to exchange the eternal pavements, the cabs and omnibuses, and the never-ceasing lines of the gas-lamps, for grassy slopes, for village streets, and for river, fishing-boat, forest and glen?

Literary London knows no actual vacation. Yet, to judge from the stagnation of the "Review" literature must have followed the examples of so many other professions, and have gone lollily out of town. Mr. Murray announces some important publications. Amongst them are a "Life of William Pitt," with extracts from his correspondence and MS. papers, by Lord Stanger; "The United States—hazards," by Mr. Motley, the accomplished and indefatigable historian; "The Diary and Correspondence of Charles Abbott;" and the "Five great Monarchies of the Ancient World," by the Rev. George Rawlinson.

The French Academy has accorded its triennial prize, unanimously, to a "Histoire d'Angleterre," by M. Emile Bonnet. If, as Duran says, it is desirable to "see ourselves as others see us," then by all means let us have a translation of the book, and let us read our own history by the light of this French lantern, which is to throw Hume, Lingard, and Macaulay into the shade. If you have "writ your annals true," said Corlaeus, "you will find certain accusations against you, which are ignored in your justifications." Are our schools to find in this new "Romance of History" proofs of great things against us, could we put on our spectacles to see them?

There is in town a picture that challenges attention. It asserts an important if not dangerous claim in regard to the authenticity of one of our assumed noblest pictures. We speak of the celebrated "Ecco Homo" of the renowned Antonio Allegri da Correggio. The rival is on view at a gallery in Oxford-street. The sum of eleven thousand pounds, as we are all aware, was paid for the famous Correggio in the National Gallery. They were purchased from a nobleman who had spent much money in the acquisition of works of art. The Marquis of Londesborough was the seller of these to the nation, now some twenty years ago; and most people have duly admired both pictures since their gorgeous gold frames and under their thick plate-glass covers. The subjects are, "Christ led out of the Hall of Judgment," and exposed to the sight of the people, with the "Behold the Man!" of the governor Pilate; and "Cupid taught his Arcadians by Venus and Mercury." We have inspected this assumed real "Ecco Homo," in the Oxford-street gallery with great care, and on strict reference and comparison to its prototype in our National Collection, we can distinctly say that it is very doubtful which is the genuine production.

That both of these pictures—the one in the National Gallery, and this one in Oxford-street—are not by the same hand, we feel as certain as any judicious person can be who is a judge of the manner and style of Correggio, and who has an eye to recognize his distinctive traits. We have been assured that there was total ignorance regarding the existence of this picture no longer than two months ago. The subject ought to be investigated by competent judges. And we say as pretty a piece of picture-controversy as one may well desire, in the possibilities of debate, during this autumn, about the rival claims of these two great works—for grand the Oxford-street "Correggio" assuredly is!

The huge statue over the arch at Hyde-park Corner everybody admits is a disgrace to English taste, to the great loss, its original, and to the common sense of those who have erected it there. A great hollow underneath it for a pedestal is at once an architectural horror and a vacuum which Nature herself abhors. The equestrian figure—colossal as it is—wants a mountain, or at least a hill or a tumulus upon which to stand, to look the great object which it might. Upon the top of Primrose-hill, with the feet of the colossal horse upon the ground, it would have a natural pyramid to stand upon as a pedestal. And coming up through the Regent's-park, it would strike upon the popular sight with extraordinary effect. We should have in London, then, with the aid of the distinctness of the colossal figure in full relief upon the horizon, a monument upon a hill which would really, in its effect, vie with the great works of antiquity.

London, though "out of town," will have some music this September. That excellent artist and conscientious musician, Mr. Alfred Noyes, has taken the New Floral Hall of the Covent Garden Royal Italian Opera, for a series of concerts, chiefly instrumental, but in which songs will have their due share. He is announced to commence on Monday next, the 13th instant.

Fine Art seems to be doomed to perpetual failure in this country, when put under the hands of officials. King, Lords, and Commons are not favourable to any exhibition whittier of Art. The attempts to embellish the New Palace at Westminster have almost entirely failed in the hands of the "Commission of Fine Arts." It is certainly a pity that Art should be put into Commission at all,

their corners off. Then, and then only, may they mature into generous, although rigid, judges of the Court of Letters, and take more pleasure (as true critics always do) in discovering great beauties, than in hunting out petty faults and dark spots on the disc of genius.

Leaving out of consideration, for the present, the smart and "fast" young gentlemen, who are but sowing the wild oats of their literary career, and who will in due time become portly gentlemen and honest citizens in the great Republic of Art or Letters, I shall arrange a little more particularly into their several divisions and sub-divisions, the great army of the utter, the hopeful, and the absolute criticasters. "Brains," and "No Brains," would be the easiest divisions into which they can be drafted off. But as such a classification would be much too vague, I shall divide them into the following:—

The good-natured criticasters, who praise books, and who uniformly select the worst, tamest, and weakest passage in the novel, poem, or history, as the best.

The criticasters who maliciously select the worst passage in a book and proclaim it to be the best.

The ill-natured criticasters, who abuse or "cut up" books, and who just as commonly select the noblest and most eloquent passages as specimens of the author's uniformity for his lack.

The criticasters who write at books without having read a page of them.

The criticasters who write upon books after having read them, but always fail to perceive their drift or merit, or even their defects.

The criticasters who know the author, and say a kind word for him, but in such a way as to do him no service.

The criticasters who know the author, and have eaten his bread and salt, and by way of showing their stern impartiality, and the powerlessness of friendship to lead them from the strict line of duty, "pitch into him."

The criticasters who do not know the author, and never heard of him, and for that reason think it incumbent upon them to abuse his book and to ignore his merit.

The criticasters who hate the author because he is great and distinguished, and has achieved a success which has been denied to themselves.

The criticasters who do not hate the author for his greatness, but for his neglect in not having asked them to dinner.

The criticasters who dislike the author because he has red hair, or black hair, or because he is quaint, and who vent the necessary displeasure upon his book.

The criticasters who have written popular books, and cannot endure that anyone else should share the public favour.

The criticasters who have written unpopular books, and who, consequently, desire that everyone else should be as unpopular as themselves.

The criticasters who have no time to read, and to justify their opinion, good or bad, and who write at hamlet.

The criticasters who have no conscience, and who think it right to be witty and smart at an author's expense, even although they misquote him, and pervert his words or his meaning for the purpose.

The criticasters who desire, above all things, to show what an ignoramus the author is, and how very clever they are themselves; even although it happen that the only information they have upon the subject on which they write is derived from the author whom they denounce.

The criticasters who think it effective to be funny—even in reviewing a sermon or a mathematical treatise.

The criticasters who will not see any desert in a favourite.

The criticasters who will not see any merit in an opponent.

The criticasters who have no grudge against the author, but have against his publisher, and smash the author accordingly.

The criticasters who may have borrowed money of an author, and, failing to pay it, hate him and his book in consequence.

The criticasters who want to borrow money of an author, and who think no way so effectual to sap the fortunes of his prudence or suspicion, as extravagant praise of his genius.

The criticasters who fancy that the author is a criticaster himself, and once reviewed their poem—or play—unkindly or unjustly, and who take their revenge upon him every time he appears in print.

The criticasters who sell the books they review, and never cut the leaves, lest they should diminish their value as new books, and push them down into the second-hand category.

Not to be personal, let us (*i. e.*, the reader and myself) suppose that there are before us several criticasters drawn out of these twenty-four classes; and that their names are A., B., C., D., E., &c. Let us, furthermore, suppose that a new book has just appeared—a poem—a novel—or a history; that the book is good; that the frogs are in their own pool of criticismism, and that they have just begun croaking.

A. leads off thus:—

My head is wooden; 'tis an age of wood,—
Who is not wooden, is not great nor good.

B. follows:—

My spectacles are yellow: let none dare
To say that skies are blue, or earth is fair.

C. prolongs the noise:—

To give no dissent: how can he renege
Great thoughts or deeds in memorable verse?
Give me the poet who can keep a cock
And choosest verse, or else I'll damn his book.

D., who is melancholy, adds his croak thus:—

My hary's matrimony: I hate the common loom,
Who talks to me of harmony and tune;
And melancholism, passion, and every
The art of writing a dead—how let it be!

E., who is sour as vinegar, croaks still more lustily:—

I've failed, and shall another man succeed?
Not if by spiritless pen,
Or shrug suggester, I can blight his fame,
And tag dabbler to his fatal name.

And thus they will continue, all through the Alphabet. They will afterwards find their opinions stated at greater length in the *Driveller*, the *Twinkler*, the *Squaler*, the *Howler*, or the *Scarifier*, and perhaps in such great lights of the provinces who keep a London Correspondent to twaddle for them, as the "*Snobington Gazette*," the "*Pettifogging Mercury*," or the "*Goslington Independent*." Of them it may be truly said,—

They cannot snap the poet's soul;
How can their little pen define
So great a world, from first to last,
With all its climates as they shine?
How can they trace the stormy seas,
And mountain ranges, and mountains,
His wild wood-paths and flowing seas,
His rivers rippling to the breeze,
His forests roaring to the wind—
To map such world would waste space in heaven;
To use it needs the sun for paper,
While to their snore, through much they're driven,
Unhappy souls! are cold sleepers.
A rushlight, and a sheet of paper.

I may add, in conclusion, that I once published a poem myself, when I was but one-and-twenty; the mere fool I. How many copies does the reader think were sold to the intelligent public? Nine—only nine! But the public, as the late John Reeves used to say in the farce—"The public, sir,—is a *HARE*."

SKETCHES FROM THE CONTINENT.—No. I.

OUR WATERING-PLACE.

FOR some weeks past the swallows of the London season have been "flying—flying south." Switzerland this year is crisscrossed with tourists, and the thrifty crowds in the watering-places on the Rhine receive daily accessions of British visitors. The gregarious habits of our countrymen induce them to flock to those special localities which, from some cause or other, have become of late years their most frequented resorts. Those principally patronized by them, however, are not those which, to the stranger, would seem to offer the greatest attractions; and the haunts once considered the most fashionable amongst us, seem now to have lost their charm. For "our watering-place," for instance, which we flatter ourselves is second to none in point of gaiety, beauty, and climate, the English are in a large minority. They seem to have been driven out of the field by the Americans. At the *balda diodes* we sit next cheer-complacentedly deliciously-formed girls, accompanied by a prettily old man and a grout-bearded papa, and we may be sure that he is a "retier" from Boston or New York—*one* as *famille*. The young gentlemen with the downy chin, who is making free with his Napoleons at *trunk et garniture*, is the hope of the family, and plays with a considerable swagger, because youth of his age are not usually indulged with a trip on the continent; and when he returns to that "store" from which the golden egg is annually extracted, he will have the satisfaction of triumphing over his less fortunate comrades, who have been obliged to content themselves with a fortnight's dissipation at Newport or the Virginia Springs. But though Americans swarm at "our watering-place," they by no means constitute its permanent feature; of a restless and migratory nature, they pass and repass perpetually, but their faces constantly change, and are unknown alike to the *habitués* of the Kursaal and the gaming-table. It is to our annual visitors that our respect is due, some of whom possess charming villas of their own, and maintain expensive establishments here every summer; they form a respectable and exclusive society, which has grown and flourished under the protecting auspices of *roupé et noir* and *roulé*; and comprises within its circle persons of the highest eminence and distinction. It was, doubtless, the lofty moral standard which prevails at most German watering-places which induced an exalted personage not long since to select one of them as a rendezvous for a reigning prince, who, conscious of the dangers to which his principles were likely to be exposed, took care to surround himself with guardian angels in the forms of most of the crowned heads of Germany, before appearing at the place of tryst. Physically, and indeed socially, to the outward eye, "our watering-place" presents a very fair exterior. Verdurous forests mantle with dark-green the steep slopes of the hills beneath which it nestles; there are romantic old castles concealed in their recesses, and foaming cascades which gleam out from under the dense foliage, and contribute their respective quota to the babbling brook which passes through the centre of the town, and twirls away clear and pellucid in the lights of heaven, relieving all the dirty work to be done by that invisible sewer which flows buried beneath the thick crust of society. There are green fields intersected by broad avenues, which form charming drives, and wild, romantic walks, where people with sentimental or gambling propensities can make love or commit suicide without fear of interruption. Then, of course, there are magnificent hotels, with the gardens sloping to the water's edge, and lawns and summer-houses. We rubber pipe ourselves on our hotels,—not that we spend much of our time in them. We lead a healthy, open-air existence. All the stupid people in the place are to be found, between the hours of half-past seven and half-past eight in the morning, listening to a bad band, and drinking the waters conscientiously. We are only in a position to give an account of the aspect of affairs at this hour from

invitation—a few cups of tea, and a plate of biscuits, plenty of light, plenty of pleasant talk, and unintermitted conversation, even without introductions—women in ball costume, if they are going further, grouped in bright spots of colour about the room, and women in shawls and *gilette* bonnets, who have come down by an omnibus, or else walked, if not too late and the streets not muddy—winding up with a tray of *soufflés*, orange-flower water, *croûtes*, and biscuits; and here you have your pleasant evening, bright and cheerful, and so animated, without trouble, ostentation, or expense, where people have met to be interested and amused, and on leaving which, those who are hungry will eat their bread and cheese quietly at home. Imagine Mrs. Smith, with her Buttons, giving such an entertainment! It would be hard to say which would fail most in the attempt—the entertainer or the entertainment.

Now, nothing of the heavy luxury of which we have been speaking is necessary for happiness or pleasure—nor yet for beauty. One supreme beauty, indeed, which every one may have and cultivate to the utmost, is a prodigious wealth of cleanliness—a luxury of cleanliness—which is rarer even than money, and not always to be found with money. Another beauty not spelt in gold, is taste in arrangement. A bit of colour thrown in here; a well-drawn line standing boldly out against the background there; flowers; a judicious assortment of tints—all these are even more beautiful than magnificent dinners or gorgeous furniture. And no one need be too poor to have them. We want a few lessons of fashion to take the right of simplicity. If some beautiful woman would inaugurate the taste for simple dresses, unornamented and inexpensive, but graceful, and in perfect harmony,—if some wealthy people would have meetings where the amusements and not the supper would be the object, and where there would be a liberal allowance of style of toilette, and where no one need spend beyond their rightful power, perhaps the taste would spread; and those who could see society only on these terms might then get their footing among drawing-room crowds, which now shouder them out into the hall; they might then take the place which education, refinement, intellect, and breeding have marked out for them, but which wealth and luxury sully away.

THE PHOSPHORESCENCE OF THE SEA.

From the days of Plato to our own, the occasional phosphorescence of the sea has excited wonder and curiosity, while naturalists have surmised and conjectured concerning its cause. Some have thought the light of the sea was absorbed by the sea during the daytime, to be given out again in the darkness of night; but the universality of the phenomenon—for it occurs equally at the poles and the equator, as well as in temperate regions,—its remarkable vividness frequently at periods of full-moon, and many other circumstances, not to dwell on the obvious one that under this hypothesis, after every bright day, the phenomenon should be exhibited, has left that idea no tangible basis. Peculiar electrical conditions of the air, or of the ocean, have also been suggested and found equally untenable. The well-known luminous properties of the glow-worm and the firefly have caused others to attribute the phenomenon to organic agency,—consequently the true cause, although from the minuteness of the objects which produce it, they have remained undetected for many ages by observers and investigators.

The phosphorescence seems to be exhibited with the greatest intensity in the tropics; the whole ocean there, at times, giving forth a faint gleam as far as the eye can reach, while the passage through a narrow strait is a succession of sparkling light; but the "burning" of the sea is often to be seen, under very beautiful circumstances, from our own shores.

It is now some six years since, that on a warm night, standing on Folkestone pier, I witnessed a remarkably brilliant exhibition of this interesting phenomenon. If you dropped a pebble into the water, ring after ring of "fire" rippled over the calm surface; every drop of the returning splash sent out its tiny sparkling circle, while the downward sinking of the stone was marked by a vivid streak. A handful of pebbles produced a blaze of light; grains of sand, thousands of tiny stars. Every object floating in the harbour was painted out phosphorescent outline; and from the mooring-posts of boats and barges, thick miniature catenae of glowing fluid, as they dipped and rose again from the placid water. As the *Boulogne* steamer dashed into port, the spray from her bows, the foam from her paddles, and the undulating waves in her wake, formed a glittering, glowing scene which many an experienced illuminator has vainly endeavoured to rival.

Although nearly eleven o'clock, no charming was the effect that a bucket of the luminous water conveyed to my room with the intention of closely examining it. On stirring up the water in the dark, luminous specks remained on the hand, which, being brought to the light, were seen to be minute gelatinous globes. The water was densely crowded with these jelly-like creatures, and amongst them were numerous small crustaceans. In the daytime I had been in a small boat dredging out at sea, where I had found the water thick with organic particles, while long streaks of what appeared to be brown yeast, or sillage from a brewery, floated by us with the tide. So still was the sea "in-shore" that we, brought our little boat over the long reef of sandbanks and mud stretch along the beach a few hundred yards distance, and so clear there the water, that as her keel ground over the rough stones, we gathered magnificent specimens of *Paddle pellicula* from the stems of the waving tangles, and watched, as we slowly drifted along, the star-fish and porpings crawling in the hollows six or eight feet below.

The soft glaucous nature of the bodies of the little creatures that produce these beautiful phosphorescent effects at once leads us to associate them with the *Medusa*, or jelly-fish, while from the periodic occurrence of these luminous exhibitions one is inclined, in spite of the opinions of naturalists, to consider them as the fry of some larger fish newly sent forth by their parents. Naturalists have considered them perfect animals, and hence named their tiny living lanterns *Noctiluca miliaris*—and truly "nightlight grains" they are. As my curiosity was aroused, disregarding the lateness of the hour, I placed a few of them on a glass slide under my microscope, and extinguished my lamp. Under a powerful lens, they presented themselves as a series of little, by a broad pale rim of electric-looking light, like the faint gleam of an exhausted glow-worm, while occasional sparks of vivid brightness traversed short portions of the objects, particularly at certain points. This exhibition of their luminous properties seemed voluntary, as for long periods they showed no brightness, and then suddenly shone out again very brilliantly.

Whatever phosgene might naturally do, irritation always provoked a remarkable effect. The power, too, is dependent on life; for of samples of water kept many days under different conditions, some retained their phosphorescent properties, while others had lost it; in the latter case the *Noctiluca* were invariably dead. The yeast-like form to which I have alluded as floating in dense streaks on the surface of the sea in a dense congeries of these little phosphorescent jelly-fish, and so luminous is it that in a jar during broad daylight, it may be seen to glow with a pale-green light.

Our woodcut gives a representation of one of these *Noctiluca miliaris* highly magnified, showing its balloon-like form and the peculiar ciliated tentacles by which it twirls and turns itself about and upends down in the water, in a slow but very remarkable manner. The smaller figures give the natural size of some of the largest specimens. Numbers, however, do not exceed the 1-1000th part of an inch. We cannot do these minute creatures without our thoughts turning to the contemplation of the amazing number of myriads with which the ocean-water must be swarming, to render its surface over hundreds of miles glowing with a subdued light, ready to burst out in vivid flashes with every floating obstruction, and to mark in moving streams of light the crests of the rolling waves.

In recent experiments the effect of exposure, and other gases, have been tried on the luminous properties of the *Noctiluca*, as well as those of strong mineral acids, ether, and chloroform. The results of these experiments show differences of action in the cases of the glow-worm and the *Noctiluca*. As, for example, in the case of carbonic acid gas, glow-worms lose their phosphorescence very shortly after immersion, whereas, in that of the *Noctiluca*, there is no agent which has the effect of increasing the brilliancy of the light emitted, at the same time that it renders permanent frequently to the extent of twenty or twenty-five minutes. At the lapse of this time, however, it proves fatal to the *Noctiluca*, without the capability of resuscitation by the admission of atmospheric air, which will often revive glow-worms when similarly treated.

In some examinations which I made of *Noctiluca* under the microscope, in a dark room, I found that the phosphorescence was not always fixed, but that, sometimes, a bright spark would travel from one point of the object to another, as from a to b, in one instance observed. It is very desirable that further observations on the luminous properties of these objects should be made, and even more desirable that we should acquire an intimate knowledge of their early stages of development; for little, indeed, of their habits and history is yet known, even to naturalists.

MY SEA MONSTERS.

By THOMAS HOOD.

"Pan-Ban-Caliban!"
"Not a sea monster, and not a new man!"

It was in a weak moment on a warm day that I first gave way to the desire that made me a slave of Caliban, or Sea Monsters. By that title I desire to mean the inhabitants of Aquariums. I had seen lovely pictures of them, in windows festooned with creepers, and buttressed with Varian cases. Visions, of Mr. Noel Humphreys' crabs, floated before my eyes, and wooed me to devote myself to a tank. The sea, whispering as it murmured among the rock-pools, completed the spell [the printer will be obliging enough not to omit the "p" in that last word], and I registered a word of bondage. Oh, that deceitful sea! This was its first bit of treachery; but, once possessed of a Caliban, I was always falling a victim to its wayward treachery. Did it not once creep up round me as I was transcribing a dictionary, and compel me to run for my moist life? Mind you, "a hop, skip, and a jump" is good muscular fun on green turf, but it is hard work with the sea up to your knees, especially if a rude wave comes and puts you roughly on the back just as you have completed the grammatic three. That was what happened to me, and I plunged as I felt, and settled it too, by the sea, and illuminated it with flourishes of my ten fingers. The next time Mr. Shirley Hibberd gives us an illustrated book on Calibans, I can supply him with an initial letter.

Well; the first little ocean I started on my own account was nothing more than a finger-glass, and well it throve, though I believe only to lure me onwards.

"One glass," says the temperance maxim, "leads to another," and so it did in my case, for ere long I found myself the miserable Neptune of an inverted foreign-glass. But the inversion did not make it any the less a forcing one, for never was there a more tyrannizing crystal since the days of Doctor Lee.

First of all, the water would not settle. I filtered it from morn till night, but its opacity was obstinate, and a Hartz Forest carbonized would not have been cluical enough to clear it. All of a sudden it grew clear of its own accord. The water settled—and water settles it too, by over-stocking it. Everything died in the odour of—certainly not sanctity.

It was then I first learnt the full beauty of a certain Devonshire word—"anewb," to wit. I had frequently heard it used, but now I fully appreciated its force. Odd to say, I have never yet met with any one who had kept a Caliban, and did not see how comprehensive a description this word gives of "an ancient and feeble man."

In the mean time, he it understood, I had left the seaside, so that, after due purification of the tank, my new stock was sent me from a friend on the coast.

This time I, of course, did not overstock, but ran to the other extreme, and I put hosts of sea-creats into my supplementary foot-pans, as a *corps de reserve*. Unhappily, the one containing three crabs was put near some net curtains. As crabs climb like transmigrated middles, next day their residence was vacant; and, what is worse, the strictest search could not reveal their whereabouts. A shelly robber fell upon the house; and my little naives, eight, lived in endless fear of meeting the things glancing at a dark turn of

the stairs; nor did I, without misgivings, thrust my feet down to the foot of my bed.

At length the piano required tuning. It was moved from the wall, and, with a gust of anything but Arabian perfume, this spectacle presented itself.

The three wretches had shambled in there, stuck fast, and perished like these Maritime Mistletoe-Bough Brides. Still, however, one crab was left me, "to glad me with his" swivel "eye." He grew familiar and agreeable—demoniacally so! A tap on the glass would bring him up the sea-grass hand-over-hand for shreds of meat; and he would sit sweeping and churning near the surface like a little model of a marine steam-engine. But this was all part of a deep-laid scheme against my happiness; for one day, just when I "came to know him well," on a flat stone I found the hollow crust of him—a shell, but with no corpse in it. I concluded, with mourning, that in a fit of suicidal despair, or after an orgie of leaf-bred days, he had strayed into an anemone.

Not two hours after, as I was about to syringe the water, I was turned to a cold jolly to see my friend's ghost rising near the surface, spouting viciously in several directions at once, and twiddling his thumbs like a sea-quaker. I was so startled I dropped the syringe. As it happened to be glass, the water went unsucked for the day, and was not improved by the omission. The truth was, he had cast his shell; a habit which, I afterwards learnt, was fashionable among the crustaceans at due and decent intervals. But I'm sure he did it for a practical joke, for he grinned and squinted so atrociously that he dislocated his eyes, or some other limbs, and otherwise so mortally injured himself that he shortly perished.

Among the other denizens of my tank were anemones, lovely to the look, but really hollow bags of sea-water, very like marine British Banks. They were uninteresting, always turning themselves inside out, putting their puffy striped lips, and assimilating all that came in their reach with a forty-alderman voracity. As there were a good many fish, of one sort or another, that came to their net, it is easy to guess my stock dwindled rapidly. As for my shrimp and prawns, writers on this subject are prone to call them "shadowy" as a fanciful epithet, but they were so shadowy with me, that they disappeared altogether. They probably got checks from my British Banks, and were "taken in."

Then my mussel unmoved himself, and rolled to the bottom with the expiring cockle; and the double device so affected the "shadles," that they died smothering. So did my two hermit crabs, who, after having shifted shells once or twice in a nervous, rapid, and modest manner, turned bodily out of their dwellings, and died, naked and not ashamed.

My clump of asperula tubes, meanwhile, glared with hollow orifices, like a house in Chancery, for a new crab, of solitary and assimilable tendency, had a habit of sitting on it, and peevishly picking out the inhabitants like "periwinkles." And all this time a gentle "smooch" hovered over my tank, as my "bright gazelles" were obliged to be thrown, one by one, down the sink. So that, on the whole, my Caliban was a sort of succubus that was always fondly hanging over; and getting only smells, and no enjoyment, from it. Indeed, my glass was so odorous that my friends called it my "slow fever." And slow enough, in the slang sense, it had become, for, with the exception of the sulky crab, there was no livelier thing to be seen than a vegetating anemone or so. To be sure I had a tradition under a bit of rock, but I never saw it, and did not know its name. It was a multi-crural beast of petrified appearance, like a stone monument of a Daddy Long Legs spider. Indeed, it had so many legs, and so many joints to them, that it never moved, out of sheer despair, I believe, of ever doing anything right with them.

My last attempt to infuse a little life into this uninteresting stagnancy was painfully unsuccessful. I had read that the common stickleback will acclimatise itself to sea as well as fresh water. By judicious groves of river and ocean, I gradually acclimatized one little thorny creature, and, as a natural consequence, became somewhat attached to him. Imagine my horror to find that, within ten minutes after his introduction, he had inspired another attachment—as this—

After this shock I ceased to struggle with my Caliban, although I could still tell tales of cross crabs, anemones, and crustacean crabs. I tried to persuade myself that still life was preferable, with its beautiful repose, &c. &c.

But the crowing wrong has yet to be told. The weight of its contents had cracked the bell-glass. Unseen by me, the flaw had grown, and grown, until suddenly, one day when I was meditating on it, and trying to think it rapturous enjoyment, it burst, with a report like a small pistol deluging me

with hot-inodorous water, and scattering stones, weeds, and sea monsters on all sides, in damp and desolate confusion.

What became of the crab I cannot tell. A smooch at some future day will reveal his last resting-place. The anemones I threw into the garden, and I believe he sat at them, for he was decidedly unwell for several days after. Of the many-legged stony beast, I often to this day pick up portions of thighs and shins. But I never attempted another small sea. I hung up my drenched garments, like Horace, in token of my escape from marine disasters, and washed my hands of the salt water.

Never again may I suffer a sea-change into anything so wild and strange as the drudge and vassal of an exacting Caliban.

AUTOGRAPHS AND AUTOGRAPH-HUNTERS.

THIS very general and strong desire to collect the autographs of celebrated persons, and even of individuals of inferior note, or to retain such as are recommended by particular circumstances of curiosity or affect, is perfectly natural. In many of the latter cases people persist in this practice, in spite of the inconveniences and evil results which are likely to ensue from it. Few folks can find in their hearts to destroy love-letters, though (when kept till "all sated and torn") they often betray secrets that involve very mischievous and fatal consequences. In fact, correspondence of every description more frequently hoarded than it deserves, and confusion does the work that ought to have been done by the fire, with less reservation for future reference, if deemed necessary.

But pure autograph-collecting, for the sake of the autographs, is another thing, and is justified by several considerations. No wonder, therefore, that it has grown almost to a mania of late years, and that the demand has brought to the hammer of the auctioneer many thousand precious lots, as well as to the bookmaker many private documents, which ought never to have seen the light, or been published in print to the world.

The chief reasons for autograph-hunting may be stated, as follows, in our opinion abroad, and entertained by many, that the characters of the writers may be gathered from their writing; and thus we talk of a plain hand, a round hand, a bold hand, a clear hand, a weak hand, a neat hand, a struggling hand, and so forth, denoting thence that the *manus* so typified is straightforward, well-told, manly, perceptive, feeble, precise, treacherous. To such a length has this fancy been carried, that pretenders advertise for signatures, from which they undertake to interpret probabilities, just as if penmanship and the casting of natures held similar mysteries in their relations to mankind. In short, man's nature is made out from his Sign-ature; we learn how he minds his 'p's and 'q's; he is far-sighted if he dots his 'i's; temperate, if he strokes his 't's; and poor, if his 'c' look scratchily and ragged. Secondly, if rings, or locks of hair, or books, or toys, or trifling articles of any sort, are covered as remembrances or pledges of regard, it may be allowed that the holograph note and its autograph subscription offer a form of keepsake of a very simple and grateful kind—the one being the thing, the other the best of memorials. Thirdly, for illustrating books the signature of the author is a *sine qua non*. Presentation copies are doubly, trebly, and in many instances, tenfold more valuable and valued than if they were most elaborately bound. There is a great thirst for the signatures of eminent authors, artists, and distinguished men of notorious name in notorious times, such as Lord Turpin, Paul Jones, Robespierre, as well as Luther, Franklin, Newton, have all greedy or enthusiastic purchasers. Jack Shepherd (perhaps only his mark x), Wellington, and Shakespeare—we know what they would do and fetch in the market. At Messrs. Puttick & Simpson's sales, the show of *hands* seems to carry all the world before it, and dirty scraps of paper are converted into clean bank-notes, in a manner surprising to behold. Strangers write to remarkable personages, begging their autographs, and many cunning ruses are resorted to, in order to accomplish this purpose. The civilities of answers so caught adorn many an album, and some very droll examples might be quoted of the means by which they were secured. The fatuity of direct application only succeeds with the lesser luminaries;—the greater stars are fain to shelter themselves behind silence; or if they are fanny fellows, secretary sends compliments, and so and so will have pleasure in coupling with Mrs. or Miss A. B. C.'s request, if she will be good enough to send a slate or a paving-stone to write upon, or, if she will, a sheet of glass or a window-pane. It is possible that autograph-hunters may afford a slight diversion from the common persecution; or it is quite as likely it may cause an increase of the appetite, and among the millions whose ugly portraits are now perpetuated with the ugliest want of art in every corner of town, it may become a fashion (as with the ancient Egyptians) to *athmetize* to have the names of the distinguished, to authenticate the atrocious likenesses.

Nobody, we believe, would find it agreeable, or exceedingly conducive to his reputation—not to speak of his comfort or happiness—to live in a glass house, even were it a Crystal Palace, since even palaces are abominations, owing to their want of privacy—

Every ad observed,
Set in a note-book, learnt and copied by rote,—

to cast into the teeth of the poor overlooked, and yet not overlooked, inhabitant. The same reasoning applies to the conversation and written intercourse of social life. It is difficult to draw the just and allowable line as regards the daily private and manuscript communications which pass to and fro among men without reserve, on every topic public, it may be of private consequence,—let us say in convivial parties, in clubs, in family circles, in friendly interchange of opinions, in short, in every way in which

* When testing of autographs (as of social conversation), we ought not to omit a few notes on the laws more specially applicable to letters. According to law, letters are the joint property of the writer and of the party to whom they are sent. The paper, as a document, belongs to the writer (if no note may be a word) by analogy to the law of the law, letters in other matters, such as lease and lease, and so forth, burglar, vendor, covener, &c. &c. but, in the case of a letter, the "belonging to the party" belongs to the party to whom they are sent. The recipient has no right to publish it; and a Court of Equity will grant an injunction to restrain him. Perhaps this property is not a new one, but it is a new one in the sense that if a book should continue in the author's, say, twenty-eight years, or whatever time the statute gives. We are of opinion that if a man writes a letter, and it is published, there is no copyright in the writer, and it would be a question to decide whether any is created in the owner of the newspaper. James had that there would, and thus protected his name as ours.

* "Overlook" is the only word we know in the English tongue not only with a double, but a directly opposite meaning: in "overlook," to see over everything and its due part reasons; and "overlook," to see nothing!

we are free to open our thoughts, state our judgments, or express our sentiments,—

"No facta sine causa
quæ dicta bene element."

In this especially should be maintained the good rules never overstepped in the best society, and the breach of which soon excludes offenders from one of the most pleasant and instructive of human enjoyments,—frank and unrestrained confidence, only guarded by the sense that it is so, and not to be put to a foolish trial. Such a society is, in itself, as free from the mischievous slander hateful; fortunately they are, in general, evanescent, and always pro tempore liable to immediate correction, reproof, or punishment. But the broad line where the *libera scripta videntur*,—where the ink survives living explanation or denial, is a far more serious boundary to transgress. The revelation of the secrets of Catharine in the Confessional,—the divulgence of the truth by a felon to the attorney, and by the attorney to the counsel feed to defend him—the secret communicated under oath or pledge never to divulge it,—perhaps those vows at which Jove laughs, *perjuræ amantem*,—are reckoned sacred; but there is a wide margin of less impressive confidences, which not only every honorable being, but even every judiciously-educated and wellbred person must consider to be equally "tied in" from idle report or injurious propagation. In this lies the whole question of autograph disposition. It may be a perfectly innocent and harmless transaction, or it may be a scandalous outrage and a shame. To the mere gift or even sale of unimportant commonplace epistles there can be little objection; but a severe scrutiny ought to be exercised to prevent any transgression of the clearly-understood conventional rules to which we have alluded. Beyond that point nothing can be permitted. The lapse of time, added, seems to excuse, to a certain degree, the publicity of matters which it would have been intemperately infamous to betray; but in those cases it must be remembered that the divulging of the actual party concerned,—is not restrained by the same ties—is not bound by the same circumstances,—is not responsible for the same results,—and that the results themselves are altogether altered and different. Yet even here we have witnessed many instances of incontinence for the sheer lack of lore, which were extremely discreditable to the manipulators and editors of posthumous papers.

And when we come to the reckless exhibition of the letters and autographs of living contemporaries, or of those recently taken from us by death, the enormity of the deed is alike disgusting and indefensible—its effects most deplorable, for it strikes at the very roots of social or friendly intercourse, of private confidence, and of unreserved opinion, by letter. To be balancing all our days to whom we can write, or what we can write, with safety, would be an intolerable burden; but yet, to this complexity we must come at last, if everything we write is liable to be sold to the gaze of autograph-hunters, and our style, taste, and sentiments to be canvassed by a crowd, who have as much reluctance to hurt our feelings and disparage our efforts, as to take our letters home with them, and show them, with due comments, to a scandal-loving company! Literary men, of all others, are most exposed to this indecent treatment; and there seems to be no help for them, unless they come to the determination to pen all their correspondence, in Pape, Hume, Walpole, and others have done, for publication. It is certainly very hard on them. To have no secure chance of relaxation from the stinging of the pen into the casiness of lodgings or abundance of privacy, is a fate by no means to be envied. May they look for forbearance, or hope for mercy!—not a whit! Here is a sample of what I assume to be the case. In the lifetime of the late voluminous dramatic writer, Mr. Moncrieff, the author of a theatrical proprietor and manager, publicly put up for sale, among other of her husband's chattels, books, pictures, &c., "one hundred and seventy letters of Moncrieff, the author, requesting pecuniary assistance!" Every season displays other instances, perhaps not so gross, but often extremely offensive to private feelings and public decorum. It would be quite as gentlemanly to employ the menials of old-fashioned privacy in prying into the letters in hand, or breaking their seals at once, and learning their contents.

PATERFAMILIAS AND ALMA MATER.

We lately met, in the pages of a monthly magazine, an article that appeared to call for some remark. The subject treated of was "Student Life" in Scotland, and the object in view, as we understood it, was the exaltation of English universities, and the depreciation of Scotch, on the ground that they are deficient in this same "Life," of which, fortunately, the writer favoured us with a definition.

"Student life," he says, "does not mean life spent in Greek, or mathematics, or learning of any kind, but in hunting, boating, fencing, drinking, or love-making."

Now, without attempting to deny the merits and glories of hunting, boating, fencing, drinking, &c., we submit that excellence in these pursuits is not precisely the object for which universities are founded, and that it is no more a just cause of complaint against a university that it does not promote these accomplishments, than that it does not supply butchers' meat. Proceeding with the indictment, we learn, with dismay, that though the Scotch universities have debating societies, historical societies, speculative societies, critical societies, they have "no society." That, though they cultivate, with distinguished success, the highest subjects of human thought, and their professional teaching is of almost unparalleled excellence, the great university, with all its venerable associations, is "planned on the model of a day-school." And when the student, like the schoolboy, a few years his junior, returns to his home in the evening, the writer puts forward a hypothetical case which is really quite overwhelming.

"The student who has all the morning been dissecting dead bodies, or devouring the Epistles of Phalaris, returns to dine with his sisters, and kneel down at evening prayers with his gray-headed sire. At first this is overwhelming; but when we have had a little time to recover, we find ourselves inquiring, 'Is there any objection to his doing so?'—at least provided he have washed his hands!" Other points of inquiry also suggest themselves—"Would the student be equally ineligible for admission to evening prayers if, instead of the Epistles of Phalaris, he had 'devoured' some other equally delicate and nutritious morsel? Would it make any difference if his sire's hair were grey or black?"

We are unable to feel so much alarmed as it was meant that we should be at the idea that in the universities in question "student life is as much as possible represented in them, that family life may be sustained."

By the writer's own showing, the system is so far from having the effect of representing the frolicsome tendencies (in which we rejoice as much as he does) that both students and professors are generally ready when occasion offers for even uproarious fun; and one of the most distinguished of the latter is mentioned, who, when he saw any symptoms of weariness in the lads he was instructing, would "lay down his Horace" and joke with them till the tears ran down their cheeks.

If there were really any incompatibility in family and student life in its best form (a notion which we entirely repudiate) it might be thought that as the institution of the family is, of the two, older than that of the university, and rests, perhaps, on somewhat higher authority, the family had, at least, equal claims; but the writer is of a different opinion. He does, indeed, as we very pat. Providence on the horizon, and declares that "the family is a very noble institution," but "it is not everything." While he so highly values, much inclined to repudiate the claims of grey-haired sires to filial reverence, he is feelingly alive to those of the *alma mater*. He even grows quite pathetic on this point, and exclaims—"Alas for the university that does not make its students feel that they are sons!"—sons, *velut filii*, of the university, and not of their fathers. Is filial reverence, perhaps, equally obligatory on the sons of guns?

In conclusion, the writer ventures on a hint of a sentiment which he seems a little ashamed to speak plainly.—"In the view of some," he says, "the chief fault of the Scotch universities is, that they are not fairly enough. It is supposed that if there were less of study in them, and more of sports, they would be greatly improved." No sooner, however, has he given utterance to this edifying sentiment, under the convenient incognito of "Some," than he hastens to cry "oh, he!" on himself. "Heaven forbid that we in Cornwall should glorify with it!" We should, ourselves, have thought "wild oats" rather a misfiring equivalent for "scandalous" in Scotch, and, as a sign of those "deadly sins" from which, we cannot doubt, the writer prays every Sunday to be delivered!

Though the conclusion appears to be the very contrary of the one to which the writer intended to bring us, we cannot but think it would be well for the Scotch universities if the censures passed on them by our monthly contemporary were desisted.

RAMBLER BY RAIL.—No. I.

THE SOUTH-WESTERN.

Of the most pleasant places of annual resort which England boasts, none has greater attractions for the tourist than the Isle of Wight. With a climate equally mild, with scenery celebrated for its beauty, with a soil fertile in interest to the botanist and the geologist, and with most of the conveniences the health-seeker and the pleasure-seeker can desire,—it is one of the most delightful districts that can be visited either by the railway excursionist of a day or two, or by those who have weeks at their disposal. The railway leading to this interesting locality is the London and South-Western—one of those immense iron arteries that serve to connect the heart of the kingdom with its western extremity. There is a class of routes. The most rapid journey is effected by the "Direct" line to Portsmouth, and occupies three hours after a half ascending the island. Portsmouth is reached likewise by the circuitous route via Basingstoke and Bishopscote; whilst those whose destination is Cowes can conveniently proceed thither by way of Southampton. By each route through-tickets are issued at Waterloo-bridge Station for 18s. 6d. first class, 13s. 4d. second class, and 5s. 5d. third class. Return-tickets, too, available for four days, may be obtained at 32s., 23s. 6d., or 13s. 6d.; and to meet the requirements of that class of travellers whose only opportunity of visiting the seaside in when the week's work is done and the week's wages earned, cheap excursion trains leave London every Sunday morning and take passengers to the island and back, including pier dues and a boat-hire fee, at a charge of 10s. 6d. in a first class, 8s. in a second class, and 5s. in a covered third class carriage. Third-class return-tickets, also, at half-a-sovereign, are issued by the trains leaving at six o'clock in the morning and four in the evening—available for the same or following day, or from Saturday till Monday.

To explore the island thoroughly, to visit all the objects of interest it contains—will occupy two or three weeks. Much, however, can be seen in a few days; and, from the facility of communication that exists, even if, if properly spent, will give the visitor an opportunity of becoming generally acquainted with some of its most prominent beauties. The expense is commonly over-estimated. On most occasions one occupies visitors who arrive during the height of the season have been known to sleep, for want of a better accommodation, in lodging-machines and in "refectories below on the pier." At such times, as a matter of course, lodgings and hotel charges would be high; but they are exceptional occurrences. Those who make a lengthened stay will usually be able to procure lodgings, suited to their means, at Ryde, Sandown, Shanklin, Ventnor, or Cowes; where they may obtain good lodging and boating, and whence excursions may be made to the various places of interest throughout the island. Those, on the other hand, whose time is limited, and who shift their quarters day by day, will find it possible, if not inclined to be extravagant, to live at the hotels for 10s. a day, and to get every requisite comfort and attention for that sum.

Conveyances of all sorts are plentiful, and run at cheap rates in every direction; but by far the most agreeable way to explore the island is to journey over it on foot, and to allow four clear days for the performance. Having lately returned from a tour which occupied just that time, I shall now give the reader a brief narrative of my ramble, which will serve him as an itinerary, and furnish him with the means of forming an opinion of the coast.

On the 17th ultimo, I reached Portsmouth at ten minutes past five in the evening, by the train that left London at one.

Passengers by railway are allowed twenty minutes to reach the Ryde boats. Those who travel with many "conveniences" occupy that time in transporting themselves and luggage to the pier in omnibus or cab. I found time to walk

thither, to notice the home where, in 1628, Felton assassinated Stornie, Duke of Buckingham, to pay a flying visit to one of the latter; and to examine a gilt boat of Charles the First, which occupies a niche in the face of a wall contiguous to the pier. An inscription underneath informs us that the unfortunate monarch "after his travels through all France into Spain, and having passed many dangers both by sea and land, arrived here the 5th of October, 1623." As I came upon the pier, the shrill whistle of the steamer announced her immediate departure. I hurried on board, and as soon as I had embarked she left. The evening was fine, and the numerous passengers on deck were pointing out to each other the many points of interest within view. And truly the scene was noteworthy. Leaving Portmouth behind, with its dockyard, forts, and batteries, the course of the steamer lay through the beautiful of Spithead, known to all the world as the rendezvous of the British fleet; suitably remembered, too, as the scene of the catastrophe which, in 1782, led the *Royal George*.

"When Kensington was down
With twice four hundred men."

At the time Corper wrote, he added:

"Her timbers yet are sound,
And she may float again."

But after trying, a dangerous obstacle to navigation, for sixty years, the sappers and miners took her in hand, and blew her to pieces, "partly for the purpose of furnishing the curious with snuff-boxes," and partly, no doubt, because she was an obstruction. Before us was the lake which—

"Of all the southern isles took the highest place,"

and which every turn of the paddles was making more distinct. It was somewhere here, "at a place called Rile," on Thursday, July 11th, 1754, in a gale, that Henry Findling—on his way to Lisbon—came to anchor. Persecuted by his wife to go ashore, "he approved the notion much," but how to get thither was the question. "The sea," he tells us, "strange as it may appear, did not extend to the shore; but between the sea and the shore, at low-water, there was an impassable gulf of mud and sand, which can neither be traversed by walking nor swimming." Our poor soldier, however, at last got landed into a small boat; and "being rowed pretty near, was taken up by two sailors, who waded with him through the mud, and placed him on a chair on the land!" Now, the landing is easily effected; a pier runs out into the sea for nearly half a mile; and the most afflicted invalid will experience little inconvenience.

I have read somewhere that the Isle of Wight was not an early convert to Christianity, and that, although in the fourteenth century it was under the immediate supervision of a dean, and had a suffragan bishop conferred on it by William of Wykeham, there is much reason to doubt whether it has even yet been completely converted. But the Bishop of Exeter, as a reproach, I must say, as far as my experience goes, the insinuation is a libel. I met with uniform kindness from first to last. The very moment I landed at Ryde the inhabitants expressed their readiness to serve me. Some offered me Bath-chairs, others cabs, and two of them took considerable pains to persuade me to go on with them, then and there, in a coach-and-four to Newport; and at every step I had indications of their Christian charity, for in the window of almost all houses I passed, the proprietors notified their readiness to afford accommodation to visitors. It appeared, too, this was not a mere show of hospitality on their part, but that they were sincerely desirous to entertain people. And each house seemed to offer greater inducements than the last I visited. In one they were prepared simply to help you; the next door had the additional advantage to offer in a "sea view;" two or three steps brought me to one with "a good sea view;" and many in the street boasted of having "an excellent sea view." But it was just six o'clock, and the view I most desired just then was a well-laid table; so, with little trouble, I found my way to the York Hotel, and ordered something to eat.

Ryde, from its size, its proximity to the mainland, its very many conveniences, is at once a suitable residence for those who wish to spend some weeks on the island, and an admirable starting-point whence to investigate the several districts in succession. But the tourist who has labored in his waters, taken a turn on its pier and esplanade, and paid a visit to its Catholic chapel in the upper and older portion of the town, may leave without fear of having missed any of its attractions. I slept at the York Hotel, and, next morning—having breakfasted, and discharged the very moderate bill that was presented to me (six shillings only, for attendance, bed, breakfast, and tea with cold meat, lobster, prawns, &c.)—I left ashore, intending to reach Ventnor, a distance of twelve miles, the same night. A pleasant walk of four miles brought me to Brading—the *King's Town* of Brading—which in times past was a place of no little importance; but its glory has long since departed, and now all interest is centred in the remembrance of its past position, and in its church—an ancient building beleaguered with many curious. It contains some interesting monuments, among which I noticed a very fine incised slab commemorating a Constable of Purbeur Castle, who died in 1411, and two curious altar tombs, one bearing the inscription—"JHU, was navel on Wyllan Howls Sowl. Amen. MCCCLXX. Hollethals his Wyf." The venerable edifice has many pleasant associations, not the least interesting of them being the fact that for eight years it was the scene of the ministerial labours of Leigh Richmond, known to fame as the author of "The Dairyman's Daughter" and the "Young Cottager." In the chancel, near the east window, is the grave of "Little Jane;" and not far off from it is the tombstone containing the epitaph—"Furgive, blest shade," &c., which the music of Dr. Calcott has made famous.

Brading possesses a member of Parliament till the constituency became too poor to maintain him at surcharge a day, when they petitioned, and were rebuffed from the honour and burden of being represented. The town, however, still boasts of "two bailiffs, two justices, two constables, and a hayward," and it was with considerable apprehension I walked along the straggling street that constitutes the quaint old town; for, on a half-timbered, tumble-down building which stood near the church, and which, I learned, was the Town Hall, I had seen a notice from these authorities, warning all vagrants they would be severely dealt

with—(and was not I a vagrant to all intents and purposes?); stools, also, fixed in the open brick arcade immediately underneath, lest the weight of their presence to the vagrant; and somewhere close by, a lame man, I was informed, is preserved for cases of emergency—a "Peto" of ordnance, made by John and Robert Owine, brothers, in 1549. But I suffered no molestation; walked leisurely on (leaving on my left Brading Harbour, Vantage, and Boulders Down, which reaches an elevation of 355 feet), crossed the Little River Yar, and entered Sandown. Unlike Brading, Sandown is a creation of yesterday. Fifty years ago the site was a wild common; but now it is occupied by a thriving town, rarely extending its dimensions. In the way of scenery, it has nothing to recommend it; but it has other advantages. Its position along the edge of the cliff in a flung bay, the coast with which it is approached from the sea, its hard and extensive sands, its facilities for bathing and basking, its comfortable hotels,—all tend to make a popular resort of a place which, sixteen or seventeen years since, was "a cluster of fishermen's cottages, a small roadside inn, and about half a dozen humble houses."

Somewhere here it was that John Wilkes, of North Briton notoriety, built himself a cottage, and amused himself in his old age by laying out grounds and erecting summer-houses. The house, with its pavilions of floorcloth, its grounds and its furniture, set up to the memory of Churchill, has lately been demolished, and not a trace remains of the noted villa that first made the place famous.

The public buildings of Sandown are a church, a school, a fire station, &c. The church and barracks may be passed over without loss, but the fort, built by Lord Conway, Governor of the Island in the reign of Charles I., is worthy of a visit. It is quadrangular, has a bastion at every angle, and is surrounded by a fosse. It was erected in lieu of a blockhouse which Henry VIII. had built, but which, however formidable to an enemy, proved of little avail against the hungry swans which now for a hundred and fifty years have played over the site it occupied. Three months previous to my visit a terrible tragedy had been enacted within its walls: Whitworth, the master-gunner, murdering his wife and his six children. As I was leaving I came upon a knot of men and women collected round a soldier, who was reading from a newspaper which they appeared to be intensely interested in. I joined the party, and found it was a account of Whitworth's trial, which had come off the day before at Winchester. The man read thus:—"On the 17th of May Whitworth was across the parade ground, threw himself the feet of the Captain, and exclaimed,—'Sir, for God's sake save me!' Opening the collar of his coat, he exhibited his throat, covered with blood, and said, 'There is awful work down there. Pray come down.' . . . On the led near the door was the body of Mrs. Whitworth, dressed, her neck so terribly pushed that the vertebra was plainly visible. Across the mother lay an infant which had evidently been at the breast. On the floor near the window were two girls at the head of a little boy—all dead! Filona had been used to settle the crisis of the victims."

"The villain! I hope they will hang him," exclaimed a woman who had a child in her arms, and who seemed terribly excited.

The soldier went on with the account of the trial. "The prisoner, when placed at the bar, stared wildly about him, muttering some incoherent anagrams. The jury found 'that the prisoner was unable to plead,' and his lordship directed the usual order to be made."

Leaving Sandown, I continued my journey along the edge of the cliffs to Shanklin, two miles further, where I intended to dine. When about half-way, a curious change appeared to take place in the appearance of everything. There was a strangeness about the light, and a bluish mist hung over the landscape. Then I recollected there was an eclipse of the sun. Taking out the glass of my watch, I smoked it with a "vesta," threw myself on the heels, and thus had a good view of the phenomenon. Whilst I was enjoying the glass, a shepherd, who for some time had been watching my movements, approached, and, pointing to the sun, said,— "Is that for rain, master?" I explained to him that it was an eclipse.

"Why, sir," he remarked, evidently re-assured, "we had, as you know, a wet St. Swilkin, and I was afeared it was the sun a drawing up water."

Shanklin, nestled amidst trees in a little valley 300 feet above the sea, is a beautiful village, and one would willingly linger along its charming nooks. I spent two hours and a half in strolling about the place; examined some picturesque thatched cottages, garnished with geraniums, myrtles, verbena, and roses; lounged on the cliff, which commands views of surpassing loveliness; visited the church, that peeps out from groups of elm-trees; and, when I had ordered dinner at Daish's Hotel, descended to the shore, which is said to be a good collecting-ground for seaweeds and molluscs. I was, however, much disappointed; the weed was of a very inferior description, and the sea anemones were evidently the result of their order—not to be compared with those to be found at Tenby or on the Devonshire coast. After I had eaten my dinner, for which I paid 2s., I found my way to the "China," which is the principal object of attraction to the place. Here, too, I was much disappointed, having read descriptions, and seen sketches of it, that would lead one to suppose it was one of Nature's greatest wonders. The little glen, however, with its tiny stream, nourishing the shrubs and underwood that clothe the sides, is pretty; and those who are not led to expect too much, will doubtless be much pleased with their visit. After a thorough inspection of the China, I struck off through a secluded pathway which took along the edge of the cliffs, and, having traversed a track rising at first in gentle undulations, but gradually becoming wilder and more precipitous, soon reached Lacombe, one of the most striking scenes I ever witnessed, and one which the tourist, having once seen, will not easily forget. Hence, indeed, all the way to Ventnor, the path leads through some of the most beautiful scenery in the island. Immediately upon leaving Lacombe, with its precipitous claus, its common covered with tufts of trees and tangled brakes of fern and bracken, and its picturesque group of fishermen's huts perched on a rocky terrace by the sea-shore—I entered the wild and lone district known as the

Land-slip—a chaos of huge rocks, which have fallen from the precipitous cliffs above, and which Nature has since clothed with luxuriant vegetation.

Having threaded my way through the immense masses which everywhere around stretched the ground, I emerged upon the high-road at the old church at Bournemouth. It is a venerable Norman edifice, which, for its simplicity, beauty, and picturesque effect can scarcely be surpassed. In the quiet churchyard a plain tombstone, recording his name, age, and time of death, indicates the resting-place of John Sterling; and at no great distance lies William Adams, author of the "Shadow of the Cross." The appearance of Bournemouth itself is impressively grand, and one can readily agree with Sterling's opinion, that the house are "such as a poet would imagine and a painter depict," like a fine picture, the more one becomes acquainted with it the more its beauties show themselves. As it is scarcely a mile from Ventnor—of which place, indeed, it may be called a suburb—I resolved to return in the morning, to enjoy its charms at my leisure. Taking what is called the Malvern road, I soon reached Ventnor, and "pitched my tent" at the Elysian Hotel, on the beach.

Reviews of Books.

INTERNATIONAL DRAMATIC RIGHTS.*

IN 1851 a treaty was entered into between France and England, for the mutual protection of the rights of dramatic authors. It contained a proviso that the protection stipulated for on both sides was not intended to prohibit "fair imitations, or adaptations of dramatic works to the stage, in England and France respectively." In the quiet churchyard a plain tombstone, recording his name, age, and time of death, indicates the resting-place of John Sterling; and at no great distance lies William Adams, author of the "Shadow of the Cross." The appearance of Bournemouth itself is impressively grand, and one can readily agree with Sterling's opinion, that the house are "such as a poet would imagine and a painter depict," like a fine picture, the more one becomes acquainted with it the more its beauties show themselves. As it is scarcely a mile from Ventnor—of which place, indeed, it may be called a suburb—I resolved to return in the morning, to enjoy its charms at my leisure. Taking what is called the Malvern road, I soon reached Ventnor, and "pitched my tent" at the Elysian Hotel, on the beach.

The joint parties to the treaty believed that, without interfering with the legitimate liberty of the stage, they had effectually secured the rights of dramatic authors. They were mistaken. The treaty turned out to be no protection at all. The evasion of the stage right was found to be as easy under the treaty as open larceny had been before. Piracy, indeed, has shown even a bolder front, and executed more dexterous deeds of rapine under the national flag, since 1851, than at any former period.

The uninitiated reader will naturally ask—what is the cause of this strange state of things? Simply the proviso, excepting "fair imitations or adaptations" from the operation of the treaty. Who is to decide what is a fair imitation or adaptation? Who is to draw the line beyond which the imitator or adaptor must not trespass? It is clear that no general rule can be laid down, and that each case must be decided on its own merits, so that the treaty, which was intended to put a stop to piracy, merely opens a wide door to litigation. Hence the rights of dramatists are daily visited with impunity, because the law is vague, and the redress is costly and doubtful.

Mr. Charles Reade takes up the subject in the volume before us, but unfortunately he treats it as a case of rampant fury that is self-invited, and not as a case of piracy which the managers of the law, by exceedingly likely, if the book have any effect, will sweep off the public from looking into the question. People do not like to be dragged through personal broils and intemperate controversies on an inquiry which could be disposed of much more satisfactorily in half a page of calm reasoning; and they are apt, moreover, to suspect the equity of a cause which is defended with loud bluster and reckless declamation. Both elements stand in this book. Such epithets as "liar," "chief," "swindler," are scattered about in alarming profusion; and saucy statements are made which we fear, Mr. Reade would be much perplexed to substantiate. Belonging to the latter class is what he says about the proviso, which lies at the root of the whole matter.

After telling us that in 1851 the "chief nations of Europe" agreed to an "International Copyright Act" which we are ashamed to say we never heard of before, he turns to the treaty between France and England, describes it as "a too noble not to be furiously resisted by some creeping thing or other," and then goes on to show how it was vitiated in the execution.

"Here we see [in the principle of international copyright] the mold of the two legislatures. But presently was smugged in a proviso that shoves forth both in its wording and morality, the products of a distinct mind, and an English mind, and a theatrical conscience, instead of a legislative one."

We will not stop to ask what is meant by slining forth as the product of a distinct mind; but we must beg the reader's attention to the assertion that the proviso was smugged into the treaty by an Englishman, Mr. Reade, who clamours so loudly for justice, and who does not hesitate to make this broad assertion in the face of evidence in his own book, which proves, if any proof were necessary, that it is absolutely untrue. The assertion, nevertheless, that the treaty was surreptitiously diverted from its avowed purpose to subserve a fraud, favourable to the interests of that most contemptible of all the hangers-on upon the skirts of our drama, who take law France on the authority of Mr. Charles Reade, possibly, if it is accepted and diffused by his friend M. Maquet, who having written to him "I found this was your gentleman, whom, probably, rather believe that the whole treaty was forged than that Mr. Reade could be capable of making such a statement, without a little of foundation." And yet this statement has not a title of foundation to a little of foundation. It is a statement which, if it were written before 1851, than they are in dramatising his novels, and that the defence in both cases is exactly the same—the right to do that which is not prohibited by law. Now, instead of calling people rogues and robbers, would it not be wiser to endeavour to get the law altered?

Has Mr. Reade attempted to effect a reform in this direction? We cannot gather any symptoms of it from his book. He limits himself to the denunciation of the "thieves," and, strange to say, suffers the greatest thieves to escape scot-free. Why does he confine his indignation to such small fry as Messrs. Barnett and Johnston, when he has only to look over the play-bills for the last seven or eight years for examples of tenfold more glaring larceny? Even in the recreation he has chosen, he does not exhibit the right sort of virtue. The cases he selects for exposure are exclusively his own.

But Mr. Reade is in error in supposing, as he evidently does, that he is the only person in this kingdom who has taken any practical interest in the question of international stage-rights. He is mistaken. He is not alone. The Section at the Congress of Brussels, and good reasons were assigned by the French dramatists themselves why no step should be taken at present with respect to the terms of the treaty. If that be their opinion, who are the real

The main purpose of the book is to relate a narrative of which Mr. Reade is himself the hero, and which, with innumerable episodes, and whole chapters of wandering reflections, mixed up with fierce assests of "gods, men, and columns," is made to fill the entire volume. The actual narrative may be put into a very short compass. When the treaty came into operation, Mr. Reade thought he ought to buy the goods to which he had previously helped himself without payment; and he accordingly entered into a contract with the authors of a French play for their English rights, declaring, in a public advertisement, his intention to perform any other version of the said play by an injunction in Chancery. Notwithstanding this, however, the managers of the Strand Theatre announced a version of their own; in consequence of which, Mr. Reade served them with a formal notice, threatening proceedings in Chancery, if they persisted. Not a bit frightened, the managers did persist; whereupon Mr. Reade, doubtful of the issue, and somewhat alarmed at the costs in prospect, also issued the injunction. The managers now took the case into their own hands, and sued Mr. Reade in the Court of Exchequer for injuring their property, by declaring that they had no legal right in a piece which, they maintained, was "a fair imitation and adaptation" under the treaty. They laid their damages at £300. Regarding this proceeding with contempt, Mr. Reade, for the purpose of getting a judicial interpretation of the law, sued the managers for a nominal sum—in the County Court! It being obvious that important questions must arise in such a case, which it would be preposterous to submit to the adjudication of a County Court judge, especially as it was the first case under the new law, the judges of the court removed the cause, in order to try it with certainty. Mr. Reade again declined to follow up his own motion. The managers, however, persevered in their action for damages; and the result was a nonsuit, with a reference to arbitration, proposed by the plaintiffs, for the purpose of determining, by comparison with the original, whether theirs was a fair imitation or not; and, if the former, whether the imitator, who they had sustained, the catastrophe is involved in profound darkness. "This arrangement," says Mr. Reade, "was consented to, but not by me. It was ridiculously unfair to me, and I protested against it in court, and never consented to it, and never would have consented to it." Then who did consent to it? For it is clear that the arbiters were not to be asked.

Mr. Reade tells us that the arbitration hung over their heads for three months, when one fine day he was told it was all over. But he does not inform us how it was over. In this new and mysterious phase of the affair, the plaintiffs applied for a new trial, and were refused. The nonsuit, consequently, stood; but out of £300 costs incurred, Mr. Reade recovered only £60. The story is told in an explosive style, and amidst so many interruptions, that we follow the thread of facts with difficulty; but one thing is clear, that the case was conducted, from first to last, in a very extraordinary manner.

Mr. Reade, then, in writing this book to let the public know how much money, and time, and perfectly useless anxiety, he expended to obtain redress for a wrong under a law which he knew beforehand afforded him none. He insists upon sacrificing his cash and his convenience to a phantom; and at the moment when he was declining to risk the Chancery suit which he had himself invoked, he was telling the managers of the law, who, he depicts himself as a martyr in the public cause. The passage is grand.

"In a nation of twenty millions I was alone. I felt like a solitary camel, thirsting in Zahrain for a drop of water; there are times when one drop of sympathy is as precious, and comes not to the parched heart."

He is so impressed with the villany of the treaty, that he offers a wager, in large type, of seventy guineas to forty, that neither Belgium nor America ever acted so dishonestly in treating, or refusing to treat, about copyright, as Great Britain.

"I, Charles Reade, of 46 Bolton Row, Mayfair, London, do, by these presents, offer a bet to the first comer of whatever nation. I bet him, or her, seventy guineas to forty guineas, that he, or she, does not, to the satisfaction of also umpire, to be by us approved, succeed in proving," &c.

"There," he exclaims, "that is the way to get at the truth in England. The country is check full of fellows who will risk their souls on a lie, and will not risk a £5-note on one." But if the fellows would take up the wager, how can the bet be the best way to get at the truth? If it fall still short, it will get at nothing.

With the best intentions, the book will do more harm than good. It attacks the wrong so completely, or so wrongly, side, that it will obstruct the remedy by occupying time with questions which are susceptible of a good defence in law. Besides, Mr. Reade is terribly inconsistent with himself. His morality, or justice, or by whatever other noble epithet he may call the sense of doing right, of which he seems to think he enjoys the monopoly, is really nothing more nor less than the naked right of law, a fact of which he is quite unconscious. He distinctly tells us that he considers himself justified in appropriating French plays that were written before 1851, simply because at that time there was no legal protection in existence. Yet he denounces the playwrights that dramatize his novels as thieves, and swindlers, and what not. He surely ought to know that he is no more justified, morally, in appropriating French plays than he is in appropriating English plays; and that they are in dramatising his novels, and that the defence in both cases is exactly the same—the right to do that which is not prohibited by law. Now, instead of calling people rogues and robbers, would it not be wiser to endeavour to get the law altered?

Has Mr. Reade attempted to effect a reform in this direction? We cannot gather any symptoms of it from his book. He limits himself to the denunciation of the "thieves," and, strange to say, suffers the greatest thieves to escape scot-free. Why does he confine his indignation to such small fry as Messrs. Barnett and Johnston, when he has only to look over the play-bills for the last seven or eight years for examples of tenfold more glaring larceny? Even in the recreation he has chosen, he does not exhibit the right sort of virtue. The cases he selects for exposure are exclusively his own.

But Mr. Reade is in error in supposing, as he evidently does, that he is the only person in this kingdom who has taken any practical interest in the question of international stage-rights. He is mistaken. He is not alone. The Section at the Congress of Brussels, and good reasons were assigned by the French dramatists themselves why no step should be taken at present with respect to the terms of the treaty. If that be their opinion, who are the real

*The English Connoisseur. Charles Reade. London: Tinsley & Co.

suffers, we are hardly justified, on this side of the Channel, in urging the matter to a premature and unsatisfactory issue. At all events, whatever is proper to be done should be done by the joint action of both parties.

Amongst the varieties which will be found in this volume, apart from the copyright problem, are some statements respecting the history and statistics of the stage, which will be new to most readers. Miss Saalsburg will be delighted to learn that the thousand pounds by the little Strand Theatre last year; and future homeopathic managers will be cheered by an assurance of the gratifying fact that "large sums of money are made in small theatres." The historical student will also acquire the following information: that, in the sixteenth century, France had a greater and more diffused drama than England; that, when the theatres re-opened in 1660, there were neither writers nor actors; that no actor of repute who played before the troubles spoke a line on the stage after them; and that the English drama, in fact, did not revive till the kingdom was settled in 1689. "What do I find now?" asks Mr. Roade, that is, in the Augustan period between 1689 and 1719—Dryden, Lee, Otway, Mrs. Cowley, Mrs. Gaudin, Young, Congreve, Farquhar, Olden, Addison, Rowe, Southern, Young, Steele. It is just possible that, by pushing his inquiries a little farther, the student may discover that the sixteenth century, when our drama is represented to have been inferior to the French, was what we call the Elizabethan age; that when the theatres re-opened in 1660, there was an inundation of new writers, and amongst them the founders of English comedy; and that, of the performers who played before the troubles, there were at least eight prominent actors who played under the Restoration—Hart, Cini, Modini, Cartwright, Wintehall, Bird, Slattery, and Burt. Of the dramatists who are claimed by Mr. Roade during the period between 1680 and 1719, the names given are: Dryden, Congreve, the preceding period—Dryden, who was called to write for the stage three years after the Restoration, and may be said to have taken his leave of the theatre on the death of Charles II., having produced nothing in that way throughout the reign of James II., and trying it again in 1666, out of sheer necessity; Lee, who died in 1692, and who, on the whole of his pieces, with Congreve, before 1689—Mrs. Behn, who died in 1689, and Congreve, could not have produced anything after it; and Otway, who died four years before. To these writers, who strictly belong to that age of revival which produced Buckingham's "H-boursal," and in which Mr. Roade tells us there were neither dramatists nor actors, a word of other might be added. The year was, in fact, remarkably prolific. We could reckon up fifty writers for the stage who flourished between 1660 and 1680. Take a few of them:—Cowley (who is as well entitled to a place for his single comedy as Addison for his "Cato"), Parnock, Wycherly and Sedley, Stoddard, Crown and Burnesscott, Killgrew, Launce, Lacy, Mountfort, D'Urfey, Settle, Howard, Duke, Stapleton, Porter, Field, Henslow, Portland, Caryl, Dods, Betterton, Rawley, all of whom, and a dozen more, had reputations in their day.

FEMALE NOVELISTS.*

We do not hold, with the grudging proverb, that woman's sole business in this world is to stitch and sew. She has her talents and powers, for which she is specially adapted, and upon which society has set its seal of its admiration and respect. But we apprehend that the true sphere of her usefulness and influence lies in that domestic region which Nature seems to have indicated as her legitimate domain, and from which she cannot wander very far without risking the loss of credit, merit, and opportunities. Her physical organization shuts her out of all those occupations that require muscular strength or continuous effort; and one of the most difficult problems of our time is to find suitable employment for women. Her mental organization is no less fine and sensitive than her nervous system, and quite as little fit for severe toil as her hands.

There are, of course, exceptions. But we are not speaking of exceptions; and whenever we happen to meet one, we shall render it due honour. Women work at busy hand-work in busy climates, and sometimes do a great deal of that kind of slow drudgery which requires patience and endurance rather than strength and shrewdness; and however well or ill they discharge such functions, the rest of the world is agreed in deploring that they should ever be put to them. In science and literature, the occupation is more varied, and, in some directions, less laborious. There are departments in which the weakest may find something to do in common with the strongest; and it would be uncandid to deny that, in spite of disadvantages which would be insurmountable in our sex, women have occasionally won marked distinction as writers. But the cases are rare.

We dismiss from consideration the Davies, De Staels, and Wollstonecrafts, because in philosophy, politics, and criticism, no female writer has outlived the momentary surprise occasioned by her appearance in a character so unattended by her constitution, education, habits, and opportunities; and because, moreover, our present business is with women as producers of fiction, a province in which they might be expected to achieve the largest measure of success.

Of all the forms of fiction, the drama demands the highest capacity; and hence the contributions of women are of an inferior order. Our English drama rich in power of every kind, does not present a single play of solid pretensions written by a woman. Vivacity, generally of a trivial kind, superficial treatment of feelings, passions, and motives, and an exuberance of truth every-where in a flimsy texture of plot, are the ordinary features of the original plays set on us by Mrs. Behn, Mrs. Cowley, Mrs. Wintehall, and Mrs. Field. We find in none of them that combination of wit and character, skilful elimination of incidents, and intimate knowledge of life, which shine with such steady lustre in the plays of Wycherly, Congreve, and Sheridan. The gold that lies thick and massive in the dialogue of the one, is opposed by the thin glitter that glitters only while it is shining, in the dialogue of the other; the wit that contains a permanent element of truth, has its shallow reflection in the touch-and-go repartee that leaves nothing behind; and instead of broad treatment and ingenuity of structure, we have slight and minute efforts, and a design kept so loosely together, that it usually breaks down in the end.

Similar specialties may be traced in the novels of the same period. The most successful female novelists are those who have drawn upon the topics that lay

closest at hand, and submitted them to the investigation of the microscope. There is no generalisation, or reasoning, of a practical kind in these works; but they contain abundance of quiet and vivid surface observation, acute guesses at profounder things, and heaps of conventional commonplace which men generally overlook, or are incapable of appreciating. A woman's novel of society, and a man's, are essentially contrasted; yet both, taken from opposite points of view, may be equally true for what they say. The man will probably consider, for the most part, in the method of proceeding, rather than in the choice of materials. Men and women figure in both in much the same situations; the same procession of cross-purposes and explanations is carried out, and pretty much the same results are arrived at in the last chapter. But there is a general difference in the manner of presenting the details, which are massed in the one, and separated and wrought out with infinite distinctness in the other. The woman's nature receives impressions more numerous and rapidly than the man's; she collects by a sort of intuition, the histories of lives out of faces; she assimilates, in her own way, the most irreconcilable contradictions; she free from the restraint of logic, she leaps to impossible conclusions; she is unconscious of danger, she rushes into a hundred perils; she is absorbed by surrounding fugitive impressions, she neglects more important considerations; and guided by feeling, rather than reflection, she trusts for her emotional passages, her great actions, and her pictures of human struggle, to sentiment rather than experience. When she writes the novel, they set about them on principles the reverse of these. We by no means consider that they are infallible in their craft. Incomparably the best novels that have ever been written are the work of men; so, too, are some of the very worst. But a certain sense of responsibility, a certain largeness of design, and a certain power to think of the reader, instead of the details of art, is, more or less, with various degrees of success and failure, common to them all.

The female novelist who keeps strictly to the region within which she acquires her knowledge may never produce a fiction of the highest order, but she will seek to produce a fiction of the highest order, and she will be most likely to excel. The great secret is to draw from life, and not from books, or from fantastical dreams about what life ought to be. If this maxim be true, it results a homely tale to all female novelists who undertake to reform the world by depicting scenes, and preaching at evils in our social condition. But there is one point, in the region of art, which is common to the true field for the writer of fiction is experience; and as the range of a woman's experience is limited by the primal conditions of her existence, there is no great difficulty in determining the point beyond which she cannot venture with safety or advantage.

The art and literature of the day yields a variety of examples of the ordinary errors and defects of female treatment to which we have alluded; and it offends seriously and instructive evidence of the weakness of the female hand when it attempts something beyond its strength. The aim of the writer we have not been fortunate enough to discover; but the story is easy enough of penetration, notwithstanding the mist and vapour hanging over it by a cloudy mystery, which is kept up, without any necessary purpose, to the end. The heroine is a young lady, who goes down into the country, apparently on foot, to take charge of the household of a half-crazed old person, who has been afflicted for many years past by one of the most desperate Amazons that ever held possession of an elderly gentleman's kitchen against his will. We will not say that this character is an impossibility; it is, at the best, a slight improbability that any respectable house, from John o' Graust's to Lady's End, would suffer such a belabour to remain in it for a week. Her exploits are tremendous. She exercises a demoniacal despotism over the whole establishment; half starves her master, which is against her own interest, and therefore incredible; keeps him in constant alarm, and consolidates her power over him by menacing him with exposure in a matter in which he is perfectly innocent; plunges him into debt, ruining over an indefinite period, with his tradespeople, by putting the money for the payment of their bills into her own pocket—as if such a course could go on without detection; and appropriates in the same way even the wages of the gardener, who for four or five years receives neither wages nor clothes, and, stranger still, never asks for them.

The young woman who comes from London to supercede this terrible functionary, is, in reality, a lady in disguise, who had formerly been a pupil of the crazy person, and who, under the sanction of one of his friends, has resolved to devote herself to his conversion from the threshold under which he is suffering. His friend, to be sure, might have hit upon a shorter and more effectual way to get rid of the incubus; but where would the novel be? There are three volumes to be filled, and in order to make business for the implausible scheme is devised of employing a young lady in disguise, to long term of experience, and of a character which could have been done at once much better by a palmer. The cool way in which the young lady enters the house, which she has never seen before, and takes possession of the principal apartments, confronts the virago, and, finding she will do nothing for her, helps herself, and, after dining comfortably, takes out her work, so if she had levelled the place all out, she procures her own tea, and is finally comforted with a decanter of wine and one of the quaterlies," is intended to indicate firmness and self-possession, and what ladies call "character," but, to use the mildest term, it is simply an absurdity.

The story turns on this pivot. Miss Elliot, the young housekeeper, perceptive there is a mystery, and is determined to find out what it is, by degrees she subjugates, not only the demon of the kitchen, whom she turns out at last, but the entire neighbourhood. Everybody looks upon her as a miracle of sense and benevolence. The parson has a faint glimmering that she is his former pupil, and falls in love with her, and in his stupid stage asks her to marry him, to which demand she shrinks the sensible reader giving an instantaneous assent. It will hardly be believed that this demure old clergyman loaves of a choice library, including some "delicious little Elvish duodecims, clad in vellum or quaintly gilded calf;" that his favourite reading is the "Elderly edition of Uken's works;" that he composes and preaches his own sermons; that he studies "good old Shalvey" out of his "art of Reading." The sequel of the drivelling love-making is a relief, although it reveals all sense of likelihood. The young lady does not love the parson after all, but an engineer, whose acquaintance she has recently made; the parson, who had previously acted very ignominiously in the matter, gives her up; so she marries the engineer, and becomes the mother of a blossoming family.

* *Mainstone's Housekeeper*. By Eliza Maynard ("Bibberley"). 3 vols. London: Hurst & Blackett.

favourably exhibits Mr. Stantton not merely as a verbal critic, but as capable of detecting the nicest turns of thought, and of appreciating the highest artistic excellences in dramatic poetry:—

"Let be! let be!
Would I were dead, but that methinks, already—
What was it that did make it?"

To a reader of taste and sensibility, the art by which the emotions of *Leontes* are developed in this situation, from the moment when, with an apparent feeling of disappointment, he first beholds the "so much wrinkled" statue, and gradually becomes enraptured, enthralled, till at length, borne along by a wild tumultuous throng of indelible sensations, he reaches that grand climax when in delicious rapture he clasps the figure to his bosom, and faintly murmurs:—

"O, she's warm!"

—must appear commendable. Mr. Collier and his annotator, however, are not satisfied. To them the eloquent abruptness,—

"Not that she's warm, already—
What was it that did make it?"

—is but a blot, and so, to "do the force and clearness of the speech of *Leontes*," they stem the torrent of his passion in mid-stream, and make him drivel out:—

"'Would I were dead, but that methinks, already
I can feel dead, stand looking upon alone.'"

Can anything be viler! Conceive *Leontes* whimpering of himself as "dead," just when the thick pulsation of his heart could have been heard, and speaking of the statue as a "stone," at the very moment when to his imagination it was "flesh and blood!" Was it this Shaksperean wrought! The insertion of such a line, in such a place, is absolutely monstrous. The annotator assumes *Leontes* to mean,—"I should desire to die, only that I am already dead, or holding converse with the dead;" whereas, in fact, the expression, "I would I were dead," &c., is neither more nor less than an impression equivalent to "I would I were the king's real mourning!" In reference to *Pauline's* remark, that he will think *anon* it moves, is, "May I die, if I do not think it moves already." Mr. Stantton adduces seven corroborative examples, from which we select two:—

"—would I might be dead,
If I can think!" &c.

The Two Gentlemen of Verona (Act iv., scene 4).

—*Poor to morrow*—an oath much used—as we say, *I would I were dead*, I pray God I die, *I may I die*.—"Flora's World of Words." Among other confirmations of old readings we cite the following:—

"But fear not yet
To take upon you what is yours; you may
Convey your pleasure to the other party,
And yet seem cold."—*Macbeth* (iv. 3).

"For convey," says Mr. Stantton, "Mr. Collier substitutes the comparatively loose word *enjoy*, and styles it an important change!" Notwithstanding this ridicule, however, it can hardly be denied that there is a specious property in the word, that might reasonably induce many, without much inquiry, to agree in Mr. Collier's opinion; but no one who reads Mr. Stantton's explanation of convey, to *manage anything by stealth*, and the authority he brings for the original text, can reasonably question the necessity of withdrawing the old reading from all further debate. A like satisfactory result of critical editing is also effected in *Julius Cæsar* (i. 2):—

"When could they ever, till now, that talk'd of Rome
That he was a tyrant?"

For the word in Italian, *tyrannus* "wells," and this has been followed and "corroborated." A quotation from Holingshead and another from Daniel's "Vanity of Faune," conclusively prove that it was a fault to disturb the original word. "Spring" in "The Tempest" (iv. i. song), has been in the same manner substantiated; and the first word in the line, "A late edge of torture, gracious loud" (*Rich. III.*, v. 5), will not in future be disputed, although the substitution, "relate," has been praised as incontestable. In addition to the instances given by Mr. Stantton of *oblate* used with the signification to *blunt*, we may produce a couplet from *Hindstam*, to show that the word was employed, when Butler wrote, to express the destruction of the edge or sharpness of an instrument:—

"Without the power of resistance,"—*Part III.*, c. 2.

As conjectural criticism has recently been busy in unsettling the text for the sake of "evidence and improvement of the sense," it is reassuring to find in this latest edition so much that establishes controverted readings of the authentic copies.

To conclude. Having done so much, and much that is so excellent, it is scarcely possible that this should be the termination—the beall and end-all of Mr. Stantton's Shaksperean labours. These illustrated volumes, viewed in their less important characteristics, beautifully printed, with all requisite annotations, and a glossary, under the Commonwealth and the Stuart. Not that authors did not appear in strict succession, but that none of these expanded as they would have done under more auspicious influences. On the Roman Catholic side there was Anna Bryn of Antwerp, who, in virtue of some ancient verse she produced, was preposterously called the *Sappho of Brabant*; and on the other side was Van Zuyler, who, with consummate tact,

HISTORY OF FLEMISH LITERATURE.*

[CONCLUDING ARTICLE.]

The political and religious agitation which preceded and accompanied the Reformation was, like agitation of every kind, unfavourable to the development of literature. What prose or poetry there was, ran into party, as it did in some degree, under the Commonwealth and the Stuart. Not that authors did not appear in strict succession, but that none of these expanded as they would have done under more auspicious influences. On the Roman Catholic side there was Anna Bryn of Antwerp, who, in virtue of some ancient verse she produced, was preposterously called the *Sappho of Brabant*; and on the other side was Van Zuyler, who, with consummate tact,

set the *Palmas* of David to the most popular airs, by which stroke of policy he found an entrance for Protestantism into the households of the people; and there was (Antelien, who wrote an "Art of Poetry" that was somewhat in advance of his time, although it retained many of the obstructive formalities of the French school, and there were sundry prose writers, preachers, and philologists, such as Herman, Dabbe, and Marini, who kept alive the high themes of history and science; but literature languished, notwithstanding, in its more genial aspects.

The Spanish domination finally blighted the national genius. Under the government of the infatuated Duke of Alva, intellectual progress was simply impossible, especially in the direction of the Flemish language and literature, which every act of that sanguinary despotism tended to discourage and obliterate. Upon his arrival there was an immediate exodus of the ability and vigour of the country.

"The aspect of the country (says M. Delepoire) was indeed distressing; in the metropolis of Flanders horses grazed where busy streets had been, and the wolves were literally masters of the plains around the town. Six thousand families of Ghent received their pursues. Wealth and talent had retired before the enemy, to live in peace and freedom beyond the Scheldt and the Meuse. At the end of the century the United Provinces were enriched by a considerable number of preachers, theologians, teachers, printers, engravers, physicians, lawyers, diplomats, mathematicians, admirals, superior officers, historians and poets, all either Flemings or natives of Brabant."

This movement, which impoverished Belgium, enriched Holland in proportion; there we have the great point of departure which marks the different historical destinies of the two countries, with respect to their language and literature. While Belgium was insensibly losing her national characteristics by foreign grafts, Holland was solidifying her strength of Flemish nationality. The stage professed largely by this Dutch revival. Mere allegorical representations of vices and virtues gave way to pictures of society, with a kind of attendant chorus, to point the morals of the scene. This was early in the seventeenth century, and, looking back hesitatingly, for lack of fuller information, it may be considered to embody the first legitimate attempts on the continent at a drama of real life, characters, passions, and all, having in it a strong pulse of vitality. All this was not only done after Shakespeare, who brought this kind of drama to perfection, had ceased to write for the stage, but it was crude and incomplete, and, here and there, continued to touch sacred subjects, by way of deference to the old traditions. It would be worth while to ascertain by a careful examination whether this Dutch theatre is indebted to the English stage of the Marlowes and Peebles, and to what extent.

The opening of the 17th century was signalized by a translation into the vulgar tongue of the Bible, from the original Hebrew and Greek texts. This great task was undertaken under the auspices of the Synod of Dort, one of the most distinguished Flemish, Brabantian, and Dutch scholars were engaged upon it—a combination which helped materially to restore the unity of the language, and to give it increased grace and power. Then followed the "golden age" of Flemish literature, of which *Hooft*, *Vondel*, and *Cats*, were the principal authors, men of whose inner lives and habits, the character of the instrument in sustaining the national reputation. *Hooft*, whose poetry is full of French affectations, was one of the finest prose writers of Holland, a paucity which does not exceed the merits of his "History of the Netherlands." *Vondel*, who, by the way, was not a native to the manner born, having first seen the light in Cologne, is known only as a poet, and known chiefly by isolated passages that have passed into universal circulation. This fact sufficiently indicates the character of his genius. He is wanting in sustained power, but is capable of occasional excellence of the highest order. His diction is affluent, and his imagination vivid, and when he approaches a subject that does not demand severe treatment, he fairly pours out his enjoyment. Of these three masters, in contrasted styles, "loved master *Cats*," as he is called by Bilderdijk, is confessedly the most influential. He is emphatically the household poet. He is to be found everywhere. Scraps of his songs are as current in the mouths of the people as scraps of Burns in Scotland, of Moore in Ireland, or Béranger in France. It is by his poetry that the people, addressed to their inner lives and habits, the specialties and historical recollections of the Flemish people, that he still lives in the hearts of his countrymen. But *Cats* had other claims on their admiration. He was an historian and a moralist also; a lawyer, a philosopher, and a teacher; and, still more, he was a practical farmer; and he was sent on a diplomatic embassy to England. There, where the Netherlands much resented the presence of the Flemish people, that he still lives in the hearts of his countrymen. But *Cats* had other claims on their admiration. He was an historian and a moralist also; a lawyer, a philosopher, and a teacher; and, still more, he was a practical farmer; and he was sent on a diplomatic embassy to England. There, where the Netherlands much resented the presence of the Flemish people, that he still lives in the hearts of his countrymen.

The propagation in Belgium, during the 17th century, of the French language, French literature, French manners, French everything, threw still further back all possibility of recovering the native tongue. Several circumstances concurred to produce this result; but chiefly the great access of the soil by French immigrants and the marriage of the XIV. with the Infanta. The change was abhorrent to the character of the people, in whom, as M. Delepoire observes, "the love of a peaceful fireside existence is a fundamental trait." The Flemish authors made a gallant stand, but they struggled in vain. Their great hope was the theatre, the last place in which the popular element can be entirely extinguished; but here they failed, as in other directions. De Coninck, under the Spanish yoke, had transplanted upon the Flemish stage the intrigues of the *Comedie* and *Seneca*, and little was now needed to extirpate the last traces of the native drama. The Flemish play being at last extinguished, nothing was left but translations from the French. This was late in the 17th century, and in spite of occasional flickers of the old drama, French it has continued ever since.

It is curious enough, that after the Flemish language had ceased to be the vehicle of the literature of the country, it came to be more investigated and elucidated by philologists than ever, perhaps for that very reason. The fact recalls very forcibly Swift's epigram on the magazine:—

"In this a proof of Irish sense
And Irish wit we find;
When nothing's left that's worth defence,
We build a magazine."

* A Sketch of the History of Flemish Literature and its celebrated Authors, from the Tenth Century to the Present Time. By Octave Delepoire, LL.D. London: Murray, 1860.

WEEKLY SCIENTIFIC NEWSPAPER.

THE MECHANICS' MAGAZINE;

AND

JOURNAL OF ENGINEERING, AGRICULTURAL MACHINERY,
MANUFACTURES, SHIPBUILDING, GUNNERY, AND TELEGRAPHY.

PUBLISHED WEEKLY, PRICE FOURPENCE; BY POST, FIVEPENCE.

THE "MECHANICS' MAGAZINE," which existed for thirty-five years in its first form, and during that long period had its value repeatedly attested by men of every class—from Lord Brougham, who was one of its earliest eulogists, down to the humblest artisans in the kingdom,—now appears in an enlarged and improved form.

The many thousands who have constantly read the Magazine know perfectly well that it has borne a conspicuous, and even a prond part in the promotion of those great undertakings by which practical science has distinguished the last half-century—the construction of railways, the extension of steam navigation, the development of the electric telegraph, and other kindred works. It is not, therefore, without cause that it has been honoured with a much warmer and far more constant support than any other publications of a like nature—many of which have made a transient appearance. But the growth of mechanical science has become so great that the demands upon the Magazine were found to exceed its limits, and the Proprietors have therefore given it a much enlarged and entirely new form, adapted to the circumstances of the present age—have made it, in fact, a first-class scientific newspaper, well edited, carefully illustrated, and in every respect worthy of the great objects to the furtherance of which it is devoted.

No needless expense is spared in producing the Magazine, and the Editors avail themselves of all those sources of information which long experience has opened to them.

The publication, in its new character, has received the extended title above given, and a definite and special value is given to it in each of those branches of mechanical science which its title indicates.

The reputation of the Magazine as an *engineering* journal was made long since, but the recent enlargement is doing much to extend and consolidate it.

The time for great improvements in *agricultural machinery* has manifestly arrived, and the Editors now lay before agriculturists full detailed descriptions of all really valuable implements, as they are from time to time introduced, so that farmers and others may find in their pages exact and reliable accounts of those improvements which journalists are usually content to gossip about.

Of much that relates to new and improved *manufactures*, the Magazine is unquestionably the herald. In connection with *ship-building*—an art which, except in their own pages, has been much neglected,—the Editors confidently assume the foremost place, and have made arrangements for presenting their readers with a series of sound original articles upon the subject, and with regular intelligence of its progress.

In addition to the foregoing, they also publish reports of the proceedings of scientific societies, and such other information as properly belongs to a scientific newspaper. The splendid part played by inventors of every class in this country, under the protection of the Patent Laws, is duly regarded in their columns, in which complete lists and descriptions of all patents applied for, granted, and extended, continue to be recorded from week to week, together with lists of all articles protected under the Designs' Acts. No pains are spared to render this part of the Magazine as full and reliable as the official Government records themselves. THE MECHANICS' MAGAZINE is, in fact, the *inventor's journal par excellence*.

IN SEPTEMBER NEXT THE MECHANICS' MAGAZINE WILL AGAIN BE
PERMANENTLY ENLARGED.

"THE MECHANICS' MAGAZINE has conferred lasting advantages on the manufacturers of the country."—*Report of Select Committee of the House of Commons on the Arts of Design.*

"THE MECHANICS' MAGAZINE has, from its establishment, had an extensive circulation, and it communicates, for fourpence per week, far more valuable information, both scientific and practical, than was ever before placed within the reach of even those who could afford to pay six times as much for it."—*Lord Brougham.*

"I was reading, the other day, your catalogue, which I hastily scanned, containing a list of the books and pamphlets of your institution, and I do not find one which I think you ought to possess—the MECHANICS' MAGAZINE. I think it is an admirable periodical, which should be in an institution designed for the welfare of the industrial classes, just to show you that science is entering into everything in which we are engaged."—*Sir R. Peel, of the Blackburn Mechanics' Institution, April 23rd, 1857.*

"I find it extremely amusing to follow the monthly revelations of the MECHANICS' MAGAZINE, touching what is doing in the world of science. It is true, I often meet with matters too deep for me, and abstruse calculations which I do not even attempt to follow; but I turn with infinite pleasure to the weekly list of new patents for 'inventious and improvements.' There I dive into the very arena of progress, and feel great satisfaction in reflecting that no one can keep his secrets from me, even if he chooses to secure to himself, by patent, the pecuniary advantages of them, with which, in fact, I have no desire to interfere."—*Chambers's Journal, April 18th, 1857.*

THE LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 7.]

SATURDAY, AUGUST 18, 1860.

[PRICE 3d]

FOOD AND MONEY PROSPECTS.

TO have scarcely any corn cut in the middle of August, with much hay not yet carried, and much spoiled, while the weather is still unsettled, makes most people reflective, and may make statesmen apprehensive. The very late harvest does not promise to be abundant. How far it may be deficient cannot yet be known. Though the means of providing the subsistence of society be of unspeakable importance, the laws by which it is governed are not fashionable studies. The fierce disputes about protection, and the disrepute into which a lux morality has brought trade, have turned the hearts of men away from it; and yet the manner in which this great community—now dependent on almost every country of the world for some portion of its daily bread—is regularly and continually fed, is well worthy of close investigation. Jars, cracks, and breakages in the machinery are justly offensive, but they ought not to destroy our admiration of it as a whole.

Though the harvests of 1857, 1858, and 1859 were good, we imported in 1858 of wheat and flour together 3,343,469 quarters, and last year 4,931,871 quarters, or about one-fifth of our whole annual consumption. The total quantity of all kinds of grain imported last year, besides potatoes, eggs, poultry, provisions of various kinds, &c. was 10,270,744 quarters, of the value of £18,042,063; and the important question for consideration is, what quantity we shall require to import in the remainder of this year and in the next, and what will be its value, supposing we are afflicted with, what is now, unhappily, but too certain—a deficient harvest. Already the corn we import much exceeds in value every other single article imported, except cotton, and the supply from abroad cannot be short, in conjunction with a scanty harvest, without deranging very much our whole commercial and financial systems.

In the first six months of the present year the imports of wheat, 1,394,432 qrs., and of flour, 1,429,536 cwt., against 2,203,736 qrs. of wheat, and 2,318,202 cwt. of flour in the first six months of 1859, show a considerable decline. Although the price has been gradually rising for some months, it has not been high enough to check consumption materially, and our stocks are consequently very short. To make up for our late and deficient harvest, we shall require, before the end of the year, to import at least double the quantity already imported. Afterwards we shall require more than was imported in the first nine months of 1858 and 1859, to keep us well fed till we can gather in the harvest of 1861. Whatever the quantity may be, we shall, no doubt, get it, as all the world is ready to supply us; but at what price, and where from!

Last year, 43s. 9d. per qr. hardly sufficed to bring any wheat from the United States; this year, with a price 10s. or 12s. higher, though the supplies thence are not yet large, they are fifteenfold more than they were last year. But this higher price has brought from France only a tenth as much wheat, and a third as much flour, as in the first six months of 1859. It has brought increased quantities from Russia, Prussia, Denmark, and the northern countries. The rise in price is equivalent to 26 per cent.; and we may look on something more than that, or a rise in average price to 60s. or 65s. as sufficient, should the harvest abroad be good, to ensure the necessary supplies.

From what countries are they to come! In the two last years we received more wheat—2,014,923 qrs.,—and more flour—4,326,438 cwt.,—from France than from any other country. Prussia stood next

in the list; but she sent us only 1,397,691 qrs. wheat, and no flour. This year France has sent us very little, either wheat or flour; she has, at the same time, imported corn from the Levant; her harvest prospects are not good, and she is more likely to compete with us in the markets of Southern Russia and the United States for food, than send us as large supplies as in 1858 and 1859. The protectionist ship-owners, and others who have indulged in much lamentation over the greater value of her exports than her imports from us, may this year and the next be gratified at seeing the balance redressed, though at the expense of bringing necessary food, at a greatly increased price, from countries much further off.

We have, as yet, no reliable accounts of the harvests of Prussia and Russia; but rainy weather is favourable to their sandy and light soils, and we may expect that the produce will be great. In Canada and the northern parts of the United States the harvests are magnificent. From the two together we received, in 1856, 1,309,969 qrs. of wheat, and 3,196,633 cwt. of flour, and every year since cultivation has extended in them, and their capability to export, in favourable seasons, has increased. There is no speculative mania at present prevalent in them, and we may expect that all their spare food, if we need it, will come hither. The present price of 57s. 7d. induces them to send us some, and a small additional rise will be for them, with a good harvest, an ample remuneration.

Last year, with an average price of 43s. 9d. we imported, wheat and flour together, 4,931,871 qrs.; and when the price was 74s. 8d. in 1853, we imported only 3,217,766 qrs. Then we were at war with Russia—now we are at peace; and unless crops should fail abroad as well as at home, there is reason to suppose that the price of wheat will not rise so high now as at that period. There is a real reason to suppose that we may obtain a greater quantity from all parts than we have ever before imported. Between 1850 and 1853, consumption increased very rapidly throughout the civilized world. The increase began with the maritime commercial and town population, and low prices in previous years had not stimulated the agricultural population into the activity they have since acquired. Consumption has undoubtedly since gone on increasing, but production has also increased, and more rapidly than before. It bears now, we believe, a closer proportion to increased consumption than in 1853, when the occurrence of a bad harvest had the effect of nearly doubling the price in the following year. Without pretending to assign any limit to the rise in price, we may conclude with confidence that the price of wheat will not, unless the harvests abroad should be universally unpropitious, reach the extreme point (80s. 10d.) which it reached in February, 1854. At less than the average price of 1855 we shall obtain, in 1860-61, more food than we then obtained.

The effects on the money market will depend on the additional quantity we shall require, and the price to be paid for it; but we must remember that the trade in corn and in the precious metals is now habitually so large, that the additional purchases of the former, for which the latter must be paid, will not cause as much derangement as when the trade in both was much less. We must remember, too, the source whence the additional supplies of food come. If they come chiefly from North America, the countries there take such large quantities of our manufactures, and are so generally our debtors, that, though the first effect would be to keep from us the precious metals they usually send, the next effect—and it would speedily follow—would be an increased demand in them for our manufactures. Very soon

the transmission of the precious metals between the two countries would run in its accustomed channels.

The average value of all the grain and flour imported in 1858 and 1859 was £19,000,000; we may, as the consequence of our bad harvest, have to buy food to the value of £25,000,000 or £26,000,000 between this and the next harvest. But these increased purchases will be sure to increase the demand abroad to some extent for our manufactures, and they will not all be made by the precious metals. We may have to export £4,000,000 or £5,000,000 additional, which is not more than the sixth part of the billion now industrially imported and exported. In conjunction, however, with our bank regulations, a demand for gold in this extent is quite sufficient to cause considerable derangement in the money market. We may expect that some little time hence gold will begin to move abroad, rapidly, and a corresponding rise in the rate of discount, with all its effects, will be the immediate consequence.

There are, too, some other unfavourable circumstances to be taken into consideration. The State has loosened its balances, and has so far diminished the resources of the Bank. It is borrowing, also, though it be by annuities, and will increase the demand for money. Several other States, too, have outstripped their resources, and are in the market for loans. At the same time, the exports, by which we buy gold, are diminishing. Last month, the value of our produce exported was only £9,000,000, against £10,000,000 in the corresponding month of 1859. The imports, however, which must be paid for in gold, if not paid for by exports, are greater than ever. The value in the first five months of the year was £57,000,000, against £45,000,000 in 1859; and in May was £11,687,000, against £11,561,000 in May, 1859. All these circumstances, and many similar, operating together to increase the demand for money, will, ere long, become a great strain on the national resources.

In general the people have been living well up to their incomes, and the Government has set them the example of a profuse expenditure. Neither people nor Government will have any great stores to fall back on. In what way, or at what point exactly, a rupture from the strain may take place, that other trades may turn out to have been, like the leather trade, conducted on false principles, cannot be continually expended while nothing is really earned, cannot be foretold; but that great difficulties will be experienced before the end of the year is highly probable. The chief cause will be the disastrous weather, which almost destroyed the spring crops, and which is not bringing forth in due season the still more important summer and autumn crops. But such changes being in the order of nature, it is the special duty of Governments, as well as of individuals, to provide against them. Human wisdom can effect nothing greater, and may be proud of the achievement when accomplished. Trade, though some commercial men pervert it to sinister purposes, will bring the indispensable food, which Heaven denies to our agricultural exertions, from America, India, and Australia. Thus trade corrects inequalities of season, and repairs many of the disasters which spring from the impotence of individuals and of Governments. That it may do this beneficent work most effectually, it must be left, in spite of all the plausible pretences to the contrary, perfectly free.

THE BREAK UP.

THE Italian revolutions are running their course—much to the discomfiture of some of the sovereigns of Europe, and the bewilderment of all. The great Emperor Napoleon, who last year seemed to be master of the fate of Italy, and supreme arbiter of peace or war on the continent, is no longer in the first rank. The fate of Italy does not depend so much upon his will or his schemes as upon the determination and fortune of Garibaldi. The King of Piedmont steps into the background, and must follow Garibaldi as his leader, whether he like it or not. Astuteness, cunning, diplomacy, and intrigue, all have become more or less foiled by the honest man and brave soldier who has set his heart upon the great task of the independence of Italy, and pursued it without fear, favour, or *arrière pensée*, and without the slightest regard to the projects of any native or foreign king, or native and foreign traitor or intriguer. Ferdinand is king of but one of the Two Sicilies, and, by the time this sheet reaches the eyes of our readers, may have ceased to reign over the other, and added a new name to the list of the sovereigns who have been hurled from their desecrated thrones by the progress of free ideas, and by the outraged sense of justice of a long-suffering people. Every one can see that the Bourbons of Naples have either gone or are rapidly going into that dreary down-hill path, where the Stuarts of England, and the Bourbons of France preceded them; and where some still more respectable sovereigns than either may yet join them. They can even see it themselves—for they are preparing for flight to the fastnesses of Austria.

Garibaldi, by reason of his strength and virtue—and the Sultan by reason of his vice and weakness—are simultaneously, but without any connection one with the other, engaged in the same work: they are breaking up the European system, and inaugurating a general war. Austria, alarmed for Venetia, by the progress of the great Italian, and desirous to save the falling throne of

the wicked and incompetent Bourbon of Naples, menaces intervention in Italy—which neither Piedmont nor France can allow—although both Piedmont and France would rather crush Garibaldi than be driven to the cruel extremity of supporting him; while France and Great Britain, with the hope of propitiating the Sultan, are administering a blow to his authority by their intervention in Syria, from which he can never recover.

And yet there are means, if sovereigns and statesmen would see them—and take them—by which this great débâcle and "break up" might be prevented—at least in our generation. The disease of Turkey is chronic, and the Turkish Empire must expire. Every one can see that. But were there no other causes of evil at work in the body politic of Europe, the Turkish Empire might be allowed to die with decency; and without causing irremediable mischief to its neighbours. The more immediate danger is the position of Austria in Italy. If the Emperor of the French had fulfilled the brilliant programme which he sketched in 1859, before opening his Italian campaign, and "freed Italy, from the Alps to the Adriatic," the Italian question might have resolved itself into many new complications—but certainly into none so troublesome, so perplexing, and so all but hopeless as the complications that now exist, and always will exist, so long as Austria retains Venetia, or any inch of Italian soil. Why does not Austria sell Venetia? She will spend in defending it, during the month of June, if she attacks, double the money that it is worth to her; nay, infinitely more—for Venetia is worth nothing to her whatever. Venetia is a thorn in her side—a drop of poison in her cup—her shame and her torment—a costly disease in her frame; and to be rid of it, without disgrace, would be of the highest advantage to her in every sense and way. If she could but be persuaded by her friends in Europe to give up so troublesome and inglorious an appendage to her state—or if not to give it up gratis, to sell it at the price which the Italian people, united or disunited, would be glad to pay for it,—Austria, instead of finding an enemy in every free people, would find friends all over Europe—and certainly in England, where at present she appears to have none. But we fear that such a sacrifice of feudal dignity is too narrow to expect of the Austrian Government, and that Venetia will ultimately have to be won for Italy at the cost of a general war. And we need scarcely say that that cost, in money, alone, would be nearly, if not quite, that of the fee-simple of the whole of Europe.

But come what may, Garibaldi, master of the fortunes of Italy for the present, is pursuing the right course. Whatever complications may ensue, his part is that of the true patriot. Hitherto he has been eminently successful; and that his success may not only continue but increase, must be the earnest wish of every lover of European freedom.

THE PROGRESS OF UNION IN GERMANY.

ONE of the dildest, most important, and least understood of the subjects which occupies, or should occupy the public attention at the present day, is German politics; it produces very much the same effect upon the mind as Indian Finance, or the New Zealand Constitution. A species of mental miasma visits at the mere name; it is so complicated, so involved, so thoroughly German, it implies so minute and extended an acquaintance with German feeling, and German feeling is so incomprehensible to the practical British public, that we turn from it with disgust; partly because we do not appreciate its importance, and partly because, if we do, we think that our needs are paid to understand it, and we will trust to them. Unfortunately it is of the utmost importance, and the people who are paid to understand it, either do not, or, which comes to exactly the same thing, do not act as if they did. At the risk of being tiresome, we feel bound to call attention to the more prominent features of the German national sentiment at present, without entering in detail into those questions which more or less agitate the public mind, and give it its direction. The merits of the national Bund, the military question, the customs question, the Schleswig Holstein question, the Hesse question, are all matters upon which gentlemen who venture to discuss foreign policy in the House of Commons, ought to be thoroughly well informed, besides a mass of others which we will not discuss; the delicate sensitivities of our readers by alluding to. The relations of Northern to Southern Germany; the position which the small states of the Confederation occupy with reference to the large; the various shades of political sentiment which public opinion in each of these separate states assumes; the real causes, concealed or apparent, in which they have their origin; all these are considerations of the highest importance, for without a due appreciation of them we cannot rightly estimate the value of Germany, considered as a whole, as an element of weakness or of stability in Europe.

The game is about to begin, and, before tossing up for sides, we should have some notion of the relative merits of the players. Whatever may be the feeling in England, and the determined scepticism among certain of our political men, the opinion is universal in Germany that a European war is inevitable before two years have elapsed. With that view every effort is being exerted to merge all the minor differences arising out of the various questions to which we have referred, in a general sentiment of national cohesion at all risks,

The settlement of disputes is to be indefinitely postponed; the same sense of distrust, the same consciousness of the necessity of self-preservation which led, among ourselves, to the enrolment of Volunteers, and the extension of our national defences, has induced all classes in Germany to forget every cause of division, and unite in a determined league in defence of the fatherland. In this movement the sovereigns are setting an example which is cordially sympathized with by every individual in the community.

Never before were the rulers in Germany so popular as now, when they are engaged in a general system of fraternization. The Baden meeting produced precisely the opposite effect to what was intended: it excited a general feeling of suspicion throughout Germany; and the interview of the Emperor of Austria with the Prince Regent of Prussia at Toplitz was the result. At this meeting it was arranged, first, that any attack on Austria should be considered as an attack on Prussia, and that the integrity of the two countries should be maintained by each by force of arms mutually. In other words, the offensive and defensive alliance between the two empires is complete, except with regard to *Venetia*. In the event of that province being attacked by Italy alone, Prussia declines to interfere, but has pledged herself to do so should the French unite with the Italians; on the other hand, Austria engages to maintain the frontier of Prussia as she received it from Frederick the Great.

The position of Prussia in the Diet has always been a disagreeable one, her liberal policy has generally placed her in a minority, Austria supporting the smaller states in their opposition to the advanced principles advocated by the Prussian Government, if not by the Prince Regent himself. In the event of a war, a majority thus exercised would produce a serious difficulty when the question comes to be discussed of the military command-in-chief. This much-voiced point was satisfactorily settled at Toplitz, and it was agreed that the decision of this important question should not rest with the Diet. The results of the meeting at Toplitz have produced the liveliest satisfaction throughout Germany, and have led to another meeting of sovereigns of almost equal political significance. On Sunday last, on the occasion of the laying of the last stone of the Vienna and Munich Railway at Salzburg, the King of Bavaria and the Emperor of Austria proceeded in special trains to this frontier town, and there inaugurated this great commercial enterprise by a political act which will cement still more closely the inter-Germanic alliances. The expressions used by the Emperor in his speech on that occasion were eminently national, and in his allusion to the recent meeting at Toplitz, he reiterated in public the assurance of the determination of Austria to remain German to the last. The greatest possible enthusiasm was excited by these words at the time, and it is most certain that this enthusiasm will not be limited to the persons to whom they were addressed. The effect of this union with the rest of Germany has produced an eminently liberalizing effect in Austria. A recent telegram announces that the discussions in the Reichsrath are for the future to be entirely free and public, and that press reporters are to be present, as in our own House of Commons. The Emperor of Austria paid a visit to Munich upon the day following the ceremony above described, and appeared in that capital in public in plain clothes for the first time in his life. Though apparently a trifling and unimportant circumstance, this fact, pregnant with a significance which only those who have lived under and are accustomed to the stern military rule of Austria can appreciate.

If German progress and unity thus go hand in hand, and afford satisfaction to the people of the country, we ought to consider these indications of a growing strength no less a matter of congratulation. It is possible that the day may come when a German alliance will be indispensable to us, as it has been before. The absence of any general national sentiment during the Napoleonic wars proved the ruin of the cause; each state made its separate peace, and the Emperor triumphed in detail. Since those days the facilities of inter-communication, the expansion of thought, and its extended expression through the press, has exercised a harmonizing influence throughout Germany. The subjects of the various states no longer call themselves by the local but by the general name. The Bavarian, or the Saxon, prefers rather to call himself a German than anything else; and the sentiment thus evidenced is daily increasing under the pressure of impending danger. This bundle of German fagots, if strongly bound by the tie of a common interest and a common nationality, will be very difficult to break; and there can be no doubt that it is our interest to see this union firmly cemented. It is not by telling Prussia in official despatches that we consider her the "clauson of Austrian and administration in Italy," however, this object is to be attained. If the friendship of sixty millions of the finest race in Europe is of any value to us, we must take other means to secure it, and sacrifice our love of epigram to common courtesy.

Meantime we trust that the meetings at Toplitz and at Salzburg may both be estimated in the proper quarters at their right value, and that the words of the Austrian Emperor, when he gave as a toast "The union of the princes and the people of Germany," and of the Bavarian monarch, when he drank to the two principal Powers of the

Confederation, may find an echo beyond the limits of that Confederation.

It has been said to be the "cherished object" of Louis Napoleon to see Germany comprised within a single frontier, and forming one empire. Be it ours to see it untried, not by physical but by moral boundaries, animated by one sentiment alone, and deriving its strength from its internal powers of cohesion.

THE IRISH MALCONTENTS.

IT is full time that the English and the Irish should understand each other. The optimists of thirty years ago hoped that a consummation so much to be desired would have been brought about by Roman Catholic Emancipation, which was granted with a spontaneous liberality that astounded the Liberator himself. O'Connell was ready with the "Wings" to exultant for an instant; but, to his astonishment, he got the whole without any condition whatever. The measure was carried, not by Roman Catholic impetuosity, but by Protestant toleration. An Irish millennium was to follow. The old antipathies and animosities were to disappear, and we were to settle down into a perfect model of a Happy Family. As to the alleged political influence of the Pope, it was a mere vulgar bugbear. There was no such thing. His Holiness dwelt in a sphere far remote from mundane concerns. He was a spiritual abstraction at the head of the Church, and exercised no more authority over the domestic allegiance of the Roman Catholics of Ireland than the Dey of Algiers. The distinction was so broadly drawn, and so vehemently insisted upon in a thousand shapes of affirmation and protest, that even the longest-headed of the Tories, who let in these professions at one ear and out at the other, were compelled to admit, as a matter of reasoning, that no pretext for the civil exclusion of the Roman Catholics could be drawn any longer from their avowed relations with the See of Rome. They had solemnly qualified for admission to the constitution of these realms, by disavowing the foreign influence which had previously shamed them out. Emancipation, therefore, was conceded without a single proviso or restriction, in the confident expectation that it would tranquilize Ireland, and identify the masses with the common interests in which we are all bound up.

So far as the faith of the English Government was pledged to the arrangement, it has been scrupulously observed; indeed, somewhat too scrupulously. The old Orange ascendancy has been effectually extinguished; the reigning families that were sovereign over the view, and held the patronage of the country in their hands, are gone down into oblivion; even at the risk of weakening the English prestige, the old supporters of the English connection have been snubbed and disencouraged; Roman Catholics have been advanced, not to an equal distribution of offices, but to an alarming preponderance on the bench, and in all the public departments; and nothing has been left undone to give practical effect to the widest interpretation of the Act of 1829. Whatever may be said of Sassenach tyranny, it cannot be pretended that the operation of the measure which bestowed upon the Roman Catholics of Ireland the same rights and privileges that were enjoyed by their Protestant fellow-subjects, has ever been tampered with, or that it has not been left free to work out its legitimate ends.

But what is the result? Has Emancipation answered its purpose? We have now had thirty years' experience of it, and can take its measure pretty accurately. Is Ireland more contented? Are the "hereditary louds" more satisfied? Have the Roman Catholic representatives accepted their position with a faithful sense of its responsibilities? Have they honourably fulfilled the engagement under which the doors of the British Legislature were thrown open to them? The answer to all these questions is, that the Act of Emancipation has utterly failed, and that it is the section of the people for whose advantage it was passed that has frustrated its beneficial action.

Ever since 1829, the efforts of one administration after another to govern Ireland in a spirit of equal justice have been impeded, perverted, and resisted in a multitude of open and covert ways. One does not wonder at any obstacles thrown in the path of good government by the remnant of the Orange faction, who lost their monopoly of place and power by the change; but that the Roman Catholics, instead of co-operating with the English Executive in their attempts to retrieve the social condition of the country, should find in these ameliorating labours new grievances, and fresh excuses for hostility to the English rule, would be absolutely incredible, had it happened anywhere in the world except in Ireland. At one time, an exodus of indignant patriots, whose great souls revolted from the despotism of England; at another time, an obstructive brigade in the House of Commons; once a little mock rebellion, got up with the usual stage properties; and at all times denunciations and disturbances, have risen up in judgment against us, and rebuked us for having credulously indulged the hope that we could have induced the pure Irish party to participate with us in the advantages of free institutions. It is clear we cannot.

Evidences of incompatibility crowd upon us every day. Mr.

O'Donoghue—sometimes called *The O'Donoghue*—a prominent Milesian, wrote to the *Daily News*, a few days ago, to complain of an inaccurate report of a speech of his in the House of Commons. They had attributed to him a phrase which he never uses. "The phrase 'United Kingdom,'" writes O'Donoghue, "is never employed by me when I am referring to Ireland. I always speak of Ireland as a country quite distinct from England." O'Donoghue never says "United Kingdom." He cannot contemplate such a political blunder as a "united kingdom." The wretch who would tamely consent to live under the dispensation of a "united kingdom" does not deserve the comforts which true liberty "sheds over the soul." No. O'Donoghue's ideal of human government is a disunited kingdom; and it is only here justice to the particular circle whose sentiments he represents, to allow that they do their best to achieve the Elysium for which they put. O'Donoghue "always speaks of Ireland as a country quite distinct from England;" this, too, in the English House of Commons, which, if his professions were of half the value of the sheet of note paper on which he made that noble disclaimer to the *Daily News*, is the last place in the universe he ought to put his royal foot in. It is curious how these florid Irish bravadoes fall to dust, like the Dead-Sea apples, the moment you apply a practical test to them; but rotten as they are, they indicate the course of the current.

When The O'Connor Don, some little while ago, upon his election by an Irish constituency, advanced the right of the Pope to "sell his own niggers," adding, then pending on the issue of duty on foreign paper, he unconsciously furnished a key to the secret principles of his party. The Roman Catholics, who have been all these years past clamouring lustily for civil and religious liberty in Ireland, denouncing the English Government for its bigotry and oppression, and setting themselves up as martyrs in the cause of popular freedom, turn round suddenly, when the Pope's practice of wallowing his niggers is objected to by the niggers themselves, and insist upon the right of His Holiness to exercise an intolerable tyranny which at no period, since we have had the semblance of a constitution, could have been attempted in England.

A little further light is thrown upon these convenient principles by the issue of the late meeting of the liberal party at Lord Palmerston's in reference to the vote, then pending on the issue of duty on foreign paper. The Irish members considered it a cardinal point of policy to support free trade, and were, consequently, in favour of the vote. But Lord Palmerston happened to say something about Garibaldi, intimating the necessity of sustaining the present administration, as being of vital importance to the cause of liberty in Europe. This unfortunate allusion lost him seventeen votes. Of the Irish members present who would otherwise have voted for him, eleven did not vote at all, and three actually voted against him, or rather against their own opinions, on a question of great moment, in preference to supporting a minister who, by the observance of a strict neutrality, has succeeded in obtaining for the Italian people a clear stage and no favour in their struggle against tyrannical power. Sland it he said, after this, that the Pope is a ghostly myth in those realms, and that he exercises no disturbing influence over the political consciences of his followers!

We are on the verge of events which will bring out to bolder light the antagonism which exists on all questions of civil liberty between the Roman Catholic party and the rest of the people of this kingdom. It is lamentable that religious creeds should again become the ensigns of political principles; but the fact is before us, and we cannot escape from it. On the one side is intolerance allied with the Papacy, and on the other the open creed of Protestantism and the vindication of popular rights. Let us, then, clearly understand each other, so that in the contest we shall at least know our friends from our foes. It would be well, with this view, to reconstruct our political clubs, and allow no man, like The O'Donoghues and The O'Connor Dons, to affect a colour under which he is not prepared to fight.

EDUCATION AND INSTRUCTION.

THE word "education" is often used by people in and out of Parliament, who have no clear idea of its meaning. It is but too commonly confounded with "instruction," which is something that may be very different. Every civilized citizen is more or less instructed; but where is the man or woman who can truly be called educated? The work of education is commenced at school, but who shall say that it ends there! In fact, Education never ends, with wise men or women; and only ends with fools, with whom it may be said never to have begun. When statesmen talk of the "education of the people," they talk of a thing with which they have nothing to do; which they cannot control, if they would; and which they ought not to be allowed to control, if they could. And if they would bear this fact in mind, they might often save their breath and the time of Parliament, and proceed to the consideration of urgent matters, more strictly within their province. If the distinction between "Education" and "Instruction" were duly made, it might also save a vast amount of theological discussion and sectarian

rancour; for if instruction in reading, writing, and arithmetic, were held to be the birthright of every British child, just as food is, either at the expense of its parents or guardian, or of the parish—if it either have no parents at all or none able to bear the charges,—its education might, at an after period, be safely left to the theological and other agencies that would compete for the task. Reading, writing, and arithmetic, are tools or implements that may be used for educational purposes, but they are not education. The possession of a razor, an axe, or a rifle, is one thing; the use of these tools for shaving, for felling a tree, or for shooting a wild animal—or the invader of one's country—is another thing. In all the parliamentary debates and platform harangues upon Popular Education, the two are hopelessly confounded; and the result is, that the Government is not allowed to instruct the destitute, which it might do, for fear it should attempt to educate those who are not destitute, which is neither its duty nor its policy, nor within its power to attempt.

The Government, representing the whole people, pays enormous annual sums for the support of prisons, penitentiaries, hulks, and convict establishments, for the prosecution and safe holding of offenders, and for all the paraphernalia of criminal justice; but when the Government desires to diminish this annual outlay, or render it unnecessary, by taking hold of, and instructing in reading, writing, and arithmetic, the children of the utterly destitute, and therefore the criminal classes, with the view of enabling them to compete more successfully for honest employment with the classes more highly favoured by fortune, a bull-baiting is raised against the government of the proceeding. The religious sects are alarmed lest proselytism should lurk under the insidious guise of the alphabet, of elementary strokes and potbooks, or of the multiplication table; and because the control of education might become a dangerous thing in the grasp of a Government, instruction to those who most need it is all but forbidden in the richest, the humanest, and most philanthropic nation on the face of the globe. When, on Tuesday evening, Sir John Pakington moved, in the House of Commons, that the grants annually made by Parliament for the promotion of education (i. e. instruction) should be extended to the ragged and industrial schools, which are alone calculated to meet the wants of neglected and destitute children, he was opposed by men of his own party, like Mr. Ashburton and Mr. Henley, as well as by Liberals and Whig officials, and the proposition was negatived by 41 against 25. The principle of the Government, as set forth by Mr. Lowe, and accepted by other speakers, is simply the old principle of "*aide toi et le ciel t'aidera*." Those districts which help themselves in the matter of popular instruction shall receive the help of the Government, but those districts which are too destitute, or too ignorant, to do anything, or even to know how to do anything for the instruction of the swarming children of the criminal classes, shall be left to their ignorance and vice, unfriended and unaided. In other words, the more urgent the need, the less shall the need be supplied; and the Government will only take cognizance of the "Aids of great cities" when they shall have picked pockets, robbed tails, and broken into houses. And this scandal is perpetuated in the names of Education, Religion, and Philanthropy!

CAPITAL PUNISHMENTS IN THE NAVY.

LEGISLATION being essentially conservative, always follows, at a respectful distance, the progress of society. Long after observers had ascertained that Draconian laws did not prevent grave crimes, and all enlightened men advocated the abolition of capital punishments, except for the most outrageous offence, and even long after the power of giving effect to such laws had passed away, Parliament obstinately persisted in maintaining them on the statute-book. Till this very session, the "laws relating to the government of the navy" decreed death for almost every conceivable offence a man could commit on board ship. The extreme punishment could not be carried into effect except in very rare cases; but it was printed over and over again in the Articles of War, and continually read to the crews of Her Majesty's ships, to convince them, apparently, that the law was a dead letter, and that the living spirit of discipline was the arbitrary unchecked power of the Admiralty. It was empowered, and in turn it empowered, every captain to rule over each crew, and to punish the men according to the laws and customs in use at sea. The old usages of Norse pirates and buccaners, even including running the gauntlet and keel-hauling, were accordingly preserved as long as possible in the Royal Navy; and when they could be preserved no longer, modern ingenuity, rivaling old cruelty, supplied their place with numerous petty punishments, less revolting to the public, but more teasing to the seamen. Threatened continually with death, by the awful denunciations of the law, they were led in to legislation, and submitted with patience to all the minor outrages sanctioned by custom and arbitrary power.

For half a century the nominal absurdity and mischievous spirit of these awful denunciations have been pointed out, and only now for the first time has the Admiralty suggested to the Legislature, and the Legislature has adopted the suggestion, of bringing this system

verly in more conformity to reason and the present condition of society. In how many cases it has abolished the denunciation by the bill just sent from the Lords to the Commons, to amend the laws for the government of the navy, we have not enumerated, but in no less than ten cases it is still retained. Cordially approving of the diminution of these terrible and yet impotent denunciations, and giving great praise to the Duke of Somerset for the blow he has had the courage and wisdom to give the old system, we must express our deep regret that so much of it is left. To subject ten special branches of naval discipline to the punishment of death is a reproach to the Parliament and an offence to the public.

Such legislation is founded on total ignorance of the best-established principles. To deter brutal natures from brutal crimes, brutal punishments may be feasible; but seamen are of a generous nature, and the offences in question are violations of the code of military honour, rather than brutal offences. To deprive death for want of energy, want of skill, want of zeal, want of courage, &c., is to take an erroneous view of motives. For all these and similar offences, disgrace, dismissal, contempt, are appropriate punishments. The men who have "no fear of death, if with them die their foes," cannot be punished by a threat of inflicting it. They disregard it every day and every hour. They seek it in the cause of honour. To live disgraced and dishonoured is for them a real punishment. Death comes in the order of nature to all, and it can only be the disgrace from the mode of inflicting it which makes it a punishment at the yard-arm, and an honour at the edge of the poop. There Nelson received his death-wound. The navy should be so regulated and governed, so well paid and highly honoured, that to be dismissed and disgraced should be a far worse punishment than death. To avoid service in it now is an object of ambition. Even the late elaborate contrivance for obtaining a reserve is acknowledged to be a failure. To run from the service is no dishonour, and every year some 3,300 men and boys desert from the death-threatening system, forfeiting some £25,000 wages. Our legislation degrades the naval service, and weakens the national defence.

FLUNKYISM IN CHURCH.

MR. JENKINS. Mr. John Thomas, and his brother footmen of the fashionable press, individuals who wear plush, and have plush in their souls, continually publish—thanks to the unwise indulgence of the editors and sub-editors of the daily newspapers—the names of the guests entertained at dinner by their masters—the duke, the marquis, the earl, the viscount, the baron, and the baronet. It has been asserted, we know, that the noble and wealthy individuals who give great dinners and have great *soirées* and receptions during the London season, sometimes furnish the lists of their guests to the newspapers; may, more, that some of them actually pay for such announcements, as tradesmen pay for advertisements. But this we hold to be a scandal and a libel on the aristocracy; for no real nobleman or true gentleman could behave himself in a manner so very much like that of a snob. But how, it may be asked, if footmen take it upon themselves to bring their masters into contempt in this manner, are they not reprimanded or dismissed? We cannot tell, and decline to discuss the question. What we want particularly to know at present is this—Are the daily papers about to extend the nuisance of such publicity beyond the limits of the dinner-table? And are the flunkies, or coachmen, who contribute "fashionable intelligence" to their columns, not to have any check-string, to intimate to them when it is proper to stop? We ask these questions, because we happened, on Monday, to read the following paragraph in a morning journal:—

"The Rev. F. D. Maurice officiated on Sunday, and had a very prosperous congregation. The Duke and Duchess of Argyll were among the afternoon congregation."

Are we to infer, from this, that the auspicious commencement of the reverend gentleman's ministrations was owing to the fact that a real duke and duchess were among his auditors? Or if not so, are we to infer that it is so unusual a thing for a duke or a duchess to go to church, that the fact, when it does occur, needs special announcement? Under ordinary circumstances it might be supposed, by any ordinary individual, that a duke and duchess, or Mr. and Mrs. Jones, Mr. and Mrs. Smith, or Mr. and Mrs. Snooks, might say their prayers without publication of their names in the morning newspapers. The same ordinary individuals might also suppose that his grace of Argyll might sue for the grace of God without being advertised as a curiosity for so doing, unless it be a marvellous thing—which we by no means assert—to find piety and the prayer united together in the worship of the Supreme Being, to whom a peer and a caluam are alike weak and erring creatures. Were we a duke we should dismiss any flunkie who penned such a paragraph as the above about our noble selves, if he were in our service. If he were other than a flunkie, and we knew the snob, we should drop his acquaintance immediately. And more than this, we should write a polite letter to the editors of the morning press, requesting them, as gentlemen, to omit our name from their papers, both with regard to our dinners and our prayers. Sufficient for them to publish reports

of our speeches in the House of Lords. In the House of God, we should inform them that we wished to be considered of no more account than Brown or Green, or the humblest and most miserable vagrant who came there on the same errand of humility and contrition as ourselves.

OFFICIAL STUPIDITY.

THERE are few readers of newspapers who have not heard of Mr. John Trotman, as the inventor of an anchor which has proved of incalculable service in the preservation of life, shipping, and merchandise. It has been the desire of Mr. Trotman to have his anchor used in Her Majesty's navy; but Mr. Trotman is simply a man with an idea in his head. He has invented something very useful, and the official folk of the Admiralty, who, like the authorities at the Home-Guards, defect novelties, have resolved to oppose the adoption of his anchors in the public service. Perhaps a noble lord never yet made a more untenable position for himself than the Duke of Somerset did, when he attempted to justify his department for rejecting Trotman's anchors. First, the noble duke, as a ground for his prejudice against them, alleged that merchant ships provided with them went ashore in the memorable hurricane in the Black Sea, on the 14th November, 1854. What is the reply to this allegation?—That not a single casualty occurred to any one of the steamers or sailing ships provided on that occasion with Trotman's anchors;—that whilst small vessels provided with these anchors rode the storm out in safety, Her Majesty's steam frigate, with the Duke of Cambridge on board, was near being lost, and would have perished, but that she threw overboard her guns, shot, shells, &c.—that vessel being supplied with "Navy," and not "Trotman's" anchors. The Duke of Somerset next declared that no officer of the navy would trust Her Majesty's ships to Trotman's anchors. What is the answer to that allegation?—That Her Majesty's own ship, the *Fretoria* and *Albert*, the personal safety of Her Majesty and of all the royal family, such as we are, are wholly dependent upon the efficiency of Trotman's anchors. So much for the allegations of the head of the Admiralty.

We now come to Lord Alfred Paget, who represents the inefficiency of the Admiralty in the House of Commons. Lord Alfred Paget's first objection to Trotman's anchors was, that the one supplied to Her Majesty's yacht cost £119, instead of £90. What is the answer to that allegation?—That the difference between £90 and £119 was occasioned "by obstructiveness" on the part of officials, who did their utmost to prevent the anchor being delivered on board the royal yacht;—this occasioning additional expense, arising from damage of man and lurch for more than six weeks, before the anchor was landed at Her Majesty's dockyard. Lord Alfred Paget next declared that the Admiralty would not enter a particular anchor to be used. What is the answer to that allegation?—That the Admiralty would not use Sir Wm. Peel to use Trotman's anchor, and was forced him to take "the navy" established anchor. Lord Alfred Paget next declared that the officers of the fleet disapproved of Trotman's anchors. What is the answer to that allegation?—That no report on Trotman's anchors from the officers of the fleet has been received at the Admiralty.

It thus appears that official obstinacy and administrative incapacity have set their faces against Trotman's anchor. They will have none of it, though it saved the *Great Eastern* at Holyhead on the night when the *Royal Charter* was lost; that, on a series of experiments, it proved to be the best, and "the established Navy" the worst of anchors; and that Mr. Trotman offers to test one of his anchors, cost £20, against an Admiralty anchor, cost £265. The justice that the Admiralty officials, high and low, refuse to do, they may feel assured public opinion will yet extort from them.

A VOLUNTEER REMINISCENCE.—The distinguished part taken by Lord Elcho in the rifle movement, and the tribute paid to him at the Edinburgh Volunteer Review, reminds me (says a correspondent) of his progenitor, so long ago as when another Emperor threatened, and another patriotic manifestation upheld the honour of the country. The old lord was wont to sing a forenoon song, I believe of his own composition, on the occasion; of the poetry of which the following is a specimen, as it is also of the feeling and manner of that period:—

"Oh, how I loved, I got an once a night;
I dreamt of red and green a last night;
And two cats fighting, and a cock crowing;
And two cats fighting, and a cock crowing!"

And, O! dear, I never could see fear,
For the French and Bonaparte are coming here;
And we'll be murdered, and it's a terrible fear,
We'll be murdered, and it's a terrible fear,
O! dear, Margaret, is not that a pain?"

Caters demand,—"the language of comic effusions were not due to the Duke in those days. But even old women were not much afraid, and men made a joke of invasion."

WILD FLOWERS.—We know not even by name the Vicar of St. Michael's, Derby; but we must congratulate him on having originated the idea of an exhibition of wild flowers. The idea is deserving of imitation in every rural district in England,—the land beyond all others which produces the fairest, the brightest, and the most sweetly-scented wild flowers. Each year, and in the month of August, the vicar of St. Michael's has a show of wild flowers, of which the collectors are the pupils in the parish schools. Wild flowers and grasses are sought for in hedgegroves, fields, nooks, and dells, and then, when gathered together, the scholars display their taste in arranging them. We are not surprised to learn from a Derby contemporary that "singing and music contributed to the enjoyment" of the wild-flower gatherers, and of that excellent pastor who proves by such a festival that he is a fitting minister of Him who came upon earth to "preach the Gospel to the poor."

CRYSTAL PALACE.—ARRANGEMENTS FOR WEEK ENDING

MONDAY, Open at Nine. Temperance Societies' Entertainment.
TUESDAY, Open at Eight. *Fortunio's First.* Displayer of GREAT FOUNTAINS.
WEDNESDAY & FRIDAY, Open at Ten. Admission One Shilling; children under twelve, Sixpence.
 The Crystal Palace ARTISAN DRAWING FOR PRIZES will take place on **THURSDAY**.
 Spectators admitted free on showing their tickets.
SATURDAY, Open at Ten. Temperance Societies' Entertainment.
 Children under twelve One Shilling; season Tickets free.
 Orchestral Band and Grand Organ, Performances Daily, and Displayer of Upper Fountains.
 Many thousands of Government and other medals are to be shown on the Sunday and Tuesday.
SUNDAY, Open at Half-past One, to three o'clock gratuitously, by Ticket.

THEATRE ROYAL, HAYMARKET.—Lessor, Mr. BUCKSTONE.

On **MONDAY, TUESDAY, and WEDNESDAY**, the highly-entertaining Comedy, by Tom Taylor, Esq., *THE OTTENDALE BOOTS*. Characters by Messrs. Charles Mathews, B. C. Mathews, Thompson, Chapman, Rogers, &c.; *Messieurs Charles Mathews, William, Pommer, Griffiths, &c.* The new Comedietta, entitled *HIS EXCELLENCY*. Mr. and Mrs. Charles Mathews. And a Popular Farce, the **THURSDAY, THE CRUISE**, and a Ballet.

NEW THEATRE ROYAL, ADELPHI.—Sole Proprietor and Manager,

MR. W. WEBSTER.—Last night of the popular Cornish Actress Miss Julia Daly. On **MONDAY**, and during the week, **JANET PRIDE**. Richard Price (his original Character), Mr. E. Webster; Messrs. J. L. Todd, Paul Bedford, Stuart, Stuart, Stuart, &c. Billington; Messrs. William, Pommer, &c. To conclude with *THE POOL OF THE FAMILY*. Miss Julia Daly; Messrs. Paul Bedford, Kharas, Stuart, &c.

ROYAL STRAND THEATRE.—Lessor and Directress, Miss SWAN.

BURROUGHS.—LAST WEEK OF THE PRESENT SEASON.—LAST SIX NIGHTS OF *RAID AND THE MAURITIA*. On **MONDAY**, the highly-entertaining Comedy, by Tom Taylor, Esq., *THE OTTENDALE BOOTS*. Characters by Messrs. Charles Mathews, B. C. Mathews, Thompson, Chapman, Rogers, &c.; *Messieurs Charles Mathews, William, Pommer, Griffiths, &c.* The new Comedietta, entitled *HIS EXCELLENCY*. Mr. and Mrs. Charles Mathews. And a Popular Farce, the **THURSDAY, THE CRUISE**, and a Ballet.

STILEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager,

MR. W. BATTY.—On **MONDAY**, and during the week, *THE OTTENDALE BOOTS*. Characters by Messrs. Charles Mathews, B. C. Mathews, Thompson, Chapman, Rogers, &c.; *Messieurs Charles Mathews, William, Pommer, Griffiths, &c.* The new Comedietta, entitled *HIS EXCELLENCY*. Mr. and Mrs. Charles Mathews. And a Popular Farce, the **THURSDAY, THE CRUISE**, and a Ballet.

FLORAL HALL, COVENT GARDEN.—MR. ALFRED MELLON'S

CONCERTS.—For One Month only. Last two nights of His Highness Prince George of Gallia. Band of Eighty Performers, and Chorus of the Royal Italian Opera. In consequence of the great success of Miss Parson and Mr. Wilton Cooper, Mr. Mellon has reserved their services for the remainder of the series. The Programme for **MONDAY and TUESDAY** next will comprise:—*Soloists from the ranks of the great masters; Overtures; Grand Orchestral Exercises; Vocal Music, sung by Miss Parson and Mr. Wilton Cooper; Instrumental Solos; Piano; Italian's New Opera; Quadrilles; Italian Valse; and Kermesse Polka.* Conducted by Prince Gallia, &c. &c. The Chorus of the Royal Italian Opera are engaged, and will appear on **WEDNESDAY** next, August 23rd, and on the three following evenings. Conductors—Prince Gallia and Alfred Mellon. *Proscenium—One Shilling.*

SCALE OF CHARGES FOR ADVERTISEMENTS.

FOUR LINES Do 6d.

Every additional Line, after Four Lines, Sixpence.

Advertisements exceeding One Column in Length are charged in proportion.

THE LONDON REVIEW

AND
WEEKLY JOURNAL.

SATURDAY, AUGUST 18, 1860.

It would not be a difficult task to trace the various steps by which the speculations of naturalists, geographers, and philologists have been in our own times popularized through newspapers, blended with national and provincial prejudices, and seized upon in France as a ready means of raising a war-cry favourable to a policy of aggression. If Panisivism is to stretch one arm to the shores of the Adriatic, and another into the heart of Bohemia; if the States of Germany are to coalesce into one nation; if the Scandinavian kingdoms are to acknowledge brotherhood,—why should France not make an appeal to those traces of a common language and civilisation which she inherits with Italy and Spain from the Roman Empire? The idea of a Latin nationality—perhaps of a Latin kingdom—seems to have captivated Louis Napoleon. There can be no doubt that it has influenced his policy both as regards Italy and Spain. A Frenchman by birth, an Italian by descent and education, and connected with Spain by marriage, he, no doubt, imagines that he is destined to win the first triumphs of a policy, the ultimate aim of which is to convert Spain and Italy into satrapies of France, to extend Algerian conquest into Tunis and Morocco till Sicily and Spain can be seen from the eastern and western extremities of an African province of France; and to surround the western basin of the Mediterranean with a girdle of powerful states, which, when their natural resources have been developed by railways, steam navigation, and manufacturing industry, may at any time make themselves independent of intercourse with the rest of the globe, and thus, should they so will it, the narrow seas protected for our commerce by Gibraltar, Malta, and Corfu.

The rapid progress of Spain in material wealth and civilisation, and the equally rapid formation of a powerful kingdom in Italy, give a new meaning and importance to these ideas, and should induce our statesmen to watch with suspicion any attempt made to forward a policy on the part of France which is fraught with infinite mischief, if not with positive danger, to the naval supremacy of England. Hence it is that General Prim's visit to Paris to enforce the claims of Spain to admission as a first-class power, in virtue of her recent rapid and wonderful increase in wealth and population, acquire a significance it would not have had under ordinary circumstances. In reply to a question in the House of Commons, on Thursday last, Lord John Russell stated that Spain

had as yet made no application on the subject to our Government, but that Louis Napoleon had expressed a desire that she should be added to the five powers. The Emperor of Austria, it appears, has no objection to the admission of Spain, if the concession is not turned into a precedent for the recognition of other powers. The Government of Prussia, on the other hand, expresses an opinion that the admission of Spain would prove injurious to the Protestant States of Europe, unless a similar privilege were at the same time conferred on Sweden. The opinion of England, expressed through Lord John Russell, is that if Spain and Sweden are admitted, Portugal, which signed the treaty of Vienna, must also be admitted, and that should their claims be recognized, it will be impossible to repudiate those of Sardinia; but that there is at present no necessity for any change, as the concert of the five powers since 1815 has very well effected the object of preserving the peace of Europe.

Demonstrations still continue to be made against the policy of Louis Napoleon in Belgium and Switzerland, neither the Wallons nor the Swiss of the French cantons exhibiting any desire to become citizens of the Empire. While the German, Dutch, Italian, and even Spanish newspapers have given full details of the great Belgian *fetes* of the 21st of last month, not a single allusion has been made to them in the French papers, and the Parisians have even remained ignorant of the fact that they have taken place; the newspapers of Lille and Valenciennes being compelled to assert that the jubilee was a mere official demonstration, and that the people are as anxious as ever to become French. In the mean time, however, French propaganda has been suppressed, and the Rife movement has been inaugurated in Belgium.

The annual meeting of the Swiss officers' military society at Geneva, which generally passes off quietly, has been the occasion of a very striking demonstration against the Imperial policy, on the part of a population French in race and language, who are as unwilling as the Wallons to acquire the rights of French citizenship. (Saturday last was kept as a holiday at Geneva. The streets were filled with enthusiastic crowds. English, American, Prussian, even Austrian and Russian flags were displayed in all directions. No attempt was made to exhibit the tricolour. From six hundred to seven hundred officers arrived from Lausanne and Villeneuve, in two steamers, and were received by the crowd on the quays, with tumultuous cheers. At a great dinner, which brought the demonstration to a close, on Monday, patriotic toasts were drunk with an enthusiasm which amply proves that there is not a man, be he Protestant, Catholic, Conservative, or Radical, either in German or French Switzerland, who does not shrink at the idea of any part of the republic becoming French.

There is news of interest, if not of importance, from Italy. From Genoa expedition after expedition is hurrying down to Sicily, there being no attempt made to conceal what is going on. The volunteers march openly through the streets of the city, with their officers at their head, unarmed, but in uniform, precluded by drums and military bands, and after being publicly reviewed, embark on board mercantile steamers for their destination. At first, the volunteers consisted chiefly of soldiers who had previously served under Garibaldi; but, for some time back, adventurers from all countries have been recruited; so that the Sicilian army has gradually been acquiring more and more of a filibustering character, as it increases,—the total number who have embarked from Genoa being now 22,000.

The latest Genoa newspaper dispatches announcing the unopposed disembarkation of 8,000 men near Reggio, on the night of the 10th instant, and the evacuation of Sicily; but this intelligence must be received with distrust,—for though the population both of Calabria and the Basilicate are favourable to Garibaldi, it would be imprudent in him at present to attempt invasion. The Neapolitans have 40,000 men, while he has not more than 22,000. He is therefore, it is to be presumed, prudently endeavoring to organize and increase his army. He has, in fact, despatched his aide-de-camp, Captain Edward Styles, to London, to induce, if possible, respectable young Englishmen, especially rifle volunteers, to spend their autumn holidays in Sicily; having been so efficiently aided by those of our countrymen who have joined him already, that he wishes to secure the services of as many others as possible.

A note or circular or diplomatic document of some sort has, it is said, been drawn up by Austria, in anticipation of a continental invasion by Garibaldi, which declares that should he take possession of Naples the armies of the emperor Francis Joseph will at once advance into Southern Italy and expel the invader from the continent. What Garibaldi's intentions are is not known. According to one report he will proceed to Venice as soon as he gets possession of the Neapolitan fleet, while, according to another statement, he will attempt to liberate Venice from Venice, by stirring up a revolt in Croatia and Hungary, or by a march inland from the eastern shores of the Adriatic. If any such attempts are to be made, the Italians must rely upon French assistance, as the Piedmontese and Sicilian troops would only bring down upon themselves another Novara, by any attempt to cope with the well-disciplined army of Austria. This is the strongly-expressed opinion of well-informed military men, who add that the Piedmontese army has now lost, by the annexation of Savoy, the very finest of its soldiers, and those who, by their courage and gallantry, conferred upon it a great share of the prestige it has recently won.

The arrangements entered into at Toplitz, as they affect the Italian question, are still imperfectly understood. But according to a telegraphic despatch of Thursday from Vienna, Austria had requested Prussia to occupy

Bahama and Hungary in the event of an attack on Venice, and on Prussia refusing to interfere the same request had been made to Bavaria, with the same result.

It will be very unfortunate if the arrangements come to at Topitz do not secure the unanimity between Austria and Prussia which was anticipated. The forty millions of Germans who occupy Central Europe are bound together by much closer ties than those which connect the so-called Latin countries, and would they be indeed to sacrifice the local jealousies and enmities which still divide them, would form a power strong enough to ensure the peace of the world. Whatever be the intentions of the German Powers with regard to Italy, it is gratifying to find emperor, kings, dukes, and electors making the discovery at last that their power and strength lie in German unity. At the inauguration dinner of the railway from Salzburg to Munich, which forms the link of the great German system, connecting Bavaria with the German Provinces of Austria, the Emperor of Austria and the King of Bavaria delivered speeches, in which they referred to the feeling of nationality, which now connects all parts of the Fatherland, and which the growth of railways had tended so much to foster. The Emperor spoke of the meeting at Topitz, and concluded with a cheer for the German people and their princes. The King of Bavaria replied, and asked another cheer for the long continuance of amity between Austria and Prussia, all more *Britannicus*.

The news from the East wears still a gloomy character. There can now be little doubt that the outbreak did not originate in a mere local quarrel between the Druses and the Maronites of the Lebanon, but that it is connected with a plot, hatched at Mecca among ignorant and fanatical pilgrims, which has wide-spread ramifications throughout the East. From all parts of Arabia, Syria, Asia Minor, and Turkey in Europe, and northern Africa, there are reports of murders and cruelties recently perpetrated against Christians, most of which, however, reaching to through Greek channels, cannot be relied upon. From Constantinople we learn that Ahmed Pacha has been sent back to Beyrout, after having been publicly degraded. Kurchid Pacha is to follow. Both are to be tried by mixed commissions.

From Damascus, the news is satisfactory. Fudl Pacha seems to have used every means in his power to restore tranquillity. On the 30d he arrested 320 persons, and he has since added considerably to this number, having resolved on the immediate execution of those condemned by an extraordinary council. A great part of the property stolen during the conflagration and massacre, has been recovered, the troops showing no sympathy with the robbers and murderers, and meeting with every assistance from the settled inhabitants, whether Ulemas, Mollahs, or Sheiks, who appear, during the period of the riots as well as now, to have made great exertions to shelter their Christian fellow citizens.

A Kalye was of a very serious kind, has broken out in Algeria, but the details have not been made public. It is said to have no connection with the disturbances in the East.

While the French troops are embarking for Syria, a large army is pouring down from Central Russia into the Crimea, ready to embark at a moment's notice, should Muscovite interference be called for in the settlement of Turkish affairs. The emigration of the Turco-Tartar population of Southern Russia is going on with extraordinary rapidity. It is favoured by the Government. The whole of the steamers in the Black Sea have been engaged for some time in conveying the emigrants, and many sailing vessels are employed in the same way. It is understood that the meadows and cultivated fields abandoned by the emigrants, will be occupied by serfs liberated by the recent measures of the Government, so that a purely Slavonian population will, in a few years, occupy the northern shores of the Black Sea.

This Report of the Committee appointed to inquire into the mode of nominating and examining candidates for junior appointments in the Civil Service, was issued on Tuesday. Since the commission first set in 1855-6, the number of candidates rejected was 2,479, all but 108 of this number having failed to pass the examination, from shameful ignorance of arithmetic and spelling. It is very difficult, from the conflicting evidence adduced, to decide what the effect of the new system has been in increasing the efficiency of the Government service. It seems, however, to be admitted, that although no marked improvement has taken place, yet the examinations test with sufficient fairness the general capacity of candidates. The committee think, nevertheless, that a sufficient time has not yet elapsed to allow a fair trial of the regulations of 1855, and that any opinions now pronounced on the subject must be founded on a priori reasoning, rather than on experience. They approve, at the same time, of the subjects chosen for examination, which have been as often ridiculed by the Press, as savoured too much of dilettantism, and deny that candidates have in any case been disabled by anxiety and apprehension from doing themselves justice before the examiners.

On Thursday night Mr. Sydney Herbert sat in the House of Commons that the Ordnance Survey on the 25-inch scale is in the mean time to be discontinued, in consequence of Colonel James's staff of engineers being engaged in making plans for the proposed fortifications. It is satisfactory, however, to know that the large scale is approved of by the Government, and will be recommended by them when the survey is proceeded with. Sir Morton Peto seems to think that he proved the utter futility and uselessness of the Survey on the large scale when he said that the map of England and Scot-

land would cover twice the surface of Lincoln's Inn-fields; that to examine the map of a single county, it would be necessary to use a ladder, and that to examine the map of the empire it would be indispensable to employ a balloon. Who ever thought of putting the map on rollers? It would be as reasonable to denounce the extension of the library of the British Museum, because the paper of which its books consist, if pasted sheet to sheet, might be made to cover the area of Middlesex. The comparative values of the surveys on the large and small scales have been adverted to recently with much greater sagacity by the Lord Advocate, in a lecture delivered by him to the Trades' Protection Society at Edinburgh, in which, with a courage which does him infinite credit, he proposed to make it the basis of a new system of conservancy, which, instead of describing real property in the cautious methods of our present title-deeds, shall simply refer to red lines on the great government plan. This probable use of the large maps naturally did not occur to Sir Morton Peto.

Indian finance, it appears from the speech of Sir Charles Wood, in moving a resolution to enable the Indian Secretary of State to raise a loan, if necessary, of three millions, at length exhibits a more satisfactory balance-sheet—there being every reason to believe that the new income-tax and license system will prove the source of a large revenue, and will be well received by the native population, who appreciate the security they enjoy under our rule, and who never were so prosperous as they have been since canals and railways have begun to open up the resources of the country.

The Prince of Wales landed at Halifax on the 30th, where he was received with enthusiastic demonstrations of loyalty. After reviewing the 62nd and 63rd regiments, he left by railway en route to Quebec, accompanied by the West-India squadron.

SKETCHES FROM THE HOUSE.

BY THE SILENT READER.

We are working double tides to finish Supply, and get through the Session. So much progress has been made, that there seems no reason why we should not be prorogued by the 1st of September.

Our Noble Viscount is with us early and late. If he had not been indefatigable in his attendance, John Bright would have stolen a march upon us all. That hon. member had recently prepared a manifesto for the recess—a sort of Queen's speech,—indicating a programme of parliamentary grievances to be unfolded in the provinces next November. You can imagine the scene. Free-Trade Hall, Manchester, or Town Hall, Birmingham, crowded to excess—Mr. Bright the central figure—ickets at a premium—the London reporters in attendance, with a special gig at the station—if not, a short summary by telegraph next morning, and the day after, three or four columns of the hon. member's speech, plentifully interlarded with "much laughter" and "enthusiastic cheering." If Mr. Bright could only have gone over the same ground on Friday night without interruption and without answer, it would have been thought that the Commons and the Cabinet were deeply conscious of having betrayed the privileges and liberties of the Lower House, and that they were constrained to listen to Mr. Bright's sharp and shrewish lecture in silence. The hon. member had taken his measures well. His notice was vague. We knew he would, on the motion that the House at its rising adjourn to Monday, say something about the Excise Duty on Paper. When I asked Sir Fozzle, at the club, what Bright's notice meant, he positively replied—"Some lack from a papermaster against the Customs duty, I suppose; or perhaps a lack from some Customs importer against the Excise Duty." So, when Bright rose, there were not twenty members present.

Sir Fozzle says he would have walked three miles to give Palmerston a cheer for his speech that night. Sir Fozzle can't walk very well, but he can cheer pretty loud, as the member for Birmingham would have discovered. His regrets are shared by all the men left in town, and not a few who have "paired" for the rest of the session; the former were riding in the park, or reading the papers, or getting an early dinner at the club. The front Opposition bench, when Bright rose, was deserted. "Dismal would have haunted the flame of any one of his novels for the pleasure of being present, and the opportunity of 'improving' such an 'occasion' to the mutual advantage of our Noble Viscount, and the politician who is supposed by some to keep him in office. Not one of the Opposition lieutenants and generals was present,—scarcely even a commissioned officer. A little group of Italians, below the gangway, surrounded the "Benicia Boy of Parliament." Two or three ministers occupied the Treasury bench. Milner Gibson looked a little uneasy, sat upon thorns when Mr. Bright's language was sharp, seemed a little resentful when he deprecated discussion, and looked comforted by the aspect of the empty benches opposite. The Chancellor of the Exchequer threw himself back with grave satisfaction, to hear the words of truth and wisdom from Mr. Bright. His allegation of the "pignonic innovation" of the Lords was about to be endorsed. His desire for "action" against lordly usurpation was about to be reciprocated. All sorts of alternatives were to be examined, and declared to be in turn practicable and better than the inaction of the Government. His chief was about to be talked at and talked to. His inaudible and disaffected speech and demagogue, so opposed to Cabinet discipline, were about to receive approbation and sympathy. And finally the House of Lords were to hear from the *cor populi* a formal protest and an independent denunciation of the slight offered to the House of Commons and the Minister of Finance.

Another minister was there. He leaned forward in his seat; he turned his head slightly round to the member for the gangway, so that he might lose no word of his address. And as soon as the member for Birmingham resumed his seat, he leaped to his feet, and advanced to the table. It was our Noble Viscount.

Such a pretty fabric as Mr. Bright had reared! everything that was to be said

in November and December in sharp and venomous sentences—all the topics which were capable of being handled in a manner to create dissension and ill-will between classes—were now kindled in doubt and kindled in dissension. His opinion certainly was, in the main, that the House of Commons had betrayed the interests confided to them, and that our Noble Viscount had aided, abetted, and encouraged, if not actually instigated and led them in the surrender of their privileges. Did our Noble Viscount know that the House of Commons had sustained a marked diminution of its power since Parliament met—that his Chancellor of the Exchequer was now a priest with "maimed ribs?"—that if he is still king of finance he has a victory over him in Lord Derby? If our Noble Viscount had only dissolved Parliament, and gone to the country upon the question of leniency or severity, did he know that he would have such a majority as to render his opinion in modern times almost irresistible? Yes, that was the fact, and our Noble Viscount would be good enough to believe it on his solemn assurance. As to dealing with the Lords, there were as many ways of shunting them up, of putting them down, of cutting their claws, and drawing their fangs as a Frenchman has of cooking an egg. If these easy and effectual methods of vindicating the privileges of the Commons had not been undertaken, it was consoling to know that there was one person, and only one person, to blame. That person, he regretted to say, was our Noble Viscount, who had committed the very worst kind of treason to a constitutional state. Still, let not the Noble Viscount take his course too much to heart. Perhaps the Noble Viscount, not anticipating this unmaking of the Birmingham battery, might not have been so ready to load and prime. If so, and he rather hoped such might be the case, perhaps the Noble Viscount would give his best consideration to these humble suggestions from his sincere friend J. B., and be prepared at some future time, before Parliament broke up, to adopt them. All this was said in a tone of great moderation—the tone, in short, of the House of Commons, the which, as everybody knows, differs as much from the tone of the Free-Trade Hall as the French of Stratford-at-Bove of Chaucer's Prioresse from French of Paris.

Our Noble Viscount's reply to Mr. Bright is praised as one of the best bits of off-hand, impetuous, extempore dealing which the whole British has afforded since a Scoville, too, that has been remarkable for good and effective speeches. I am not disposed to question the verdict. But I have some private reason to doubt whether the scope and tenacity of Mr. Bright's speech took our Noble Viscount entirely by surprise. There is, indeed, a courtesy of Parliament which is little known among the general public. To make a personal attack upon a Minister, or even a private member, without a previous hint, is considered shabby. Even a *Hornet* writes a note to Sir C. Wood, or Mr. Walter, to tell him he is going to "pitch into him." Public speaking is not so easy a thing as the stranger in the gallery is apt to think, after listening to Gladstone. So, if a statement is to be made on a matter of house or foreign policy, it is considered the "correct thing" to write a private note to the Minister concerned, in order that he may think the matter over and have his answer ready. To do otherwise would be to transgress the unwritten law of Parliament, as much as if a pugilist hit a man below the belt, or struck him when down. For these reasons, and others which I am not called upon to disclose, I incline to think our Noble Viscount did not come wholly unprepared to the "wordy war." His President of the Board of Trade, who could not be wholly ignorant of Mr. Bright's intention, was, perhaps, charged to communicate an outline of his speech, and to say that he did not wish to provoke a debate.

Upon any interpretation, however, and with all these aids and qualifications, our Noble Viscount's reply to Mr. Bright was as unexpected as it was manly and spirited. He would not submit to be lectured and schooled by the member for Birmingham upon the duties of a Constitutional Minister. There was a touch of haughtiness in the tone with which he declared that he required no stimulus from Mr. Bright to do what he conceived to be his duty. As to the assertion that if he had dissolved Parliament upon the constitutional question connected with the Paper Duty, the electors would have sent a large majority to Parliament in his favour, he was wholly at issue with Mr. Bright. This opinion of our Noble Viscount, which, if one may give a guess, must have been uttered at more than one Cabinet Council, carried as little conviction to-night as the Cabinet Ministers could send him as when it was expressed in Downing-street. It played the Chancellor of the Exchequer, indeed, into a sublime state of Homeric anguish and delirium. Our Noble Viscount was, in fact, talking to his own Ministers. He was belabouring Mr. Bright, but the member for Birmingham was, in fact, only the whipping-boy, whose punishment was vicarious, and whose amendment was not the thing which the Dominie had most at heart. The Pythias of the Damon under fastidious wined at every stroke. He would have intercepted that vigorous aim, and averted those heavy, ineffectual, and well-directed blows. What consolation the President of the Board of Trade administered to the member for Birmingham, after he was subdued, we need not inquire. His first inquiry was probably to go to his office in Downing-street, and pen his resignation.

And all this fun went on in an empty House! Bright, cheekmade and flagellated, Milner Gibson lacerated, Gladstone humiliated, and not a single Tory leader in the House to put our Noble Viscount on the back, to launch ironical cheers at the member for Birmingham and his Ministers on the Treasury Bench! I have had to describe the scene twenty times to Sir Fozels and his friends. Our Noble Viscount's speech has not made him unpopular among the legislators in either House. Some call him a "gallant, spirited, and plucky old gentleman;" others as "old brick," which probably expresses, in the vernacular of the speakers, pretty much the same thing. I can reach for the dignified tone, and the entire composure and self-possession of our Noble Viscount; and I must be permitted to say, that a more concise, and at the same time, a more effective reply, or one abounding in harder hits, I never remember to have heard.

Friday Mr. Bright was conspicuous by his presence, on Monday he was equally conspicuous by his absence. Our Indian Budget without Mr. Bright, is the play of "Hamlet," "with &c. by special desire." Such a budget became an established institution of the country when Mr. Bright used to rule over the Indian Minister

with a rod of iron. It was got up at his entreaty. The hon. member for Birmingham has been strenuous in denouncing when it was coming on. Monday was named, and on Monday night Mr. Bright was absent. Nor was he singular in his absence. At no period of the debate were forty members present. The members on the Opposition benches proper varied from one to four. Our Noble Viscount sat it out with a patience and constancy above all praise, and a Lord of the Treasury or two established a claim to promotion by bearing him company. Subtract the number of those who addressed the House in the course of the evening from the number present at any time during the debate, and the result would leave the present writer.

I went down to scrutinize and admire Sir Charles Wood. He well repays the careful attention of the Parliamentary student. My tastes are, I think, peculiar, and it would, perhaps, be unreasonable to quarrel with my brother M.P.'s, because, on Sir Charles's benefit-night, there was no one in the theatre but the actors. A man may admire Shakespeare, and yet decline to hear him read with the tone and elocution of a macaw. So a member of Parliament may wish well to India who would rather not hear Sir Charles Wood talk for an hour and a half, or even ten minutes, on any subject whatever. Let us not, therefore, blame Lord Stanley too severely if, while the Secretary of State for India was yet speaking, he rose, and, in a fit of absence, left the House. It is not that the heir of the house of Derby cannot cut any quantity of the driest Parliamentary saw-dust. He can speak down a blue-book with statistical tables, and make a lucid descent upon McCulloch and Bastiat. India is his forte, and he will be known to posterity, among other favourable claims to distinction, as the first Secretary of State for India. But even Lord Stanley must draw the line somewhere, and he draws it at Wood. I think, for my own part, that it is a pity a Minister or any other man should make a turkey-cock the model of his parliamentary oratory. The "wobble, wobble" of that noble bird has, no doubt, a certain music, but it is pleasant only by its association with Christmas langousts. If a public speaker will not open his mouth wider than would admit a pea, he must lay his account at being as insipid as Sir Charles Wood, and half his words like those of that right honourable gentleman, may as well be Hindostani or Telugu as the English of Queen Victoria.

I see I shall have to demand space during the recess to say something about parliamentary oratory, the training necessary to make men effective and graceful speakers, and the training which our young men who devote themselves to public life actually receive.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

THE scheme of the "International Exhibition of 1862" will, it is expected, be fully launched in a few days. It is understood that it will partake more of an industrial character than that of 1851. The subscriptions to the guarantee fund considerably exceed the sum prescribed, which was £250,000; so that the trustees will run no risk in setting the thing going, and the favourite locality of South Kensington will be sufficiently convenient and central for the purpose. We believe that the Royal Commission will soon be issued, after which the preparations will be at once commenced. We trust that in the construction of the Council care will be taken not to entrust the exclusive management to the jobbers and speculators who were so ready to turn the success of the Exhibition of 1851 to their own profit and advantage.

One of the most expensive officials of the Turner Exhibition is the establishment at South Kensington, which is ludicrously named the Department of Science and Art, and which has already expended 160,000*l.* on a mass of ugly buildings, which are a standing opprobrium to art and architecture, and the establishment charges of which cost the country no less than 95,000*l.* a year—a sum only 5,000*l.* a year less than the British Museum, and about four times the cost of the Home Office, which presides over the internal Government of the United Kingdom. These estimates are either neglected by the House of Commons, or fall under the criticism of some big game hunters for Marlborough, Westminster, or Lansdown, who are generally in utter ignorance of the subject.

The administration of justice has exhibited some strange scenes of late. The most fantastic and the most deplorable is the conduct of the High Sheriff of Surrey, Mr. W. J. Evelyn, a county gentleman of fortune and family, and formerly M.P. for the county. This gentleman first undertook to advise the judges on a question of manners; and having apologised and got over that little difficulty, took to lecturing him upon a question of law. In the first instance, Mr. Evelyn might be pardoned for a good-natured effort to obtain for his neighbours the thanks of the judge for their attendance at grand juries—in numbers more than were required; but when he proceeded the court with a charge against the judge of acting contrary to law, it was clear that he identified himself too strongly when suffering from the temperate and well-merited castigation inflicted upon him in open court by the Lord Chief Justice of England. The Sheriff is, no doubt, the highest executive officer of the county—deriving his authority, like the judges, from the Sovereign; and High Sheriffs have, in matters properly under their jurisdiction, played important parts in the earlier constitutional history of England. But they are no more entitled than the lowest officer to presume to decide what is illegal and what is not. On the contrary, their duty is to assist, and not to assist, the judges in the discharge of their duties, and to cause the law to be respected, and the decrees of the courts to be carried out.

A scene of a Trans-Atlantic character is reported in the Jersey papers, from which it appears as if the leading advocates of the superior courts there are in the habit of squabbling in court, and of settling their disputes in the neighbourhood by batons, assisted by their friends and relations on both sides. The report of the royal commission of inquiry into the administration of the law in Jersey is nearly ready, and will not make its appearance an hour too soon.

Parliament has, within the last day or two, passed several bills, and made

considerable progress in supply; notwithstanding which the season cannot well be brought to a conclusion before the beginning of September. Lord John Russell has left town for Aberfeldy, the residence of the Duchess of Kent, near Balmoral. Sir George Grey is in attendance upon the Queen. But Her Majesty will be attended by Lord John Russell on her return to town and his visit to her maternal relations in Germany. Her Majesty will first visit Cologne, and subsequently proceed to Berlin, notwithstanding the contradiction of a weekly newspaper which pretends to convert information on these subjects.

Mr. Swinburn still continues "to rain over us," and we suppose will have his fiery days out. There is already a considerable destruction of the growing crops of corn in the clayey and undrained soils; but in the high and dry parts of the country there is still hope of saving a considerable harvest, if we have two or three weeks of sunshine and fine weather. The grass, the gardens, and the fruit are all doing well.

The Royal Gardens at Kew are eminently worth a visit at this time of the year. The flowers (almost endless in form, size, variety, and colour) in the great *parterre*, or Italian Garden on the Terrace in front of the Palm House and Lake, and those on the borders of the Grand Promenade, are now in their greatest beauty and perfection. The Conservatory is very remarkable just now for the exquisite beauty and variety of foliage, and the gorgeous splendour, artistic combination, and skilful contrast of colour, of the curious and costly plants, now in blossom, garlanding, festooning, and adorning the crystal walls, roof, and centre of this most unique and beautiful little Temple of Flora. Several tropical plants are also in flower in the old and new apocynums. The love of flowers is an innocent and, largely, a general taste, and these beauties are now brought within convenient distance of the mass of tired-out Londoners of almost every class.

The Park at Battersea is even still more accessible. The enlargement and improvement of the ample sheet of ornamental water are nearly completed, and will add greatly to the beauty and interest of the landscape by which the Park is surrounded. The rose-garden, flower-beds, grotto, and gymnasium are nearly finished, and will soon be open to the public. There will also be provided a couple of drinking-fountains for public use.

These improvements are a good rest against the ride in Kensington gardens, even if the great ventral grievance were made out, which we are far from believing. The only real grievance of the pedestrian party is the little place through the gardens—some twenty or thirty yards. By diverting this a little lower down, and protecting it on both sides, the new and old rides may be connected without annoyance to anyone, and a gate may be opened at the top of the new road into Bayswater. This would be a very general convenience, and would dispense with the necessity of the equestrians turning back along the inside of the Bayswater-road, where the children and nursery-maids of Paddington have to pass. The Borough of Morylebone is not, after all, the whole community, and everything must not be considered to be in a public garden. However, the ride is closed for the season, and before next winter it will be easy to re-arrange it so as not to cause inconvenience in any quarter.

Mr. Cowper's speech in Hyde Park has been commented upon in the House of Commons. However anxiously it may be for a Minister of the Crown to turn stump orator, we think that Mr. Cowper defended himself in a simple and manly way, by his unprepared and *impromptu* defence from an attack which he so unexpectedly encountered. If Mr. Cowper sinned, it lies not on the side of exclusiveness, but rather in a perhaps over-sensitiveness to public opinion—a fault on the right side.

Literary folk and curious folk are all debating, with *pro* and *con*, a certain very startling, and, we must add, very interesting, article in the *Cornhill* of this month. In a paper profoundly dealing with "Town and Table Talk," surely a notice is not out of place of the asserted achievements of the latter important article of furniture in this so very unexpected respect. Are these marvellous passages—the miracles told as occurring, roundabout in our very neighbourhood—real facts, or a "mockery, a delusion, and a snare"? Are they, absolutely facts, or, absolutely fables? Surely science—surely our detective powers—are competent to expose the folly of these suppositions of moving tables and of salutary chairs "of invisible orchestra, and of shadowy penatulations? If they are deliberate misrepresentation, or only rags, fancy, or juggler's tricks of the half-witted—perhaps over-stimulated—news, let them be put down. It is clearly the business of science to examine into these matters, not to "fool, pooh!" the whole evidence because we are reluctant to grapple with it. Either science can do this, or science itself must be explained by some other science.

Miss Katharine Hickson, a very clever actress in a style infinitely less popular than that to which we—mean the "high style"—has been playing excellently a series of parts in the first-class drama at the St. James's Theatre. A short runner—as it has been called—season has been commenced here, to replace, and if possible, to follow on to the successful campaign of last winter, when Clara St. Clare delighted us with her singing, and Miss Lydia Thompson, eight after night (two must say somewhat too continuously), was dancing into the hearts of the quiescent British lings.

There is disagreement amongst the Committee of Taste appointed to superintend the raising of the "Guards' Memorial" in Waterloo-place. Slowness of progress with this Memorial or Mausoleum—for it looks much more like the latter—is the consequence. Did every one see more absurd objects than the salient real canon, with the ambitious, but defeated pop-gun in the centre, which adorn the northern face of this work?

Some time back exertions were made to set up a replica of Fido's beautiful statue of Lord Hardinge, erected for Calcutta, on its site now disfigured by the Guards' Memorial. It is now in contemplation to erect this admirable work of Art between the Athenæum and the United Service Club. A committee is in course of formation, with whom some of our leading artists have consented to co-operate, in order to preserve a memorial that is really creditable to British Art.

The Floral Hall of the Royal Italian Opera, Covent-garden, has opened with

its brilliant vocal and instrumental concert. Prince George Gallitzin is a real ornament to the art which he illustrates so enthusiastically. Ballé, our renowned native composer, is, we are given to understand, busy with a new opera, of great promise, for the Tyne and Harbours management of English Opera.

Messrs. Leigh, Sotheby, and Wilkinson, will commence next Tuesday, August 22nd, and the following days, a sale of very choice books. Many of the lots are both interesting and scarce, and to the antiquary, as well as the book collector, the sale will prove interesting, as containing a singular collection of rare and expensive binding of the fourteenth century, in a state of great preservation. Among the lots we notice the first edition of Waller's "Poems," 1645; the first edition of Spenser's "Faerie Queene," 1591; Woodfall's first collected edition of "Janin's Letters," and a fine copy of the first edition of Shakespeare's "Poems." Lot 85, Didot, Paris, 1813, is a marvellous specimen of billiardié skill—"Jean de Meun, le Roman de la Rose," being printed on rose-coloured paper of which only three copies were taken off, wonderfully bound in green morocco, and the sides and backs looked all over with roses, the centre occupied with a bunch of roses laid in different colors.

Messrs. Puttick and Simpson have also commenced a sale of books this week, which will be continued during a portion of the next. Among the lots will be found a copy of Cranmer's Bible, Rome, 1566; and the first edition of Milton's "Paradise Lost," 1669.

The unpublished letters of Pope, which Mr. Murray has in his possession, will appear in the forthcoming edition of Pope's works.

Mr. Edward Mayhew, author of the "House Doctors," lately published by Messrs. Allen, of Ludlow-street, has just entered into an arrangement with the same firm for a new work relative to "Dogs," which will be treated much in the same manner. Mr. Henry Mayhew has also made arrangements with Messrs. Allen for a new work on Martin Luther, to be entitled, we believe, "The Footsteps of Luther."

Under the title of the "Royal Album," Mr. J. E. Mayall, the photographer, of Regent-street, has given to the public a series of portraits of Her Majesty, the Prince Consort, and the royal children. Many simple folk will be surprised to find how much like "other people" the royal family can be seen in pictures. Here we have an English lady and her husband, with a somewhat plain, dressed far more plainly than many of the members of our wealthy classes; without any appearance of crown, sceptre, throne, or royal purple robes, looking happy and at home; and the children looking like children, and not according to the popular and delusive idea of princes. They are beautifully executed, and will add largely to Mr. Mayall's already extended fame. These portraits are doubtless valuable from the fact of their being published by express wish and permission of Her Majesty, and such is the demand for them that the wholesale publishers are already requiring 60,000 sets.

THE EMBANKMENT OF THE THAMES.

BACK-BOOK literature has within the last few days received a further addition in the shape of a bulky volume, containing the evidence and report of the Select Committees appointed to inquire into the very ancient question of the Embankment of the Thames. The appearance of such a volume is evidence of the magnitude of Embankment, to the noble river from which their country has derived so much of its wealth at home and commanding influence abroad, and affords proof of the spakly with which we may be brought to regard works of great and admitted importance at our own doors. Ages past, when London was a mere collection of wretched huts, bounded by the Fleet Ditch and the Wall-brook, and the marshy river was studded with a few galleries, the Romans appreciated the value of the Thames, and commenced that work of embankment which a Committee of the House of Commons has just recommended should be completed. Among the other advantages which we owe our conquerors, let it never be forgotten that it is to the legions of Rome we are indebted for the preservation of the Thames. The marshes of Kent and Essex would long since have disappeared; the mouth of the river would have been choked up, and the tides would not now ebb and flow in their ample course through the "unostentatious tuberosity of civilized life—the capital of England; had not the men who wielded the pickaxe and the javelin known also how to handle the spade and the pickaxe. The kings and queens of the ancient Britons could never have brought their subjects, any more than modern rulers have been able to induce their lieges, to provide the "ways and means" for improving the river. Our painted ancestors cursed loudly, by their wicked gods, at the Roman governor who "consumed their bodies and their lands; and their wives and children, took the fens of their own *Caer* Ludd, and the descendants of the Ancient Britons (in Parliament assembled) have ever since declared that they will not find the money to complete the work they commenced. The consequences of this hereditary opposition to a great work are to be traced in the pollution of the river which has rendered necessary a colossal system of drainage; the formation of shoals and banks, which everywhere interfere with the navigation; acres of mud on each side of the river, which for the half of every day give forth their pestilential vapours and carry disease into the crowded portions of the metropolis; unsightly projections, dilapidated wharves and buildings, rising up—everything, in short, which makes the Thames the condition of the Thames and its banks a disgrace to the country and to the age we live in. Englishmen of the present day love to talk of Father Thames, which, godlike, with "unwearied bounty flows," and "strong without rage without overflowing full," but few care to inquire how much of those qualities which made him so early enlisted in the ranks of the gods have just glared at.

These works were the subject of repeated edicts and royal commissions, giving the most minute directions on the subject, and which extend in a long series from the earliest of Edward I. "for the view and repair of the banks betwixt Lambeth and Greenwich," to the charters of Charles and James, granted to the Corporation of London.

Owing to a great measure to the neglect and inefficiency of the Board of Conservancy, the river has been encroached upon in a most irregular and injurious manner. Persons having property on the sides of the Thames were, by interest or favour, allowed to acquire more land; wharfingers have con-

stricted bars and barriers on the shore which seriously affect the free action of the tide. At length the total unfitness of the Board for the purpose for which it was formed became so apparent that its constitution was entirely changed. By virtue of numerous charters and grants the conservancy of the river was given to the Mayor, Commonalty, and Citizens of London, and their jurisdiction extended from Staines to Yantlet Creek, and from Yantlet, which joins the Thames and Medway, up the Medway as far as Cockham Wood. The charter of this Board was wholly unacquainted with the duties of conservators. The last chairman was an importer of and dealer in spruce; his predecessors were a baker and an upholsterer. The result of the conservancy by the citizens was, that 655 persons had been allowed to encroach on the river, and obtained the right of doing so by paying to the City an annual sum amounting to £1,100. The old Board has, however, passed away, and the conservators now consist of a body partly nominated by the Crown, and partly chosen by the city authorities.

The earliest proposal to embank the Thames within London, upon a regular plan, was made by Sir Christopher Wren, immediately after the Fire of London; his proposal being to leave a commodious quay on the whole bank of the river from Blackfriars to the Tower; and the 19th of Charles II., for rebuilding the city of London, gave authority for carrying out the plan, and enacted that no house, out-house, or other building whatever, was to be erected from Tower Wharf to Temple Stairs within forty feet of the river, cranes and sheds for present use only excepted. A portion of this work was actually executed. Embankments, however, were constantly made upon this "forty-feet way," and finally, in the year 1821, this act of Charles was repealed, notwithstanding a most determined opposition on the part of the Corporation of London, and the inhabitants of Upper Thames Street and its vicinity.

A century passed away after the Fire of London, when the idea of embanking the river was once more brought forward. A plan was submitted to the Corporation of London for raising £200,000, for dealing with the north side of the river, between Paul's Wharf and Millfold Lane, the distance being about half a mile, and further determining the further details of the navigation of the Middle and Inner Temple, and other parties, by which the frontage of the Temple Gardens was ultimately included. The terms in which this proposal was submitted to the Corporation, would apply with scarcely a verbal alteration, to the state of things in the present day. The wharves, says the report, within the limits referred to, form an irregular and disagreeable outline, and afford the owners of some an undue advantage over others; "they slacken the current on the London side, and throw the force of the stream upon the Surrey shore;" there is a "constant accumulation of sand and mud and rubbish, which not only destroys great part of the navigation, at low water, but renders the wharves inaccessible by the loaded craft, even at high water, unless at spring tides. The mud and silt thus accumulated, notwithstanding the frequent expense the wharfers are at to clear it away, is, when not covered with water, extremely offensive, and in summer-time often dangerous to the health of the neighbouring inhabitants." An Act was finally passed (7th Geo. IV., c. 37) to carry this embankment into effect. Another hundred years has nearly passed away, and the great and complete work is still under consideration.

We learn from Mr. Thomas Page's excellent letter to the Duke of Newcastle, printed in the proceedings of the Commissioners for the Improvement of the Metropolis, in 1827, some interesting particulars of other encroachments upon the river. In the early days of the Middle Ages, the wharves from Westminster Hall, the present line is now rather more than 300 feet distant. At Whitehall there has also been an accession of land gained from the river. The end of Manchester-court, now Manchester-buildings, formed at one time a projection into the river; it is now 44 feet in a recess, and the gardens of Richmond-terrace and Whitehall form projections of 84 and 63 feet in front of the old lines. To these embankments, and that of Hungerford Wharf, are due the formation and increase of the extensive mud-banks in that locality. Arundel House and gardens, which adjoined the present site of Somerset House, was converted into streets, which were advanced 36 feet into the river, to the line of old Somerset House, Burnard-yard and the Savoy remained unaltered until 1770, when the Adelphi-terrace and the wharves under it were constructed. Messrs. Adams, "the Adelphi," as they were called, applied to the Corporation, without effect, for permission to make the embankment, and after encountering the most strenuous opposition of the Corporation at every stage, they at length obtained an Act of Parliament for the purpose (11th Geo. III., c. 34). The wretched condition of the shore in front of this terrace is the best evidence that this partial and piecemeal system of embanking has no beneficial effect in improving the state of the river.

The condition of the river at length attracted the attention of Sir Frederick Trench, who, in 1827, published his "Collection of Papers relating to the Thames Quay." His proposal was to embank a portion of the northern shore of the river between London and Westminster Bridges, and to make it available as a public thoroughfare. In the 18th of February, 1826, Sir Frederick obtained leave to bring in a bill for carrying his improvements into effect. There was considerable opposition manifested, even on the motion for leave to bring in the bill; but a majority of forty finally voted in its favour. The late Sir Robert Peel was one of the opponents of the bill, on the ground that the embankment would, if constructed, interfere with the view of the river from the streets leading to the Court of Common Council. This objection was also influenced the opinion of the House, and among them, that the information then possessed as to the effect of the removal of old London Bridge, was too imperfect for immediate legislation; and after a petition presented against the bill on the 15th of April, 1826, it was finally dropped. Sir Frederick Trench, however, still kept up the agitation of his favourite subject.

The subject was once more revived at the time when the select committee was appointed on the building of the New Houses of Parliament, and adopted the plan of advancing the site of the present building some distance into the river. The Corporation then directed surveys to be made of the state of the river, and a committee reported to the Committee of Common Council in favour of various plans for improving the navigation of the river, including, among other recommendations, some uniform system of dealing with the banks of the river. On the 30th March, 1840, the Corporation applied to Parliament for powers to embank both sides of the river, between

London and Vauxhall Bridges. A select committee was appointed, "to report its opinions and observations thereupon to the House, together with the best means of carrying the same into effect." The committee first found with its inquiries for above four months, and suspended its sittings without coming to any decision, and reported that in consequence of the near approach of the prorogation of Parliament, it was obliged to conclude the inquiry without the examination of various plans and witnesses, and that upon the general opinion of the importance of the navigation, and so without any embankment, in the present state of the inquiry, it gave no opinion." Then followed another report, on the navigation of the river, founded on a general survey extending from Putney to Gravesend, and which was presented to the Common Council on the 29th January, 1842, which recommended the time at first time a solid embankment, for the purpose of meeting the complaints which had been made of various projections on the river, by "laying down a line beyond which all present and future encroachments upon the banks should be removed, by whatever authority, and under whatever circumstances made, and regardless to whom they might belong." How far the Conservators would have acted upon the spirit and letter of this very sweeping recommendation, we may judge from their previous conduct, shown in the frequent leaning to private interests, and the occasional indifference which they displayed to the condition of the river.

On the 23rd of November, 1842, a royal commission was appointed "to inquire into and consider the most effectual means of improving the metropolis, and of providing increased facilities of communication within the same." This commission consisted of the present Duke of Newcastle, Lord Lyttelton, Lord Osborne, Sir J. C. Herries, the Lord Mayor (Alderman Humphreys), Sir Robert Inglis, Sir Charles Lemon, Mr. H. T. Hope, Mr. Henry Gurney, Mr. A. G. Campbell, Mr. N. G. Gurney, Mr. J. G. Gurney, and the late Sir Charles Barry. The commission reported in January, 1844. The first and most important question to which they directed their attention was the construction of an embankment on each side of the river, and they came to the opinion that "for remedying the existing defects, and for further determining the further details of the navigation, an embankment of the river would be the most effective measure." That such an embankment might be advantageously combined with the formation of a carriage and foot line of communication, between Scotland-yard and Blackfriars Bridge, whereby the great objects of public recreation and health would be promoted, and consisting of the improvement of the existing communication between the eastern and western districts of the metropolis. And further, that by the adoption of the general principles presented in a plan prepared by Mr. Page, these benefits could be obtained without detriment to the trade on the shores of the river; they also proceeded to ascertain the cost of the work, and in what manner the same could be obtained, so as to press with the least possible weight on the inhabitants of the metropolis and its environs.

Again, there was a Committee on Metropolitan Improvements and Communications, in 1855, and another Bill-book was circulated, and illustrated with a profusion of drawings and plans, and the embankment of the Thames was approved of as the best and most feasible mode of carrying out the plan of the series in the publications of the present year. The report of the committee printed on the subject would suffice to form a small portion of the proposed solid embankment. It will be seen from this historical review of the question of the Thames Embankment, that it is one of the most venerable of British grievances; and it was only, we presume by an oversight of the Baronet's dagger, that we have not noticed its character as a national grievance. We shall point out the advantages which would result from the completion of the work, and the manner in which it is proposed to carry it into effect.

"CASH PAYMENTS."

THOMAS CARLILE has declared cash payments to be the sole *modus* between man and man; and, for once, he appears to have hit upon a truth. Disciples of that school of Political Economy in which John Ruskin is a distinguished preacher, would have us prefer preferences to shillings, and conduct our business upon sentimental principles. Those who cultivate this "roots of honour" in obedience to such teachers, will find them sprouting, before long, in a Bankruptcy Law Court. The true "roots of honour" are cash payments. If Mr. Ruskin, senior, had acted throughout his long business life as Mr. Ruskin, junior, preaches, the doctrine of sentimental trade would not have been sent forth from his lips, and the world would be nothing like hard work for a bare living to brush the elbows out of a man's brain.

Cash payments are the sole *modus* between man and man, and have been from the remotest antiquity. In the shield of Achilles, as described by Homer, to strike a blow, to represent, to pay, to give, to receive, to demand, and defendant, contesting as to the amount of "blood-money" to be paid by the accused. In the Northern and Teutonic laws of Europe the varieties of "blood-fines," ranging from homicide to the squeezing of a free man's ear a little too tightly, are set forth in the most precise terms. The Saxon law is full of such minutiae; and the English law is not very far behind. We now draw the line at murder. Mr. Greenleaf has not allowed to compound with the family of the slain; but violent assaults of different kinds may be indulged in at various prices. You can have a splendid article in this way, from most magistrates, for about five pounds; and an inferior quality of assault, at two pounds. The old law of the "assault" assigns a price to the payment to the wronged in proportion to the injury inflicted. If one man struck another on the head, so as to draw blood and cause it to flow to the earth, the assailant had to pay to the assailed six hundred pence. If the blow was so severe as to crack the skull, the price was nine hundred pence. Modern civilization has acted on the principle of these laws of the "assaults," and Lord Campbell's Act restored the old system of "blood-fines" by compelling the wrong-doer to bestow upon the sufferer, or his heirs, such pecuniary compensation as a jury may determine.

While the modern law, however, has provided a scale of penalties, on the one hand, to be inflicted upon assaulters and clumsy people, it has provided, on the other, a loophole for escape in the Insolvent Debtors' Court. A jury may impose a "blood-fine," and a commissioner may decree that the insolvent is unable to pay it. While the wrong-doer is marked black in one department of law, he is washed white in another. At this point it is that the system of assurance steps in, and secures that cash-payment to mankind

tolling in the fields—their active utility may be far lower,—but they have got the magic garments.

In the appreciation of the police force, this east-west-takes an exactly opposite direction. The army would be looked upon as nothing without their uniforms; the police are looked upon as nothing with them. Wherever half a dozen people are gathered together there is a policeman in the midst, but it is the mob which brings the officer, and not the officer the mob. No town, or neighbourhood, or village ever showed any respect for the plain blue suit with white binding, and the shabby hat; no drill-meetings of any divisions, from A to Z, were ever attended by an eager public; no triumphs of the woe-lan truncheon have ever been immortalized on canvas by illustrious battle-painters. Even at the doors of sixpenny photographers—doors that you cannot pass without being stopped by loungers—you may see a hundred family-looking soldiers figuring in various positions, but never a single muddy-looking policeman. His pay may be good, his labour may be useful and necessary, but his uniform is not popular, because it is not provocative of wonder.

The moment, however, the policeman returns to "plain clothes," without ceasing to be a policeman, he is simply repudiated by the public for their former neglect. No celebrated low-comedian working along the Strand,—"an literary 'lion'" at an evening party,—no pugilistic champion after a fight for the belt,—can produce more excitement than a well-known police officer in "plain clothes." Something very serious must be in the wind when the "unfathomable" and "unfathomable" 8-ozent button is seen in a common "every-day track-suit," and a "private" "half-shilling of reward" for any round red face of "Mendous the detective" is recognized under a wide-awake hat, over a theatrical-looking smock-frock, and between a pair of false red whiskers, the little knave who recognises him have no doubt that some gigantic robbery will be immediately exposed, or some "mysterious murder" unearthed from his den. That never reflect that "Mendous" is known to them, he may be and is known to hundreds more, and especially to those regular criminals whom he is supposed to be working to destroy. He whisks—he nois—he puts on many ostentatious disguises—he rejoices in the name of a "detective"; he is often puffed on the bill by magazines; he sometimes does a little private business as a spy, and he rather enjoys the growth of crime, by stopping the appointment of a real preventive police. He may be familiar with all the small thieves of the metropolis, as many red-coaters and sewer-men are familiar with all the small rats; and in neither case are the vermin checked or destroyed before they develop into far more serious nuisances. "Detective Mendous" plans the plan of every policeman in plain or eccentric clothes, is to watch and tend the criminal fruit until it is rotten with ripeness, and then to shake it gently into the lap of justice. He never tips it in the bowl. A trial for petty thieving brings as little reputation to the "detective," as it does to the Old Bailey barrister. So, petty thieves are never marked as they are left to grow. Sometimes they not only grow, but escape the net that is laid for them, and these are the "detective's" failures, which we seldom hear of. We always hear of the successes, and thus the popular belief in "intelligent officers" is kept up.

When we come to exceptional crimes—to those enthusiasts of individual iniquity which are even greater disturbers of society than the steady rife of the dangerous classes—then the "detective" system is a "detective" system. In the first place, it never moves without the promise of a heavy reward, and its notion of its own value is based upon its reputation. In the next place, it seldom does more than constitute itself a centre to which any information may flow; and what is brought to it voluntarily it takes credit for discovering. Its silence is seized, the silence of those who have really nothing to say, and its pander "investigations" never derives to gain time, in the hope that something may turn up.

A little reflection ought to convince the most able believers in the detective system that a policeman in plain clothes is not so vastly superior to a policeman in uniform. To make a "detective," such as he is, the "intelligent officers" are supposed to be, you require a most remarkable combination of qualities. You must have a power of observation such as is given to few, and a logical faculty such as seldom exists in conjunction with this power of observation. You must have the qualities of patience, endurance, and self-possession, no slender degree of initiative talent, and a perception of all the finest shades of evidence. Edgar Poe had many requisites for a good detective; and that of Charles Dickens, we might possibly get the particular combination that we want. It must not be forgotten that the business of a detective, even when it is set in motion for the pure benefit of society, has generally too much of the spy about it, and the feelings of a gentleman. Those who are best adapted for skilled detectives are prevented from doing the work by high scruples and high taste.

The policemen in plain clothes—the regular and only "detectives"—may do their work as well as their ability will allow them; but it is almost to suppose that they can see much farther into millions than half of their neighbours. Their inflated reputation has been swollen more by the stupidity of criminals than by their own sagacity. A foreign clerk, a fraudulent banker, never appears to have any inventive genius, and while one is sure to go to Liverpool to embark for America, the other is as certain to go to Paris. The "detective" has only to hasten to one of these places, and secure his prisoner, when the public will exclaim, "What a very intelligent officer!" The officer may be intelligent, as far as his intelligence goes, but this is never very far. He will be able to unravel some complications on a level with his own power; but when any superior mental agency has been at work, he is thrown entirely off the scent. The Waterloo-bridge tragedy—still an unsolved mystery—is a proof of this; and no detective system ought to hold up its head as long as that murderer remains undiscovered. It is a lasting disgrace to any body of men, who have nothing else but "detecting" to do, that they have never got to the bottom of this notorious crime. The child-murderer near Fome will also most probably escape, if the "investigation" be not taken at once out of the hands of professional "detectives." They have already wasted a couple of months, during which they appear to have suspected most people. They arrested two; but as neither of the charges could be sustained, the solution of the mystery appears as remote as ever. If the decision about the sagacity of policemen in plain clothes is not to be dispelled, let us at least not to employ "detectives" as to defeat the ends of justice.

INEDITED LETTERS OF LORD NELSON.

WE are indebted to the courtesy of Colonel Fulke Greville for permission to lay before the public an interesting collection of Lord Nelson's letters, which descended to him from Sir William Hamilton, and which are now printed for the first time. Sir William Hamilton died in 1803, and willed his Pembrokeshire estates to his nephew, the Right Honourable Charles Francis Greville, upon whose death the property devolved upon Colonel Greville's father, at whose decease Colonel Greville came into possession. The letters are strongly bound in a single volume, and have evidently been preserved with great care, and noted, numbered, and endorsed throughout, frequently in the handwriting of Sir William Hamilton. They range over a period of nine years, with long intervals between, beginning in 1793 and ending in 1801, both years inclusive. They are chiefly addressed by Lord Nelson to Sir William Hamilton; but there are also occasional letters from Lord St. Vincent, Sir William Hamilton, and other persons, almost exclusively relating to public affairs; some official communications, the substance of which has been incorporated in the history of the time; and sundry miscellaneous papers and memoranda relating to private and personal matters.

The moment at which the correspondence opens is one of prominent interest in the life of Nelson. He had just made Sir William Hamilton's acquaintance, and was on the eve of the most responsible and important part of his career. In order to render the allusions in the early letters perfectly intelligible, it will be necessary to recall a few of the incidents which preceded Nelson's first visit to Naples.

From the age of twelve, when he entered the navy in 1770, he had seen a great deal of active and varied service—had sailed to the West Indies; been employed in an expedition near Captain Lutwidge, to determine whether a navigable passage could be discovered between the Arctic Sea and the Pacific Ocean; and had served subsequently in the East Indies, the North Sea, the Atlantic and other stations, giving abundant promise, on many memorable occasions, of the zeal, energy, and courage which afterwards rendered him the idol of the fleet, and the glory of his country. During these events and diversified services in different climates, his health suffered, and he was, more than once, compelled to return to England to recruit. These interruptions, however, only served to stimulate his ambition, and to increase that ardent craving for work which seemed incapable of exhaustion.

But devotion to his profession was not the only passion by which his eager youth was distinguished. Nelson was fond of the society of ladies, and to use the expressive language of one of his biographers, he was extremely "susceptible of the tender passion." When he was only twenty-four years old, we hear of a friend of his in Quebec preventing him, by a little gentle violence, from destroying his prospects for life by forming an imprudent connection; and two years afterwards, when his income did not exceed £130 a year, he fell in love with a young lady at St. Omer, whose fortune did not exceed £1000; and upon this interesting occasion we find him writing to his uncle to request that he will allow him £100 a year to enable him to marry, assigning, in proof of the necessity of entering into that state, the philosophical proposition that "life is not worth preserving without happiness." What became of that romantic attachment is not known; but that it was not attended by any serious consequences may be inferred from the fact that, two years later the secret is clung to Antigua, where Nelson is discovered absorbed in the charms of another lady, "whose equal," he declares, in one of his letters, he "never saw in any country, or in any situation." This time the enchantress is Mrs. Montrey, the wife of the Commissioner; but the spell is destined to be abruptly broken. Mrs. Montrey returns home to England, and the gallant sailor is inconsolable. In herance he writes to his brother that the country has become intolerable to him. "It is barren, indeed," he says; "I went once up the hill to look at the spot where I spent more happy days than in any one spot in the world. Even the trees dropped their heads, and the tamarind-tree died,—all was melancholy. The road is covered with thistles; let them grow. I shall never pull one of them up." This overwhelming distress of mind was making life hateful to him in September, 1784. How soon afterwards he met a young widow, Mrs. Nisbet, in the island of Nevis, whose fascinations obliterated all traces of Mrs. Montrey, is not recorded; but in November, 1785, that is, in little more than a year after the death of the tamarind-tree,—the following passage occurs in a letter to the same uncle whom he had formerly asked to allow him £100 a year to enable him to marry the young lady at St. Omer. "My present attachment is of pretty long standing, but I was determined to be fixed before I broke this matter to any person. The lady is a Mrs. Nisbet, widow of a Dr. Nisbet, who died eighteen months after his marriage, and has left her with a son." Then, having entered into some details about her family, he goes on to say:—"I am twenty-two, and her personal accomplishments you will suppose, I think equal to any person's I ever saw; but, without vanity, her mental accomplishments are superior to most people's of either sex; and we shall come together as two persons most sincerely attached to each other from friendship." This time the writer was really "fixed," to use his own term. Nearly a year and a half afterwards, in March, 1787, Horatio Nelson, post-captain in the royal navy, was married to Mrs. Francis Herbert Nisbet, the bride being given away by his Royal Highness the Duke of Clarence, afterwards William IV., who had sailed under Nelson's command, and who, entertaining the strongest personal attachment to him, desired to be present at the ceremony.

These limits in the early life of the hero are not so trivial as they may

appear on the surface. They supply a key to his whole character, and indicate the direction in which we are to look for those qualities that chiefly coloured his life. In him were united the bravest and the sweetest elements of our nature. He had the tenderest heart in the world. But it was not in relation to the emotions of friendship or love alone, that this constitutional tenderness was shown. No man was ever so easily touched by the sorrows or sufferings of others. As one who knew him well declares of him, he was "singularly humane." He could not witness a punishment which, in the stern exercise of his duty, he had ordered to be inflicted on a sailor, without undergoing almost as much anguish himself as the delinquent. It was of him that the commandant sailing ran through the fleet, "that he was as bold as a lion, and as mild as a lamb."

The Duke of Clarence first saw Nelson in 1783, and the description he gives of him at that period is particularly striking. "I was then a midshipman on the *Borghese*," said His Royal Highness, "lying in the Narrows of Staten Island, and had the watch on deck, when Captain Nelson, of the *Albemarle*, came in his large alongside, who appeared to be the merest boy of a captain [he was then only twenty-five] I ever beheld; and his dress was worthy of attention. He had on a full-bellied uniform; his lank unpowdered hair was tied in a stiff Heronian tail, of an extraordinary length; the old-fashioned flaps of his waistcoat added to the general quaintness of his figure, and produced an appearance which particularly attracted my notice; for I had never seen anything like it before. I could I imagine who he was, nor what he came about. My doubts were, however, removed, when Lord Hood introduced me to him. There was something irresistibly pleasing in his address and conversation; and an enthusiasm, when speaking on professional subjects, that showed he was no common being." Like other men, he was not always in a mood for conversation, much, of course, depending on the character of the people by whom he was surrounded. Some persons thought that, so far from being "irresistibly pleasing," he was obstinately somnolent and reserved; but under whatever aspect he appeared, and whatever might have been the immediate impression he made, everybody was struck by the originality of his manner, and felt, as the Duke of Clarence described it, that he was "no common being." We have a remarkable instance of this in a description of him written by a lady to Mrs. Nisbet, who at this time had never seen him. The passage in the letter relating to Nelson runs as follows:—"We have at last seen the captain of the *Boreas*, of whom so much has been said. He came up just before dinner, much heated, and was very silent; yet seemed, according to the old adage, to think the more. He declined drinking any wine, but after dinner, when the President, as usual, gave the following toasts—"The King," "The Queen and Royal Family," and "Lord Hood,"—this strange man regularly filled his glass, and observed, that those were always banquet toasts with him; which having drunk, he uniformly passed the bottle, and relapsed into his former taciturnity. It was impossible, during this visit, for any of us to make out his real character; there was such a reserve and sternness in his behaviour, with occasional sallies, though very transient, of a superior mind. Being pleased by him, I endeavoured to rouse his attention by showing him all the civilities in my power; but I drew out little more than 'Yes' and 'No.' If you, Fanny, had been there, we think you would have made something of him, for you have been in the habit of attending to those odd sort of people." It might almost be gathered from these closing words that Mrs. Nisbet's friends looked forward to a request, whenever she should chance to fall in with the taciturn captain of the *Boreas*; at all events the suggestion was magnificently carried out, since, as we have seen, Mrs. Nisbet did make something of him, apparently with great celebrity, as far as the dates enable us to judge, and finally made all she could of him, by making him her husband. As to his strangeness on the occasion alluded to in the letter, it should be recollected that he had only just come away from Antigua, the spot polluted by what he then supposed to be the happiest hours of his life. An impression under such circumstances, and it was well, otherwise than gloomy and silent under such circumstances, and it was well, with his peculiar temperament, that he did not forever society altogether.

After his marriage, Nelson returned to England, and was paid off. During the preceding few months of his service in the Leeward Islands, and afterwards at the North, when the vessel he commanded was made a receiving-ship for impressed seamen, he had got into much disagreeable correspondence with the Admiralty, and had incurred several expressions of official disapprobation in the performance of the duties assigned to him, which were peculiarly arduous and embarrassing. He was so chafed by the treatment he received, that he became disgusted with the service, and made up his mind to resign his commission; but that hasty resolution was happily overruled in a pleasant interview he had with Lord Hood, who promised to introduce him to the Queen. His anger was as easily dissipated as provoked, and his love for his profession—the ruling passion of his life—returned again with all its early ardour. But a considerable time elapsed before he obtained a ship. Lord Hood told him that a ship in peacetime times was not desirable, but that should hostilities take place, he might rely on getting a good command. Nelson's first impulse upon being paid off in December, 1787, was to go to France, with a view to learn the language; but he was persuaded by his father to take up his quarters with him at the old paragon of Burnham Thorpe, in the county of Norfolk. It was here Nelson was born, and the occupation in which he is said to have employed himself during his long exclusion at this period, recalled the days and pastimes of his boyhood. His constant delight was to work in the garden, and to watch and assist at the

farming operations on the glebe land; these cheerful open-air pursuits being varied with bird-nesting and other youthful amusements, which local associations seemed to have revived. Nelson was not a student of books. The state of his eyes prohibited him from becoming a great reader; and the only writings in which he took a strong interest were those that related to his profession. While he lived at Burnham, having the whole of his time lying idly on his hands, he read the periodicals, and as they were in those days; but chiefly devoted himself to the study of charts and maps, and to correspondence with his brother officers.

He made frequent applications for employment, but without success, until January, 1793, when we find him in London, writing a hasty note to his wife, with a scrap of lively Latin in it, to let her know that the Admiralty had, at last, been propitious to his prayers. "Post nubila Phœbeus," he writes:—"after clouds come sunshine. The Admiralty so smile upon me, that really I am as much surprised as when they frowned. Lord Chatham yesterday made many apologies for not having given me a ship before this time, and said, that if I chose to take a Sixty-four to begin with, I should be appointed to one as soon as she was ready; and whenever it was in his power I should be removed into a Seventy-four. Everything indicates war. One of our ships, looking into Brest, has been fired into; the shot is now at the Admiralty." On the 30th of the same month, Nelson was appointed to the command of the *Agamemnon*, 64; and on the 11th of February following, war was declared with France.

Nelson appears to have been highly pleased with his new ship, and describes her, in several of his letters, as one of the finest of her class in the service, and an admirable sailor. As soon as he had a sufficient complement of men, he joined the fleet, Lord Hood having assured him that they were wanted for immediate service; but it was not until after having cruised about for weeks and months to no purpose in the Channel, that, in the month of June, the squadron sailed for the Mediterranean, under the command of Lord Hood. Nelson was now in his element, with the prospect of some glorious work before him; and the salutary effect of his new life upon his health and spirit, after the preceding five years of inactivity, may be traced in the bounding exultation of all the letters written home at this period.

The opening of the war was auspicious. Lord Hood had no sooner appeared before Toulon, and entered into a negotiation with the Commissioners, who carried instructions from the Provisional Government, than the citadel and the forts surrendered. Not a shot was fired; and, the British fleet having anchored in the bay, Lord Hood appointed Admiral Goodall to take possession of the town in the name of Louis XVII., and placed Captain Elphinstone in command of the grand battery at the harbour's mouth. "What an event this has been for Lord Hood," writes Nelson home to his wife; "such an one as history cannot produce its equal;—that the strongest place in Europe, and twenty-two sail of the line, &c., should be given up without firing a shot. It is not to be credited." But troops were wanted to secure possession; and on the 25th August Nelson was despatched by Lord Hood, in the *Agamemnon*, selected because she had the reputation of being the fastest sailer, to leave despatches for our Minister at Turin with the Vice-Consul at Oneglia, taking the Sardinian frigate under his protection as far as Corsica; then to hasten forward with despatches for Sir William Hamilton, the English Minister at Naples; which mission executed, he was to return immediately to rejoin Lord Hood in Híres Bay. The main object of this rapid movement was to procure the aid of 10,000 troops from Turin and Naples, to enable the English to keep the marvellous advantage they had gained. Nelson half regretted his absence at this moment from the great naval spectacle which took place when the whole English fleet entered the harbour of Toulon; "besides," he says, in a letter to his wife, "I may have lost an appointment [alluding to the appointments of Goodell and Elphinstone] by being sent off; not that I was to be employed out of my ship." He took ample revenge on fortune, however, on his way to Naples, by intercepting a Spanish vessel bound for Marseilles, worth £100,000, and sending her in to Leghorn to be judged. The adventure did not turn out so well as he hoped, however, as we shall see presently.

On the 11th September he lay to in the Bay of Naples, where he was beleaguered that night, and had the satisfaction of enjoying the charming scene around him by the light of Mount Vesuvius, which he describes in his letters as being unusually "fine" on that occasion. His reception by Sir William Hamilton, and by the Prime Minister of the King, who was an Englishman by descent, Sir John Francis Acton, was extremely cordial; and, as was gratefully acknowledged by Lord Hood, the skill and address with which he executed the duty assigned to him was afterwards shown in the speed with which the Neapolitan troops were sent to Toulon, the first detachment actually arriving there before the Admiral's formal requisition had reached Naples. On the 27th September, 2,000 Neapolitan troops appeared before Toulon, in two ships of the line, two frigates, and two sloops; and on the 5th of October they were followed by 2,000 more.

[To be continued.]

RAMBLERS BY RAIL.—NO. II.
THE SOUTH-WESTERN.

FROM Ventnor the excursionist with only a day at his disposal may proceed by coach along the Undercliff to Newport, and thence take another coach to CORVA, where he will arrive in time for the boat that meets the last train for London. Thence, however, who are not so pressed for time will find Ventnor an agreeable halting-place. The hotel-charges are not intrusive; (my bill

for tea, breakfast, and attendance was 7s. 6d.; the residents are civil and obliging; and the visitors appear to be, in a high degree, sociably inclined. Indeed, during my journey of a dozen miles I could not but notice a change gradually, but perceptibly, taking place in the demeanour of the visitors at the various places through which I passed. At Ryde, the loungers and promenaders on the pier seemed to look upon the fresh arrivals that disembarked, as interlopers. Every morning arrival (their countenances argued) carried with him a mouth; every mouth must be fed; each additional mouth to be fed helps to raise the price of provisions; more than all, the owner of the mouth will, in all probability, require to be lodged, and lodgings, as a consequence, will become more costly. They are spectators of the process that leads to "the height of the season," and so, are not over partial to the producing cause. But when the "fresh arrival" has crossed the Downs—those huge vortices that, running from east to west, divide the island into two parts,—he finds a change at once in the character of the scenery and of the visitors. He, in turn, is regarded as one of the initiated, and treated accordingly. All reserve has disappeared, and every countenance bids him welcome. Ladies show him their collections of seaweed and shells, ask his opinion of the diamonds—some of them extremely acryphal—they have picked up on the beach, and strongly recommend him to go and see the sweetly pretty place they have last visited. Gentlemen offer him a cigar, or invite him to make use of their telescope; are quite communicative; tell him their reasons for selecting the island this summer; inform him where they were last year; whether they intend going next; and, most kindly, will invite him to be one of a water-party, or to join an excursion to some of the sweetly pretty places alluded to. I am sure I was favoured with more than half a dozen such invitations for the following day, but the acceptance of them did not suit my convenience. The next morning I left, alone, for Freshwater Gate. The distance is twenty miles; but I had resolved to break the journey by sleeping at Brighthelm, a village nine miles off, and thus have an opportunity of lolling amidst the charming scenery of the Undercliff, or "descending the 'Chine'" at Blackgang, and of examining the curious flocks of St. Christopher which adorn the interesting and picturesque church at Shorehill.

The little wayside inn at Brighthelm is convenient, but not very attractive. I was introduced into a small smoky parlour—not clean, but comfortable. A stout lean running across, tended to make the ceiling appear lower than it really was; the furniture smelt musty; and through the chink of a glass-door, which opened into a small flower-garden, the wind whistled a melancholy tone. To provide dinner, I was told, would be an inconvenience; if, however, I was willing to wait, they would at once kill a duck or a fowl. I declined the proposal, and ordered tea, with ham and eggs. The eggs were fresh, the ham excessively cured, but the tea was not unlike a dejection of soda. Next morning I tried coffee. That, too, was miserable, and smacked strongly of liquorice-juice. Hungry, I rose from the table, and left at once for Freshwater, to get breakfast. From Brighthelm to Brook is rather a monotonous three-mile walk; but after passing that village, the traveller ascends the chalk Downs, from which, the whole way, the eye sweeps over a magnificent prospect on both sides. It was past twelve o'clock when I sat down to breakfast at Morrow's Hotel. I believe I did full justice to the repast; and, no doubt the waiter of my opinion, for he seemed anxious to know if I had been travelling all night. Leaving my knapsack at the hotel, I set out for Abney Bay—the variegated sands for which it is noted, and returned in the afternoon in time to be present at a dinner on the Downs. It was altogether a miniature affair. The troops consisted of that portion of the 10th regiment of Artillery which is stationed in the various forts recently erected along this coast; together with the Volunteers of the place, who, to the number of thirteen, attended the muster. The colony of visitors from the hotels, the residents of the neighbourhood, including the Poet Laureate, and two or three wanderers who, like myself, had accidentally come upon the scene—constituted the spectators. There are at Freshwater two large hotels; but having accepted an invitation to dinner and the offer of a bed, from a party of Christchurch men who had hired a house in the vicinity, for the season, I cannot speak of them from personal experience. The charge, though higher, I was given to understand, than those at hotels in the more accessible parts of the island, are not exorbitant; indeed, considering the shortness of the season, and the comparatively few opportunities the proprietors have of making money, they may be considered moderate. One of my friends had his yacht at Yarmouth, and it was arranged he should like me in her next day to Cowes. When, however, in the morning, I was aroused by one of the sailors, who opened the shutters of my room, and pointed out to the dreary wet, and gusty weather, I changed my mind, and eventually took the coach to Newport.

Although the capital of the island, Newport, possesses little present interest. When one has seen the Grammar School, which was the residence of King Charles, during his negotiations, in 1648, with the Parliamentary Commissioners, and the scene of his seizure in November of the same year; by the agents of the Parliamentary army,—visited the newly-erected church, which contains the fine monument by Manselton, erected by her present Majesty "as a token of respect for the virtues, and sympathy with the misfortunes of Princess Elizabeth, daughter of Charles I.,—and taken a turn in the late of Wright Museum,—there is nothing else to be seen. The upper portion of the Museum is appropriated to curiosities specially connected with the island; but all I saw that could properly come under that head, is a monstrosity in the shape of a stuffed pig with two heads, and which is properly authenticated as having been born in the island. The chief object of attraction in the whole island, however, is Carisbrooke Castle. It is at a pleasant distance from the town, and the road leads through the street known as Castle-hold. In time gone by, this street was notorious as the peculiar home of the outcasts of the island society. Cock-fighting and bull-baiting were the every-day amusements of the inhabitants; and in one of the little public-houses of the neighbourhood is still preserved the license granted by Queen Anne, in 1706 (the year in which John Addison became Secretary of State) for a cock-pit,—to the intent it may be used as it ought to be, for the moderate recreation of such

persons only as by the laws of the land may so direct themselves. Provided always apprentices and servants are not suffered to play, but only as much times as are allowed them." I soon found myself at the base of the hill on which the ruin stands. Passing through the archway of Queen Elizabeth, and traversing the bridge which crosses the moat, I stood under the vaulted roof of Woodville's gateway. On each side were the guard-rooms, and immediately in front the old crown-barred wooden gates which, in August, 1648, swung open for the King's Majesty to pass through, after his long captivity. I pulled the iron bell-handle suspended from the roof, and thereupon the bolts of the wicket-gate were withdrawn, and an elegantly-dressed female stood before me. I lifted my hat, and bowed, and one side for her to pass. Instead of advancing, she opened the gate wide, evidently intending I should first enter. Again lifting my hat, I stepped into the great courtyard. "The apartments occupied by King Charles are those to the left," said the lady, as she replaced the bolt. I looked round, but she had disappeared. Indeed, I seemed to be the only occupant of the stately ruins. I wandered about as my leisure—ascended the keep—went through the Montagu Tower—visited the ruins of the Chapel—found my way into the Tiltyard, where the king was accustomed to while away the hours of his captivity on the bowling-green—made my way through a postern-gate to the outworks—inspected the window through which the unfortunate monarch attempted to escape, and in which he stuck fast—"I mean while," says Pichon, "hearing him groan, but could not go to help him, who was no small affliction to me!"—but not a soul could I meet with. Every place seemed deserted. Many visitors, I knew, had preceded me, but they were nowhere to be found. At last, catching a glimpse of a lady's dress at the door of a house adjoining the Governor's residence, I directed my steps thither. The mystery was at once explained: I had reached the well-known. Each successive visitor goes first to see the well-bone, and on my arrival, the room was quite full with silent spectators. The well, dug in 1150, by Baldwin de Redvers, is said to reach a depth of 400 feet, and is a good specimen of Medieval engineering skill. The water is raised by a turnspit wheel. He does not, of course, descend the shaft, but enters a large wooden wheel, goes through his paces till the bucket reaches the surface, then quietly walks out to be admired; takes, with much gravity the biscuits presented to him by his admirers, and evidently considers himself the right donkey in the right place.

Carisbrooke Castle is of high antiquity: the mound of the Keep is said to be of Celtic origin, and in portions of the Keep itself I detected fragments of the early Norman workmanship; but five minutes' walk conducts to an object of much higher antiquity—the ruin, namely, of a Roman villa which was discovered a year ago in Carisbrooke village. It is small and rude, but contains the remains of a bath and a mosaic pavement of curious device, tolerably well preserved. I got back to Newport just in time to catch the coach—mounted the box-seat—and, in little more than half an hour, was on board the mail steamer *Prince Albert*, threading her way through the craft that was lying off the harbour of Cowes. When she touched at Ryde Pier I had made the tour of the island, the cost in time being four days, and in money £2.

Rebels of Books.

IRISH REBELS AND THE IRISH PARLIAMENT.*

FULL two-and-sixty years have not passed away since the occurrence of the events described in the work of Mr. Madden; and yet so different in many material points are political circumstances, the sentiments of statesmen, and the feelings of the people, between that period and the present, that it will be difficult fully to appreciate the labours of the author, without looking back to the leading incidents that preceded the Irish Rebellion of 1798.

The society of "United Irishmen" was first formed in the year 1791. It was established to obtain—first, a reform in Parliament; secondly, religious equality; and thirdly, an abolition of the title system. The justification of the original formation of the society of United Irishmen is to be found in the fact that the Parliament of the United Kingdom has since conceded what the United Irish Society then demanded. That the society of United Irishmen subsequently became a secret confederation, seeking to effect not merely a change in the laws by force of arms, but to separate Ireland from England, and to establish an independent republic, is a circumstance the guilt of which must be shared between the members of the Society, the Irish Parliament, and the Tory party who then governed the country.

In 1791, a new era seemed to be dawning upon the world; and men in every land were animated with the hope that the reign of tyranny was drawing to a close; that freedom and philanthropy were about to triumph over their old and obnoxious foes—despotism and superstition. The men of that day were the eye-witnesses of stirring events. They had looked with satisfaction, in 1774, on the assembling of the first Congress of the United

* The United Irishmen—their Lives and Times; with several additional Memoirs and collections of Documents, the whole matter now arranged and revised by Richard H. Madden, F.R.C.S., Esq., M.R.I.A., author of "Travels in the East," "The Life and Times of St. Edmund," "Memoirs of the Congress of Brest," "Patriotism, its History and Foundation," &c. Three vols., second edition. C. Dolan, London; J. Muller, Dublin.

States; they had, in 1775, sympathized with the struggles of the colonists at Lexington and Bunker's Hill; they had, in 1776, rejoiced in Burgoyne's surrender at Saratoga; they had, in 1779, been armed as Irish Volunteers; they had, in 1781, felt assured of the ultimate triumph of American Republicanism by the surrender of Cornwallis; and they had, in 1782, secured "the independence of the Irish Parliament," a fatal victory for themselves; as that Parliament was the property of a clique of jobbers and corruptionists, who were resolved to plunge the country into blood rather than part with one atom of the power they possessed. The Irish, contented for the time with the name of "an independent Parliament," were filled with enthusiasm when the tidings came that France, in 1789, and, first, of the Convention of the States-General, then of the National Assembly, and then of the downfall of the Bastille. In 1791, democratic France was free from crime and cruelty. Its Marais, Robespierres, and Garriens were still struggling in the obscurity of their clubs. France had abolished tithes—it had declared equality and fraternity—it had put an end to feudal servitude—and it had announced the right of all men to participate in the government of the country of which they were citizens. "Universal emancipation" was then supposed to be a possibility.

The Irish Volunteers had extorted from the military weakness of England an acknowledgment of "the independence of the Irish Parliament," which, previous to that time, stood in the same relation to the English Parliament as the legislatures of Canada or Jamaica to the Imperial Parliament; but the Irish Volunteers refused to demand from their own Parliament a concession of equality to all creeds and classes of their countrymen. Bigotry and fanaticism produced a breach in the ranks of the Volunteers. The Parliament that had been declared by them to be "independent"—that is, no longer controllable by the supreme power in England—was thus invested with absolute command in the country, and that Parliament belonged to "the ascendancy"—that is, to the Irish Tory party, over whom presided as chiefs the Beresfords and a few titled families, who, by means of close relations brought, held within their grasp the majority of seats in the House of Commons.

In 1791, the United Irish Society was instituted, for the purpose of performing the task which the Irish Volunteers had shrunk from discharging. Its objects have been already stated, and it is not necessary to repeat them, together Established Church, Protestant Presbyterians, and Roman Catholics. The principles on which the society was founded are stated in the following test, to which every person admitted as a member was bound to subscribe:—

"I, A. B., in the presence of God, do pledge myself to my country, that I will use all my abilities and influence for the attainment of an imperial and adequate representation of the Irish nation in Parliament; and as a means of absolute and immediate necessity in the establishment of this chief good of Ireland, I will endeavour, as much as lies in my ability, to forward a brotherhood of affection, identity of interests, a common sentiment of duty, and a general sense of the rights of all religious persuasions, without which nothing very useful to the nation can be partial, not national, inadequate to the wants, due to the wishes, and insufficient for the freedom and happiness of this country."

The main thing sought for as the great, urgent, and indispensable necessity of the time, was "a reform of the independent Irish Parliament," for that independent Irish Parliament, Irish Parliament, and the Government, was to be an intolerable nuisance—a nuisance not less to the Irish people than to the English Crown—a tyrant to the one, and only controllable by the other through the most barefaced corruption. It had, for instance, embarrased the Crown by its conduct in 1789 on the Regency Question; and in 1793, it was declared by Lord North, "that Great Britain and Ireland had become to each other, in point of political power, as foreign nations." In referring to this period—from 1782 to 1791—it has been justly observed by the *Edinburgh Review*, "The Irish Government may be characterized as a system in which legal independence was neutralized by corruption and religious intolerance."

"Corruption and religious intolerance" were the conspicuous features of the Irish "independent" Parliament from the commencement to the close of its career. In 1791, when the United Irish Society began its labours, it may be supposed the majority of the members hoped a reform in Parliament and the other changes sought for by them might be accomplished, by constant appeals to reason, aided by the spirit of the times, as well as the influence of example given by America, France, and other lands that were shaking off the yoke of despotism. Such may fairly be supposed to have been the hope and desire of the majority of the United Irishmen; for there is nothing in the records of the Society given to the contrary. At the same time it may be readily believed that even from its inception there were to be found amongst its leaders a few at least, if not many, who, incited by the example of the United States and of France, wished to see Ireland disconnected from the British Crown, and established as a Republic. If such party did exist amongst the United Irishmen, they were never able to influence the proceedings or change the policy of the Society until 1795, when a military organization was introduced, with a view to insurrection, and the treasonable project entertained of inviting a French army to invade Ireland for the purpose of overthrowing the Government.

This change in the policy and proceedings of the United Irishmen is directly traceable to the conduct of the Irish Tory Government and its "independent" Parliament. Both Government and Parliament had determined upon suppressing "public opinion" in Ireland. To publish an argument in favour of a reform in Parliament, was an act treated as a crime, and punished with enormous fines and long imprisonments; whilst to secure the conviction of the accused, the Government had "recourse to packed juries and the employment of perjured witnesses." (First Series, p. 261.)

At the time (1794) that this system—the exclusion of the Irish from their rights as British subjects—began, the French Revolution had made fearful progress. It had covered itself with blood; it had massacred king, priests, nobles, judges, priests, women, names; it had its Revolutionary Tribunal; its unblinking guillotine; its *sapides*, its *faillites*, and its moveable columns of armed assassins traversing the various departments of France. In palliation of the violent conduct of the Irish Government and Parliament it may be alleged that they adopted an unconstitutional course—an outrage upon law and justice in the most flagrant manner. In doing so, they were similar to those that had befallen France. Such an excuse cannot be admitted,

because the whole of their proceedings in Ireland, especially during the years 1797 and 1798, were imitations of the atrocities committed in France, and especially in Paris and Brittany, by the *Sans Culottes*.

The plan of the United Irishmen was to invite an invasion by a large foreign military force, and the peninsula in such a state of military organization that they might be able to co-operate with the invaders; but they never intended to have an insurrection of Irish peasants unsupported by a foreign army. On the other hand, the Government and the Irish Parliament resolved, from the moment they were made aware of a military organization going on amongst the Irish, to force them into an abortive rebellion; and the said attacks with honour at the details given in these volumes, they resorted to by the Tories to compel the people to take up arms. The tale is briefly and truly told in the following question and answer given on the examination of Mr. Emmet, a United Irish leader, in August, 1798:—

"Pray, Mr. Emmet," asked the Lord Chancellor, "what caused the late insurrection?" To which Mr. Emmet replied, "The free quarters, house-burnings, tithes, and the military executions in the counties of Kildare, Carlow, and Wicklow." (First Series, p. 40.)

The *Sans Culottes* of the Tory Government were the armed Irish Orangemen. These—with a soldiery so ferocious and undisciplined that they were declared by the viceroy, Abercrombie, for a short time government-tyrants, to be "formidable to every one but the enemy"—were let loose upon the population! And so, what with the tortures they inflicted, and the massacres they perpetrated, they compelled the peasantry—as in Wexford, where the organization of the United Irish Society was almost unknown—to take up arms, as the only chance left to them to save their wives from dishonour, their property from ruin, and themselves from death—the agencies of which were sure to be prolonged by torture. Lord Cornwallis was an unrepentable witness upon this point. He had arrived in Ireland with the intention of putting an end to the misdeeds of the Tory Government and Irish Parliament.

"There," said he, "no law either in town or country, but martial law." His words, "it is martial law conducted by Irishmen heated with passion and revenge. But all this is trifling compared to the numberless murders that are hourly committed by our people, without any process or examination whatever. The yeomanry are in the style of the loyalists in America, and their property is in the power of the yeomanry. The Irish militia, with few officers, and those chiefly of the worst kind, follow closely on the heels of the yeomanry in murder and every kind of atrocity, and the families take a share, although much behindhand, with the others."

The Irish rebellion, provoked by the Government, was suppressed. The question may now be asked,—Was it necessary to have recourse to such an expedient? Subsequent events proved it to have been a gratuitous piece of wickedness; for the British fleet destroyed at sea the ships that were conveying aid to the Irish insurgents; and as to the French soldiers that escaped the British fleet, and landed in Ireland, they had to surrender as prisoners of war to the army commanded by Lord Cornwallis.

The loss of human life caused by the rebellion is estimated to have been seventy thousand men, women, and children, and the lowest money-cost is calculated to have been £20,000,000.

To what did the suppression of the rebellion lead? What was gained by it? Here is an account of the suppression of Ireland under its Tory Government in 1798:—"The suppression of the independent Irish Parliament a year and a half after the suppression of the rebellion. This writes Lord Cornwallis, on the 16th November, 1799, to his friend, General Ross:—

"The greatest difficulty which I experience is to control the violence of our loyal friends, who would, if I did not keep the strictest hand upon them, convert the system of martial law (which, I know, is of itself bad enough) into a more violent and intolerable tyranny than that of Robespierre. The violent informers are hunted out from the prisons to attack, by the most barefaced perjury, the lives of all who are suspected of being or of having been disaffected; and, indeed, every Roman Catholic of influence is in great danger."

A conflict arose between the Irish nation and the Irish Parliament, with reference to these three questions—parliamentary reform, religious emancipation, abolition of tithes. A Tory Government, the creature of that Parliament, to prevent the success of these measures, first took away from the people the protection of trial by jury, the right of speech, and the liberty of the press. The next step was to force the people into rebellion, and then to establish as the normal condition of the country, the permanent administration of martial law,—a more violent and intolerable tyranny than that of Robespierre.

And how did all this end? Actually in the non-achievement of the objects for the attainment of which the Society of United Irishmen had been founded. The first consequence of this waste of blood and life, of the torture of men, the abuse of women, and the slaughter of children, was the suppression of Parliament—a reform of the Irish "independent" Parliament itself, in the only possible way such an infamous and corrupt body could be reformed, namely, in the annihilation of its rotten boroughs, the extinction of its own power as an independent distinct body of law-makers, and the absorption of its remaining members in an imperial legislature, to be carried out at Westminster.

The other measures—religious liberty, and the abolition of the tithe system,—which in its dying struggles "the independent Irish Parliament" sought to resist, were finally, but not without a long struggle, and despite of a persistent Tory opposition, eventually triumphant in the Imperial Parliament.

The "independent" Irish Parliament performed one deed that was beneficial to Ireland, and useful to the British empire. It committed suicide, voted its own annihilation, and declared itself to be "*le fété de sa*." But even that final act of its existence was performed from none other than corrupt motives. It was bribed into its self-destruction, and so initiated those of whom Athenaeus, on the authority of the ancient historian Pseudo-Dionysius, gives the following strange account:—

"And other men in the theatre, having received some silver or gold money, and some even for a number of earthen vessels full of wine, having taken pledges that the gifts promised them shall really be given, and having distributed them that the gifts were theirs, have had themselves down on their knees with their faces upwards, and then allowed some bystander to cut their throats with a sword."

The Irish Parliament voluntarily submitted to its own destruction; and the conditions for its suppression were faithfully fulfilled by British ministers. Its "heirs and assigns," the boroughmongery proprietors, and convert patriots duly received the price for which they had stipulated, in gold and silver, in places, pensions, annuities, and peerages.

The volumes of Mr. Madden which have suggested this reference to the Irish Rebellion of 1798, its causes and consequences, are most valuable for their truthfulness, accuracy, and minuteness of research. The author has been scrupulously exact in his statements, and has not hesitated to state, not only that he could not, nor trouble to procure original documents, or to place himself in personal communication with persons who have survived the rebellion, and taken an active part in the United Irish Society. For this purpose he has been obliged to rely on the accounts of those who were contemporaries of the States of America. He has heard not only what the United Irishmen had to say in their vindication, but he has not shrunk from coming in contact with pensioned spies and informers when they wished to tell him anything they thought would be of service to them. He has not been misled by the laborious work which has been undergone, because the author, to use his own words, wished—

"To obtain a hearing in England for a truthful relation of the struggle in which the United Irishmen engaged, the sufferings and the wrongs which the people endured at the hands of a bad government, a base oligarchy, a bigoted and corrupt parliament."

The hearing he wishes for should in justice be conceded; and in the hope of aiding him in so laudable an object, we strongly recommend his three volumes to the attention of the public.

BOND AND FREE.

THE nature of novels, and the requirements and expectations of novel readers, would seem to have somewhat altered of late years. They are now read not merely for the interest of the story, and the plausible excitement of "wondering how it will all end." There may be determined devourers of fiction who possibly have no more profound aim in view when they take up the last new three-volume story; but it may surely be concluded that the influential class of readers, whose opinions carry intellectual weight with them, and make or mar the fame of the writer, require more than the most ingeniously constructed plot, the most surprising and cleverly managed array of incidents, before their suffrages can be gained, and their favourable verdict recorded.

The novel appears, in fact, to be to these modern days very much what the essay was to the last century, insofar that through its medium a large proportion of those floating ideas which need the action of time and the haven of experience to give them apparent consistency, are first sent voyaging on the world. Sometimes these errant thoughts, strange and unfriended in the beginning, are like "bread upon the waters"—destined to be found again after many days,—to be recognised and welcomed by a world which, sooner or later, grows wiser. The moon, is sure to sympathize with and assimilate that which is essentially true, and to find its kindred in all the more like stones, which, starting with loud splashes at the outset, soon sink by their own weight, and are never heard of more.

To incarnate the so-called "ideas" in the flesh and blood of human characters, human interests, and human—*even if exceptional—incidents*, is what we expect, nowadays, from the novelist. And though much more is required of him than "plot and incident," it is at his peril if he slight these adjuncts. For, such neglect on his part is apt to result in indifference on the reader's side, and the result is that the novelist's message is bound to be infinitely lost. If he seek to include its teachings, it should be set forth practically, rather than expound them didactically. And the novels which of late years have attained most popularity, and have undoubtedly had most influence over the public mind, have been those in which, while there was little abstract reasoning on good and evil, right and wrong, the characters were so skilfully drawn that the reader was led to draw his own conclusions. The writer of "Adam Bede" scarcely ever indulges in a moral reflection; but how poignantly its lessons come home to us! so easily, so naturally, indeed, that we are not even conscious of any intention on the part of the author, and we may hear people complain that they cannot see "what *object* he has in view,—what he is trying to teach." For, like the characters of actual life, those of the good dramatist and novelist impress us as "unhappy."

We may candidly admit that we have been led into these reflections more by the obvious deficiencies than by the more subtle merits of the book before us. Judged by the preceding standard, "Bond and Free" is anything but a perfect novel. In regard of its lessons being wrought out practically by the action of the story, the writer's former work, "Caste," is a more artistic production. But there is a tone of elevated thought and feeling evident in many of these pages, which, together with one exquisite creation among the *dramatic pieces*, redeem many defects, and impel us to draw attention to the present work.

There is a stronger and longer lust than evil; and so, for the sake of "the child Policia," we will forgive the strange ugly and, so far as we can see, purposeless character of Miss Nanpeth, which seeks to divide the interest of the story with her; but not without a protest, *en passant*. We can imagine no good end, possibly to be effected by the portrayal of such exceptional women, even if they are utterly unnatural women as this. If intended as a contrast to the mindless and senseless women of the "other half" of its object, inasmuch as it goes beyond it. The ideal woman does not need to be placed beside what is so nearly black and foul, for her radiant whiteness and beautiful innocence to be apparent. Miss Nanpeth is unwomanly to an extent that would shock many a woman who falls far short of the gentle and childlike ideal which she represents. It is not, however, as far from the possible it is for them to be good in all obvious senses, and yet very different from the feminine ideal. "Strong-mindedness" is more sadly foolish than wicked, although, as in many another instance, it may possibly do more harm in its own unrecognition, yet, than that which is at once know-

But if, as we believe, there is little to be learned, and nothing to be

gained, from fictitious characters, like Miss Narpent, there is truth, and the poetry of truth subdues, penetrating, and bringing with it refreshment and healing, in the conception of Felicia. The picture of the old grey country-house with its walls and its beech trees alike in decay, and the wholesome loving care which the old woman bestows on the garden, and the old garden itself, this is charmingly drawn. The child Felicia, the central figure of the group (for the hero, Wilfred, only begins to interest us when he interests her), is sketched with rare truth and refinement. Very little is actually described, but by implication, by the effect wrought by her on the mind of the dreamer, we know her to be a child of nature, a child of the open air, a child who is apparently ardent. We learn the likeness physical, mental, and moral, of this sweet, meek, loving girl-child. The description of the growth of her reverential devotion to Wilfred is very beautiful, and strikes the reader, as the description of the growth of the love of the dreamer for Felicia strikes him. The object of this girlish worship is neither heroic nor admissible in himself.

"Seeing that to waste true love on anything
Is womanly, past question."

However, in this case, as in most others, it is made clear that neither true love, nor aught else that is true, is ever wasted. The influence on Wilfred's mind is great and good, for the time, and though it seems to fade away afterwards, it is only in a temporary obscurity that in its turn passes, and finally leaves the man better, and wiser, and holier, for having known the child.

Here, the relations between the two are characteristically set forth :-

"Quite unconsciously, he talked above his ordinary self when he talked to Felicia; just as, with many people, he kept the most precious things of his soul sweetest and hidden, and involuntarily lowered his ordinary standard of principles and convictions.

"From whatever it arose, whether from love of ease, or from want of moral vigour to balance a too great love of approbation—it is certain that Wilfred, whose intellectual individuality was sharp and clear, and, at this time, dangerous purity and earnestness of ethical conviction, and whose religious feelings were pure and loving, all that was best and excellent in child nature consoled,—the contact of her being elevated the tone of his own. It is possible that he somewhat idealized a good child—but that is no matter; the influence was good, and it was not a child's influence that was so potent. The young woman is. For her, his best and best qualities were always those unpoetical. Content to reverse where she could not understand, and finding food for reverence in what she did understand, this clever and confidential intelligence only tended to make her more devoted to the young man, and the ever-worshipping admiration which Felicia already entertained for the young artist."

"Almost always calm, her enthusiasm and romance being as unobtrusive as they were deep-seated, most people regarded Felicia as just a thoughtful, practical, and amiable little creature; certainly not clever, still more certainly not poetical, therefore not in danger from influences to which they would have hesitated to expose a more susceptible and imaginative girl.

"She was not clever in that they were right; her intellect was neither quick nor particularly clear; nor was she highly imaginative, while her susceptibility was of so fine and subtle a nature as seldom to be perceptible through the veil of habitual reticence. Her understanding seemed to lie almost wholly in her affections—she appreciated beauty with her heart, not with her mind; her nature was one in which a rare candour and a rare reserve were exquisitely well balanced."

There may be those who will object to this ideal of womanhood as not sufficiently intellectual, just as there are those who take exception to what they call the ultra-neekness and blind submission of the ideal of wifehood in Tennyson's *Enid*. And it is true that intellect is one of God's precious gifts, which He shows, by its bestowal, is "good" either for man or woman. And it is true also that duty may consist in other things beside patient and unresisting endurance. But in these days we need something to be able to stand up to the temptations of the world, to be able to keep apart from those evil-doers of the head, which there is no present fear will be allowed to go out of our sight and hearing. It is well for us all to recognise that the essence of feminine nature is something beautiful and distinct from, though not necessarily inconsistent with these larger gifts; that though a woman may be a "large-souled," as well as a "large-hearted," creature, of the order of her creation, and advance in her knowledge, her powers, her virtues, her vocation, the first and not the last. Knowledge can never be her special vocation, but love, through which comes intuition, that is quicker and sometimes surer than knowledge. She may well be content. Moreover, her unconscious power is almost boundless; it is only when she tries to be strong that she is really so weak; only

"Bond and Free" seems to us an effort to exemplify this truth, or, at least, one side of it. It is a truth which we believe cannot be too widely diffused or too intimately studied, and its every utterance should be welcomed by all who hold dear that Ideal Womanhood which we may sometimes be tempted to think is gradually slipping from this world, so crowded with eager, battling women-workers, so noisy with clattering discussions of Woman's Rights.

Well says this author, after dwelling on the qualities which ought to be characteristic of the feminine nature,—

* Surely those women who clamour for other rights—for place, position, influence, part in the world's work, and recognition of intellectual capability,—surely such women feel that they fall far short of this ideal standard; feel that they are neither childlike true nor childlike pure; feel that they have nothing of heaven lingering about them, and that their kingdom, if kingdom they have, must, therefore, be of this world.

(One might almost fear, feeling how the women of to-day are lightly stirred up to run after some new fashion of faith or of works, that heaven is not so near to them as it was to their mothers and their grandmothers—that religion is a feeble power with them—that their hearts are empty of all secure trust and high faith in the beneficence of God's ordinances.)

"Surely no reviler and blower of the sex ever put upon women so profound and so bitter a reproach as they put upon themselves, when their lives become nothing but a passionate protest against their womanhood, and a wild striving to throw off, as far as may be, its distinguishing characteristics; to be no longer distinctively recognised as women, but to assimilate themselves to men by employment, manners, speech, and even dress."

It is a state of things too sad and too complicated in its causes and its results to be dwelt on within narrow limits. Not alone by the writing of books, or setting forth of arguments, are entanglements and anomalies such as this question contains to be righted and laid in order. But every sincere

* *Bond and Free*. By the author of "Caste." 3 vols. Hurst and Blackett.

attestance of sincere and thoughtful conviction on this, as on other subjects, laid forward the process of unravelling that "perplexity" which is surely one of the most pathetic, as it is one of the most ominous, features of our time.

HOW WE SPENT THE AUTUMN.*

A party of ladies, having frequently "mooted in their family councils" the question, Where shall we go this autumn? finally determined to go to Brittany. They were tired of Paris, disliked the Rhine, and had spent the last winter in Brighton. Under these oppressive circumstances, Brittany, with the pleasant operative prospect of a pilgrimage to Ploernel in the distance, promised something new and exciting. The very name, "so resolute of legendary lore, laid soothingly on their ears, conjuring up visions of olden fables, graded conjunctly on modern expectations, &c." and to Brittany, "the last remnant of the Middle Ages," they accordingly went. Being there, they further resolved to write a book descriptive of their travels, for the benefit of ladies—for, although there are many works, ancient and modern, on Brittany, the old ones, they assure us, are difficult to read, and the new ones are nearly all walking tours by gentlemen; therefore they resolved to "compile those pages," for the purpose of giving "those of their own sex who may wish to wander through Brittany some idea of the objects best worth seeing, and the easiest way to visit them all." Without prejudging the book, "those of their own sex" who meditate a wandering in Brittany, or anywhere else, may be advised to consider, before they start, whether the "unprotected" mode of travelling is likely to turn out the easiest way for ladies to see the sights. Upon the solution of this practical question in the first instance, the value of this publication, as a guide for ladies—for, with commendable modesty, it does not pretend to enter into competition with the gentlemen's books—must entirely depend.

The preface and title-page announce two authoresses, Madeline and Rosalind Wallace-Dunlop; the book itself is written in the first person singular, but which of the persons singular we have no means of knowing. The travelling party consisted exclusively of ladies, six in number. They crossed the Channel to St. Malo, where they took the *voiture d'été* of the Hôtel de la Paix, which they preferred to the Hôtel de France, because the proprietors of the latter establishment are too much absorbed in biographical recollections to attend to their guests. As soon as the *voiture d'été* was over they set out—the six ladies—in a *voiture*, for Dinan; an enterprise which we cannot recommend any of our friends to emulate. Having "inserted" in a map and guide-book, the travellers our better arrangements to take the road to Rennes, the first stage on their perilous journey into the interior. "Nora and I," says the narrator, whose peculiar phraseology, we hope, will not be lost upon the observant reader, "had condensed our ideas on the subject of luggage to a black leather bag," but the young ladies' mother, they anticipated, became alarmed at the prospect of dirty hotels, &c., and could not be persuaded to go beyond Rennes. "So Nora and I were compelled to fling ourselves on the compassion of our aunt, Lady Leslie, who kindly consented to accompany our wanderings." The party, therefore, broke up at Rennes, "Nora and I, and Lady Leslie, taking the *voiture d'été* to Ploernel, and "mamma and the rest back to Dinan," to await their turn.

The route followed is as nearly as possible the reverse of that taken by Mr. Jeppson, nearly two years ago, beginning where he ended, with some variations on the line; the walking tour, however, being more comprehensive than his circuit, and including up to the life of being pushed on by the wind, which had no opportunity of investigating. The landmarks of the journey may be traced in a moment on the map: Rennes, Vannes, St. Gilles, Carnac, Quimper, Châteaulin, Brest, St. Briac, back to Dinan.

The general nature of the incidents of travel that befell these adventurous ladies may be indicated by a few examples. At St. Briac they were to obtain the address of a resident, but nobody had ever heard his name; immediately on arriving at La Roche, they "adjourned" to the Post Office, but were grievously disappointed at finding no letters; in like manner, on arriving at La Guerche, they "deposited their belongings at the *Croix Blanche*," and "adjourned to the church," visiting a Druidical dolmen, "Nora and I climbed on to the top of the slab, and measuring it, with the help of the driver, found it to be twenty feet; they could not attempt to count the waxy crosses of Brittany, which are numerous and "unending; they turned up a lane in a "primitive state of repair," upon which "my aunt declined to trust herself any longer in the carriage, but proceeded on foot, wondering how we could do it, and the rest of the party, on the return voyage to Jersey, everything in the cabin was overturned, and "I was flung off my sofa on to the floor," and such a violent storm arose as "nearly terminated this and all future voyages."

The objections that they constantly to contend against exhibit other phases of the manner in which they spent their autumn. On one occasion, as the evening was deepening into twilight, they "commenced their researches" on the banks of the *Loire* for a "canoe," [and] its crew, to cross over to Donges. "First," says the narrator, "was introduced a tall big man, with a black eye, and an uncertain hesitation in his manner of speaking." As night he expected, "my aunt positively declined having anything to do with such a character." Others were consulted: the Norwegian consul was taken into counsel; and at the end of seven pages, we are happy to say, the ladies were at last "deposited" in a boat under the care of one man and a boy. Another class of difficulties, peculiar to this order of travelling, was exemplified at Lesvenen, where the lady who had been hired for the day, a Neapolitan, asked him for the change. "Well, but let us see," said the driver, "how much must I return you?" "Five francs," said I, "as you agreed to bring us for fifteen." "Ah, yes, but we must arrange this little affair." And so he goes on to tell her that he had his breakfast, which cost one franc; dinner, two francs more; and stabling, two more, which just made up the Neapolitan; having said which he bowed, and withdrew. "Unprotected" moral. "We were too much astonished at his coolness to remunerate even."

Interpersed throughout these lively details are historical memoranda, whose foundations are laid deep in the Itineraries. Thus, looking to matters that concern us as Englishmen, we learn that at the Constat of the Thirty "the English were beaten, and the Gallic cock has ever since crowed over

the fact;" and elsewhere, that "the English and the Bretons, since King Arthur's time, seem to have done nothing but fight each other, till civilization taught them sense." Upon this latter statement a question might be asked, as to the period of the world's age designated by the fair historian as "King Arthur's time;" and a doubt might be raised as to the probability of teaching sense. But we suspect the authoresses would dismiss such suggestions as samples of what is called, for convenience, hypercriticism.

One naturally wonders why such books as this are written. But the great wonder is who made them. The specimens of English style are offensive, abounding in flat slang and ill-constructed sentences, flat, dreary, and colourless; as narratives of adventure, they are of no more interest than the gabbles of a lady's-maid, come fresh off the rumble; and as works of travel, the best information they give is travestied from the guide-books, and the rest is flippant and shallow, and of no earthly value to anybody.

ROME AND THE POPE.*

THE future of Italy and the Italians is now the subject of universal interest and discussion, and all information conducive to the solution of the Italian Question becomes very important, involving, as it does, the probable peace of Europe.

Our readers will doubtless recollect the great literary sensation produced some time ago by a work of M. About, on Rome and the Pope. Some spoke of it as only a libel published for a political purpose; others affirmed that it divulged only a part of the truth, and that the abuses of the Papal Government were greater and far more deeply rooted than M. About had represented them to be. We are inclined to come between the two opinions, by perusing the memoirs just issued from the press, in which M. Petruccioli de la Gattina gives a sketch of the court of Rome from Leo XII. to Pius IX.

In the first part of the book, the author, after giving a terrible picture of what was called the administration of justice under Leo XII., describes the manner in which that Pope was poisoned, without being allowed any success from those who surrounded him.

His successor, Pius VIII., showed the same religious and political intolerance; but his government scarcely lasted a twelvemonth, and Gregory XVI., a tall and vigorous monk of the order of the Camalduli, which addicted to the sensual pleasures of the table, succeeded to the Papal throne.

We find here some descriptions of the interior life of the Vatican, of the Pope's barber, Gaetano, and his wife, of Monsignore Marzili, and of many cardinals, worthy of forming some additional chapters to the adventures of Gil Blas. We may form some idea of the extravagant expenditure incurred by the pleasure-trips of the Pope, by the fact that the expenses of His Holiness to Ancona, in 1840, which only comprised six weeks, cost about fifty thousand pounds sterling. After this, we must not be surprised if the Papal States are burdened with a public debt of eighty millions of scudi (upwards of ten million pounds sterling), and if they are liable to an annual deficit of three millions.

After a reign of thirteen years, Gregory XVI. died, literally of starvation, in his own palace, through the intrigues of Cardinal Lamarmora, who allowed no one to approach his room, under pretence that His Holiness required perfect rest. At the autopsy of the body it was found that the stomach scarcely contained only a few lemon-seeds. The details of the agents of the modern Ugolino are very vividly described. We quote the passage:—

"It was the end of May, 1846; Gregory was losing strength daily; his legs were swollen, and he felt he had not long to live. As soon as those who surrounded him saw his danger, they deserted him, and in the spacious apartments of the Vatican, which were to be traversed before reaching the chamber of His Holiness, nothing was heard but the monotonous step of the sentinel on guard. Throughout those vast and lofty rooms reigned a deathlike stillness. The Pope, prostrate on a camp bed, had not a single servant within call; his confessor, Monsignore Arpi, his barber, Gaetano, and Father Vernati, his physician, paid him only a few visits at long intervals. Feeling himself gradually becoming weaker and weaker, he desired a consultation of medical men to be held; but Vernati told him there was no necessity for anything of the kind, as there was no danger. He sends for Cardinal Lamarmora and Cardinal Mastai; but they reply that they see him on the morrow. Again all is silence and solitude around him. For three days he had swallowed no food. The physician had declared that he only wanted rest. During the night he felt thirsty and hungry. Near his bed was half a lemon; he sucked it eagerly, and ate the rind; even the centinels had been removed, under the pretext of ensuring repose and quiet. Not a soul was within hearing. He suffered patiently; but his strength was leaving him, and the next morning he was dead! We said before that a few seeds of lemon only were found in his stomach. Such, then, was the end of the sovereign over three millions of souls."

As in the case of Leo XII., and when Gregory died, the public was not even aware of his illness; and the tolling of the great bell of the Vatican, announcing the event, took every one by surprise.

The three chapters which follow contain a very full account of the private and political intrigues which took place before and during the election of Pius IX., whose biography is so interestingly given in the preceding pages. His life is well worth recording; and this part of the book will be read with great interest.

His dissipated youth, the difficulties he met with in obtaining a position as a soldier, as an abbe, and as a missionary, his sermons by starlight and by torchlight in the public square of Sinigaglia, his travels and adventures in Italy, his enthusiastic desire to become a martyr and martyrdom, in eventful circumstances, might form the ground-work of a very amusing novel.

It is not to be expected that the book we review, written by an Italian, in tolerably good French, should always express sound views on the state of affairs in Europe. It certainly contains a great deal of amusing gossip; but whenever an author enters on the field of general politics, his prejudices naturally bias his opinions. Nevertheless, his concluding chapter (xxxi.) is a very remarkable appreciation of the real character of the present Pope; it is well written, and is full of good sense and truth. If any of our readers

A PROPOSAL TO INCREASE THE SMALLER SALARIES UNDER GOVERNMENT, AND TO AUGMENT THE ANNUAL TAKE OF CHARITIES AND POOR LIVES; with Reasons for the Same.

By WILLIAM RAY BURN, Esq., F.R.S.

"As able, well-timed, and most instructive pamphlet."
"Few fair or reasonable people, after having looked into the subject, will dissent from the views of Mr. Burn, or consider his propositions extravagant."—*Cont. Reviewer's Gazette.*
RICHARDSON, 25, Cornhill.

On Monday next will be published, for Bartholomew Day,

August 24, *Temp. Rev.*, price 3s., cloth, lettered.

THE TWO THOUSAND CONFESSORS OF SIXTEEN HUNDRED AND SIXTY-TWO. By the Rev. THOMAS COLEMAN.
The design of this work is to present a concise account, in a popular form, of the Two Thousand Missionaries who were ejected from the Established Church of England by the Act of 1773. It is a popular history of a great and noble reign of Charles II. Its object is to give a true and full account of the principles on which they acted—the errors to which they were subjected—the sufferings and sacrifices characteristic of the men and the times in which they lived—renewing the sympathies of our hearts for the brave and noble spirits who have since followed in their footsteps—specimens of useful preaching, and rational piety amongst them—with the influence of their labours on succeeding times.

London: JOHN BROWN, Paternoster-row.

BEST WORK OF CHINA.

Fifth Thousand, 6vo., cloth, 18s.

CHINA: ITS STATE AND PROSPECTS.
With special Reference to the Diffusion of the Gospel. By the Rev. W. H. MARSHALL, D.D., formerly Secretary to the Chinese. London: JOHN BROWN, Paternoster-row.

NEW WORK BY DR. BROWN.

In two toms., cloth elegant, price 2s.

PEDEREN THE PROPHET: a Tale of the Pagan North. Founded on Fact. By the Rev. A. MORGAN. London: JOHN BROWN, Paternoster-row.

"We have read the work with intense interest. While the book is emphatically a fact, it is also a work of fiction, and in the annals of Scotland—it has all the fascination of fiction."—*Glasgow Freeman.*

"Dr. Brown has succeeded in producing, from the various materials at his command, a book of thrilling interest."
"Fiction the Prophet" possesses the merit of earnestness and strictness of fact, and is a work which has no equal in the annals of fiction. It is a work to be proud of."—*Literary Gazette.*

London: JOHN BROWN, Paternoster-row.

Third Edition, revised and greatly enlarged, post 8vo., cloth elegant, price 2s.

THE LAMPS OF THE TEMPLE—

Crayon Sketches of the Men of the Modern Fulfillment, including Melville, Gilliam, Binger, Palford, Spurgeon, &c. "There is a power and a grandeur in the sketches that would make the reputation of half a dozen writers. They are 'sketches' of the highest order, and well deserving the attention of every thoughtful mind."—*Journal Herald.*

London: JOHN BROWN, Paternoster-row.

GENERAL HAVELOCK.

Sixth Edition, in cloth elegant, gilt edges, price 1s.

HAVELOCK: the Broad Stone of Honor. A Tribute of the Tongue and the Pen. By the Rev. J. P. HARRIS. London: JOHN BROWN, Paternoster-row.

Just published, in crown 8vo., with beautiful Portraits and Vignettes, price 3s.

JOHN ANGELL JAMES: a Review of his History, Character, Writings, and Literary Labours, with a Dissertation on the Fulfillment of the Prophecy, College Chapel, Cambridge, 1859. By JAMES CANTON, D.D.

"We thank Mr. Canton for his admirable volume, which will be perused with intense interest as long as the world of the scientific and general reader will be so long as there are men to be saved and Christians to be instructed."—*Glasgow Freeman.*

London: JOHN BROWN, Paternoster-row.

Just published, crown 8vo., cloth elegant, price 2s.

SERMONS preached at Clapton Chapel.

Such sermons as we should find it difficult to match, even in English theological literature, for the blended quality of simplicity, beauty, and quiet power, for mature experience and Christian affection.—*Westminster Observer.*

"The style is remarkably felicitous and has, moreover, the charm of being the writer's own."—*Manchester.*

London: JOHN BROWN, Paternoster-row.

This day is published, in post 8vo., cloth, lettered, price 1s. 6d.

THREE YEARS IN TURKEY. The Journal of a Medical Mission to the Jews, under the auspices of the Free Church of Scotland. By JOHN LEVY, M.D., &c. London: JOHN BROWN, Paternoster-row.

"We were read a book which as impressed us with the value and accuracy of medical missionaries. Dr. Levy has given a very graphic and interesting account of the labours, which have been less abundant. The book is long, it is a rapid and enduring circulation."—*Glasgow Freeman.*

London: JOHN BROWN, Paternoster-row.

MR. CHARLES READS NEW WORK.

PUBLISHED BY TRUBNER & CO, 60, PATERNOSTER-ROW.

Will be published on MONDAY, THE 27th INSTANT,

To be had at all respectable Libraries, in One Vol., crown 8vo., neatly bound in cloth,

1.—CAPTAIN BRAND, OF THE "CENTIPEDE,"

A PRIVATE EMINENCE IN THE WEST INDIES; HIS LOVES AND EXPLOITS.

Together with some account of the singular manner in which he departed this life.

By *Lieut. H. A. WISE, U.S.N. (Harry Grieg) Author of "La Grieg," and "Tales for the Marines."*
The above is an English copyright edition, and it is believed, will fully sustain the very great reputation the author has acquired in America as a writer of *Sea Novels*.

In One Vol., post 8vo., neatly bound in cloth, price 7s. 6d.

2.—FOOTFALLS ON THE BOUNDARY OF ANOTHER WORLD.

An enlarged English copyright Edition. By *ROBERT DALL OUSE.*

In proof of the great popularity of this Work, and the interest which has excited, it is only necessary to observe that ten editions have been sold within a very short time in America. In the present edition, the author (who is now residing in England) has introduced a considerable quantity of new matter.

London: TRUBNER & CO, 60, PATERNOSTER-ROW.

Next Work will be published, price 2s.,

CONDUCTED BY CHARLES MACKAY.

No. 8.]

SATURDAY, AUGUST 25, 1860.

[PRICE 3d.]

THE NEW FRENCH MAP OF PACIFIED EUROPE.

ALMOST simultaneously with the letter of the Emperor to M. de Persigny, a new map of Europe was published in Paris. The wide circulation which this map has already attained, and the effect it is calculated to produce in the French rural districts, renders it worthy of notice rather as an indication of the restless desire to settle the affairs of Europe, which seems still to pervade the French mind, than as possessing in itself any high political significance. At the same time it is to be remembered that if it be not actually the programme contemplated by the Emperor, it is published with his sanction, and its dissemination is encouraged by the government *employés*. It is part of the same system which produces that constant issue of pamphlets designed to prepare public opinion, by its vague shadowing forth, for the full development of a matured policy. By thus constantly distracting the attention of the people of France from a contemplation of their grievances at home to the great changes which are to be worked upon the face of Europe through their own instrumentality abroad, the double object is achieved of securing internal tranquillity, and of paving the way to further aggression. It is certainly a striking evidence of the existence of this aggressive spirit in France, that in no other country in Europe are pamphlets and maps of this description issued—no other nation has ever assumed to itself the absolute right of settling the affairs of the civilized world; or had the hardihood to propose and publish the conditions under which the settlement is to take place. We are accused by our Gallic neighbours of wrongly suspecting them of schemes of territorial aggrandisement, and of imputing to them unjustly a perpetual desire to embroil Europe in wars from which they hope to obtain the largest share of the spoil; but we point to such a publication as this last map as a justification of those suspicions. It is impossible to imagine that the changes there contemplated could be accomplished without a war; while the advantages which they propose are altogether Utopian. Europe had remained in a state of profound tranquillity for forty years prior to the seizure of the French throne by its present occupant; since then it has already been disturbed by two serious wars, and publications are daily issuing from the Paris press involving more. In spite of this our public men are conjured to put away their abject fears, and protestations continue to be made of the peaceful policy by which the French Government is animated.

We confess we regard these signs of the times as even more significant than the French armaments; we find that upon every occasion upon which the sword is to be used the pen prepares the way. In this instance it is the point-blank, and the following modifications of the frontiers of the existing states of Europe are coolly and deliberately proposed for their consideration. It must not be supposed that these modifications are made at hap-hazard, and uncontrolled by any political principle. The author has a principle and a theory, though his application of both is somewhat vague. His principle is, *Justice*. This, he maintains, consists in not doing to others what you would not wish them to do to you. "As justice prohibits individuals from attempting the life, the liberty, or the property of their neighbours, so it exacts from nations who are moral individuals, that they should mutually respect their political unity, their independence, and their territorial possessions."

In pursuance of the principle of justice thus laid down, France, in the map before us, "respects the political unity" of Prussia by taking from her the Provinces of the Rhine; "the independence" of Italy,

by depriving her of Liguria; and "the territorial possessions" of Belgium by absorbing them altogether. Thus enforcing the great principle of doing to others as you would they should do unto you, by two highway robberies and a murder.

Austria ceases to exist—that portion of it which is German being incorporated with Prussia and the smaller states into a German empire—Poland, Hungary, Servia, Bosnia, and the Principalities constituting a country to be called the Danubian Confederation. Turkey and Greece are to form a Christian kingdom to the south of the Balkan, with the exception of a section surrounding Constantinople bearing the name of Marmora,—its capital to be the seat of the future European Congress. All the possessions of Great Britain in Europe are to be taken from her. Gibraltar, with Tangiers and Ceuta, are to form Atlanta—a neutralized territory; Malta is to be the seat of the international maritime force, under the supreme direction of the Congress, and always at its disposition; and Heligoland is to be neutralized. The Channel Islands, being difficult to deal with, are not marked in the map at all. Switzerland, Holland, and Denmark, are neutralized—the latter power, as being the key of the Baltic, has a portion of Sweden assigned to it; Palestine becomes the centre of the Christian faith, the seat of the Pope, and the focus of a religious propaganda. In other words, Maronites and Druses will change places in the matter of religious persecution. The Isthmus of Suez, with its canal, Syria and Egypt, are all to be neutralized, together with sundry towns and islands—among the latter Corfu,—and mouths of rivers, which it is needless to specify. In a word, the development of the principle of justice, in the French sense, is the annihilation of Austria, Belgium, and Turkey; the subtraction of territory from Russia, Germany, Sweden, and England; and the addition of territory to France, Greece, and Denmark. This arrangement, it is hoped, will ensure a permanent and substantial peace, the effect of which is to be a general disarmament, involving a pecuniary saving to Europe of two milliards of francs, and a precisely corresponding increase of production, which is also to amount exactly to two milliards of francs.

The principle being justice, and the theory national and natural limits, it is difficult to perceive by what right Corsica should remain French, or Genoa be annexed; in fact, as may be conceived, the whole scheme is in itself a direct contradiction in terms, and an absolute absurdity, except as viewed in the light of being a French production. To carry out such a scheme, all existing treaties must be regarded as so much waste paper; and it is the utter indifference to all treaty obligations which has characterized recent European diplomacy, that doubtless encourages the publication of these political "ideas." Nor can we consistently complain if measures are taken by the French Government substantially to develop them. Our own policy has recently been marked by such an entire want, both of principle and logic, that we are, to a certain extent, debarred from appealing to either in our opposition to the French programme, whatever it may be. We remained passive, and offered no remonstrance to that outrage to all international law involved by the intervention of France in the affairs of Northern Italy; we now agree to non-intervention in the South, while in defiance of the ninth article of the Treaty of Paris, by which none of the concessions then forced upon the Sultan were to open the door to foreign interference, we insist upon his submitting to the occupation of part of his territory by French troops.

At one moment it suits us to abandon the doctrine of non-intervention, at another to apply it. We are swayed by impulse

rather than by principle; by our sympathies with the abstract rather than by the stern dictates of conscience; and we cannot object to a similar policy on the part of the Emperor of the French. The only difference is that his impulses are selfish, while ours, though they may be mistaken, are generous. His sympathies are for France; ours for liberty; but we both think that the end justifies the means, and that the sacred obligations incurred by treaties are to vanish before the special interests on which we have respectively placed our affections.

Soner or later we shall be driven back to the old stand-point of moral right; but it will be with a bad grace. For we shall only be moral because it will become our interest to be so. We shall only become consistent when inconsistency is perilous to the safety of a portion of our dominion. To those who take a wider view of foreign politics than that which presents itself to the superficial observer, that moment has already arrived: the gradual extension of French influence upon the shores of the Mediterranean already threatens our possessions in that sea; the new map truly indicates the feeling of intense jealousy with which every Frenchman regards the occupation by England of Gibraltar and Malta; and there can be little doubt that it is in this quarter that our power will be first assailed. The subjugation to French influence of the Italian Peninsula and of Syria is the first step in this direction, speedily to be followed by a pacific occupation of Egypt for engineering purposes. When all the ports of the Mediterranean are at the disposal of a combined Russian and French fleet, we shall find the inconvenience of the policy of indecision and acquiescence which now characterizes our foreign diplomacy, and regret that we did not at an earlier period adopt measures to thwart those elaborate conceptions which a gentleman with a turn for international organization and arrangement has just favoured us with on sheets of painted paper, under the magniloquent and high-sounding title of "Europe Pacific."

DOES INDIA "PAY" ?

OF all the political discoveries of the last few years the most astounding is, that India is of no value to England. But, though the belief is astounding, it is not unaccountable. India has been unfortunate; she has "had losses;" she is now in difficulties, and she wants money. The opprobrium of poverty is upon her. It is the common lot of common men, in such straits, to learn contumely. Small governments, like small persons, must not get into debt, and seek to borrow money. If they do, it is pretty sure to be discovered that they are worthless, and that they may be dropped. They who have made most use of a poor fellow in his day of prosperity are often the first to turn against him when he asks for a little help in the day of his need. And we are now practically applying these principles of ingratitude to the case of empires, by declaring that the Imperial Government has really no need of its Indian dependency, and can do just as well without it. "Perish, India," it is said, "rather than she should cost Great Britain a farthing!"

Ingratitude is always foolish and short-sighted. It is as much a blunder as a crime. In the first place, India cannot perish, unless it be submerged by the ocean. We may blot it out from the political map, but we cannot expunge it from the catalogue of nations. If we find the country does not pay, and withdraw ourselves from it, there are other great Powers at hand prepared to divide it between them. We are almost ashamed of ourselves for committing so obvious a truism, but India has been told so seriously and so solemnly to perish, that we are constrained to treat the possibility of such a phenomenon as a conviction firmly implanted in the minds of a certain school of politicians; and, therefore, to insist, in *finis*, on the fact that the primal question is not whether England shall or shall not be mistress of India, but whether England or some other European Power shall hold it. We cannot blow up India as a retreating army fires its magazines, or spike it, like an abandoned gun, lest it should become serviceable in the enemy's hands and be destructively employed against us.

But if we could, what then? There may be men who seriously believe that England is nowise owes her proud position in the "federation of the world" to her dominion over the great continent of India; there may be men, we say, who believe this, as there are children who believe that the moon is made of cheese. But the one faith is no more a delusion as the other. It is a trick of our self-love to believe that the favour with which we are regarded by the world owes nothing to adventitious circumstances. We may persuade ourselves that our greatness is self-contained in "our tight little island;" and that no extraneous advantages can add anything to it. But other nations regard the matter with very different eyes. They would laugh out—if they heard our boasts—their mutterable appreciation of our self-conceit. India may not "pay" in peace, but she pays in prestige. The statesmen and the peoples of other countries think much of our colonial possessions; but still they do not envy us the possession of Australia; and we do not know that Canada or Vancouver are thorns in any of their sides. But they cannot bear to think of our Anglo-Indian empire; and they cannot withhold from us their respectful admiration so long as we possess it.

Let us inflate ourselves as we may, we must shrivel, in spite of all our efforts, into comparatively scanty dimensions, if once we be stripped of that magnificent appendage to our greatness.

Still, India, it may be said, does not pay; whatever may be its political advantages to us, the financial results appear to be doubtful. We gain nothing by it, it is allowed; and, on the other hand, we may lose something by it, if the progress of coming bankruptcy be not fetterly arrested. If India be bankrupt, it is very true that England must eventually pay,—a sufficient reason, we should think, why we should endeavour to avert such a calamity by enabling the Indian Government to raise money at less ruinous rates of interest than those which, without an imperial guarantee, she is compelled to pay. But although our selfishness and short-sightedness, in this respect, doubtless increase the danger, we have no apprehension that England will ever be called upon to pay the debts of her Indian Empire. And it may be doubted whether India would not lose more than she would gain by accepting the security of the imperial Government; for if such security were given, Parliament would assume the right to interfere in the business of India, and thereby nothing could more surely hasten the downfall of our Eastern Empire than such Parliamentary interferences. But if a demand were to be made upon the national purse, we do not clearly see that the statesmen of England would have a right to complain.

Looking at the matter through no other medium than that of pure justice, we can hardly fail to discern the fact that England is largely a debtor to India. Immense sums of money have been paid from the Indian revenue, which ought strictly to have been charges on the imperial exchequer. If the fifteen millions sterling which were expended on the war in Afghanistan—a war made by English statesmen to avert disagreeable consequences nearer home—had been, in the summer of 1857, at the disposal of the Indian Government, with the accumulated interest of fifteen years added thereto, the amount would have gone a long way towards the payment of the extraordinary expenses incurred during the eventful period of the late Indian Rebellion. It is hard, indeed, to say how large a share of our national burdens in *esse* and *in posse* have been cast upon India by the adventures of English statesmen.

Into the commercial bearings of the question we cannot enter at present. We have always been of opinion that the extent and importance of the market for British manufactures, which may be opened out in India, have been considerably exaggerated. We cannot persuade the people of India to put their legs into Nottingham stockings, or, notwithstanding the hopes held out by Mr. Wilson, to eat their dinners with Sheffield blades; but still there is scarcely a department of trade in which does not exist more or less of the occupancy of India; and it is scarcely possible to calculate the extent to which British capital may find profitable employment in that country, if we have only the enterprise and the confidence to embark it in new adventures. Of the wealth which may be derived from that country we have as yet scarcely had a glimpse. Meanwhile, however, it is no small item in the account of England's obligations to India, that she supplies fields of honourable and lucrative employment to so many members of the middle classes of England. Not only are thousands of our brethren, who otherwise would be chafing up the avenues of professional advancement or swelling the disastrous tide of mercantile competition at home, acquiring fame and fortune in the East, but thousands more are spending in England large incomes, derived from the revenues of India; some enjoying the fruits of their own industry, and others in the second, third, or fourth generation, inheritors of wealth acquired by others. Nor is it only Indian money that has been brought home from the East, to contribute to the material greatness of the empire. Much besides has been brought home which has added largely to our moral grandeur and strength. "India," said the old soldier, in one of Bulwer's recent novels—"India is the nursery of captains." On fields of Eastern adventure such warriors as Wellington, and such statesmen as Metcalfe have laid broad and deep the foundations of that power to cope with great conjunctures which has afterwards been turned to such vast account for the benefit of our empire in the West. There are but some of the obligations which we owe to India, and yet it is said to be better that she should perish than that we should help her, in her need, to six-pence out of the national purse. Up to this time India has cost us nothing. It is not likely to cost us anything; but if we do not give her anything else, we may, at all events, do her justice.

AN UNREASONABLE STRIKE.

THE operative lace-makers of Nottingham have chosen to strike for an advance of wages;—another example of the ignorance of their own affairs which is so common among working men. The spring was extremely unfavourable for most kinds of home trade. There was no fine weather, very little or no garden-stuffs to make, the horticultural interest flush of cash, and there was less desire, less means, and less opportunity of wearing and showing off fine new clothing than in any spring within the recollection of milliners and dressmakers.

On the 1st of the present month—an important day for men in business who put their names to bills at one, two, or three months' date—there was, as a consequence of the disastrous spring, a greater number of bills not taken up than has been known for a long period. They were chiefly the bills of retail traders—a proof that a check had been given to the prosperity of the classes in which a great number of the best customers of the Nottingham lace-makers are found. The lace trade has felt it, with several other trades, and within the last few weeks several failures have been announced, both at Nottingham and London, of persons connected with the trade. It might have been unkind—overdone—based on too much credit; but in the extremely unfavourable spring there lies a cause for a diminished demand for Nottingham lace wholly beyond the control of the masters, which must have lessened their power to employ and remunerate the men.

At the same time the demand from abroad has diminished. Few or no lace manufacturers were employed, under any attempt to force the foreign market. If that were overdone last year, the authors of the mischief are merchants abroad, or merchants in Liverpool and London. This year the trade has declined. In the six months of 1859, for which we have the trade tables, the value of the lace and patent net exported has fallen off to £158,901, from £201,956, as compared to the six months of 1859, or 22 per cent. So handicraft and millinery—of which lace forms a component part—has declined from £215,900, in 1859, to £185,416 in 1860, or 14 per cent. In this decline the exports to all countries have shared. Now, over the foreign consumption of millinery and lace, the master-manufacturers of Nottingham could have had no influence whatever. This decline in the demand for lace from abroad, however, would require to have affected Belgium, where the lace-trade is depressed as well as in England, like the lessened demand at home, must have diminished the demand of the masters for the services of the men and the means of paying their wages. The demand for the produce of one art or manufacture depends on the success of other arts or manufactures. If these, from any cause, fail—such as an inclement spring, an unusual summer, as in North America last year—there must be a diminished demand for those things for which horticultural and agricultural produce pays. The produce of one species of labour is always paid for, in fact, by the produce of some other species of labour; and those who work for the market, as almost all men now do, find a greater or less demand for their produce, or are well or ill remunerated, according to the success or failure of the demand for the goods and other manufacturing products, with the remuneration of the manufacturers, depends on the variable results of agricultural labour. But these, in the two instances mentioned, have of late been short, and, unfortunately, at present our own harvest prospects are by no means favourable. The lace-makers have struck, therefore, for higher wages, when the demand for their produce and the means of having it are diminished, and when there is no immediate prospect of the demand increasing. They could not have struck, as the *Nottingham Journal* says, at a worse time. There have been failures amongst the employers; prices and prospects at present are not likely to tempt capital into the trade; and the strike is an effectual means to keep it out. The misinformed and misguided men on strike, therefore, will not succeed. They will only waste the resources still in their possession, and a general appeal to other trades for support will only end in general waste, increasing general poverty.

It will be obvious that, our remarks applying only to facts, are not dictated by partisanship. We side, on such questions, neither with masters nor men—believing that both have a common interest, and both will prosper best by mutual goodwill, mutual kindness, mutual forbearance, and above all, by mutual knowledge of the facts which determine the condition of both. The vast expenditure this year on the means of national defence must have lessened the expenditure on other objects. Patriotism has diverted some of the usual payments from millinery and lace-making. The strike is unreasonable, not because the men should not aspire to be better paid—they ought so to aspire,—but because they are ignorant of the special facts which at present exercise a commanding influence over the trade. So men may say all strikes are unreasonable, from ignorance of the general facts which determine at all times the relations and condition of masters and men. We may even extend the inference, and affirm that men at all times and places only act unreasonably from ignorance of facts. What is meant by the phrase "acting unreasonably," whether applied to operatives or master-manufacturers, or any class, is that they act ignorantly. They are ill-informed of the past; they form incorrect views of what will be the consequences of their actions. What the operatives immediately see, and immediately know—such as the continued attempt of the masters to make as much as they can by their business—is only a very small part of all the circumstances, they ought to take into consideration before striking for higher wages. What they do not see, and yet should endeavor to find out, is the power of the masters to employ them and pay them higher wages; and the circumstances which determine this, though not within their immediate ken, may, with a little care and diligence, be ascertained.

THE PASSPORT NOTICE—A NEW TASK FOR MR. COLDEN.

WE avow ourselves of the number of those who believe that the Treaty of Commerce which Mr. Colden has for months past been employed in negotiating with the French Government, will be better appreciated the more it is understood; and that it will ultimately prove the means of effecting a far more durable and beneficial alliance between the British and French people than any merely dynastic, personal, or military policy ever pursued by our rulers has yet effected—or ever can effect. Of course the professional diplomatists have had their little *monter* at the unprofessional straightforwardness of one who was not trained in the crooked ways of diplomatic business, and who has gone direct to his purpose, just as he did in the agitation for the repeal of the Corn Laws. But Mr. Colden has, doubtless, been able to treat the disparagement of this class of critics with the indifference which it merits; convinced, as he must be, that the bulk of his countrymen approve of his conduct.

In receiving a published letter, he expresses his belief that in less than a couple of years all the English politicians (of both sides of the House) "will be eager enough to claim the merit of always having 'been friendly to the French Treaty.'" In this belief we share. We believe, also, that the details of the treaty are in good hands, while Mr. Colden has charge of them—though we do not share his views in some other matters—or agree with him that there is, or has been, anything like panic in this country, on the subject of a French invasion. We do not, however, intend to discuss that subject—and only allude to it thus incidentally in connection with Mr. Colden's letter, in order to point out to that gentleman a means by which he may very greatly aid the growth of that good understanding between the British and the French people, which he has at heart, and which he has already done so much to encourage. If impediments to trade are bad, are not impediments to locomotion bad also? If hostile custom-houses are a nuisance to the merchant, is not a hostile *gendarmarie*, stopping the passenger, and demanding his passport, a personal nuisance far more aggravating?

The Emperor, as the world knows, is an enemy to the passport system. He has already publicly expressed his disapprobation of it. Three or four years ago he held out hopes that, as far as Englishmen travelling in France were concerned, it should be forthwith abolished. But the promise remained unfulfilled—though its fulfilment we think would form a graceful supplement to the new Commercial Treaty, and be appreciated by a class of Englishmen who do more than any other to mould the opinions of their countrymen on all matters of foreign policy—the class of travelling class, who at this season of the year swarm over to the Continent, and bring back with them feelings, ideas, and impressions, favourable or unfavourable to their nearest neighbours; and often less favourable than they might be, by the operation of the passport nuisances. If an Englishman could leave his country without the trouble and expense of this utterly useless and vexatious document, and walk as freely on to the jetty at Boulogne, as he can to the pier of Rye or Margate, or to the Brunswick of Glasgow—a barrier would be removed which, more than any other, has tended to keep up a sentiment of estrangement and hostility between the two nations.

An Englishman can cross the Atlantic and travel thousands of miles over the American continent without a passport; but he cannot go twenty five miles eastward of Dover, without being molested of a fee, and stopped as if he were a thief or a conspirator. And all the expense, delay, and annoyance save no good purpose whatever. The want of a passport never stopped a thief or a conspirator who desired to travel in France or anywhere else; but the enforced possession of a passport has been a hindrance and grievance to honest men for ages. The railway system seems, of its very nature, to be at war with the passport system. The one is a growth of modern science and utility, and of time; travelling is a right, a necessity and a means of civilization. The other is a stupid remnant of feudal ignorance and barbarism, and of a time when a man had no legal right to travel, to think, to speak, or even to act, without the permission of some grim and ruthless baron or prince, of whom he was the serf if not the slave. We recommend the subject to the earnest attention of Mr. Colden. If he can procure from the Emperor the boon of free locomotion in France for the inhabitants of the British Isles, he will add another stone to the pyramid of his fame, complete a great work of conciliation, and entitle himself, in a higher degree than ever, to the respect and gratitude of every lover of peace, and every friend of the civilization of Europe.

FLUNKYISM, AND FASHIONABLE ANNOUNCEMENTS.

WE have received the following letter from a respectable tradesman, who once wore plush, and who seems to consider that the fraternity of flunkies have been wronged by the remarks in our paper on the subject of the fashionable announcements in the columns of some of our daily contemporaries. Our correspondent somewhat misunderstands the purport of our remarks. Though we highly disapprove of the foolish and intensely foolish parade of the names of people who have dined with dukes and earls, or who have been

received at evening parties by fashionable ladies, we should not have thought it worth while to animadvert upon a practice, which has, at all events, the merit of antiquity (common to many other abuses) to recommend it to toleration. It was only when we saw indications of a desire to carry the vulgar fashion into churches—where there ought to be no fashion—that we felt prompted to do what we could to nip the abomination in the bud. If my lord the duke is to be considered a greater person in the House of God than the tradesman or the pauper, and to be advertised accordingly, it is time not only for the press, but for the clergy, and all other teachers of the people, to raise a warning voice against what might be called the irreligion, as well as the vulgarity of the practice. With these few preliminary remarks, we leave the letter of our correspondent to speak for itself.

To the Editor of the "London Review."

Sir,—Though I once were plumb, I beg to say that I have not "plumb in my soul." A lively soil was always felt by me to be a degradation. Having had some education, and some ambition, I succeeded, by good conduct and studiousness, in raising myself from the condition of what we are pleased to call a "bunkey," to that of a butler, and no longer were lively. How long I was a butler I need not say. It is enough for my present purpose to inform you, that by strict economy, and attention to my business, aided by the kindness—I might almost say the friendship—of an indulgent master, I was enabled to leave service and establish myself as the keeper of a respectable public-house. I may praise the house in your columns, for I shall not publish my address or my name, but only give to yourself privately, as a voucher for the authenticity of this communication. I may then all, without being suspected of a puff, that I will give beer, good spirits, and good wines; that I do not adulterate either, and that I believe I am a far honest man than some of the tradesmen in my neighbourhood. As I said before, I was once a footman, and a butler; and in both capacities—having eyes in my head, and some share of intelligence—I saw a good deal both of footmen and of their masters and mistresses. I learned, also, how the fashionable announcements of great dinners and parties got into the daily newspapers, and can assure that it was not in any case through the agency of footmen or butlers.

The materials for these announcements were sometimes collected from servants by persons who called themselves fashionable reporters. What sort of a living they made of it I cannot tell, but I consider that a butler, or, perhaps, a footman, is quite as respectable as any of them. I also learned, and know, that footmen took no pains to glorify their masters in these matters, but that several noble families paid the fashionable newspapers very considerable sums to have the lists of their guests made public. I cannot, of my own knowledge, state it as a truth, but it was currently reported among the gentlemen's gentlemen with whom I associated, that one paper, in particular, derived a revenue of from £90 to £200 a week during the season for this service alone. If the fact be so, why should footmen be accused? If you will make further inquiries, I feel convinced that you will discover that the "swearing plumb" is quite innocent of the embelishment with which you charge them. A master may be a snob, and a footman may not be a snob, and vice versa; and I do not see why you should attack a class upon the strength of a puff paragraph which may have been sent to the newspapers by a snob who never "were plumb," and may have men in plumb to wait upon him.

If fashionable people did not want the names of their guests made public, you may depend upon it that they could very easily stop the practice. The remedy is in their own hands, and they, not their footmen, are to blame; nor even the poor penny-8d. innkeeper, who earns their bread-and-cheese in this way, as they might in any other.

August 22, 1860.

Yours obediently,
JOHN THOMAS.

AN EXCURSION TO MOUNT ETNA.

THIS is the time for tourists. The young Prince of Wales is lionizing in Canada; Mr. Spurgeon recommends the Rhine, which hitherto has been the kind of Euxine-Hall Mexico; the various railway companies give excursion tickets for the north and for the west; Kewick and Killarney are overflowing with their summer flocks; the Alps bristle with Britannie invaders, and a chosen handful have lately elected to visit Mount Etna and Garibaldi. Those last have the best of it: with their rifles on their shoulders—for who would trust himself unarmed in the Neapolitan states!—with a "handsome and picturesque" uniform by which they may recognize each other in the crowds about Messina; with a free passage, rations, and "compensation" given them by Garibaldi, always generous to the English and the patron saint of all the lovers of Italy,—they will see one of the wonders of the world, and the greatest hero of modern history, under more favourable circumstances than any other men can boast of. They may see Vesuvius too, before they have done with the excursion, and be at the opening of the Neapolitan dungeons; they may help to knock off some rusted chains from a few hundred patriots, and carve their names in a nobler fashion than Smith and Brown who write theirs on the Pyramids, or in the visitors' book on the Rhigi.

This handful of brave young Englishmen—this little band, six hundred strong, seems to belong to a more heroic time than this, when the yard-measure of the counting-house marks off patriotism and valour as only worth so much, less low on the transaction. It carries us back to days when men fought for brotherhood and love, and each believed in a cause felt bound to help his comrade, no matter what the cost. Our brave excursionists—picked men all of them—

will meet hundreds of Italian patriots who have sacrificed friends and home, and, perhaps, will sacrifice their own lives, for liberty and Italy. They will find in the chief a man of antique virtue, greater, more daring, more simple than we moderns; and they may, if they will, take an active part in one of the noblest works which this generation has to do. Yet they are not volunteers, they are not enlisted, they are simple excursionists, and are under special advantages, to see Mount Etna, and perhaps Mount Vesuvius. If they choose to gather laurels at the foot of either—and why should they not!—History will keep their memory green for ever.

THE GOUTY PHILOSOPHER.—No. VII.

MR. WAGSTAFF CONTINUES THE SUBJECT OF "SLOP," AND ESPECIALLY OF SLOP PHILANTHROPY, SLOP PHILOSOPHY, SLOP AUTHORSHIP, AND A SLOP HOUSE OF COMMONS.

Slop Philanthropy and Slop Philosophy may go together. They are closely related. Slop Philanthropy, that gives its annual guineas to a public charity, and at the anniversary dinner of the Society for the Dissemination of Religious Tracts to Savages, who can neither read them, nor apply them to any other purpose of utility or decency, gives its fifty guineas that the ghosts and devils on the table may ring at the mention of the munificent donation,—has Slop for its father, Slop for its mother, and is itself Slop. If not exactly conscience-money, these guineas are the tribute to hypocrisy, that smooth and sung idleness, which is set up in the temples of the world for half mankind to worship. Can Jones, who subscribes to a score of charities, cheat in weight or measure, grind the faces of his workpeople, or adulterate his commodities? Oh, no! says Respectability, in its gig—the thing is impossible. But though supposed to be impossible, it is done, nevertheless, by Jones the aforesaid—and by Smith, and by Robinson, and by a whole host of lying knaves, who spread out the very thin gold-leaf of Slop Philanthropy, to cover the rottenness of their worldly dealings. And as such societies have generally a pious Lord or Earl to preside over them, to vouch to gentlemen for the correctness and the respectability of the concern, and to take the chair at the anniversary meetings and dinners, shop-keeping knavery thus gets to breathe the atmosphere of aristocracy. If it be only once in a year, it is something to boast of, and attracts custom and extends connection. Not only the vulgar herd, but the Earl or Lord himself is commonly a Slop Philanthropist, and trades upon philanthropy, as other men do upon their talents or their capital, as a surer means of attaining social position than statesmanship, true religion, eloquence, or genius (for of these he may possess no particle) could afford him. The Slop Philanthropist of the patrician order loves applause as mightily as a tragedian or a prima donna, and sucks in the adulation of crowds—especially if they be ladies—with an insatiable delight that would cause Democritus to laugh and Heracles to moan if they could see it. As for Slop Philosophy, whether it come from Fourier or from Owen, from Paley or from Malthus, from the Positivists or from the Optimists, from the red-hot owner of slaves in Louisiana or Alabama, or the red-hot abolitionist of Massachusetts or Connecticut, down to the female critter—all brains and no heart—who preaches upon woman's natural rights to forewear nursing for doctoring, and the government of a happy home for a share in the government of an unhappy world, there is no such of it in vogue on both sides of the Atlantic, as to justify the belief that it is the very quintessence, crown, and some of all other Slop. Discourism, Free-Lovism, Spiritualism, Mormonism, Salutarism, Trotterism, Vegetarianism, Puseyism, and I may add Toulism, are all pieces cut from the same web—woven out of the same warp and well—of folly and arrogance. Such "isms," and fifty others as absurd, are all slop and sham. Philosophers of the slop school—pretending to be wiser than Nature—lose sight of Nature altogether, and would cheat mankind in their belief and their observances, as grossly as the slop tailors and the food-poisoners cheat them in their apparel or their bread. One doctor of Slop proclaims all drink to be bad but water, forgetful of the contrary experiences of all ages and countries; another asserts all food to be injurious except cabbage and carrots; a third proclaims that the dining-room table of every household is the altar of the Divinity, and the medium through which the spirits both of the blessed and the damned communicate, by vulgar rays and painful spellings, with the children of this world; a fourth asserts that all evil comes upon the earth from the sinful habit of smiling, and looking cheerful, or taking a walk into the country on the day which most Christians call Sunday or the Lord's Day, but which Jews and Scotchmen call the Sabbath; while a fifth, with a great "ism" filling up all the emptiness of his saddle, attempts to explain with his poor reason all the phenomena of creation, and to put Infinite into that very small nutshell, his cranium. These be your Slop philosophers; and the age pillulates and is rotten with them.

The Slop Author is a remarkable person, and one of the most singular products of our age of Slop. There is nothing that he cannot or that he will not undertake to write. His mind is a microcosm and a macrocosm. His talents are elephantine—either to pick up the pin, or to rend the oak. Did Time not vanquish him, he would undertake a whole Encyclopedia to himself—not forgetting his scissors. A new Bible or new dictionary, a new tragedy, comedy, or farce; an article for a quarterly review or a daily journal; a treatise upon political economy, or upon the spasmodic nature of all true poetry; a code of art or of morals; a sermon or a pantomime; a history of

the world; or a fairy-tale for Christmas; an astronomical or a gastronomical treatise; an introduction to a new edition of the pre-Scottish novels or an advertisement for a new palette of Messrs. Aaron and Sons, or a new mantle of the Morning Company; an epic poem, or a song without sense for Mr. Crotchett, the great composer, to be sung by Mr. Alto, the great tenor; a treatise upon the Differential Calculus, or a slashing review of the last new poem by Mr. Misty;—all these things are grist to this merry miller. He hath stomach for these and a thousand others. Armed with his sciences, he defies Time with his sceptre. Ask him to write a tragedy—certainly of good payment being presupposed—and give him ten days for the task, and he will undertake it and bring it to you, all trig and ready, the day after to-morrow. Ask him for a new History of England, and give him six months for the job, and you shall have it in six weeks, ready for the printer.

Slop authorship being a recognised fact of our time, slop criticism naturally follows it—but, having said so, say on that branch of the subject on a previous occasion, I have done with it, and return to it no more, unless upon provocation, and then—let the criticsaters beware!

The Slop Drama grows out of slop literature, as the branch grows from the stem. Shakespeare having possession of the minds of theatrical managers—not altogether because he is Shakespeare, but partly because he is dead and popular, and can enforce no copy-right,—the drama made by living men falls, by the operation of the law of gravitation to the level of Slop. Were a dramatist as good as Shakespeare to appear in our day, who would recognise him? Nay, who would tolerate him? If he were a poor man the other Shakespeare would stand in his way to the extent of depriving him of bread; and if he were a man of fortune, and wanted no bread out of his brain or his ink-bottle, Shakespeare would alike shut him out of reputation and the chance of making it, by the mere fact of the deadness of him—Shakespeare, and of the livingness of him—the aspirant. And as there is such little remuneration for novelty of invention and greatness and originality of treatment, how can the man who expects to live by this particular business fail to perceive—time being money—that to borrow takes less time than to create? If a Frenchman has an idea why, upon this principle, should not an Englishman make use of it, to save labour? That is one of the great secrets of the Slop Drama. A man will get thirty shillings for the merely mechanical labour of translating and slightly modifying a French vaudeville; whereas, if he wrote an original piece, worth fifty French vaudevilles, he might, perhaps, receive nothing!—unless the cold shouker and a series of insults and rebuffs can claim to be accounted something. The Slop Drama is not the crime but the misfortune of the dramatic author, any more than slop tailorship or slop shirtmaking is the crime of the unfortunate labourers. It is both the crime and the misfortune of the traders in dramatic representation and the amusement of the public; the statutory rascal shown, with houses over their heads, who in an age of Slop regulate the affairs of the stage, and claim to transact their business, as Aaron and Sons do, and with no higher purpose. It is the discrimination to pay to a living man a good price for a good thing, when dead men and foreigners stand in the way, neither being in the condition to claim a recompense for the labour, that reduces the original drama of our time to the condition of Slop. The slop tailor and the slop dramatist are on the same footing. When the wage is duly diminished the work is duly sanctified, whether the work be coats or trousers, or tragedies, or pantaloons, or penitentials. The giants of literature no longer condescend to write dramas. Fate and circumstance, managers and actors, critics and public are against them. Cheapness is the rule, and cheapness produces its natural fruit, inferiority and worthlessness.

Last result of Slop,—we have a Slop House of Commons and Slop Legislation. Who, in our days, are the favourites of the people, when the people in large numbers have the privilege of election? Local lawyers, who have the gift of the gab; and local tradesmen, with a similar unhappy accomplishment. With rare exceptions, genius, learning, eloquence, and statesmanship, find no favour among large constituencies, unless backed by the influence of the purse; and Mr. Slob, great in local matters, great in the vestry, and great in the estimation of every little snobling in the place, becomes member for Shobbington, though he may have won the wealth that alone qualifies him for the distinction by means the most despicable. He may have been the auctioneer and undertaker of the Borough, or the chief grocer, famous for his piety and his sardonic sugar. And the dunce, though he may be able to pay largely out of the future thrown into his lap by public gullibility or lucky speculation, may scarcely be able to open his mouth in a society of gentlemen, without betraying his ignorance and vulgarity. The Slop members of the House are known for the liberties they take with the aspirants—for their indifference as regards such facts of history as they may have learned—for their ignorance of all the rest—for their innocence of even a remote perception of great principles—for their love of small details—for their stupid pertinacity in voting upon every motion which comes before the House, whether they understand it or not; for their belief, that constant attendance in Parliament, day after day and night after night, is of more importance to their constituents and to the nation than statesmanship; and for the facility with which a prime minister can wheedle, and cajole, and twist them into his purpose by invitations to dinner, or by civilities to their wives and daughters. And then, Slop Members, with all their talk of purity and principle, honour and independence, are the most avaricious men in the realm. They are generally wealthy enough to need no place of pecuniary conduct for themselves; and are generally

mean enough to desire to quarter their cousins and dependents, and their wives' cousins, as well as their chairmen of committees, and even their bill-stickers, upon the public service. Fifty pounds a year in the Customs or the Post Office is a price for the Slop member, to be bestowed upon some needy voter of Shobbington, for services rendered at the last election. But Slop voters, who know nothing of the public interests, and if they do, care nothing, deserve Slop members. Fifty-four—if there be only fifty—may choose a wise man to represent them; but fifty thousand fools find it difficult in the first place to get a wise man to undertake the ungrateful labour of asking their suffrages; and still more difficult to fix their choice upon the wise man—if he have been bold enough to place his wisdom at their mercy.

From Slop voters and Slop representatives comes naturally Slop Legislation, useless Acts of Parliament, made one year to be found unworkable the next; an accumulation of acts on all subjects, great and small, worthy and unworthy, in such manner, that Law, which should be simple, intelligible, and founded on common sense and justice, becomes such a jumble of conflicting absurdities, that no lifetime, however lengthened, is sufficient to study, and no intellect, however hardy, well trained, and comprehensive, is sufficient to master it.

In fact, our modern civilization is altogether Slop. The ancient solidity is defunct and out of fashion. Cathedrals have given place to chapels; substance has made way for show; real truth to mock; broad-cloth to subtlety; deeds to words; gentlemen to snobs; and gentlemanism to what, for want of a better word, I must call females. At all events, such seems to me the tendency of the age, morally and materially. John Wagstaffe loves reality, thinks the rank of a gentleman the highest of all ranks and titles, and a gentleman, young or old, the only of any crowned queen or emperor in the world, and worthy of as much true respect and heartfelt homage. John Wagstaffe loves the solid—prefers silver to electro-plating—and would like to see a servant dress less ostentatiously than, and in a different fashion from his mistress. He prefers a brick cottage to a tent, and linen to calico. The age is of a different fancy, and though John Wagstaffe cannot cure it of its degeneracy, he can pity and deplore it.

LORD MACAULAY, M. SIMMONDS, AND KIRK WHITE.—There is, perhaps, no passage in all Lord Macaulay's writings, more widely known than the following, which forms the climax to a splendid passage upon the durability of the Papacy:—"She was great and respected before the Saxon had set foot on Britain, before the Frank had passed the Rhine, when Greece and Sicily still flourished in Antioch, when idols were still worshipped in the Temple of Mecca. And she may still exist in undiminished vigour, when some traveller from New Zealand shall, in the midst of a vast solitude, take his stand on a broken arch of London Bridge to sketch the ruins of St. Paul's."—[*Edinburgh Review*, October, 1846, art. "Banks's History of the Popes."—Where is the germ of the preceding passage to be found? Most likely in the following lines of Kirk White, published many years previously:—

"O'er her maets,
Her crowded ports broods slavery; and the cry
Of her keels, and the groans of her
Of distant follows breaks along the void;
Even as the savage sits upon the stone
That marks where stood her capital, and hears
The hollow booming in the woods, he shrinks
From the dismaying solitude."

Lord Macaulay was not the only illustrious author who had a similar idea. The celebrated Simmonds was thoroughly a master of the English language, and in his "History of the South" will be found the annexed passage. We adopt the translation given by the *Edinburgh Review*, vol. xiv., p. 54:—"Who knows, if some centuries hence, this same Europe, where the reign of literature and science is now transported—which shines with such lustre—which judges so well of times past—which compares so well the successive influence of ancient literature and morals, may not be deserted and sold as the hills of Mauritania, the sands of Egypt, and the valleys of Assyria? Who knows whether some day, perhaps, in the high lands, where the Oronoko and the Amazon collect their streams, perhaps in the now impenetrable enclosure of the mountains of New Holland—there may not be formed nations with other morals, other languages, other thoughts, other religions; nations who shall again renew the human kind; who shall study, like ourselves, the times past, and who, seeing with surprise what we have been, and have known, what they shall know—that we have believed, like them, in durability and glory,—shall pity our impotent efforts, and shall recall the names of Newton, of Racine, of Tasso, as examples of the vain struggles of men to attain an immortality of renown which fate denies them." We do not say that the thoughts contained in the above words were suggested by the following lines of Kirk White, but they are so similar in spirit, if not in form, as to make the comparison between them a literary curiosity:—

"Measure the Arts, in second infancy,
How in some distant clime, and there, perchance,
Some bold adventurer, flid with golden dreams,
Turning his back through trackless solitudes,
Where, to his wandering shepherd's eye, no power
Hath ever plough'd before,—explores the frowns
Of fallen Albion.—To the land unknown
He journeyed; and, perhaps, descends
Some vestige of her ancient splendour:
Then he, with vain conjecture, fills his mind
Of the unknown of race, which had arrived
At a woe in that solitary
Far from the civil world, and singly sighs
And so reflects on the state of man."

THE LONDON REVIEW AND WEEKLY JOURNAL, published every Saturday Morning, price 3d. per copy, aims to supply a want long felt by the owners of the Empire, a Weekly Journal, in which Politics shall be subordinate to Literature and Art, and in which topics of social and universal interest shall be treated for the benefit of all. While its pages will afford a complete record of the events and opinions of the day, and while its articles on public affairs will appear in the highest order of mind and style, its Literature, its conductors will strive to make it an indispensable companion in every household where intelligence and good taste are valued. The *Tale*, the *Sketch*, and the *Social Essay*, will, in its columns, compete with *Fiction* for the favour of the family circles to which it will address itself.

The "London Review" will contain no poetry, allusion, or advertisement, that could render it an improper guest at the fireside; and the amusement and instruction of those who have but little sympathy with the theories of party politics, and who look in a newspaper for something more than controversy, will be amply provided for.

The "London Review" is published weekly, on a regular, solid type; and, in quantity at least, greatly exceeds most of the more costly weekly newspapers; whilst its price is such as must secure for it a world-wide circulation.

TERMS OF SUBSCRIPTION.

| QUARTERLY. | HALF-YEARLY. | YEARLY. |
|-----------------|--------------|---------|
| Stamped | 4 6 | 17 6 |
| Unstamped | 2 3 | 13 6 |

One Yearly per Copy for any period, with One Penny additional if sent by Post.

Orders for "THE LONDON REVIEW AND WEEKLY JOURNAL" received by all Booksellers and Newspaper; or, at the Office, 11, Southampton-row, Strand.

Post-office Orders to be made payable at the Charging-cross Office, to W. LITTLE, Manager.

A Single Copy sent free by Post on receipt of Four Postage Stamps.

SUBSCRIPTIONS for "THE LONDON REVIEW" received by Messrs. W. H. SMITH & SON, at 185, Strand, and at all their Railway Book-stalls.

THEATRE ROYAL, HAYMARKET.—ON MONDAY, AUGUST 27th, and during the week, **THE OVERLAND ROUTE**, being positively the last work yet of its performance, and of the engagement of Mr. J. Charles Mathews, who, with Mr. Dickinson, Mr. Compton, Mr. Clippendale, Mr. Wilkes, &c., will sustain their original characters in this comedy, after which, *St. Nicholas*, the Comedy of JACQUES. *Paul Pry*, Mr. Charles Mathews; *Pease*, Mr. Charles Mathews.

NEW THEATRE ROYAL, ADELPHI.—Sole Proprietor and Manager, Mr. W. WEBSTER.—LAST NIGHT OF JANET PRIDE.—ON MONDAY, and during the week (Wednesday excepted), JANET PRIDE, (this original Character), Mr. B. Webster; *Mrs. A. L. Todd*, *Miss Belford*, *Miss F. Darnley*, *Miss F. Darnley*, *Misses W. & J. L. Todd*, *Miss Belford*, &c. To conclude with *THE EXCHANGED ISLE*. *Monsters of the Deep*, *Mr. J. L. Todd*, *Miss Belford*, &c. *St. Nicholas*, the Comedy of JACQUES. *Paul Pry*, Mr. Charles Mathews; *Pease*, Mr. Charles Mathews.

STEELES ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr. W. BUTT.—ON MONDAY, and during the week, will be presented the splendid Spectacle of *MARTELLA AND THE WILD ROSE*; with *Misses W. & J. L. Todd*, *Miss Belford*, &c. To conclude with *THE EXCHANGED ISLE*. *Monsters of the Deep*, *Mr. J. L. Todd*, *Miss Belford*, &c. *St. Nicholas*, the Comedy of JACQUES. *Paul Pry*, Mr. Charles Mathews; *Pease*, Mr. Charles Mathews.

ERRATUM.—In the article last week referring to the unceremonious in which Mr. Trevelyan has been treated by the Admiralty the name of the Secretary was, by mistake, printed "Lord Alfred," instead of "Lord Clarence Paget."

SCALE OF CHARGES FOR ADVERTISEMENTS.

Per Line, per Day, 6d.

Every additional Line, after Four Lines, 3d. per Line.

Advertisements exceeding One Column in Width are charged in proportion.

THE LONDON REVIEW

AND
WEEKLY JOURNAL.

SATURDAY, AUGUST 25, 1860.

GARIBOLDI has at length disembarked at Bogiana, a place on the coast of Calabria, a few miles north of Scylla, and within easy reach of Sicily. Various detachments had preceded him. So early as the night of the 5th, favoured by stormy weather, Misori had crossed the Strait of Messina with 200 picked men, had disembarked under Torre de Cavallo, had stealthily crept through the detachments of Neapolitan troops who lined the coast, and had without detection gained the mountains in the interior, where he effected a junction with a large body of insurgents, who had already mastered among the hills. For more than a week little progress was made, owing to the want of a naval force, the Sicilian boatsmen, on whom Garibaldi was obliged to depend, having thrown down their oars the moment that firing commenced. Gunboats and steamers were, however, armed, and made ready for the conveyance of troops, and a fleet of 130 vessels came at last to have been collected. Immediately on landing, Garibaldi appears to have been joined by the insurgent forces already assembled in Calabria, and to have discovered that he was in a position to attack Reggio, which is now stated to be a despatch from Naples, dated Tuesday evening, to have fallen into the hands of the invaders.

No additional information has been received in the meantime, as to the ultimate purposes of Garibaldi. After he has obtained possession of Naples, he means, it is said, to proceed to Rome, and when both Rome and Naples have been united to Piedmont, to stir up a war in Hungary, and attack Venetia; and not to rest until every spot which belongs to the geographical region of Italy has been united under one government. It will be very unfortunate if Garibaldi hurries at present into any such course, as we may assume, from the last continental news, that the arrangement came to at Toplitz really was that Austria should not interfere in Italian affairs, unless Venetia were attacked. The argument that Venetia is part of Italy, and should, therefore, form part of the new Italian States, might, with as good reason, be applied to Corsica—which Garibaldi has no intention of wresting from France—or to the eastern seaboard of the Adriatic, which he does not intend to recover from Austria or the Porte. He must stop at some point,

and it would be wise to do so at the limit where he will neither provoke a contest with France or Austria.

The national Hungarian fête has passed off more quietly than was anticipated, there having been no demonstration against the Austrians, and nothing to indicate that any spontaneous outbreak is likely to occur opportunistically for Garibaldi. General Benedek entrusted the maintenance of public order to the municipality of Pesth, who undertook, in the absence of Austrian troops, to guarantee the tranquillity of the town.

The news from Russia gives a gloomy account of the harvest. Heavy rains and high floods have damaged the crops in all parts of the empire, while in the southern provinces the woods and corn-fields have been devastated by locusts. This scourge made its appearance in Bessarabia. The whole population was called out as against an invading army. Twenty thousand men surrounded the district in which the insects had appeared. At first they succeeded in confining their depredations to a limited area, but in spite of all precautions they suddenly crossed the cordon drawn round them, and made their appearance in other districts where they have eaten up every blade of corn. They have crossed the Dniester, and extended over an area of forty miles in length, by fifteen in breadth. The ultimate extent of this evil cannot be anticipated. A telegram from St. Petersburg, dated Monday last, states that the Russian finances are in an unsatisfactory state, and that the rumour is even prevalent that the empire is on the eve of a national bankruptcy.

There is great discontent, it is stated, in the army, in consequence of arrears of pay; even the Imperial Guard not having been paid for the last five months. Troops, however, cannot be sent down to the Black Sea, while 300 ships have assembled at Nicoloff, in order to transport troops to Turkey, should a chance occur to justify Russian intervention in the East.

From Turkey the news is still alarming. The precautions taken to preserve peace in all the great towns seem, however, to have had the desired effect. Collisions between the Turks and the native population were daily expected to occur in Montenegro, where the nomination of Prince Danilo is ascribed to the party who wish to throw off the Turkish yoke. The reply of the Porte to a Serbian deputation refusing to allow the Serbians to frame a new constitution is also expected to create much discontent.

From Syria every additional fact which reaches us goes to prove that the Turkish authorities were entirely responsible for the events of the past month. The last number of the *Revue des Deux Mondes* contains a very important article on the subject by a French Protestant missionary, who has had the best chance of becoming acquainted with the feelings and prejudices of the native population in Syria. It is difficult for an Englishman to realize all the depth of ignorance and stupidity in which the lower classes of the East are sunk. Of geography they know nothing. Of history they know less. Yet a kind of reverence exists for the past, and they have a deep respect for the past, and they are very much attached to the West. The writer of this article tells us that the Sepoy insurrection made a great sensation in Syria. It was generally believed that the Indian Mussulmans had crossed the English frontier, sacked London, and driven Queen Victoria from her throne. She had gone, it was said, to Constantinople, where she and her family had been received by Abdul Medjid. The Sultan was very much blamed by the village politicians of Syria for so doing. At this time the whole Mussulman population of the East were prepared for a general attack upon the Christians, which would undoubtedly have burst forth, but for the wholesome lesson taught at Jeddah. The author of this interesting article partly ascribes the present outbreak to the deference with which the Turkish authorities are treated by the English Government. The abject native races of Syria see the ignorant and conceited Turks insult English subjects with impunity, and they conclude and believe that the English, like themselves, are tributaries of the Sultan, and must submit to be dominated over by the Pashas and Governors of the Porte. "Thus (he says) has England destroyed in this country not only her own influence, but also, up to a certain point, that of other civilized nations; for the Easterns do not make distinctions, and it is impossible that an European power can lose prestige in their eyes without the others envying or imitating it. The general impression of the Syrian Mussulmans is, that the Frank princes, expelled or divided, intimidated at the song of the power of the Turkish empire, are incapable of really protecting their own subjects, and still more incapable of protecting the Rayahs; so that if a massacre took place, the Sultan would order the Pasha of Beyrout to salute the French and English flags, and no more would be said about it." On Monday last the secretaries of the British Syrian Relief Fund were able to transmit £5,000, for the relief of the sufferers in the East, to Mr. Moore, the Consul at Beyrout, with a request that the fund might be distributed on unsectarian and impartial principles.

On the 4th of August last, the first caravan of Christians, who had escaped from the massacres in Damascus, arrived in Beyrout; a column, composed chiefly of women and children, and numbering from 2,000 to 3,000 persons, in a state of misery and destitution which could not be exceeded. Great exertions had been made to feed and clothe them. Remittances from Europe were anxiously looked for.

On the evening of the 16th a large meeting was held at Salter's Hotel, to hear Captain E. Styles, the English officer of Garibaldi's staff, who has come home with the view of raising funds in aid of the Sicilian insurrection, and of enrolling, if possible, a body of volunteers, who will proceed with him to the seat

of war in Italy. Captain Styles was introduced amid the most enthusiastic applause. He stated that he had already met with great success; in three days he had collected five hundred recruits, all of whom were respectable, none of whom were without good certificates of character, and many of whom were gentlemen of independent means; but he expected soon to raise the number of volunteers to eight hundred, and not to leave this country without the means of properly arming and equipping his battalion, so that he might say to General Garibaldi, on returning to Sicily, "Here we are ready to fight." While Captain Styles was receiving the applause of this meeting, his letter, calling upon English Rifle Volunteers to take up arms in the cause of Sicilian independence, was brought by Mr. Hennessy in the House of Commons, under the notice of the Government. Mr. Hennessy wished to know if Her Majesty's Ministers were aware of what was going on; if they knew that, contrary to the statute and common law, as well as the law of nations, atrocities were being made in this country to embody troops to fight against a power with whom we were at war!

Lord Palmerston replied that it was in such cases difficult for the Government to interfere. The Foreign Enlistment Act no doubt might be enforced, but then it required proof that the enlistment actually took place in this country. Now, this might in all cases be evaded. Those who went to serve the Pope, for instance, who had been seen jealously watched by Mr. Mr. Hennessy and his friends, were going they understood to be employed upon railways, while those who are now leaving the country said they were going to visit Mount Etna. Under such circumstances how could Government interfere? The subject was dismissed with some remarks from Mr. Scully, who observed that none are so deaf as those who will not hear, and that the ignorance on the part of Government of what is passing out of doors must be held to indicate a little domestic revolution, as the advertisements in the newspapers for funds to be divided among the wounded adherents of Garibaldi were headed by the names of Lady Shaftesbury, Lady Palmerston, and Mrs. Gladstone.

The signal failure of Mr. Hennessy and Mr. Scully to excite a show of opposition to Captain Styles' proceedings, seems to have provoked Mr. Cranbury, the Mayor of Gloucester, into a demonstration which has caused great amusement in the north of England. It appears that the *Daily Chronicle* and *Northern Counties Advertiser*, a newspaper published in Newcastle, contained, in the course of last week, no less than three articles favourable to Captain Styles' mission. On Monday morning Mr. Cranbury appeared in the police-court to renew an application, he had previously made for a warrant against Mr. John Bayr Langley, the editor and publisher of the newspaper, on the allegation that the articles referred to were infractions of the act against foreign enlistments. The magistrates, after hearing the complainant at great length, refused his application on the ground that to constitute an offence under the statute, personal contact between the accused and the persons worked upon must be established, which, in this case had not been done, the newspaper articles referred to containing simply an historical statement of what Captain Styles had done since he reached England, and of what he proposed to do before returning to Sicily. The Mayor of Gloucester is not, however, satisfied with the decision of the Bench, and has intimated that he will carry the case into the Courts at Westminster, where he is to apply for a *writ of habeas corpus* against the magistrates to show cause why they should not grant a warrant.

The rapid development of the manufacturing system, which has raised this country to the proud rank of one looks among the nations of the earth, has not been without its attendant evil. The population has thronged in crowds from rural districts into great centres of industry, to adopt less laborious, and yet more lucrative, occupations; to lead a monotonous life, which produces a craving for excitement, and, at the same time, to become surrounded with every temptation to extravagance and dissipation. The result has been, that in the first generation, at least, part of the population so migrating into cities has sunk into great misery and degradation, and that large classes of children have sprung up, neglected by their parents, and neither trained to habits of regular industry, nor brought up to any calling whereby they may earn an honest livelihood. The workhouse schools supply an education, such as it is, for those among them who are absolutely destitute; the reformatory provide instruction for those who have committed crimes; but a large class of the truly helpless remain who, excluded altogether from the means of earning a trade, must, if unheeded, grow up at war with society, and with no better means than theft and crime to supply their daily wants. In this state of matters, Ragged Schools have come into existence—a class of institutions admirably suited to remedy the evil, by educating this class of children as working-men and women, and proved by statistics, carefully collected, to have diminished crime to an extent incredible to any one who reasons theoretically on their value. In our last number we regretted that the House of Commons had refused to extend Government aid to these institutions. We are now glad to see that the subject has been taken up out of doors by Lord Derby, who delivered, on Saturday last, on laying the foundation-stone of a Ragged School at Kirkton, near Liverpool, a speech well calculated to bring the true character of Ragged Schools under the notice of public men, and ultimately to secure for them a larger share of public patronage than they have hitherto received.

Another subject which has a close connection with the welfare of the poorer classes was discussed in Parliament on Wednesday evening. It is asked if the means of recovering small debts have not become too easy? Instead of making the County Courts support themselves, they are now sup-

ported, to a great extent, by funds voted by Government, and thus, by enabling small traders to recover, at the public expense, debts due to them, have encouraged a system of credit most injurious to the humble working-classes. In speaking on this subject, Mr. Ayrton remarked that the working classes were suffering from this evil to an extent little known. "Hawkers," he said, "went about the country enticing the poorer classes to buy goods on credit, and then, by means of the county courts, got their debts collected almost at the public expense, the unfortunate debtors being subjected, when they could not pay, to an imprisonment which partook of a penal character." He even suggested that the "facilities for the recovery of debts should be limited," and advanced very cogent arguments in support of the proposition.

The Aborigines Protection Society addressed, last week, a memorial to the Under-Secretary of State for the Colonies, stating the grounds on which they objected to the bill for the better government of the natives of New Zealand. They attribute much of the difficulties which have arisen to the fact that the natives are allowed only to sell their lands to the Government, whereby prices are kept down, and an unjust profit is reaped by those who ought to be their protectors. As a means of restoring the harmony between the colonists and natives, which has been so seriously disturbed, they suggest that one or more commissioners should be despatched from England, with the powers necessary, not only to institute inquiries, but to adopt remedial measures. The bill has since been withdrawn, the measure having been protested against by men of all parties and creeds in the House of Commons,—first, as an invasion on the powers of self-government conceded previously by Parliament to the colonists of New Zealand; next, as prejudicial in the absence of the legislature of the colonies; and, lastly, as supplying a very imperfect machinery for the hearing of native complaints.

THE MEETING OF SOVEREIGNS AT THE OPENING OF THE MUNICH AND VIENNA RAILWAY.

(By one who was Present.)

ABOUT a fortnight ago a rumour reached "our watering-place" (Baden-Baden) of the great *fête* which was to take place at Salzburg, on the occasion of the opening of the Munich and Vienna Railway. This important event, of great commercial interest, was to be invested with a still higher political significance, by the opportunity which it afforded to the Sovereigns of Austria and Bavaria to meet at a moment when any *misapprehension* of such a nature, between any of the German states, was of the utmost consequence. I accordingly determined to tear myself away from the attractions of Baden, in order to be present on the auspicious occasion. I found Munich in a greater state of excitement than I had ever known that previously quiet city before. I counted three carriages in the Ludwigstrasse at the same time; observed at least twice as many people as usual drinking beer in the gardens, in anticipation of the great event; and, what was the least agreeable discovery, found that all the hotels were full. However, the "Four Seasons" proved an elastic establishment, and there I was ultimately provided with a temporary home. Six o'clock on the morning of the 12th inst. was the hour fixed for the departure of the excursion-train for Salzburg, and this necessitated the extremely unpleasant measure of being called at five. Among the inhabitants of the "Four Seasons" were many eminent men who were to take part in the ceremony of the morrow, and whose names were duly inscribed by the porter on the black board with "Café" after them, "due at 5 a.m." We were a proud list on that said board, and the envy of all the other people in the hotel; for the party of excursionists were to be to the last degree select; to consist of the King, his ministers, and his ministers' special favorites. Even the diplomatic corps were excluded from the high honour of partaking of the festivities of the two following days; in consequence, it was said, of the disagreeable remembrance which might thus take place between the Austrian Emperor and the Sardinian Minister. However that may be, it is certain that the strangers were represented by a single Englishman, who, it is to be hoped, doubly appreciated the honor. A little after daybreak, came clattering down the stairs of the "Four Seasons" the officers and civilians, in every description of uniform, and suffering from a violent irritation of orders and brilliant decorations,—for no one in Bavaria is considered of any note who cannot adorn his manly person with an adequate display of stars and ribbons; and away we all drove to the station, where a great crowd was assembled to watch the distinguished arrivals. The station was abundantly ornamented with flags, and the interior very tastefully decorated with young trees and shrubs, forming quite a little thicket round the throne prepared for the King. Opposite the throne was a less pretentious erection, constructed for the bishop, who was surrounded by a brilliant staff—of clergy. The third side of the square thus formed consisted of a temporary altar, and opposite to it were the rails, not of the altar, but the railway. The intervening space was carpeted, and contained a few chairs and benches for members of the royal family. The platform on each side was crowded with spectators and excursionists, the latter principally in uniform. The roof was hung with flags of the national colours—light-blue and white; and the engines covered with pine-branches. The arrival of the King was the signal for a general buzz; then the royal brothers took their assigned positions on their knees, His Majesty setting the example. A general stillness ensued, and the venerable bishop inaugurated the proceedings by performing mass; with the voices of the chorists and the *monstrous* chant of the clergy, mingled the part of the

steam-engines, as five of them in a row came up like intelligent animals to the feet of the bishop to be blessed. This was the conclusion of the ceremony, and was immediately followed by a rush for places. The long train flattered from one end to the other with little blue-and-white flags, and looked gay and jaunty in the morning sun. At last every cocked hat had found its resting-place, and we were off across the level Bavarian plains, where the peasantry were busy getting in their crops. Past the Simm See, along the swampy margin of which we rattled over a portion of the line which we were informed had been the principal engineering difficulty of the undertaking; then skirted the shores of the picturesque Thiem See, with its mountains rising from the water's edge, its wooded islands, and its white houses reflected in its glassy surface,—past stations, all covered with flags, with platforms crowded with spectators, and bands playing; but we only heard the clash of instruments as we rushed by,—just as, if you shut your ears at a musical festival, and open them suddenly for a second, you hear the momentary war,—on through thick pine woods, where enthusiastic foresters had erected stages, with flags, and fired little cannon in rapturous confusion as we glided past; through cuttings, where the only things visible at the top of the bank were the fat legs of the countrywomen who had collected there; recklessly on at twenty miles an hour, a killing pace for a German engine, till it gets out of breath, or, what is equivalent to it, out of water, and we stop at a station where the whole population of the neighbouring country seems collected, and there is a guard drawn up, with a very stout officer in a light-blue uniform in command, plenty of music, and a good deal of beer, and sandwiches, and sausages for famishing excursionists. We are the objects of intense interest to an admiring and unsophisticated crowd for ten minutes, and then get into the train again, and repeat our experiences for two or three hours more, until we find ourselves in the highlands of Bavaria, and are only distracted from the various picturesque points of view which open upon us by our approach to that most romantic of all German towns, Salzburg itself, with its houses left, in like manner, to the beeding embs that overhang the river, and its fine old castle rising proudly above all. And so we dash into the station, under triumphal arches and forests of flags and flowers, and pull up at last between a row of Austrian officers and a fountain. For the Vienna excursion train had arrived before we did, and the platform looked like a parterre of the gayest flowers, in consequence: certainly no army in Europe can compete with the Austrian for brilliancy and taste in uniform. There was a variety and richness in the assemblage of costumes waiting to receive us at Salzburg which it would have been worth while coming all the way to see, apart from any other object. In the present state of Europe it is now earnestly to be hoped that all that glittered so brightly may turn out to be gold when the day of trial comes; meantime, since the Heilshrad is now so powerful financially, we would suggest for its consideration, whether considering the present state of the imperial exchequer, it would not be wise to spend a little less in lace and feathers, and devote the savings to more practical purposes. It is only due to the officers who were at Salzburg to say that their martial bearing did credit to their gaudy plumage; and I was much struck by the youthful appearance of many of the colonels.

The arrival of the King of Bavaria, in a special train, immediately after us, was followed by that of the Emperor of Austria, accompanied by Count Rechberg, and other ministers of the Empire. His Majesty was received on the platform with the National Anthem, and a general salute. The two Sovereigns then proceeded to that portion of the station which had been appropriated to the next part of the ceremony. This consisted of another mass, performed by the Bishop of Salzburg, the Emperor and King standing opposite to the Bishop, and the rest of the room, which was tastefully decorated, being crowded with the recent occupants of the two excursion trains. Addresses were then read by the President of the railway and duly responded to by the respective Royalties; certain documents were signed and placed beneath the last stone, which still remained to be laid to complete the work. A benediction having been offered, the party adjourned to the Fountain, where the National Anthem was sung by a crowd of the workmen employed on the railway. By this time a general "sinking" was experienced, from royalty downwards, and we proceeded to a magnificent repast prepared for 600 persons, and presided over by Count von Wickenburg. The two Monarchs, with a more select circle—for the Emperor of Austria was accompanied by a few archbishops,—partook of an elaborate repast, which was terminated by speeches pregnant with a deeper political meaning than is usual after dinner.

The Emperor of Austria spoke as follows:—"This day's ceremony inaugurates an era of important development in the communication between distant lands. May they rejoice in this new bond, in earnest emulation, and amidst continued increase of prosperity. But you must all feel, as I do, that this ceremony claims, further, a still higher significance. From this day forward, German brother meets are brought nearer to each other. Austria's sons are happy to stretch out their hands to their brothers of Bavaria, and to thank them for their fidelity and love; and the same feelings of union with which we greet our neighbours we also offer to all our German kinsmen and confederates.

"Whilst to the present audience I allude to these feelings, I cannot help calling to mind with pleasure the day when, but a few weeks ago, I pressed the hand of the Prince Regent of Prussia, in refutation of the identical sentiments which we then reciprocated. I am confident that, with your whole hearts, you will unite with me in the three repeated greetings—

"'Long Life to our Royal Brother and Friend of Bavaria!'

"'Long Life to Bavaria's Loyal and Brave People!'

"'Long Life to the Union of the Princes and Peoples of Germany!'

This speech, which was received with great enthusiasm, was responded to as follows, by the King of Bavaria:—

"I wish first to express my most heartfelt thanks in my own name and in that of my people, for the elevated sentiments we have just heard. Certainly the work, the completion of which we are now celebrating, is of vast importance. It will bring kindred races nearer to each other. May God's blessing rest upon it. Enthusiasm and hope have greeted the recent amicable meeting of the rulers of Austria and Prussia. It is a pledge for the union of Germany, and therein lies our power and our strength. From the bottom of my heart then I propose—

"'Long Life to my Imperial Brother and Friend of Austria!'

"'Long Life to Austria's Loyal and Warlike Sons!'

"'Long Life to the Union of the Two Great German Powers!'

This last most unexpected allusion to the Two Great German Powers was followed by thunders of applause, which proved the ready sympathy which the sentiment found in the breasts of the audience. Doubtless the King of Bavaria found a double satisfaction in giving the toast, since the meeting at Toplitz was due to his instrumentality, and not to that of the English Government. (a mistake into which, I see, the correspondent of "THE LONDON REVIEW" at Berlin has fallen). There is no doubt that at that meeting the Emperor of Austria pledged himself to the Prince Regent of Prussia to continue in the path of reform which the Austrian Government has been recently pursuing, and, more especially, to make important concessions in matters ecclesiastical,—a point strongly and very properly urged by the Prince Regent. The close and intimate relations which subsist between the Bavarian and Austrian Governments, and which the occasion of the meeting at Salzburg has been the means of increasing, render the union of the two countries, in a military point of view, most essential to the best interests and safety of Germany.

While the Monarchs were thus exchanging a reciprocity of sentiments, and washing down important political announcements with champagne, we were indulging largely in the same beverage in another apartment, elaborately decorated with flags, and sumptuously arranged. During the repast—and not afterwards, as is the manner of the Briton,—speeches were delivered, the healths of smelly royal personages, and prosperity to the railway, drunk in every glass, besides being provided with an excellent dinner, was furnished, with a menu, with an album containing engravings of the most important features on the line, and a full description of it throughout. Finally we were visited by their Majesties themselves, the tenor of whose speeches had already reached us, and who were received with rapturous applause in consequence. They each made a short speech; then the bands struck up once more, and we separated with a series of enthusiastic *Heils*, to re-embark in the trains for our respective destinations. As the Emperor of Austria proposed paying Munich a visit, many of our Austrian friends decided on visiting that city, which was thus destined to become the scene of further festivities. It was late that evening ere I once more reached the "Four Seasons," the greater majority of the excursionists repairing to the residence of the mayor, to wind up the evening, where that high functionary entertained them largely with beer.

On the following day the worthy citizens of Munich were gratified by the novel sight of the two Monarchs driving about the quiet streets of their town in plain clothes, and the happy individuals who were fortunate enough to be invited to the grand entertainment at the Crystal Palace, in the afternoon, revelled in the anticipation of that event. At three o'clock six hundred persons sat down to a series of tables placed in a circular form round the fountain in the centre, and which were very tastefully laid out. Mine host of the *Reichs-Hof*, had contracted for the repast, at six cents a head, and his arrangements were made in a style worthy of imitation by those who superintend a similar department at Sydenham. It was delightful to look upon a hundred dozen of champagne frozen into beds of ice, with nothing but their black corks showing above the glittering surface; and to smell the savoury odours which proceeded from the kitchen temporarily erected for the occasion.

The palace itself was a perfect labyrinth of trees, which formed side-walks, and enclosed the festive boards with evergreen borders. White columns and statues contrasted with the dark-green foliage; strips of blue-and-white flags waved in fountains overhead, and the fountain played continually. A throne was erected at the head of the tables, and during dinner their Majesties entered, and shortly addressed the guests, but did not take part in the festivities, which were protracted almost until it was time to go to the theatre, where royalty appeared again, and the crowds which were packed inside gave them another ovation. Altogether the day was devoted to merry-making; and enthusiastic citizens of Southern German tendencies sagged the happiest political consequences from it.

Of the commercial advantages of a line which connects Munich and Vienna, it is almost unnecessary to speak. It shortens the distance between the latter city and Paris to thirty-six hours, and opens up that direct communication between Western and Eastern Europe which has so long been required. Its influence upon the two countries which are thus united will be, doubtless, beneficial to both. Everything which tends to nationalize Germany is of political advantage to Europe generally, and to every state in

the Confederation in particular. The interests of one state thus by degrees become the interest of all, and prejudices are rubbed off by contact, which can be overcome in any other way.

If the political results of this connection thus develop themselves, the 12th of August last will mark an epoch in the history of Germany worthy the enthusiastic celebration which took place.

SKETCHES FROM THE HOUSE.

BY THE SILENT MEMBER.

WERTT Henry Drummond used to say that an administration was like a cow with seven heads and eight little pigs. The seven found their due place in the porcine economy, and were content; but the eighth hapless little porker went about squeaking and making all the rest uncomfortable. The particular M.P. whom he characterised as "a pig with a tail" was Mr. Rich, who squeaked as loud and was altogether so noisy and mutinous that he has been on the shady side of office ever since. Palmerston could not ask Gladstone, and Milner Gibson, and Villiers, and Charles Gilpin to become members of his administration without leaving out and passing over some former Whig subordinates. Among those was Daudy Seymour, M.P. for Poole. He was formerly Under-Secretary for India. He discharged his duty with alacrity, and touched his salary not ungratefully. He made no enquiries, was dutiful and respectful to his chief, as an under-secretary ought to be, and, unlike Austen Layard, was in no respect eccentric, or cantankerous, or wrong-headed. There is nothing remarkable in this, but here comes the puzzle. This honourable member is not a member of the present Government, and the rise might after night, in the loudest voice at present known to St. Stephen's, to attack the Indian administration of Sir C. Wood. Now, to careful observers, there appears a great similarity between Vernon Smith and Charles Wood, as Indian Governors. They are, indeed, "as like as two peas." I should say that both are as compliant to Lord Canning as need be, and that if the Indian Army Bill appears to be an exception, it is because an illudicrous duke came in, with who know not what influence in the background, and overruled the opinion of the Governor-General of India. Daudy, however, who was the very humble servant, not to say "slavery," of Vernon Smith, sets up his back and spine as Sir C. Wood, like the tom-cat in the ancient phrase of Warren's blacking. The other night he called him the autocrat of India, and said he administered India as the late Emperor Nicholas ruled the Russians. He wanted will, resolution, and vigor. He did not control the Indian expenditure as he ought to do; and the India Office, in fact, might as well be shut up as placed under his administration. A very loud voice always makes a great impression upon me, and I am therefore well enough inclined to believe all that Daudy says. But I would give a thousand pounds to know whether Daudy would have said all this, or even thought it, if Wood had offered him the post of Under Secretary for India. Observing how much, or rather how little, a Cabinet Minister usually consults his under secretary, my impression, I own, is that India administration would be a great deal better in the hands of Mr. Poole, who would have remained precisely the same, and that if any discontented person—any Daudy Seymour not of place—had got up to call Sir C. Wood the autocrat of India, and proposed to shut up the India Office, the representative for Poole would have risen to defend his chief with even more energy than he now attacks him.

The psychology of the parliamentary mind is wonderful. Make a man a cabinet minister, put a geological book into his hand, and tell him to consider the supply of coal. He will tell you (having just heard your views) that there is no fear of its exhaustion; that if you can sell it to a neighbouring people across the water, you will give employment to your miners and your sailors, and that nothing but good can result. Forget or neglect to make a Minister of him, and he reads his geology the other way, prophesies the speedy exhaustion of your mines, and denounces the folly of giving away the elements of your manufacturing supremacy. Recall another man to his post of Secretary to the Admiralty, and he acquiesces in the desirability of additional fortifications. Perhaps "acquiescence" is too strong a word. As a sub, his consent is never asked. He does not probably know what his Premier is going to propose until the First Minister rises in the House of Commons, and all he has to do is to vote with his Government on a division, and to send his resignation to be found give a satisfactory reason for his absence. Pass him all the particular pointed out by the speaker for Poole, would have remained precisely the same, and that if any discontented person—any Daudy Seymour not of place—had got up to call Sir C. Wood the autocrat of India, and proposed to shut up the India Office, the representative for Poole would have risen to defend his chief with even more energy than he now attacks him.

whether Bernal Osborne or Edwin James cultivates this rough shew of turbulent independence with the greatest success. I like to see it in both members. They were it so gracefully, and impose upon us old members so completely! People, indeed, pretend that they can discern the tongue in Edwin James's cheek when he gets up a case of quarrel with the Ministry. And the public generally set down the opposition of a patriot who has missed a place as something insincere and corrupt. But they have never studied the subtle workings of the parliamentary mind, or the peculiarities of parliamentary optics. There are some atrocious hangings who are not sincere, but the differences of opinion are, in most cases, real and not pretended. The glow of indignation is not affected. The stick in the bowl of water really seems to them broken or crooked, when it is only deflected optically. If they sat on the Treasury bench it would seem straight. The Indian sick (I don't mean Sir Charles Wood) appears to roil, Thomas Haring to be of the most rigid rectitudinal continuity. And this zealous and devoted young man will always believe, to his dying day, that Daudy Seymour's appanage to the Indian administration of Sir Charles Wood is the most laudable example that can be conceived of the impudence and unscrupulousness of a disappointed place-hunter. Prime Ministers forgive a great deal, but oh, Daudy! profit by the experience of the honourable member for Richmond.

Our parliamentary veterans come out strong at the flag end of the Session. The three members of the House of Commons most punctilious in attendance during the last year have been, first and foremost, Palmerston, fertile precursor, senior wrangler of his year, *dux* of his school; secondly, Graham; thirdly, Hensley-Graham has been silent all the Session, yet has unconsciously wakened into life and activity at the eleventh hour. During the first six months of the Session he, the least elector-member in England, fresh from the triumph of the Carlisle hustings, lapsed into silence, from which nothing could rouse him but the fight for the chairmanship. It was on a Wednesday afternoon that a Factory Act for Bleaching Works being under discussion, Sir James got up and made emphatic confession that he was wrong when, as Home Secretary, he lent a too ready ear to master manufacturers, who declared they could not rest on their laurels or maintain a competition with foreign countries, if women and children in factories received the protection of a Ten Hours Bill. Lord Shaftesbury's son had spoken of the deterioration of the English physique. The old man warmed with the theme. He had not himself observed any deterioration in the race of Englishwomen—

"Old as I am, for ladies' sake still."
"The power of beauty's immortality!"

But perhaps young Lord Ashley was a better judge than he upon this point. That the race of Englishmen had degenerated, however, he could not admit, after the noble example of courage and endurance recently presented to the world. Tom Fayers received many compliments about this time, but few of which he had greater reason to be proud. The House cheered, and not a few members declared that the veterans would not have spoken at all if he had not felt impelled to find a laurel crown at the champion of England. Then ensued another long period of silence. The Budget was the subject of the day. Excited persons whom politics he takes a semi-paternal pride, and beside whom he sat so long in that place below the gangway now tenanted by Mr. Bright—was sorely vexed by the Derbyite rank and file; yet Ajax did not once interpose his shield or present his bulwark form in the *mitis*.

The Reform Bill fully formed, and had to run the gauntlet of open opposition, covert hostility, and insidious delays. Nephew Lawson stood up for it, and denounced the Derbyite tactics. Uncle Graham smiled with forty-Mephistophelian knowings, yet kept his seat. Whether the Bill went far enough or not, or too far, we do not know this day. What Sir James thinks of a £5 rental, as against a £10 rental, we shall learn probably when he stands upon the hustings at Carlisle. Then came the Paper Duty Debate. The Northcote Lancet could not find a word to say in favour of the abolition of the Tax on Knowledge, although there came a certain Tuesday night when the Paper Duty Abolition Bill was only saved by a majority of nine, and a speech from a veteran who came fresh into the combat might have determined some votes. The Lords threw out the bill, and Sir James Graham was appointed a member of the Select Committee to search the journals for precedents. To this day we can only conjecture his opinion upon the constitutional question at issue between the Lords and Commons. His vote is said, indeed, to have averted a hostile report from the Commons, if not a collision between the two Houses; but the two Houses, it is alleged, with great show of truth, that his vote was governed by the technical form in which the question was referred to the committee, which Sir James held, precluded any expression of opinion on their part. His activity at this time was remarkable. He crossed once the floor to talk to Walpole, and left the House with him, to discuss the report at leisure. He talked across the gangway to John Bright; compared notes with the Attorney General; leaned over to confer with Tom Duncombe; exchanged views with old Whigs like Edward Ellice and Sir S. Baring; and was in daily conversation with Gladstone and Milner Gibson. He seemed to be the mind and conscience of the House, impressing old and young with hints, and the result of statesmanlike observation and experience, and giving the tone to the debates, while he studiously avoided taking any part in them. The Customs Duty found him as sleek as the Excise Duty. He had no word of regret for the loss of the Bankruptcy Bill; all through the session he has been silent, inscrutable, and mysterious. The Railway contract was his thunder; yet when Roebuck protested against the vote, Sir James was absent. Against the Red Sea Telegraph Bill he saved the House. He was beaten; yet when the cable failed, and the money went to the fishes, the senior member for Carlisle made no sign. Within the last week or two, however, upon matters of no real importance, the gentleman has not unfrequently addressed the House. As the procession approaches, the constituency of Carlisle become a great fact. They may demand the explanation of a testimony which they were not warranted in expecting, from the liveliness and vigour of their member's electioneering canvass. There has been no fault to find with the right hon. Lancet in regard to his attendance throughout the

Session. And now, when young fellows pair off and go after the grog, and the clerks and officers of the House empty until midnight to keep themselves awake, and the Speaker wonders whether he can possibly keep up until the 29th, the Netherby baronet is fresh, blustering, hale, vigorous, and half-disposed to be loquacious. The elections of Carleton may remember the little specimen on the Estimates, and the Naval Discipline Bill, and forget the reticence of the early months of this memorable Session. Or they may feel flattered by Sir James reserving for their private ears, in Town-hall Assembly-room, the opinions which the first representative-chamber in the world looked to hear, and were denied the privilege of hearing. Looking round the House, I do not know any one who could make a more telling and interesting record than Graham. Disraeli will doubtless review the Session for the education and amusement of the farmers of Bucks, and a very pretty thesis it will make. Gladstone will be heard of in the country, lecturing some Welsh farmers or Liverpool merchants. John Bright, with the Paper Duty still payable, and the encroachment of the Lords still unreversed, a democratic Reform Bill indefinitely postponed, a bad harvest, and a winter of suffering and discontent, which are for all inevitable, has a "haze" which any political agitator might covet, for I fear his cards are trumps. Lord John will have something to say at the Mansion House and Guildhall upon foreign affairs. Mr. Horeman will probably keep at a respectful distance from Strand, yet even he will find an audience and a reporter somewhere, if only at a farmers' ordinary. But the winter of the recess, if he so will it, must be the "dark horse of the Session," who might talk for three hours by Shrewsbury clock, without exhausting the great and grave topics of the Session.

Old Mr. Henley is another example of the stout parliamentary campaigner. In the general engagements and pitched battles of the Session he has been content to shoulder his market against the rank and file, and go into the lobby with his party, for, like Graham, he has listened much and spoken little. It is when bill enters the stage of "committees," and other men will have nothing to say to them, that the right hon. member for Oxfordshire warms to his work, and sets us all an example of patient and persevering industry. The recent beef begins to be necessary to assist the sluggish ear, but we remark to each other with pleasure that the old gentleman's cough seems less troublesome than usual this Session. Home-office counsel, who draw bills, turn pale under the gallery when they come within the loss of that microscopic eye, and amateur legislators tremble when the shrewd old chairman of quarter sessions interposes with his favourite remark—"Well, now, let's see how this'll work." Deposed upon it, if there are blunders and inconsistencies in a clause, they will soon be seen kicking and fighting, like the contents of a drop of Thames water under the cry-hydrogen microscope, when old Mr. Henley fairly gets them into focus.

While Disraeli has gone to Hagheboom Manor, in order to give the pleasure of reading the column devoted to the Berwick Election Commission as broken—while Sir J. Pakington can with difficulty be brought up from Worcestershire to give the *coup de grace* to a New Zealand Bill, which is strangled by its unattractive parents as soon as the sound of his carriage-wheels is heard in the distance—while Whiteley, and Cairns, and Kelly are sacrificing too at the shrine of Thémis, or anticipating the long vacation—Henley alone, of all the men of mark upon the Opposition benches, sticks to his work, and won't allow a single clause to escape him. His usual exclamation—"Fig, I *swear* say" (we never say "must" in Parliament), has been the death-warrior of this week has exhibited Mr. Henley in all his glory. But a Metropolitan Local Government Bill, an Ecclesiastical Commission, a Court of Chancery Bill, a Roman Catholic Charities Bill, have also come under his purview, and have found him vigilant, active, and watchful. An assembly with a tendency to scamp its work, like the House of Commons at the end of a Session, contains no more valuable member than a statesman of weight and experience who voluntarily devotes himself to the drudgery of examining clauses affecting the liberty of the subject and the safety of existing institutions, and who brings to his work the shrewdness, legal acumen, and accumulated knowledge that distinguish good old Mr. Henley.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

A bill has passed through the House of Commons to diminish the number of the city churches, by transferring some of them to the suburban districts, whither the congregations have already gone. But the *vis inertiae* is proverbial. One after another, amendments have been added to the bill, making it next to impossible to carry it out in a single instance. There are so many "bodies," lay and clerical, spiritual and temporal, municipal and parochial, to be satisfied, that every one despairs of seeing a single removal effected. Parliament ought not to pass measures under the pretence of allowing certain churches to take place, and then clog those measures with impossible conditions. Amongst the latest objections there to be found certain wise men among the architects, who nominated the high places of St. Paul's, and declared that the steeples of these deserted churches should be allowed to remain as standing ornaments to the city, even when the portions where divine service was performed should be removed. This accords to us a most absurd proposition. Many of the steeples "stop the way." There is nothing so admirable in steeple architecture, which is really overdone in this country. It is known that Sir Christopher Wren himself desired that only half the proposed number of churches should be built after the Fire, and that these should be of a superior description. But he was overruled by that very pious monarch Charles II., and the churches remain, of which not more than half a dozen are really worth preserving, and those are exempted from the operation of the bill,—if it should ever come into operation at all.

Another scheme—and that perhaps the very best and most pressing—for increasing our street accommodation, is postponed till next Session. The plans

approved by the committee of the Times Embankment have been received with very general approval, and the great difficulty of finding the money has had a chance of being solved. But it is found that there is no time for maturing the scheme in the present Session. The great Metropolitan Board of Works, however, must be prohibited from proceeding with their low-level sewerage. It is likely they will be too glad to be allowed to suspend this part of their work, in the hope of getting the Coal and Wine Duties handed over to them next year, and also to have such an admirable position for the sewer in the foreshore of the river. To block up the Strand and Fleet-street for an indefinite period, for the purpose of making the sewer there would scarcely be tolerated. Not to speak of the obstruction of all business, the cost would be something incredible. It is to be hoped, therefore, that the sewer will carry the embankment, and that the embankment will carry the sewer. The waterworks and the owners of waterworks property are only in the way. They will make a grand stand for compensation, and herein will be the great difficulty of the embankment. But the Government have control over a considerable portion of the Westminster end, and the other end, it is feared, will not be allowed to extend beyond Southwark-bridge. The waterworks property between London and Southwark bridges is felt to be too much to grapple with, and if Southwark-bridge be reached, it will be easy to get to Cannon-street, and thus avoid the most crowded thoroughfares connecting the City and the West End. Something—say, a great dock—must be done. It is easy to see that the opening up of the leading thoroughfares, and increasing the revenue from rent to water, must form a considerable item in the business of the next Session of Parliament.

The Metropolitan Board have been compelled to withdraw their bill for further powers, introduced by Mr. Tite. They must exert themselves, if they hope for public support next year. The notice, in one of your earliest numbers, of the delay in opening the new street from St. Martin's-lane to Covent-garden, has stirred them up a little. There is, to be sure, no more show abroad of any progress made in opening this long-promised communication. But we are informed that there is great progress underground,—that sewers and arches are being constructed, and that the street will be opened at last. There is another important thoroughfare threatened to be opened, which seems to flag altogether. They have got a large sum—about £300,000—handed over towards the cost of an opening from Blackfriars-road to the London-bridge station, and there is no sign of a commencement as yet. We do not know how Mr. Thwaites will explain this long delay to the satisfaction of his constituents over the water.

There have been some interesting discussions in the House of Commons on the vote of £15,000 for the improvement of the National Gallery. It is satisfactory to see that several honourable members, independent of party, expressed their opposition to this vote, not because of its amount, but because they desired to see a much larger and more comprehensive scheme adopted.

The removal of the Royal Academy, already recommended by the Committee and the Royal Commission, was drawn upon as a necessary preliminary to any great plan for a building on this present site worthy and capable of containing the national collections. This view was recognised by Lord Palmerston, although he was naturally reluctant to turn the Forty R.A.'s into the street. His lordship, also, we are glad to see, contemplates the possession of the barracks, and the workhouse in the rear, as necessary to the erection of a complete building. We trust that we may see this view carried out. Mr. Disraeli was in favour of it when in office last year.

The drama—more fortunate than other expedients—is a double heir. People shut out nothing it takes. Estates are pressed upon it. There is already the "Dramatic College," although it has made the very queer and ill-premising choice of a tract of land forming the corner of a cemetery for its site. The "Necropolis, Working Cemetery," will have a matchless match in its new outlying neighbours. Mr. Dodd, it appears, is lost for want of a wandering colony—theatrical it must be—to settle upon his "Promised Land." Proceedings, we are told, are in progress to carry out his intentions. Independently of a free gift of the ground at Windsor, he will generously endow the buildings with a sum of £20,000. Can he not turn his regards in another and, at least, as equally deserving a direction? We are certain that the parties which, in all circumstances, we would propose as the objects of this endowment, would not only be the most useful, but the people did, at his literal gifts. Mr. Dodd, if you are determined to endow, and to raise, some institution which shall be really worthy of your goodwill, and prove an honour to your philanthropic enthusiasm, construct a "College" for the Literary Body! The word "College" would then be no absurd misnomer, as applied to the noble refuge which your kindly feelings and liberality proposed.

Mr. Gudin, the celebrated French marine painter, has just finished two remarkable pictures. The subject of one is the arrival of the Emperor Napoleon at Genoa, to open the Italian campaign last year. The other represents an equally memorable occasion,—the interview between Queen Victoria and His Imperial Majesty the French Emperor, in the Harbour of Cherbourg. Both of these pictures have been purchased for the Emperor. The painting of the meeting of Her Majesty and Napoleon III., at Cherbourg, has been sent to London for the purpose of public exhibition. We have no doubt that it will attract great attention.

Today the drawing of the prizes in the Crystal Palace Art Union takes place. It is an interesting ceremony to all; but it will be particularly so to the winners. From that which we hear, we augur great popularity to this movement, which accords to the idea of placing valuable pictures in the hands of subscribers, objects of genuine art.

Messrs. Trübner will publish, on Monday, an enlarged English copyright edition (from the tenth American edition) of Robert Dale Owen's work, on what is usually called "The Supernatural." The English title is "Fossils on the Boundary of Another World." It will constitute an octavo volume of upwards of 800 pages.

of them would have succeeded without the pause, being only ingenious, and not humorous. Wits should have some consideration for weak brethren, and not make their jokes too difficult. For ease to the joker is difficulty to the audience. Under the area of your reading, and the greater number of odds and ends you have in your quiver, the easier it is for you to find some suitable connection of ideas. But your audience, to be successful, must be in connection, and have some slight acquaintance with both the poles which you most poetically link with your electric flash. If not, your joke is like a pan in an unknown tongue.

A good many jokes occur to me daily in Andrie; but I have only one friend who principally pursues this line among the carpatian mountains. I regret to say, for I value him very highly, he is the only man who appreciates my arabesque pun-fligree. Not that I do not know many Orientalists and wits, but that the rest of my Arabic-speaking friends are unacquainted with jokes, while my wits, as a rule, are innocent of Arabic. A joke is good, much more in proportion to its skillful and ready application to the time, place, and circumstances, as well as circumstance, than by any inherent measure of goodness.

This does not, of course, apply to written jokes; and you will accordingly find that funny writers can very seldom make extemporaneous jokes in society. Whereas colloquial jokes, often misapprehending the inherent goodness of a jest, a nervous which was due to the occasion, make their written jokes of much too slender material. An extempore joke may be too good. If, for instance, a fertile mind ever so spontaneously yields a double-barrelled witicism, it will always seem like precipitation. The difficulty of the heater in taking in the double flash will be imparted by him to the accomplished elaboration of malice, projects in the air. For instance, talking of the military capacity of the Artist Rifle Corps (stand at ease), the other day some one said, "If they came to a brush, they would be the men to stick to their colours." If that witty really made it on the spur of the moment, he would have done better to have left out the brush half, and merely said they would stick to their colours.

In writing it does not matter how many jokes you string together like onions; those who dislike their flavour need not read them; and the reader has leisure to stop and think if he pleases. He is on even terms with the elaborate wit who may have coddled his brains over his fun during many painful hours. But as no more space is allowed in this work for the development of my ideas, I must perforce postpone until next the conclusion of what I have to say,—editors being something like emperors, autocratic and despotic.

LANCASHIRES APPEAL TO MIDDLESEX.

LANCASHIRE has a message to Middlesex whereof I have the honour to be bearer. I remark, in the newspapers, advertisements in which the attractions of a life among the (Caffes, or the many nations of New Zealand are set forth. Men sink in the crowded London, before empty cupboards, and boys, who are lusty and adventurous; young women willing to travel over weary wastes of water in search of husbands; children of all sizes and complexions—are entreated to bend their steps towards Liverpool or Greenhead, and to turn their longing eyes to distant lands, where a bountiful reward of gold cleaves the heart of the worker. Alas! how different the scene that is played daily at the London Dock gates, at half-past seven of the morning, where hunger scrounles for the loaf and implores work to earn it,—where the despoite of all classes meet, as a lost restreue, and slave for a shilling, and so prolong the dear life yet another day, while the wretched voice of the emigration agent is unheeded, as it is unheeded in hundreds of sorrowful London homes. The poverty name is beyond the reach of the very poor. The poverty is so acute that there is not an hour's rest in the race between hand and mouth. The hand has a hard time of it to keep up with the demands of the mouth. If any more space is allowed in this page may fall, desires to make himself acquainted with the kind and degree of poverty that is stationary, helpless and inert, in the heart of London, let him visit the lanes and alleys about the London Dock walls; then let him pass an hour or two in the vicinity of Saffron-hill; concluding his ramble by a brisk walk about the Brick, Smeaton's-town, Clark Market, and its environs, might call his idea of the chronic social disease in question. Emigration agents make no effort here. Generations crawl to mudwall, pine, and grow, and sink into the pauper's grave—unnoticed and almost content. A youth in the gutter is closed by an old age in the union. The reason of this misery is, that there is not work enough. Since the human creature is generally rather strongly inclined to drink after some fashion, and some fashion means it follows that when fair remunerative work is scarce, crafty schemes will be rife. In stress of weather, men will lay their heads together, and endeavour to snatch the food they are not permitted to buy. Hence the dangles of all kinds, by which the poor population of London keep body and soul together. The manufacturing and work-shops of London cannot employ the metropolitan population that depends for its living upon labour of some kind. Hence our sturdy bands of juvenile offenders, our cudgeles and cranks-men, our beggling-letter impostors and street-chans. Hence our crowded prisons and oppressive poor rates.

Now, when I declare this message I send from prosperous Lancashire is addressed to the unemployed and ill-employed of London, I trust I shall have a patient hearing. The message is one of good tidings to the young and strong. I am in the midst of mills that smoke, and steam, and sing the long day through. I am in the noise of building materials for more mills. At every turn I meet rich men who begin life in fortune; vigorous workers who opened the scene with a wooden spoon and a mess of porridge, and now daintily sip tokay. The workers who through past we have just obtained an advance of five per cent. I have searched in vain for a beggar. In vain have I searched in Lancashire towns for neighbourhoods worthy to be compared with the ruins and hovels about Drury-lane. Every human creature has here his or her allotted task, which, being done, secures food and food. It may be that New Zealand is a land of plenty; it may be that the Irish emigrant has only to touch American soil to be happy evermore; it may be that among the Dutchman round about the Cape, abundant fare awaits the immigrant. But none of these distant havens offer sunnier weather to the

worker there is to be found among the mills and halls of the north. New mills are rising on all sides; looms wait for hands in vast and comfortable weaving-sheds; and thousands of children are still growing in London gutters for London unions!

"It is absurd," a Lancashire master observed to me, "that with our existing facilities for the movement of a population, there should be superabundant labour, and consequently misery and crime in our corner of the country, and work waiting for workmen in all corners."

The master's observation at once recalled to me the poverty-stricken parts of Lancashire. Here illness and vagabondage are being cultivated, when habits of profitable industry might be instilled. The children of Drury-lane roads might be directed to Lancashire mills, and be housed in cleanly and comfortable dwellings. They could take any down families, and choose to leave miserable rents, and a miserable struggle for bread, to earn good wages in Lancashire, and be bound that they shall have comfortable cottages, and the assurance of work and honourable pay for years to come. There are footless lasses by hundreds, and haggard fathers fighting at backyard gates, for the price of a few minutes of the day, not a day's journey. The voice that could pierce the din of Clark Market, and hold rugged men and women by the ear for a few minutes, and that would tell them that never thus New Zealand, never even than New York, good, honest work, in pure air, was to be had for them and for their children,—the voice that should accomplish this heavenly would do no mean work in this time.

"If a thousand came here to-morrow," was whispered in my ear at Burnley, "they would find employment at once. A few days ago," continued the small voice, "I saw, in a trial, a Nottingham weaver declared that an able-bodied operative could earn only five shillings and sixpence, nett, in a week. Now, what could he do with that?"

There is good, beyond comfort and fair wages, that might follow emigration from districts where life is scanty, to the mills that yawn for workmen. For testaceous life made great strides among Lancashire operatives, thanks to the contagious prevalence and high example of men like Mr. Liversy of Preston, who did not know that he did not a house that he did not know that in Preston's High-street, where the first Preston pledge was taken many years ago. It has done good by stealth; and I remark that the foremost operatives—the operatives who lead the mass, and are able to confront assemblies, and violate the claims of their class, are mostly, too, the ablest. These men might receive immigrants from poor districts, and make temperate men of them. They might take lads by the hand and show them the way to honourable poverty.

"Ay, but we want skilled labour," cries a friend at my elbow. "The first cannot be weaver or windler, or grinder. Apprenticeship must precede the payment of good wages. Skill must be taught by tedious experience."

It is clear that there is reason in this interpolation. But it is not discouraging. I have the authority of practical mill-owners for stating that an immigration, even of unskilled labour, would be swallowed up by the greedy mills. The will to do and to conquer is the thing needful. Will scorns obstacles. These writers might receive immigrants from poor districts, and make temperate men of them. They might take lads by the hand and show them the way to honourable poverty.

John Metcalf found out where they were. At nine years of age he could make his way from one end to the other of his native city. The blind boy learned to swim, and saved the lives of three companions, who had their sight. The blind boy took to equestrian exercise, followed the hounds, and became expert as the discoverer of short cuts, so no man could differ, and that stronger when he could find his blind horse. The blind boy became a blind man, felt for his chance in the bread-battle of life, and took to road-making. Over deep marshes, between Blackmoor and Standish Foot, he contrived a solid road, that remained dry summer and winter. He prospered, and had nearly 400 men in his employ. This blind man built bridges, and became known in the north of England for his road-making and bridge-building. A comfortable independence and a snug farm rewarded the resolute blind man, and these he enjoyed till he died in his eighty-fifth year.

And thus even the blind child upon a peasant's knee may quench the tears in his mother. There is hope for this precious labour, heavily as it is afflicted. There is reward at hand for the strong of heart and the resolute of purpose, even when the right hand is palsied, and the eyes are sightless. If for the child John Metcalf, as his tiny hands felt about the walls of his father's cottage, and he turned his stone-blind eyes, seeking pity, to his mother's face;—if for him, faded in evening darkness, who, blind and strong, when he could find his blind horse, the blind boy brought sight under his roof,—then how much more for the child perfectly developed! If blind John Metcalf could learn to follow the hounds, shall it be said that men with arms and eyes in health, may not speedily conquer the mysteries of the loom and the delicacies of the spinning machine? The will to work is the thing needful to be borne by all who would find their way from the parlous of London, and the starvation of Nottingham or Coventry, to the mills and halls of the North. There are earnest friends of the thousands of children who inhabit London cellars and dark arches; and these friends have kindly taken dirty little hands, and led little feet to Blacking Brigade head-quarters, and elsewhere.

Good has been done.—"But," cry the masters of Lancashire, "why not afford us a few thousands of these poor little gipsies? The law protects them; inspectors and anti-inspectors will see that they are not overworked; and they shall be housed in airy rooms, and clothed and instructed." Already have young women been tempted to the mills and halls, and terms provided with an establishment apart, where they may live honest and decent lives, whereas, in due time, they may issue, lawful brides of prosperous operatives. At the worst, in such times, they will be better off than they were in the squalor and chronic misery of their native nests. As the chances of children, snatched from London cellars, will naturally increase, by education, in the mills and halls, and in the roads near the mills.

I have delivered my message, honestly, I trust. There are good and powerful men in London, whom I hope to reach. Better than tea-parties in a somber hall, crammed with children "full of cat-skin and bread-and-butter," would be profitable work, pure art, and well merited education for

them. I remember only a young peer-holder, who sang the Old Hundred in perfect time and tone, and who had his bill of gratuitous tea and cake at one of those great assemblages of boys, who have been taken by the hand; I was anxious to talk familiarly with him and some of his companions, as I began by asking him whether he had enjoyed his tea.

"Yes," he replied, accompanying the exclamation with an unpleasant leer, and his companions leered with him; "Yes!" "Light! We should have liked beer better."

I pointed to a ticket which he held in his hand, which entitled him to a money price. He held it up contemptuously, and called it his ticket-of-leave. "We're all ticket-of-leave here!" he cried, and his *contenance* laughed heartily.

The consummate little hypocrites disgusted me. They were puffed so openly, that it was clear they believed they were doing their benefactors a favour in consenting to be reformed and reclaimed. Better, I think, put boys like these where there are few pet theories, but much profitable work. Better send the honest children of the poor to the mills and mills of the north, than to Exeter Hall.

RURAL ECONOMICS.

TERRITORY NOT WEALTH.

IN commencing a series of papers upon the numerous and often complex topics which affect the rural economy of this country, and thereby influence the happiness of large classes of our population, as well as the productiveness of our soil, we propose to indicate, in a general way, the intended scope and purpose of these papers.

We are apt to refer, often somewhat thoughtlessly, to the superiority of our agriculture, and the vast amount of capital it employs; while we point exclusively to the enterprise and ingenuity engaged in the manufacture of the implements and machinery of husbandry, to our flocks and herds, and to the great supplies of corn and meat furnished by our farmers to the busy hives of manufacturing and commercial London. Yet, few persons, save those who have an intimate acquaintance with British agriculture, its belongings and its burthens, are aware that these results have been accomplished under difficulties and discouragements which have rendered no small share of Anglo-Saxon determination necessary, and have very much prevented the natural development of agricultural industry in England. When these difficulties and discouragements are brought in detail and with precision before the reader, and are illustrated, as we purpose to illustrate them, by events and incidents occurring from day to day, great will be his surprise that English farmers, whom he may have been accustomed to consider sturdy and unenterprising, have done so much, but still greater will be his astonishment to find that the chief obstacles are either actually created by the owners of the soil, or are the necessary consequences of bad laws and injurious customs which they regard as time-honoured institutions absolutely essential to the maintenance of the aristocracy.

We have inherited from a system of land in reference to real (i.e., landed) property, which is calculated to render property in land of the least possible value to its actual possessor; and we have likewise inherited notions and customs in regard to land, which, for want of a better term, we may designate as quasi-feudal, scarcely less mischievous than the law of primogeniture. In the feudal estate of a noble, the proprietor is absolute (fee-simple) owner, on his death without a will, descends to his eldest son, to the exclusion of the rest of his children, although the estate may be of enormous value, and he does not leave a shilling besides after payment of his debts. This is sufficiently unjust towards the younger children, but supposing the eldest son to be unrestricted owner, he may so use his estate as to make it as productive as it is capable of being made. If it requires—as most English estates do require—to be improved by means of outlays of capital, such as in draining, building, or repairing farm-houses and homesteads, making roads, removing injurious timber and bridleways or the like, the eldest son can sell a part of the property, or raise money upon loan for the purpose of improvement. He may thus obtain for himself the best rental, by enabling his tenants to raise the largest amount of produce the land will yield. But few instances occur in which an unimproved estate descends to the eldest son. Most landowners still take the ownership to be a moderate allowance of absolute ownership on their estates; there are always inducements to acquire more land than can be paid for without taking up some money. The original purchase was beyond the available capital of the purchaser; or the landowner has generally, from time to time, the opportunity of adding an adjoining estate, or of buying up a convenient farm; and he is naturally inclined to do so. It is almost necessary to complete the purchase, and resource is had to a mortgage. The local influence and social importance landed property confers or is supposed to confer, from the strongest of inducements to most landowners to add to their landed possessions, or, at all events, to do anything rather than diminish them. Hence, when any of the numerous causes of the depreciation of a daughter, or the starting of a son in life, a contested election, or any other occasion, when ready money becomes indispensable, the landowner invariably resorts to a charge on his estate for the purpose of raising it; so that when an estate descends from one absolute owner to another, it is commonly burdened with debts which render the ownership to a large extent nearly nominal, while all the expenses incident to the whole estate fall upon the proprietor. He has to pay for the collection of the whole rental, for the reparation and maintenance of all the farms, for the support of his dignity, measured by the extent of his estate not by the net rental he can retain for his own benefit, although his own beneficial interest in the rental may not exceed, or may not extend to one-half of it. Then mortgaging is frequently called in to the aid of the owners of it require its use for other purposes, when a new loan, involving considerable legal and other expenses, has to be obtained.

When such be the position of a landowner, it is surprising that his land is unimproved, or that any other landlord's improvements demanding considerable outlays are unperformed! (Can we then expect to see the land classes, instead of tenants to occupy their farms?) And the nominal owner of a large estate is commonly most renegade of his semi-feudal privileges; he is most unwilling to grant leases to his tenants, he is most anxious to preserve game, to the detriment of his tenants' crops, and more than all he is anxious to exercise political influence, by controlling and directing his tenants' votes. These are privi-

leges which usage and custom have annexed to an ownership, even the most nominal of landed property. For the sake of them, hundreds of landowners cling to the shell—the nominal ownership—long after the substance of an estate has vanished into the pockets of the mortgagees. In a case under our own observation, a landowner held on a large estate, subject to incumbrances so heavy that the whole income was insufficient to pay the annual interest of the incumbrances, and the difference was made up by an annual allowance of timber; after a time that resource failed, the estate having been stripped of its saleable timber, and the property was then performed sold to a wealthy brewer. And when we regard the operation of borrowing money on land in a businesslike and practical point of view, it will be obvious that, like gambling, it must, if persisted in, end in ultimate ruin. Land cannot be purchased to pay more than £3 per cent. per annum on the capital so invested; and whether the actual possessor or his great grandfather acquired the estate for this purpose makes no difference, but money cannot be borrowed upon mortgage for less than £4 or £4.10s. per cent. per annum; so that, while the landowner representing a given amount of capital nominally retains the land, the owner returns him only £3 per cent. for the capital he has borrowed for the sake of retaining such a nominal ownership he pays £4, or £4.10s., or £5 per cent. It is difficult to predict how such operations will end! Where the estate is considerable, and the successive proprietors are not very extravagant or unwise, this sort of thing may go on for several generations, but the end is, nevertheless, inevitably the same. Conveyancers and others engaged in the investigation of titles to landed property, know that mortgages are never paid off until the estate finally passes by sale into the hands of a new proprietor.

Such a course of the evils incident to the incumbered ownership of land, in case either the owner be subject to his incumbrances, absolute owner, might, had he the usual courage, free himself from his entanglements by selling all, or, where not so deeply involved, a part of his estate. But then he would cease to be a landowner, or a great landowner, or so great a landowner as he had hitherto appeared to be; and land is generally very landowner's evil, and is generally very landowner's evil, which usually is the form of inability to borrow more money on mortgage, or to keep down the interest on existing mortgages.

The great base, however, of English rural property consists in the settlements and entails which the law permits, and by which the means of any one are, in case either the owner be subject to his incumbrances, absolute owner, might, had he the usual courage, free himself from his entanglements by selling all, or, where not so deeply involved, a part of his estate. But then he would cease to be a landowner, or a great landowner, or so great a landowner as he had hitherto appeared to be; and land is generally very landowner's evil, and is generally very landowner's evil, which usually is the form of inability to borrow more money on mortgage, or to keep down the interest on existing mortgages.

What will be the condition of the tenants on the estate during this long lingering period of decadence may be imagined; and it will be a part of the purpose of these papers to show the manner in which the unimproved and settled estate, and the incidental consequences of incumbrances and settlements obstruct and prevent agricultural improvement and production. The field is a wide one, the instances we shall gather will be numerous, diverse, and occasionally startling.

Intimately connected with the feudalism of our real property law, is that truly Unchristian and oppressive code called the Game Laws—"a hostial idyll" as Blackstone, in his "Commentaries," tells us, of the forest laws which the Norman conquerors introduced to this country, and "founded on the same unreasonableness of property in wild creatures," both being "productive of the same tyranny to the Commons." The absolute and exclusive possession of the game by the landowner, through the game laws, and game preserving, as well as the pecuniary losses caused by game, and for the sake of game, will often form prominent topics.

Nor shall we overlook such points of practical husbandry as have a general interest, or influence the progress of production, or the well-being of the poor, or the opinions, of the industrious classes engaged in cultivating the

soil, or the landed proprietors, who gather so largely of the fruits of the soil in the shape of rent.

The reader who will follow us through these papers will find nothing more certainly depreciable, in various forms and under widely-differing circumstances, than the fact that the aggregation of large masses of land in the hands of individuals, for which our aristocratic classes are no sager, is not conducive to the progress of the nation, the wealth of the landowners, or the well-being of the industrious classes.

SWIMMING FOR WOMEN.

HENRIAN MELVILLE, in one of his delightful romances, draws a charming picture of a young Polynesian woman sitting watchful on the rocks overshadowing a quiet pool, while her infant sprawls and splutters in the water below, learning miserably from Nature, not unlike a young frog, how best to steer its way in the world of waters. As time is done at a very early age, the little creature learns to swim even before it can walk, and so grows up into a fascinating kind of amphibious animal, as much at home in the water as on the land. And do not all South-Sea travellers—those luckiest of a lucky race—speak aptly of the sleek of dark-skinned children who come swimming round the ship, like so many ducks in water, their black trousers floating on the water behind them, and their plant limbs cutting through the waves with no more trouble than a bird's wing through the air!—accounts of actual life which make Grecian fable true, and give reality to the beautiful legends of Germany. Now, we think English people need not go to quite this length. We need not attempt the wholesale education of our infant population, save in tubs and nursery-baths; nor need our fair friends at Brighton and Hastings swim out to meet their brothers and cousins coming home in the great East Indianian yonder. Beautiful as the sight would be—superior to the South-Sea Islanders in picturesque, if not equal in poetry, it would be one of the kind of thing that would be considered as a mark of national manners; whereas our illustration from the Pacific is not meant as an argument for St. George's Channel. But there is a circle within this wide outer range, a little land-locked lay that is not the illimitable ocean. Granting that it would not be desirable to send our wives and sisters, as the heroines of the novel, to the open sea, to learn to swim, like a bed of floating tulips, we might at least teach them how to keep from drowning, if, by chance, they got into deep water when so not was near, and how to manage, so that they would not drown others who might venture to assist them. In general, it is a work of infinite peril to attempt to save any unfortunate man or woman who does not know how to swim. Their frantic efforts, their wild clatchings, and the tremendous force which terror gives to the grasp, frequently prove fatal even to the stalwart men and accomplished swimmers, who might have saved a score of persons had they known how to save accepted aid. Scarcely a summer passes without some terrible catastrophe on the English and Irish coasts, or in the quiet bays along the coast. Now a mother and her daughters,—now two poor young ladies bathing by themselves in all fancied security, both from danger and discovery,—now a whole family, mother, brother, father,—or a pleasure-party wrecked close to the land, and on a perfectly still day, yet all drowned, except, perhaps, a boy or girl who saved himself by clinging to a floating object, who, more cautious than many, distribute his power to save himself or others, if over-weighted and impeded by frantic women clinging closely to him. But these shocking catastrophes produce no practical result towards prevention. They go the round of the newspapers, and everyone cries "How dreadful!" and women are advised to bathe during the summer, and to strike home, and happy hearts, rich in life, realize the sorrow of those bereaved so cruelly. Sometimes a daily paper or a weekly periodical finds a leader or an article on the tragedy; perhaps a post publishes a sonnet or an ode; and there the matter ends. Society has felt—the press has spoken; and caution and speech are then laid aside until another oceanic crisis, when they reappear as good as new, and perform all their offices over again.

We are generally active enough in our busy English life; and when once an idle stroke strikes its roots into the public mind, it spreads and grows with irresistible power. But how to get the seed fairly sown? How to influence people to active energy? How to overcome that terrible disinclination to useful labour of an overtasked race? We all dread any increase to our work—the idle classes themselves having plenty of vicious self-imposed duties to perform; and as even swimming-baths and classes must be organized before they can be established, and fathers and mothers must "see about it" before their daughters can be taught to swim, and the matter of new occupation, and as the subject does not press, and there is no hurry, and some of us think the idea queer and the practice equivocal, it gets put off from day to day, from month to month, and finally from year to year; in fact, until a terrible accident sets us all thinking again—"What a good thing it would be if every man, woman, and child in England knew how to swim!" We have plenty of means and opportunities for this, if only we make use of them,—lakes and rivers for the inland counties, and the broad sea-coast within a few hours' journey from everywhere. Bathing is popular; sailing and rowing are popular; but swimming has been undervalued and neglected, as a matter of general education, even for men, while of women the average of those who swim for themselves in the water is the most ordinary puffers of mind, is wonderfully small for a nation of out-of-door "Amazonians," as the French delight to call us. Now, there is no reason whatever why women should not be taught to swim. There is nothing specially masculine in the use of bearing oneself with courage and safety through the water; and anything which tends to the better development of the body, or the greater power of self-preservation, belongs as much to one sex as to the other. The contrary opinion would inevitably lead one to that "untenable logic" of which we can never rid ourselves, to the golden lines of the Chinese, and the acceptance of cramped feet as the special and graceful characteristic of a perfect womanhood. We have learned to learn women, having four limbs, like the rest of us, may not learn to use them in the most satisfactory manner pointed out by Nature; and what there is in swimming more essentially unwomanly than there is in bathing, walking, rowing, or riding.

The French, who are very much less "advanced" than we in the physical robustness and energy of their women, have yet numerous swimming-baths for ladies, both in the Seine and on the coast, and the experiment has

been found to answer perfectly. Many English ladies of our own acquaintance have learned of them, to their great benefit and delight, including a proper womanly admiration of the costume, which is at once modest and coquettish, useful and jaunty, as the French understand so well how to arrange. Indeed, the outdoor cycles of any improved swimmer be picturesque and well contrived, to be generously received in France; so that neither swimming-clubs for ladies, nor gymnastics, would have got such patronage there, if the milliner had not been first called in to stitch the banner into fashionable shape. *Le chic* could not be dispensed with, even in a bathing-dress. We also have tried the same experiment, many times, but the thing has never thrived abroad; and save in a few isolated instances here and there, English women have eschewed swimming as an exercise quite foreign to their nature, and not at all requisite to their needs. Not that the bias is new, or that it has not been actually tried; indeed, at one time, it seemed to make more way than it does now, seeing that many years ago, on the occasion of one of the royal visits to the city, they are not too early a test of this, or the later years of the last reign, a certain "Swimming Company," consisting of so many ladies and so many gentlemen, applied to be admitted into the procession. The Lord Mayor refused, on the plea of the companies being already too numerous, but suggested that they should advertise a swimming match in the Thames, to divert a few of the spectators from the line of royal and civic train. Since then the company seems to have pined away altogether, for want of public support; or if existing at all, existing only in the densest shade of retirement, unknown to the world at large, and devoid of both sympathy and patronage. But there are, we believe, in actual being and in actual existence, a few ladies and gentlemen, scattered about London, started on independent grounds, and as mere matters of private speculation; but these are so little notorious, that they are utterly unacquainted with their locality. If they exist at all, other than in mere idea, we shall be glad to know of them. They may be mere delusions altogether; or they may be a regular fancy,—so many a noble lady, who is well known not widely visited; and still the practice of women learning to swim, as a branch of general education, remains as far off as ever from a satisfactory conclusion.

There are many swimming-clubs about the country; one of the most notable, which is, perhaps, the "Clyde Swimming Club"; but these are exclusively for men, women being shut out so jealously from all participation therein, as from the house dinners of the Carlton, or the smoking-room of the Reform. And the point which we wish to specially insist on is swimming for women; so that for a woman not to know how to swim would be as much a mark of "fickleness" and incapacity as if she did not know how to sew, and absolutely surrendered at a title. As an exercise it is invaluable: as a guard against fatal results, in case of a sudden accident on the water, it is of course beyond dispute; it is at once healthful and useful, good for the body, and advantageous to everyone concerned, in times of peril or panic. How many hundreds of lives have been lost for want of this simple acquirement? What frightful tragedies have resulted from the least dangerous accidents, all because a few luckless creatures were never taught to use their limbs in the water, and lost their presence of mind as soon as the first shower of spray dashed up into their faces! To learn how to swim is, in reality, more essential than to learn how to ride, or to play the piano, or to make such choices for women, the other as common as French and the pianoforte. We have not yet come to the right understanding of the law regulating fashion and national prejudice; if we had, our work would be comparatively easy, and society might be mured by a much easier leverage than now, which would be to be done without costly and cumbersome organization, with much expenditure of time, money, and influence.

INEDITED LETTERS OF LORD NELSON.

(Continued from p. 157.)

THE account which is given by one of the biographers of the impression Nelson made on Sir William Hamilton in his first interview, derives a special interest from the fact that the statement comes direct from Lady Hamilton, under whose inspiration the biography was written. "Sir William," says the writer, "on returning home, after his first interview with Nelson, told Lady Hamilton that he was about to introduce to her a little man who could not boast of being very handsome, and who would have the greatest man that England had ever produced. 'I know it from the very few words of conversation I have already had with him. I pronounce that he will one day astonish the world. I have never entertained any officer at my house, but I am determined to bring him here; let him be put in the room prepared for Prince Augustus.' This is, doubtless, true in the main, but it is, possibly, a little exaggerated in the language; and the reader cannot fail to be struck by the remarkable inconsistency of character exhibited by Sir William, whose sagacity in detecting from a few words of conversation qualities that were one day to 'astound the world,' is singularly contrasted with his weakness in making such a parade before his wife of the new-comer's merits, and in bringing him home to his house, contrary to his usual custom. Sir William was at this time sixty-three years of age, and had been married two years, his relations with Lady Hamilton, however, having extended over a longer period. It is unquestionably a fair evidence of ability and integrity of life, that Sir William Hamilton held the post of English Minister at the Court of Naples for thirty-six years; and if, on the other hand, we have a set-off in the feebleness of his nature concerning other matters, we must endeavour to adjust the balance as equitably as we can. The discrepancy is displayed in reference to Nelson; and yet, after all, have been so profound as it is here represented; for the same authority furnishes us with reason to suspect that the hero may have himself suggested the prophecy with which the Minister awakened the curiosity of his wife. Nelson, it seems, was as much taken with Sir William as Sir William was with Nelson, and addressed him in these terms:—"You are a man after my

own heart, you do business in my own way; I am now only a captain, but, if I live, I will be at the top of the tree." By an easy figure of rhetoric, the top of the tree became magnified into something that was to astonish the world.

There is no ground for supposing that Nelson was captivated by Lady Hamilton at first sight, as has been hastily asserted. On the 14th of September he conveyed his first impressions of her in a few lines to his wife, "Lady Hamilton," he writes, "has been wonderfully kind and good to Joseph. She is a young woman of amiable manners, and who does honour to the station to which she has been raised." The Joseph mentioned in this passage was Mrs. Nelson's son by her former husband. Lady Hamilton at this time was twenty-nine, and in the zenith of her beauty. With strong natural talents, she had begun life under circumstances which placed education beyond her reach, and it was not until she formed that connection from which she had, only within the previous three or four years, been withdrawn by Sir William Hamilton, that she enjoyed an opportunity of improving her knowledge or cultivating her tastes. Her progress, especially in music, was surprising; and the exquisite perfection of her form, which had previously attracted the admiration of English artists, acquired additional graces from her studies of drapery from classical originals in Italy. She had great skill in singing, considerable powers of mimicry, and possessed all the requisites of voice, person, and delivery for a consummate actress. Mr. Pettigrew tells us that he had often heard from the Duke of Sussex of "the wonderful effect produced by the combined vocal powers of Lady Hamilton and Mrs. Billington," when they used to sing together at Lady Hamilton's parties at Naples; and Romney, the painter, speaks with enthusiasm of her acting in private, in London, before several people of fashion, just before her marriage. "She performed," he says, "both in the serious and comic, to admiration, both in singing and acting; but her Nina surprised everything I ever saw, and, I believe, as a piece of acting, nothing ever surpassed it." The effect she produced is described as unprecedented. She became the talk of the whole town, and the most tempting proposals were made to her to turn her abilities to account. "Gallini," says Romney, "offered her two thousand pounds a year, and two benefits, if she would engage her life; in which Sir William said, pleasantly, that he had engaged her for him;" Romney himself was one of the most enthusiastic of her admirers. She was, as Hayley, describes it, not only Romney's model but his inspirer. From her he drew his greatest examples of womanly loveliness in form and expression; and her features may be traced in his *Joan of Arc*, his *Magdalen*, the *Pythian Priestess* on her tripod, *St. Cecilia*, *Cassandra*, and many others.

Upon Nelson's arrival in the Bay of Naples, the King was so anxious to hear the news from Toulon that he went ashore, and sent for the captain of the *Agamemnon*. On the following day, Nelson attended His Majesty at Portici, and on the 15th the King visited him on board his vessel, and afterwards received him at dinner, placing him on his right hand at table, before the Ambassador and all the nobility present. Nelson furnishes all these details in his letters to his wife, and to his uncle, Mr. Sackling, and speaks with particular emphasis of the attention bestowed upon him by Sir John Acton. "The Prime Minister, who is an Englishman, Sir John Acton, Bart.," he writes to his uncle, "makes much of us. We are called the Preservers of Italy. I am to carry the handsome letter that can be penned, in the King's own hand, to Lord Hood, and six thousand Neapolitan troops, to assist in preserving our possession." He reckoned without his host with respect to the troops; but the letter more than fulfilled his expectations. Writing to his wife on the same day, he says that he was indebted for this letter to Sir William Hamilton and Sir John Acton. Nelson was in error in speaking of the latter gentleman as an Englishman. His family were English, but he was himself born at Boulogne, in 1736. Having early acquired a reputation for ability in naval affairs, he was employed in commanding the *Xanthippion* navy, and showed so much activity in that office that he was promoted to the office of Minister of Marine. He was a man of great ambition, and is said not to have hesitated at any means that offered to advance his influence at Court. Step by step he absorbed the whole power of the state; was not only Minister of Marine, but also Minister of War; afterwards Minister of Foreign Affairs; was then made a General, which placed the army in his hands; and finally was called to the head of the Ministry, which was formed of creatures of his own. He is accused by General Pitt of sacrificing the interests of Naples to personal objects; but the state in which he found the Court shows that the line he adopted was in a great measure indispensable to the safety of the kingdom. A strong ruling mind was wanted, and he supplied the disquiet. The Queen was proud, and had a strong will, and an inordinate love of power; but she could not have accomplished anything without a capable minister. Ferdinand was a weak, foolish prince, entirely abandoned to pleasure. Sir John Acton said of him that he was a good sort of man enough, because Nature had not supplied him with the faculties necessary to make a bad one; which seems to express all that is necessary about him in a few words. The Queen attempted to public teachers, and found in Sir John Acton a zealous and competent adviser. When the French Revolution broke out, and her sister, Marie Antoinette, fell a victim to the popular passions, Her Majesty, alarmed and alarmed, made preparations to take part in the great European movement, but was overruled by a fleet of French vessels which was sent into the Bay of Naples by the Republic. Through Sir John Acton, however, she entered into a secret league with England; and when Nelson arrived with

the news of the occupation of Toulon, immediate measures, as we have seen, were taken to carry its provisions into effect.

While Nelson was lying in the bay, intelligence arrived that a French man-of-war, and three sail under her colour, had anchored under Sardinia. Sir John Acton forwarded this intelligence at once to Nelson, who, although his ship was unfit for such a service, having nearly a hundred sick on board, set sail within two hours afterwards. The suddenness of this movement disappointed him of a grand festival he had planned in honour of the King, who was to have been entertained on board that very day. In the morning the ship was full of company, who had come to breakfast, preliminary to the arrival of the King: Sir William and Lady Hamilton, the Bishop of Winchester, Mrs. North and family, Lord and Lady Plymouth, Earl Grandison and his daughter, and many others. In the midst of the gaiety, the news of the appearance of the French on the opposite coast descended like a shell upon the merry company, and the party was instantly broken up. Nelson failed in his efforts to discover the French. He suspected that they had either got into Leghorn, or were housed in some port of Corsica; and after cruising about in vain, he put into the former port, partly, as he tells us, on account of his poor sick men. It is from this place he addresses Sir William Hamilton in the first letter of our indebted collection. It runs as follows:—

LEGHORN, September, 27th, 1793.

DEAR SIR,—I came in here Tuesday evening, having seen nothing of the vessels I went after, nor are they arrived here. In my hurry of sailing I find I had brought away a letter to you. Don't call me an ungrateful creature for it; I put it in your hands, and I have the highest sense of your and Lady Hamilton's kindness, and shall rejoice in an opportunity of returning it. I am here not a little teased by *L'Esperance* French frigate of forty guns, who is going to sea. I have given notice to the governor of my intention to go on every hour since my arrival; therefore I shall not remain one moment after he is sailed. I will not break the neutrality of the port, but in the present case, with such people, a luncheon license may be taken. If I can lay hold of him, the two Corsica may negotiate for his restoration. What may happen to us, I am indifferent to, if it will serve our country; at all risks I will not suffer a ship, nothing better than a pirate, to get loose amongst our trade. Only yesterday the crew refused the captain to be sergeant of marines, made the sergeant lieutenant of marines, and the lieutenant of that corps to be captain of the ship. With no small difficulty the captain got on shore, but not a rag of clothes will his miscreants give him. Since I have been here two French row-boats have been lying outside the Mole, and to-day an English ship has sailed, upon which, if necessary, I shall ground a defence of my conduct. He has five hundred men, and says he will load on all I put to sea after him. I shall most assuredly give him the opportunity, if he pleases. She is a most noble frigate, of twenty-eight, 18-pounders on her main deck. One of my *Reclus* vessels, I find, is likewise, afterwards bound to Marseilles, the property being the French. Sir, I have told you a most interesting story for Toulon, and if this Frenchman is not gone, shall endeavour to lay in his route.

I beg my respectful compliments to Lady Hamilton, and that you will believe that I consider myself your most obliged,
SIR WILLIAM HAMILTON, K.B.

HORATIO NELSON.

They tell me the Neapolitan squadron was between Gorgona and Cape Corso on Wednesday morning.

The *Rogue* vessel was the ship he had intercepted on his way to Naples, and sent into Leghorn to be examined. The vessel was cleared by the authorities, and the expected prize was lost.

The next letter, or rather portion of a letter—for it seems to be only the fifth page of a communication which occupied a sheet and a half—leaves no date: the date having been written, as usual, on the first page. But some hint—probably that of Sir William Hamilton, to whom it was addressed—has supplied the deficiency, by inserting at the foot "September, 1794."

The sending off the private adds to the kindness I have already received from you and Lady Hamilton. I have sent 20 dollars; I do not know if I am right in my calculation. I shall go off Monte Christ when I shall hear something, and shall act accordingly. I know you carry the good wishes of yourself and Lady Hamilton, and I am sure you will move service to me. I shall be glad to see the water. Before you get this letter I shall be under sail. My poor fellows, when I told them the service they were going on, said they would exert themselves to the utmost. Please to put in your letter to Lord Hood where I am gone.

Believe me, dear Sir, your most obliged,
HORATIO NELSON.

An interval of eight months occurs between the date of this letter and that of the next. In the mean time Nelson had not been idle. After reanimating a few days at Toulon he was sent to Sardinia with secret orders, and off the coast fell in with a French squadron, consisting of three frigates, a corvette, and a brig; and immediately closing one of the frigates, a severe action ensued, which lasted nearly four hours. The enemy was so much disabled as to be obliged to relinquish the engagement; and the *Agamemnon*, having her main-top-mast shot to pieces, and her main-mast, mizen-mast, and fore-yard badly damaged, was unable to continue the pursuit. After this incident Lord Hood ordered Nelson to take the command of a squadron of frigates off Corsica and the adjoining shore of Italy, to protect our trade, and look out for certain frigates which were supposed to have gone in that direction. "These," says Nelson in one of his private letters, "are the ships I had a little brush with, joined with one or two others." While Nelson was engaged upon this duty, Toulon was evacuated. The Republican army invaded the place on all sides but the sea, which was held by the English. Her Bonaparte, only three-and-twenty years old, distinguished himself, by his foresight and energy, as a captain of artillery, and was speedily raised to more important commands. It was impossible to defend Toulon without a powerful army; and every day more clearly demonstrated the hopelessness of the case. Finally it was determined at a council of war to evacuate the town, which resolution was carried into effect, but not without a terrible sacrifice of life,

owing mainly to the fury of the French troops, and the consternation of the wretched inhabitants. This was in December, 1793.

Early in the ensuing year, Nelson was cruising off Cagliari with a small squadron, for the purpose of preventing the French from receiving supplies, and kept up a constant communication with General Paoli, between whom and Lord Hood a convention had just been concluded, by which the British agreed to assist the Corsicans in expelling the French from possession of the forts, Corsica being, under this convention, ceded to Great Britain. Nelson's work was incessant in watching the coast and harassing the enemy, which he did effectually. They had a warehouse at St. Fiorenzo, a harbour of great importance. With only 120 men, Nelson landed, destroyed the warehouse, burned the mill, and threw the flour into the sea, before the French could bring up their force, amounting to 1,000 men, to oppose him. In three weeks afterwards, St. Fiorenzo was besieged, and Nelson kept a journal at this time, in which he noted down, almost daily, every occurrence that took place; and there is scarcely an entry in which we do not find some signal danger inflicted on the enemy. On the 6th of February, for example, he lands at Centuri, takes possession of the town and harbour, and burns six polacres, four of them loaded with wine for the French ship; on the 8th, he lands at Maginaggio, and burns eight sail of vessels, takes four, and destroys 1,000 tons of wine; on the 12th, he attacks a courier-boat, and carries her after a sharp contest; and on the 19th he lands at L'Avana, takes the Tower of Momo, and drives the enemy with gun-shot off Bastia.

These are only a few illustrative incidents out of the daily round of activity in which he was engaged. He fulfilled his orders so successfully, allowing neither troops nor provisions to enter Corsica, nor frigates to come out, that Lord Hood appointed him to a similar duty off Bastia.

[ERRATA.]—We are obliged to a correspondent for drawing our attention to an accidental error, which occurred in the correction of the proof, in the introduction to the "Isolated Letters of Lord Nelson." It occurs in the first column, where it is stated that "Two years later the scene is changed to Antigua." It ought to be "one year later." Nelson, in fact, was in Antigua less than a year after his St. Omar attachment, and remained some months beyond the year, his first letter about Mrs. Montagu being dated September, 1794, and his last May, 1795; so that when he formed an attachment for Mrs. Xalet in the following November, it was little more than six months "after the death of the 'tarnished tree.'" With this correction, the dates are strictly accurate.]

[To be continued.]

RAMBLES BY RAIL.—No. III.

BY THE GREAT WESTERN, TO TENBY.

THE southern portion of the county of Pembroke is, perhaps, the most peculiar district in Britain. Although situated at the furthest extremity of Wales, English is the language universally spoken by its inhabitants. From that circumstance it has been called "Little England beyond Wales." Its people, however, are not of English extraction. They are the descendants of those Anglo-Normans and Flemings who, in the twelfth century, took possession of the country, and were the chief means of subduing Ireland and Wales to the English Crown. And they retain to the present day characteristics of this origin, in their vocabulary, in their manners, in their personal appearance, in the very tone of their voices. Amongst the notables South Pembrokehire has produced are St. David, as saint; Giraldus Cambrensis, as historian; Henry the Seventh, as king; the Lady Nesta and Lucy Waters (mother of the unfortunate Monmouth), as beauties; Robert Rees, as a man of science; and Thomas Panton, as a warrior.

The scenery of the country is unique. Its coast is stern, gloomy, and iron-bound, with cliffs of so imposing a grandeur as to have excited the enthusiasm of rough old Fisseli in such a manner that it was with difficulty he was restrained from casting himself headlong from their summits. In the interior the landscapes, lovely and everywhere distinguished for its excellent proportion, give an impression I have nowhere else experienced, that it is continually haunted by the "goblin" of the place—and seems to have a kind of innocent sorcery quite peculiar to itself. Remains of antiquity scattered over the land—monuments raised by Irish hands of old; Danish enclosures, in their original character, of historic note crumbling into decay; all tend to heighten the feeling and to increase the charm.

It is in this interesting locality, at a distance of nearly 300 miles from the metropolis, that Tenby is situated.

The railway does not extend, up to town, but comes 12 miles off, on the shores of Milford Haven. Thence the traveller, having crossed the harbour in a steamer, takes coach, and in an hour and a half alights at Tenby. Or, he leaves the train at Narbeth-road Station, and proceeds in one of the conveyances that there await his arrival.

The little town is very ancient. It runs along the margin of a small but lofty peninsula which juts out into the Bristol Channel, and which tradition holds to be the sacred island fabled to have wandered, like the Ark of old, from place to place, and finally to have become stationary, "on the border of the flood," in the place it now occupies. It was certainly of importance amongst the Welsh, and when at length the "mild" of their predecessors, it was has been the most impregnable fortresses in South Wales. At present it has no claims to consideration in that respect, but is held in high estimation as the premier watering-place of Wales. In the wintry months it looks down upon the everlasting turmoil of waters that surround it, and is, in the highest degree, wild and grand and solitary. Towards the end of May there is a change. It has become calm, sweet, and beautiful, and leaves an impression not unlike that excited by the gray dawn, on a spring morning, when birds, flitting from tree to tree, shake off the dew from the branches. The little town has been cleaned and garbed; bathing-machines are then taken out of the winter-quarters, and brought down to the beach; and the first arrival of coaches from the railway station is watched with some anxiety by lodging-house-keepers. In the middle of August the crew is different.

The season is then at its height. Most houses are full, or have had people "in," and coaches are consequently looked upon with some indifference. In the mornings the streets are filled with strange faces. Some are leaving in flys, on an excursion to the caves or crabs, for which the district is renowned; some, with fishing-lines and gins, are finding their way to the pier, to embark for a day's fishing in the bay; some, provided with jars, hammers, and chisels, are setting out on a zoological expedition, or intend taking a geological survey of the neighbourhood. The sands are alive with promenadees. Bathing-machines are in constant requisition, and "Old Mary," the bathing-woman, has more work than she can do. Gentlemen with telescopes perch themselves on the rocks, and seem much interested in the ships traversing the bay; ladies, with their hair hanging over their backs to the rock, walk about in *diabolillo*, or sit skimming the ruins on St. Catherine's Dock. The evenings are devoted to the arrangement of aquaria, the mounting of ferns, or the cataloguing of geological specimens. Those, however, who are not scientifically inclined, get books from the circulating library, or walk on the Croft, to listen to the band. Balls occasionally take place, and then the little town is as stir till a late hour in the morning, and every fly and sedan-chair is put into use; lamans, in aid of the funds of some charitable institution, now and then give the ladies an extraordinary opportunity of being at once useful and interesting; and, once a year, horse-races bring together the "comely" families, who take lodgings for a week, and thus have an agreeable annual reunion.

There are three hotels at Tenby, and ample accommodation for those who prefer private lodgings. The hotel-keepers are reasonable, and apartments can be obtained at prices varying from one to twelve pounds a week. The town, as already observed, did not spring up to suit the convenience of visitors; it has, however, considerably modified itself to meet their wants. No speculator has harnessed it into notice; but it is interesting, and must be valued, for what Nature and the past have bestowed upon it. In positions, indeed, every advantage that Nature can give—fine sands, transparent water, a commanding situation, fine scenery, and a genial climate. Yet it still wants many of those conveniences that towns of less pretensions have to offer, and that Tenby must have before it can justly be considered, what its admirers often term, "the gem of the British south-western coast."

Those who run down to Tenby, with a return-ticket for a week, will be able to pass away two days very agreeably in the examination of the town and its vicinity, and in fishing in the bay. The neighbourhood, however, has very much to show of the grand and beautiful, and the remaining time may be most advantageously spent in visiting the places I have set down in the following—

Reviews of Books.

ONE OF GEORGE THE THIRD'S BISHOPS.*

RICHARD HYDE was the son of a farmer in Staffordshire. He was born in 1720, and died in the year 1808, Bishop of Worcester, over which see he had presided for nearly twenty-seven years. He began life without a friend or patron; and by his talents as a writer, his gifts as a preacher, his acquirements as a scholar, and his virtues as a clergyman, he became first a rector at Tharston, then preacher at Lincoln's-inn, then Bishop of Lichfield and Coventry, then Bishop of Worcester, and finally, as a prime favourite of the king and queen, was tendered the archiepiscopal mitre of Canterbury—an honour which he magnanimously declined.

The modesty, the plainness, the highest, the noblest, and the greatest in the land, all delighted in honouring the man of humble birth; and to his credit must it be recorded, the advancement gained by him, and the respect testified for him, were acquired by no unworthy means. He won them fairly and retained them reputationally. Nature seemed to have formed the farmer; so he was as a ripened ornament in the midst of a courtly circle; and he prospered as he had outgrown his position by no artificial arts, but by a strict and scrupulous guardianship over his own self-respect. How complete he was a courtier, and how well he could keep the court secrets, the present interesting volume demonstrates.

Amongst other proofs of the high estimation in which he was held by George III. was his selection to be, in the year 1775, the difficult and responsible office of Preceptor to the Prince of Wales and the Duke of York. What must this modern Seneca have thought of the two little scampish Neroses that were entrusted to him? What tales he could have told of them, as times and circumstances developed their evil dispositions! What must have been the conscientious confusions respecting the young scoundrel George, and the juvenile prodigal Frederick? The biographer has little to tell on these points, and the secret thoughts of the episcopal preceptor cannot be disinterred from the grave. The only written record of Doctor Hyde's opinions concerning the royal pupils is contained in the two following brief extracts: the first dated in the year 1776, and the second in the year 1777.

"The young princes (I do not say it for their sake, and in the way of complaisance), are extremely promising."

"Dr. Uglan sent me his sermon on the article of the Christian faith. I am

* Memoirs of the Life and Writings of the Right Rev. Richard Hyde, D.D., Lord Bishop of Worcester, with a Selection from his Correspondence and other Unpublished Papers. By the Rev. Francis Kilgour, M.A., Editor of the "Literary Remains of Bishop Warburton." London: Richard Bland, 1808.

delighted with them. They will do infinite service at Cambridge and elsewhere. I sent him word I should put them into the princes' hands, when they had finished Archbishop Becker."

What a subject for an historical painter!—the cov, prin, maidly Hurd presiding over the religious reading of poor Caroline of Brunswick's future husband, and Mary Anne Clark, a "gentleman."

The Bishop's *fortis* was "the portrature of characters." How well and how accurately he could have depicted his royal pupils, if he had chosen to do so! We know, from the literary remains of Dr. Parr, he was disliked by the Prince of Wales; and yet, all we can glean of Dr. Parr's judgment concerning the young prince is to be found in the following scrap of an old woman's gossip, which a hildren in the *Adelphi*, p. 378.

"My grandmother, Mrs. John Parsons, used to tell the following anecdote of the bishop. She described his manners as particularly soft and winning, his voice as low and musical. Shortly after his arrival at Hartlebury, who said to him one day as they were sitting together, 'How do you think your pupil His Royal Highness the Prince of Wales will turn out?'—'My dear cousin,' the bishop replied, laying his peculiarly ample white hand upon her arm, 'I can hardly tell; either the most polished gentleman, or the most accomplished blackguard in Europe,—possibly an admixture of both.'"

If we give full credit to the biographer of Doctor Hurd, we are bound to believe that he was a most mild, kind, and plausible old gentleman, and at the same time a very eager disputant when the character of his friends was assailed, or their principles impugned. At the same time we find that the good bishop never logged at the use of a harsh expression in reference to the living or the dead when he felt displeased with them. Is this apparent inconsistency—placidity of temper, with the use of vituperative phrases, and combatives with the pen—a natural contrast? We believe it is. The amiability that will patiently bear with, or overlook the errors of those it loves, may exhibit a very fierce and even intolerant zeal when aroused by what it conceives to be the wilful perversity and deliberate injustice of strangers in whom it can see nought but faults, as it never has had the opportunity of being acquainted with their countenance and their quality.

To the world, however,—that world which reckons so much and thinks so little upon what mankind has the opportunity of observing, it will appear strange to see such uncharitable, unkindly, and intolerant phrases coming from the pen of one who is described as being a placid, good-natured, benevolent, and kind-hearted prelate.

We quote from the bishop's own letters:—

"To say the truth, there is a wondrous scarcity of reputable clergymen in this country; sober are rare, but learned I have not heard of one near me."—p. 11.

"To describe the curiosities of these two places [St. A. Fontaine's and Sir R. Walpole's] would require a volume. 'Tis most unfortunate that the masters of both of them are such rascals."—p. 78.

"The root of that crew of miscreants."—p. 78.

"His infamous master."—p. 78.

"The nearest and most contemptible of all my princes."—p. 78.

"Something between a fox and a hyena."—p. 79.

"A she-monster."—p. 79.

"All I do know is, that he [Priestley] is a wretched conceited, and of a virulent spirit."—p. 166.

"You know my opinion of Dr. B. [Dr. Butler, the bishop of Oxford]; I don't like him as a prostitute man."—p. 114.

"When I blamed your friend St. Asaph [Bishop Shillingley], it was for preaching at all such a vulgar, I never troubled myself about the side he took in the dispute. In great part, the cause was a natural quarrel."—p. 113.

"He [Robertson, the historian] wishes to Gibbon and Raynal make me suspect his religion to be of a piece with that of his friend Hume."—p. 132.

"I have very little kindness for any Scotch writer, except one or two, and for these only on charity because they have the feelings of men. Vanity, parade, false taste, and insidiously are the portions of the rest."—p. 133.

"That enemy of all goddesses, David Hume."—p. 137.

"Priestley's nonsense is not to be wondered at; but his impudence in sending it to me, and calling upon me to read it, shows him to be out of his mind. I suppose he was too full enough to think I would dispute with him."—p. 145.

"His [Gibbon, the historian] loaded and luxuriant style is disgusting to the last degree; and his work is polluted everywhere by the most immoral as well as irrelevant insinuations."—p. 167.

These specimens of the worthy Bishop's manner of dealing with those whose opinions he disliked, will give the reader some idea of the temper in which he was engaged, and that at one period occupied an small share of attention in the literary and religious world. Unfavourable peritests of Bishop Hurd are to be found in the writings of Dr. Parr, and scattered through the letters of Horace Walpole, and yet no fitting memoir vindicating his memory, and demonstrating the intrinsic goodness, was published until the appearance of the present volume. We congratulate its author, the Rev. Francis Kilvert, upon the manner in which he has executed his self-imposed task. With few materials to work upon—for the career of Bishop Hurd was too prosperous to be eventful—he has contrived to compose a volume which will be read with pleasure by every man who has a taste for literature, and takes an interest in the studies of a most accomplished writer and a truly ripe scholar.

Could we afford the space, we would enrich our columns with extracts from the Letters and the Counsellor's Book of the Bishop. We cannot do so, but strongly recommend Mr. Kilvert's work to general perusal. It is a truthful book—interesting, amusing, and instructive.

FROM HAY-TIME TO HOPPING.*

THE title of this little book is a stroke of genius. It is full of pictures. It takes us at once into the country, and drops us in the very thick of rural pleasures and occupations. The reader is made to feel that he is conversing with us in the works; we hear the stroke of the woodman's axe, the chirping of birds, and the lowing of cattle; we see the loaded wain come rumbling through the ruts out of the farm-yard; haymakers and reapers are dancing the hay in and out of the printed letters; and the title-page is alive with long vistas of rich hay-bushes and blossoms, through which crowds of picturesque figures

* From *Hay-time to Hopping*. By the author of "Our Farm of Four Acres." London: Chapman & Hall.

may be seen clustered here and there under the shadows. We expect a look about country associations from the author of "Our Farm of Four Acres;" but whoever looks for a manual upon grass-lands and domestic breeding in the present volume will not find what he seeks. But he will find something a great deal better—a charming story, a charming, a texture of rural scenes. The background is an English village, with its ancient church of dark-grey stone, protected by a massive square tower; fields, farms, green lanes, mansions, the park and the glebe, and all the other useful and decorative features of a bright, plentiful little settlement are scattered about; and the persons who contribute the human interest to the story are the persons who, from time immemorial, appear to have constituted the "society" of such places, both above and below the salt,—such as the great family who live up at the "Court," the "Brown-Haughtons," and the "Jones-Mercedites," who are always in doubt whether they ought to visit the "new arrivals," and who are always to be found with their heads up in the air in small communities; the doctor, and his bustling, cheerful, talking, hearty wife, known all round the place for the good she does as the "doctress;" the elegancy; and a comprehensive variety of characters supplied by the rustic population in general. The story which runs the gaudier through these people is a love-story—or rather a couple of love-stories, culminating at the close into a couple of weddings. The conduct of the story is exceedingly natural. There is nothing strained for effect. There is no false sentiment. Every person who is introduced does exactly what he, or she, would be likely to do in the issue of circumstances in which he, or she, happens to be placed, just as if there were no such thing as an artificial result to be brought about, in which the individual is to be according to a great *raison d'être* for the glorification of the author. The story moves on of itself; very quietly, but always progressively. The conversations are so perfectly easy, and there is so little appearance of premeditation, or artifice, in the structure or management of the incidents, that we might fairly suppose the style to be a direct transcript from actual life, if we did not see the plain, the simple, the direct, that a skilful fiction is often more true to life than particular realities.

Mr. Wilkie Collins, in the preface to his new novel, begs of the critics not to forestall his effects by telling his story. The authors of this simple tale lays us under no such restraint, and, if he do not tell his story, it is not because we could have any apprehension of spoiling the effect of the book, but because the charm of the story so essentially depends upon its moral aversaries, that we should fail to convey, by a mere outline of its events, which might be despatched in half a dozen lines, an adequate sense of its character, and still less of its merits. The frame, in this case, is indispensable to the picture.

One of the scenes that by the sheer force of their truthfulness, will strike all readers who have any practical knowledge of the country, is the description of the harvest-supper. The circumstances leading up to it are depicted with surprising fidelity; the gables of preparations, the small difficulties, the cross purposes, the expedients, and above all, the gathering in the hay and flurry of spreading out a table on the lawn, large enough for all the guests, and, above all, the guests themselves—all presented in minute detail. We will give one passage, to show the insight which the author possesses into the modes of life so happily delineates, and the excellent use she makes of it:—

"Seven o'clock was the hour fixed for the gathering: a little before that time, parties of three and four began to assemble on the lawn. How slow and yet how happy they looked as Henry shook each by the hand, hardened and bronzed by years of honest labour! The children cling to their mothers' gowns, and stare with looks of wonder and delight at the preparations for the supper. The boys, from sixteen to twenty, were close by home; they hang down their heads when spoken to, and figured the brims of their hats, as if they endeavoured to force from the hand felt a reply to the kind welcome they received. All the men were in black, and clothed however; their gait, their gait, their gait, their gait, and white were mostly worn, though some of the younger ones were smart in suits of black or green velvet; a few long-tailed black coats, too, could be detected among the guests, but they were mostly worn by men who had passed the boundary of middle life; the well-preserved gentlemen appeared as if they might have been near when the shatterly-looking women by the side of the women were country brims. I am sorry to record the fact, but middle-aged women in the country are almost invariably shabby in appearance; and very rarely have I seen one who, at that period of life, can be called good-looking; hard work and scanty fare, and the destruction of the complexion, may have done this. . . . Yet all but the young unmarried women who took their seats at that table were shabby in appearance, and, with the faded richness in their shabby bonnets, light-coloured velvet dresses, and unsightly-pointed shoes, offered an indelicate contrast to their class, devoid of any of the graces of dress."

Other questions relating to the condition of the labouring classes, and many household problems in country districts, are touched upon in the course of this truthful little prose idyll.

A MODERN SOLDIER.*

IT, on our own merits, modest ones are dumb, T. H. Kavanagh, Esq., is not, strictly speaking, a novel; and, in the country, without any of the usual his-daring exploits and desperate adventures, we must excuse that the style in which they are described has reminded us of characters, dramatic and historical, of one of whom it was said, "None but himself can be his parallel." For example, there was one Parolles, a very bragging chump, and there was another, quite his equal, of the name of Bohadri, who drew him as the dog Billy used to settle his. "Twenty now; kill them too." Then there was a fat fellow called Falstaff, who boasted not a little; but Mr. Kavanagh, upon the whole, in his glorious achievements, might be more aptly compared with Cincinnatus, for he flattered the rebellious septagenarian who the Roman flattered the Volscians, and might in like wise exclaim,

"For a reader's amusement, however, this country epigon rather adds to the attractions of the volume. If we are deeply interested in such extraordinary perils as life, and such marvellous deeds as were performed, and have immortalized Ferdinand Mendez Pinto and the Baron Munchausen; we cannot resist a like feeling in the narrative of 'Look Back to Kavanagh,' who, nevertheless is an extremely distinguished individual, and complains

* How I won the Victoria Cross. By T. Henry Kavanagh, Esq., Assistant-Commissioner in Oaths. Ward & Lock.

bitterly of his ill luck now, and the ungrateful return awarded for his never-to-be-too-highly-appreciated services. We remember that the famous "Living Skeleton" was also a Kavanagh. Can it be possible that the directors of the East-India Company and Her Majesty's Government conspired to relieve him of the miserable condition of his nautarick? Colonel Sykes and Sir Charles Wood might be capable of so base an act, but our author has refrained from specifying it.

But, despite of its absurdities, there are many statements in this little volume which, coming from the pen of the man who has lived nearly thirty years, really lauded in the fray, and might indeed say, in his position, *opimus pater matris fidei*, we will venture to touch upon, in the belief that they are sufficiently authentic and curious for popular notice. Mr. Kavanagh held a civil appointment in Lucknow when the rebellion broke out; having been, on the evacuation of the city, in 1858, made superintendent of the office of the Chief Commissioner. When the rebels broke he enlisted himself among the gallant Volunteers who contributed their noble exertions and their blood to the defence. It was in this honourable career that he did his valiant deeds, for which the "Government did little to honour him,"—for which he did not get the Victoria Cross, the Court of Directors having refused to endorse Lord Canning's recommendation for distinction, for which he did get £2,000 and immense celebrity in private society, and all which he was advised to write in a book to make potent and commensurate, as proven by the work before us.

His picture of Lucknow and the war, of slaughter and massacres, of terrible vengeance taken by the Europeans the extent of which he conveys, of suffering too horrible to think upon, and his own grand portrait in the front of all, make up the exhibition. It is evident that he was the soul of valour, self-devoted to his country's cause, indefatigable, impetuous, heroic, and merciful, the directing spirit of the swirling tragedy; and that, with directing the command, he was the leader in action, pointing out what ought to be done and what avoided, it might have gone wrong with Lucknow, Oudh, and the Indian Empire, had he not been there to play the part he did. One feature is brought more prominently out than we have hitherto seen, namely, the inviolable attachment and fidelity of many of the natives, *anglo-soldats* and servants, in the trials of the severest trials, and the devotion and courage of so many of their companions. Surely this may be received as a sign that, with kind and judicious treatment, the future of our eastern world may be rested on bases more secure than those the overthrow of which led to the calamities here so fully described. The illustrious efforts of Havelock, Outram, and family, of the fine old Highlanders, whose names are well known to Europe, and their reference, honoured in by a multitude of cruel enemies, and daily losing strength by fatal casualties and privations, the shade thickened over the devoted land that defended the last fortified posts of Lucknow. The doubt of success, the alternation of hopes and fears, the dreadful apprehension of a fate worse than death, which distracted the unhappy women shut up in the fortifications, though not preventing them from continuing to administer to the necessities of the sick and wounded, and sharing the dangers of their husbands and brothers exposed to every contingency for life or death, offer a spectacle at which humanity might tremble while it wept.

It was not the end of this appalling tale of things that Kavanagh tells us he volunteered to pass his life in the service of the East-India Company, to get accurate information to Sir Colin Campbell of the true condition of the garrison, and guide him in the safest course to penetrate for its relief. The details are romantic. In company with a *sepoy* spy who had found his way in, Kavanagh deemed it possible, though desperately perilous, to find his way out. And so, having got the permission, he started off for the beleaguered heads of the "nigger" tent, and clothed himself after the Oriental fashion, and at midnight marched forward on his hazardous expedition. The details are flowery, and the incidents startling. Answering challenges from sentries and pickets, wading rivers and creeks or swamps, hiding and dodging, tend to a fortunate arrival in the morning at the British camp, where our hero is well received and cordially welcomed. No doubt the intelligence an individual in his position could furnish must have been most acceptable, and far superior to what could have been learned from a curt despatch or a cannon spy; but Mr. Kavanagh certainly rides the high-horse throughout, and forces us to mingle his story, from its being so awfully overlaid with assumptions of the inviolable importance of his interference with every person and on every occasion. He is in fact the *deus ex machina*, and all the rest merely agents, if not puppets, moved by him. We have said that Sir Colin Campbell gave him a cordial reception; and to rest him after his notable night's promenade he was put to bed in a tent before proceeding to business. And now for a sample of the splendid dithyramb:—

"Aristomenes ventured alone, at night, to the city of Sparta, in a spirit of defiance, and fixed a shield on the Temple of Minerva, with an inscription, that he dedicated it to the goddess from the spoils of the Spartans. The removal of Heracles is greater than the removal of the statue of Minerva. The removal of Heracles, whilst the last beams of the bridge fell clashing into the water, to save his friends. The Romans nobly honoured him with a statue, and as much had as he could plough round in a day (what a fine statue, such a process might attain even in Odysseus!); and the Athenians awarded the cost of a day's food to reward him. The noble Minerva, to deliver his country of a dangerous enemy, poured into the camp of Vercasse to kill him, and when tonight before the king, he thrust his hand into the fire, and held it in the flame with unnumbered countenances, exclaiming, 'See how the flames are the tortures can avoid to make a brave man tell the secrets committed to him.' The world has not yet forgotten the will-devotion of Deiane and his son," &c. &c.

Now, the argument is, that those were poor affairs or extravagant bravadoes, and the author pots the moral:—

"Yet the fane of their deeds has reached through the ruin of ages, to excite us to emulation. Should I be remembered when the records of centuries are consumed for the insignificant of youth? Should I be honoured with a statue (nothing of the ploughing-meat), and would every Englishman misread the cost of a day's food to reward me?"

Alas! no: John Bull, we fear, is too fond of his inward man; and as for our states, they are generally so bad that no man person can be ambitious of the *ex premo carissimo* of youth.

The fighting in the streets of Lucknow, the butcherings and the plunderings, are sickeningly vivid:—

"The appalling sounds of cutting, hacking, and stabbing were heard all round,

with the dreadful screams of the complainants. 'Gawpoo, boys! Remember our women and children! Money! No mercy for you!'"

Miserable creatures! a day of retribution had come. Kavanagh is the first to relieve the garrison, who greet him with three cheers; and he introduces Sir James Outram to Sir Colin Campbell:—

"I effected the grand object of my ambition (he adds): I saved many lives, and the public treasure, amounting to over £300,000, and the Government of India gave me for this and the other more important services £2,000. Contrast this with the liberality of the public to Tom Sykes!"

Indeed, and indeed, we cannot. The task would distress us. We must withdraw from the contemplation of our mighty compatriot; but yet justice requires one quotation more:—

"I was engaged in a room with three swordsmen. I was so fortunate as to dislodge the first by a blow on the head, which broke my sword in two; the second, thinking me powerless, made a desperate cut at my neck, but I happily dodged him one across the face that rolled him on the floor. The third turned about, I pushed him by the shoulder into the doorway, and he dashed to the ground. I stumbled forward in a gateway, and was instantly run over by several of the enemy, so frightened that they did not see me!"

Previous to this, one of his chief directions was to meet the Pandies underground, where they were running their mining galleries, and shoot them there with revolvers. He has now gone back to India in a respectable official capacity, civil judge under the present regime, and we doubt he is not, should any other avowed crisis arrive, he will be ready to perform as much again for his country's salvation and his own glorification.

LADY MORGAN.*

WHATEVER may have been Lady Morgan's faith, she was Irish to the heart's core, and, together with very considerable talent and vivacity, possessed many of the great qualities of the soil. The space which she occupied for upwards of half a century in the literature of her country entitles her to a large measure of posthumous honour; and we rejoice to find her character, in the hands of one who feels so warmly and can express himself so well. The champion of a lady may well be excused if he is occasionally more ardent than the enemy of a right impartiality would perhaps justify. He rarely transgresses the bounds of good taste, and, except in one instance, is a candid and generous censor of the opponents of his friend.

Mr. Fitzpatrick's book is well adapted to extend Lady Morgan's fame among a class of society where her name has hitherto been no recommendation to a closer acquaintance. It is a most agreeable volume, and will find acceptance in all circles.

The life of a mere woman of letters is seldom diversified by the incidents or adventures which give a charm to female biography in general; but that of Lady Morgan was not without its romance. It may be questioned if any of her own novels can produce a "situation," so striking as that which occurred on the morning of her marriage with Sir Charles Morgan. It is related by Sir J. Emerson Tennent, who received this truth truer than any fiction, from the lips of the "fair incognito" herself, at a period of her life when the reader of the novel had failed from her own character, and she could confess her frailty without a blush. When very young, she had formed a mutual engagement with a youth named Crosely, younger still, who shortly afterwards was appointed to a cadetship in the Indian army.

"The correspondence (between Sir James) continued for some years, though so interrupted that a considerable suspension took place, during which the lady's position and prospects had been continually rising, and her marriage at length solemnized with Sir Charles Morgan. On the morning of the wedding, the post arrived before the procession to the church, and the sister of the bride took charge of her letters for Miss Oremont. These she opened on her return to the house, and amongst them was one from Crosely, accounting for his long absence by the necessities of a period of uncertainty, which had now ended by his receiving some promotion in the army, and a staff appointment in the service of the Nizam. This was the long-looked-for point in his career, and, having at last attained independence, he wrote to thank the performance of their early engagement, and propose an immediate union."

It does not appear that "the brave Aloose" took any further step towards his imaginary, for the enforcement of the plighted vow; but if he ever did return, on such thoughts intense, and met the matured substance of his former young dream, on *grand issue*, at the Irish Court, as described in the following sketch, the reader will scarcely wonder that no ghostly result ensued:—

"Here it was (says a correspondent of our author) that I saw Lady Morgan for the first time; and as I had long pictured her to my imagination as a sylph-like person, nothing could equal my astonishment when the celebrated authoress, as she presented herself before me, was so different from the airy creature in the midst of that dazzling scene of beauty and splendor. Every female present wore feathers and tains; but Lady Morgan scorned such appendages. Hardly more than five feet high, with a spine not quite straight, slightly uneven shaven above, Lady Morgan glided about in close-fitting, and her wig, bound by a fillet or solid fold of gold, her large face all animation, and with a witty word for every body."

The last twenty years of her life were spent in London, where she resided in a street adjoining Hyde-park, and gave her evenings entirely to social reunion of all kinds, but chiefly affected, like Tommy Moore, the company of the *Rip Dips*.

The guests (says her biographer) included nearly every person of literary or personal distinction. His Imperial Majesty, the present Emperor of the French, was a constant visitor. His mind, said Lady Morgan, in conversation with a friend, seemed to be always alive hourly and working strongly. It would fall into frequent reveries, and he remarked that, whenever a *black case* to the door, he always started strongly."

No doubt he thought he was "wanted," and that the *rap came* for him. We have no space for the fund of literary and miscellaneous gossip which relieves the graver parts of this publication, and renders it one of the most amusing volumes of the day.

The conclusion of the whole matter, or as Mr. Fitzpatrick has it, "the

* Lady Morgan, her Career, Literary and Personal. By William John Fitzpatrick, J.P. Street, London.

great moon" of her ladyship's life, like that of Tom Sowers, may be summed up in one brief word—*luck!* That was the secret of her success. To that it is owing that her executors were able to administer to so round a sun as shines thousand pounds. "To no code trails, and contra auditorio ito!"

—Such was the device on her Annunciation *pelta*. Had she, at the beginning, yielded one foot of ground to those bad boys the reviewers—had she not risen more determined, after every fall, to "go in and win," her genius and her lore would have availed nothing. With some public favourites, "luck is all," with Lady Muggins it is *gladness*.

And now, *languis re!* I take our leave of her ladyship respectfully and kindly, with many thanks to her biographer for the pleasant hours we have enjoyed over his pages.

DOWN BY THE SEA.

"Down by the sea!" At this season of the year there is freshness and health in the very rocks; and, ay, and glorious music lodes; for what tune is like that slow, solemn grumble of the waves breaking on a sandy beach, or the sharper, wilder note they strike on a rocky shore? Chorded concertos and straining singers can be tolerated, my appreciation, in winter, but the only thoroughly enjoyable music when the days are long and the sun shines bright in a sky of blue is that which Nature's musician makes in her vast cathedral, and there is none in that orchestra so competent as the sea.

"There is sweet music here that softer falls
Than jets from blown roses on the grass,
Or night-dews on cold waters between walls
Of shadowy crannies, in a yew-tree mass;
More that gentles on the eapart from
Than bird-calls upon the spring breeze;
Music that brings sweet sleep down from the blisful sky."

Or, if in the summer weather we reject the lofty later's philosophy, and "go in" for other enjoyment than that which consists in "living reclaimed,"

"With half-blind eyes one may
Falling asleep in a half-dream,"

where are we so likely to find amusing and instructive recreation as down by the sea? Almost every rock-pool is full of life. In this one the snail-moss, large-eyed blenny, dart to drawing-room aquariums for its sociable disposition in confinement, but now as well as the chaunio of the Alps, darts about in free unrest; and the slow, ungainly crab is making frantic efforts to escape into some dark corner from the poke of your inquisitive stick. Here the tiny hermit is incessantly dragging forth his long footless fingers, in search of invisible food; and there the brilliant plumes of the sepiolae, whose white and serpentine forms cover almost every stone in the pool, are continually in play. Glance into this other pool and you see an actinia—red, purple, violet, or fawn-colour it may be, but in any case beautiful, with its gracefully curving tentacles, or bristlers, or, as the poetical countenance suggests it, the "luscious line of beauty;" while here also first comes the pycnogonid star-fish, ready to mutilate itself as soon as it is touched by a rude hand. Here swims the lovely sea-nouse, one of the most gorgeous of marine animals,—whose charms even Science herself could not withstand, and so named the pretty creature with Aphrodite—with apocryphal colour, yellow, and blue, purple, and emerald,—all the hues of Iris lay upon them with the changing light, and shine with a metallic effulgence; and there the transparent prawns, with its huge eyes, and long legs, leaps, as leaps a grasshopper on the green. In this other pool the sea-hare, ruddy round upon, turns the water into blood; while in that, the edonid, spiny sea-urchin, repays; and yonder, in the sand, trebellae, wonderful "tetter," as he is called, rears his dwelling with a compactness defying human hands to imitate. And evidence of the marvellous bearing of the phobias lies scattered about in many a stone, and if we step down to yonder rock we may even observe him at his work.

These and hundreds of other things may be seen during our holiday down by the sea, if we place ourselves under the practical guidance of such an accurate and conscientious observer, and genial and gossiping narrator as Mr. Harper.

Mr. Harper, though a popular writer, is no mere compiler. Avoiding as much as possible scientific terminology, he yet overcomes with all the patience and accuracy of a scientific man. In the book now before us, and which has just been issued, *Mr. Harper has furnished us with some new and astonishing facts about that much-vaunted question of crinoids. Hitherto it appears to have been the general belief that crabs cast their shells annually, until such time as they had attained their full growth, when the process of exuviation, as it is called, rears his dwelling with a much more intelligent and accurate naturalist than himself, Resonant, describes the crab as swelling to an unusual extent, and first bursting the shell "at its junctures between the body and the tail;" the animal then "disregards itself of every part, one after the other, each part of the joints bursting longitudinally." The process is further described as so violent and painful as to cause death in many instances. Various other authors of note adopt much the same view, not only regarding the annual casting-off of the shell, but also as to the painfulness of the operation, and the piecemeal character of the exuviation. In the book now under our notice, Mr. Harper, who has had the good fortune to witness several cases of exuviation, satisfactorily shows that naturalists are quite wrong in assuming such facts. The exuviation may at a loss. In the cases which came under his observation, the operation was neither violent nor a piecemeal character, and it occurred in the same specimen not once a year, but five times in the course of six months. The author thus describes the process of exuviation:—

"I observed that his (the crab's) shell had just opened near the tail. . . . The operation did not extend to the head, . . . the animal was not in any way, and at first almost imperceptible degrees. The shell, or carapace, was slowly raised over the back, and gave one the idea of the rear view of a lawyer's wig when tilted over his brow, thus exposing the natural black hair on the segment below, as the hair of the crown of a wig. The animal was very dark in colour, while the old case assumed a whitish hue. I need hardly say, the legs, sheaths of the crab did not split open, and yes the corresponding limbs were drawn out with the greatest ease. Moreover, they did not appear in view one by

one, but in a cluster, as it were, and packed close to the bent body of the crab. During the entire process the animal appeared to me securely any exertion whatsoever, certainly not so much as any insect being vociferous in throwing off the most trifling garment. In fact the crab seemed to swell painlessly, and gently roll or glide out in a kind of ball. Until it had completely creased from its old shell, it was somewhat puzzled to guess what shape it would eventually assume. The eyes and antennae, as soon as they left their old sheaths, commenced together with the feelers, to work as usual, although as yet they were still inside the exuvium. This circumstance was distinctly visible by looking through the side of the half-cast shell. It was a curious and extraordinary sight to see the eyes gradually lose their brilliancy, and exhibit the flinty lock-like appearance of death, while the act of exuviation was being accomplished."

With reference to the frequency of exuviation, Mr. Harper writes:—

"I feel justified in stating, confidently, that the moult of the crab (in its comparatively youthful state, at all events) takes place not only once, but many times during each year of its existence. My specimens may, perhaps, be considered exceptional, as they were produced by a young crab, and as yet they were almost of adult. The cast-off shells lie before me I write. There is a set of three belonging to the same animal, exhibiting with marvellous exactness the gradual development of a broken claw. In the first, the member appears very immature; in the second it is nearly twice its former size, and in the third it has advanced to its natural form and bulk. To my regret, I cannot state the exact period that elapsed between each successive moult; but I am confident that the two were cast in the course of a very few months. . . . The next series of specimens, five in number, possess even still greater interest than the first, inasmuch as they were produced by a young crab, and as yet they were consecutive intervals.—The first moult took place on 11th April 1858; the second on the 22nd May following, the third on July 2nd, the fourth on the 30th of August, and the fifth on the 25th of September of the same year; so that between the first and second period of exuviation there was an interval of forty days; between the second and third forty-two days elapsed; between the fourth and fifth forty-eight days; but, singular to state, between the fourth and fifth moult only twenty-seven days intervened. My first impression was, that as the creature grew older, its shell would be renewed less frequently, and the dates of the moultings seemed to support this idea until the fourth moult. It had occurred to me that perhaps the operation might be accelerated by the amount of food which the crab consumed. In order to test this, I fed the animal carefully every day, as though he were a prize beast about to be exhibited at some Christmas show. Nothing loth, he ate of everything that was placed before him with a gusto that would have done credit to an alderman. The result was that the shell was renewed in less than half the time that elapsed between the preceding moults. These interesting investigations have been conducted thus far so satisfactorily, were suddenly brought to a close by the death of my protop."

It is astonishing that the discovery of such interesting facts—for interesting they must be, even should subsequent investigation prove them to be exceptional,—should have been left to an enthusiastic amateur. When witnessing the process of exuviation on another occasion, it occurred to Mr. Harper that it would be of great consequence to make a series of drawings as well as "while it was yet only half completed, in order that others also might be enabled to witness the marvellous act of exuviation." He accordingly lifted the crab out of the tank where it was, and dropped it into a quantity of spirits, thus causing its immediate death, while as yet only half of the animal protruded from the shell.

The specimen shows at a glance the increase that instantaneously takes place in the size of the crab after the act of exuviation is performed; the animal emerged being on a scale considerably larger than the old covering, which, however, is conspicuous enough to hold that half of the animal that had not effected its deliverance at the moment when the novel arrangement was so unceremoniously severed. The fourth and fifth pair of legs are free, while the eyes and antennae are also drawn out of their sheaths. The *chela*, or large claws, being still undischarged, serve to bind threads to its rigid integument, and thus enable the act of exuviation, or one phase of it at least, to be distinctly apparent."

In connection with phobias, and their boring, Mr. Harper has also some interesting and original observations to make, which we have not space to discuss, but which may not be unworthy of the attention of naturalists. The Mountain-sucker fish, not hitherto supposed to be a *habitat* of the Firth of Forth, Mr. Harper asserts he has found often there; and the admirable delineation from nature of a specimen the author had in his possession, seems to tally well with those furnished by Donovan and Yarrell. Altogether the book is one of the most valuable for thoughtful study as well as for pleasure-seeking by the amateur, though the author's long and gossiping style in some parts hardly does justice to the manifest exactness of his observations.

THE WEATHER DURING THE MONTH OF JULY.

(By JAMES GLASHIER, F.R.S., *Regent Observatory, Greenwich*.)

THIS state of the weather since I wrote to you at the end of June, and published in your number for July 7, has been very unaccountable up to the present time, August 24th. I will, however, confine my remarks to the weather in July, and next week will submit you an account for August.

Till the 15th no rain fell, but during the remainder of the month it fell nearly on every day, and on one day, the 28th, to an amount exceeding one inch.

The temperature was always low, and this degree of cold was experienced from what quarter soever the wind blew. The sky was almost always cloudy.

The numbers in the second column of the following Table shows the highest reading of a thermometer in the shade at the height of 5 feet above the soil daily. (If these readings be compared with 74°, which is the average highest temperature for July, the deficiency of high day temperature will be at once seen.)

Those in the third, the minimum temperature every night, whose average value is 55°; and if each reading be compared with this value, the deficiency of night temperature will be evident.

The numbers in the fifth column show the mean temperature for each day, and those in the next column the deficiency of temperature day by day. It will be at once observed that on five days only did the temperature attain its average value, viz., on the 2nd, 3rd, 4th, 15th and 17th; on all other days it was below, and generally to large amounts.

* *Originals of Green's Life, or, Book-Poets and the Lessons they teach.* By John Harper, London: J. Nelson & Sons.

THE
LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 9.]

SATURDAY, SEPTEMBER 1, 1860.

[PRICE 3d.]

THE SESSION; AND ITS MORAL.

THE long and weary Session of Parliament has at last been brought to a close. The jaded members have spread themselves over the counties, to attend to their own affairs, or over Europe and America, in search of health, excitement, and change of scene. For five months the orators and the gabblers will be equally silent, unless in the smaller arenas of public dinners or meetings. The Executive Government, untroubled by the dangers that all Governments incur in constitutional countries, while any kind of Parliament is in session, is left to the sole management of affairs, exposed to no criticism but that of a press which may be kept in ignorance of its proceedings, until criticism shall become useless,—and to the operation of that public opinion which, even though it may prove adverse, can execute no judgment except through the votes of a parliamentary majority. Until February next, therefore, the Ministers may repose in peace. If their lives be spared, and they remain united amongst themselves, no rivalry can overthrow them in the interval.

The Session has been productive of so vast an amount of talk, accompanied by so little apparent work, that it has become a fashion to deride parliamentary government altogether, and to sneer at free institutions as if they were incapable of producing men competent to manage the affairs of a great nation. But the speakers and writers who indulge in such opinions, and not the members of the Parliament which they condemn, are the real gabblers, and darkeners of counsel with vain words. It is the especial business of Parliaments to talk; and it is only when, urged and incited by over-ambitious and over-zealous ministers, they attempt to do a greater amount of work than public necessity calls for, or than public opinion would support, that they are justly open to reproach. The true history of the Session which has just been brought to something like an ignominious end, proves that although a great amount of unnecessary oratory has been expended, a very considerable amount of valuable work has been performed; and that, if the Ministry, by means of its various members and subordinates, had introduced fewer important measures, which it was unable even to attend to, much less to carry to completion, a still greater amount of useful business might have been dispatched at a much earlier period than the month of August.

The Budget, the French Treaty, and the National Defences, with the minor but important questions directly or indirectly arising out of them, were quite sufficient to monopolise the time and the eloquence of Parliament, without the host of measures which the personal ambition of each separate member of the Administration endeavoured to force upon the unwilling attention of the House. But when, in addition to these great subjects of debate, all of them of paramount urgency, there were fifty vast, and some of them almost revolutionary, measures to be discussed, to say nothing of the yearly increasing private business on which Parliament has to legislate, what could happen but a break-down! First in magnitude was Lord John Russell's Reform Bill—of itself quite enough to consume the energies of the Session. With such a measure—affecting so many interests—is it surprising that talk prevented work, and that business wellnigh came to a standstill! Sir Richard Bethell's bill for the amendment of our mercantile law in the matter of Bankruptcy and Insolvency—a bill with nearly six hundred clauses—was another obstruction. Possibly it was a right thing to be done some time or other, but it was not the right thing to be attempted when matters of greater urgency demanded the whole attention of the Legislature.

There are but two specimens of the hindrances; but we might run through the list of the measures promised in the Queen's Speech at the opening of the Session, and afterwards announced with more or less flourish by the Ministry, by the Opposition, and by independent members, and come to the same conclusion with respect to them all, viz, that they were too many and too important to be undertaken in any one year; and that the reproach of want of business capacity does not so justly lie upon the Parliament that could not proceed with them, as with the Ministry that thrust them upon attention without a reasonable hope of carrying them to maturity.

Nevertheless, and in spite of all these drawbacks, the Session is not fairly liable to the accusation of barrenness. Mr. Gladstone's Budget, mutilated though it has been by the House of Lords—which set, in this instance, a mischievous and dangerous precedent,—is a remarkable and laborious, as well as a highly important work, which links itself intimately to the cognate subjects of the French Treaty and the National Defences. These three form the real business of the Session; and it is instructive to observe how they severally entwine themselves with the affairs of the French Emperor. The possession of the throne of France, and the command of the finest, most numerous, and most ambitious army in the world, by the heir of the name, the policy, and the hopes of Napoleon I., imposed upon Great Britain the unhappy necessity of not only renewing, but of increasing the amount of the Property and Income Tax that was to have expired during the present year. Because that eminent, able, and aspiring monarch is where he is—and what he is—the Budget of our national expenditure had to be framed more strictly in accordance with the possibilities of his career than with the necessities of our own. Because he was strong, we found it imperative to make ourselves stronger, or we ran a risk that no prudent nation—were it only one half as rich or one half as vulnerable—ought to have incurred for a single day. We were compelled to consider our National Defences, because France had unsettled Europe; and we were too important a member of the European Commonwealth to be unaffected by the perturbation which France had caused, and the future convulsions to which it might lead. For these reasons we renewed and increased the Income and Property Tax, and set our financial house in order, to be prepared for every contingency. The treaty negotiated by Mr. Cobden grew from the same stem. If it cost us so much in money, as well as in anxiety, to have such a neighbour as France, with such a great and mighty autocrat to rule over it, surely it was better to cultivate the relations of commerce with a people against whom we had no grudge,—to exchange our superabundant calicoes and woollens for their superabundant wines,—and multiply our business with them to such an extent as to prove to them, as we had already proved to ourselves and to the rest of the world, that Free Trade was the source both of prosperity and of peace, and that war with a good customer is both a crime and an absurdity. Such was the conviction that prompted the French Treaty. It is one that is deeply imbedded in the popular mind, and is not to be eradicated by the hostile criticism of a few false free-traders, who are in favour of chesquens and freedom in every article except the particular article which they may happen to manufacture. That conviction will grow; and if it will only take root in France as effectually as it has done among ourselves, the day may speedily come when the armaments of both nations may be made more consistent with good-neighbourship.

as well as with Christianity, than they have been since the days of Cressy and Agincourt.

In the perils times in which we live, the ancient and illustrious Parliament of Great Britain has great responsibilities. It has to set an example not only to the people whom it more or less completely represents, but to the world. To make its example efficacious, it has other things to reform than its constitution. If it would be respected, it must reform its own modes of procedure. It must attempt less, and accomplish more. It must, above all things, guard its own privileges and prerogatives from the aggression that it has too faintly suffered at the hands of the House of Lords. If it ever relax its grasp upon the national purse—if it allow any authority but its own to originate a new tax or reimpose an old one, contrary to the legally expressed decision of a parliamentary majority, it will abdicate its only valuable function, and, like the Stuarts and the Bourbons, it may march to political annihilation as fast as it pleases. It was a bad sign of the public spirit of our day that an aggression, which, forty or even twenty years ago, would have set the whole country in a ferment, should have been sneered and pool-pooled out of discussion. It is the highest wisdom to stop the beginnings of evil; but of this wisdom the Parliamentary Session of 1860 has been lamentably deficient.

DIPLOMACY; AND THE DEAD SEASON.

THE first of September has come, Parliament is prorogued, and partridges are, it is to be hoped, getting less plentiful in the stable, and more plentiful on the table. Public business is rapidly subsiding into abeyance, and if it were not for an unusually large number of failures, private business would be almost at a standstill. But while the community at large is enjoying, or preparing to enjoy, the repose of the long vacation, there is one department which offers an exception to the general rule. It is now that the Foreign Office wakes to new life, that its agents abroad start into activity, and that officers commence their autumn labours. The prerogative of that inconvenient talking institution, the British Parliament, is the signal for our good friends and allies to prepare their agenda for the next year's exploits. Some nationality is probably to be consoled, or some Rhenish Savoy, putting for liberty, is to be annexed. It is the carnival time of diplomacy. It is now that our Foreign Minister requires all his eyes not to see, and all his ears not to hear, while we depend only on that Fourth Estate, which knows neither slumber nor sport, to keep a watchful look-out for the storms which may be brewing. The fate of Italy, probably of Turkey, will be decided during the recess; Parliament will not assemble but be told of *fille accomplie*, or it may be suddenly evoked to vote the supplies for a war already determined on, which will cost more than the Crimean blunder, with as bootless results; or, worse still, may envelope in its horrors the whole human race. These next months will be monuments in the history of Europe, but we shall be allowed no voice in determining their course. This is the special province of Diplomacy, which we know is equivalent to saying that Great Britain will not influence the decision. Strange to say, the people, that is the Parliament, are content that such things should be. A burst of indignation from the public press is, indeed, sometimes followed by a growl from some troublesome member in Parliament, but the minister rises, pronounces the magic word "diplomacy," and the House is counted out. Diplomacy is the *Alphabetum* of state conjurers; it is a sufficient answer to all objections. As a science confined to a few it has always been regarded by the uninitiated as a mystery, and it has had the fate of all mysteries. Formerly it was revered, now it has become a laughing-stock, and still it governs the world. The Sultan and the Shah regulate their movements on the fiat of the court astrologer; so we do nothing but under the direction of our augurs; but the Eastern peoples believe in the supernatural knowledge they invoke, while the Western nations deride the pretended wisdom they lay to. Is, then, diplomacy a juggle, or are its professors at fault? Is there nothing in a science which still commands our assent, while its modern results do not satisfy our reason?

There was a time when the fad of a family was provided with a commission in the army, and the emigration was sent to sea. Thanks to the progress of sound learning and religious education, we have now neither fads nor fickle, at least there is a strong determination to discourage their growth. If we cannot altogether destroy the weeds, at least we are resolved not to employ them. An incurant examination has closed the doors of the Horse Guards to the inevitably ill or stupid, and a phantom, of the same terrible proportions, warns him from the sanctuary of the cockpit. The nation, that is, the "upper ten thousand," was on the point of being reduced to the greatest straits in regard to the disposal of its weeds, had there not been discovered a convenient, unapproachable little pasture, in which to plant them becomingly out of the way. The Police Force offers, indeed, an asylum to the thistles and nettles; the unsavoury, hard-fisted, unteachable; but for the soft-skinned and cultivated produce of the drawing-room—the pimpernel and poppies—something better was required. This something has been discovered in Diplomacy, that one profession in which no knowledge appreciable

by examiners is required, nor any learning insisted upon more abstruse than an imperfect acquaintance with the art of spelling; in which a medium of bad French excuses an utter lack of intelligible English, and Vattel and Tuffendorf are advantageously replaced by *Times* leaders and the "Turf Calendar."

Having settled this matter so satisfactorily, we have no right to be astonished that we are outwitted and baffled as often as our representatives, thus chosen, meet those of other nations. We may console and justify ourselves by saying that Diplomacy is the science of coquetry and the art of lying—branches of useful knowledge which require little teaching and less learning. That the men we have appointed to the office are the very men for the place, and that their little success is only the proof how well they have resisted the influence of Russia, which has introduced throughout Europe a Green-Scalvonic aptitude for deceit repugnant to our honest Anglo-Saxon natures. But we might find another explanation of the phenomenon of our diplomatic failure, in the fact that Diplomacy has, or has had, another meaning than that which we have given, and that in all other countries it is recognised as a science with fixed rules, to be studied as accurately and as regularly as medicine or mathematics. It is only in England that the waifs and strays of "good society" are considered the best guardians of national interests, or that ignorance can cope with knowledge in the discussion of the most complicated laws. The nation has seen the battles gained in the field lost at the council-board by its highly-trained plenipotentiaries; and the people have been satisfied, or at least silent. In Russia the founding hospital is the favourite nursery for diplomatists, a system the very opposite of ours, but found to work equally satisfactorily—for Russia.

The function of true diplomacy is, not to elate our enemies or our allies, or even our countrymen; neither is it to meddle in the internal affairs of other nations. The old-fashioned *ars diplomatica* was, in its origin, the knowledge of deeds; hence it was especially applied to the knowledge of those public deeds on which international law is based. A diplomatist was one whose occupation was to preserve such deeds, and to frame others in harmony with all those which had gone before them. In this capacity he was bound to uphold Right, and prevent unnecessary wars. His aim was to protect the interests of his country, to do which effectually he was bound to consult those of humanity at large. The members of this profession were the gravest, the most learned, the most accomplished men of their age—clergymen, warriors, or legislators.

Now the object of our diplomacy is far oftener to meddle in the affairs of weaker states than to defend the principles of law and order menaced by powerful ones. We employ men to intrigue at Madrid or bully at Athens, while we fail to make ourselves heard in Paris or Vienna. The result is, that diplomatic secrecy has no longer a meaning except as regards ourselves. Public feeling is not yet so desensitised to right that we could bear the knowledge of what we are ourselves doing by proxy. Hence the necessity for those falsifications of despatches which are the *opprobrium* of our public men. They are so ashamed of their own acts that even the responsibility of office does not deter them from mutilating or even falsifying state papers. At the Old Bailey the actions would be punished as forgery which in the House of Commons are applauded as clever statesmanship. It would seem that public morality is the very reverse of private. We have before us a pamphlet on the Afghan Papers, published in a blue-book in 1859. It illustrates what we have been saying. A second blue-book, containing the same papers, was published with the date of 1859, and on comparing the two, we discover that the Ministers of the Crown had before the great council of the nation a series of despatches which had been deliberately falsified. Of sixty-five despatches, forty-five were garbled or altered in the first edition; words were erased, or others substituted in their place; sentences and whole paragraphs were suppressed; and, in a public servant (Sir A. Burnes), was thus made to advocate a policy of which he absolutely disapproved.

We recognise the utility of the diplomatic corps as a provision for our inquisables, but to this we would confine its functions. The withdrawal of our ambassador, from Madrid, a few years ago, produced no injury to English interests, none good perhaps to Spain. It is a precedent which might be advantageously acted upon in other countries, but in the mean time we must look to the press for protection from the consequences of the diplomatic season which is opening.

THE POLICY OF RUSSIA IN THE EAST.

HISTORY unfortunately discloses to us but one method by which nations have invariably attained greatness. Territorial aggression, in one form or other, seems to be an indispensable condition to national prosperity; and although there is a large section of politicians in this country with whom we have many sympathies in common, and for whose opinions we entertain the profoundest respect, who entirely repudiate this doctrine, as one opposed to the more enlightened views of political economy, the fact remains, and it is one which in the present state of European politics deserves our consideration. It is no less true that, as by the consistent prosecution of an

aggressive policy, nations have risen to greatness, so they have at last exerted their downfall to this propensity pushed to an inordinate degree, and that which once proved the prime element of their grandeur has finally contributed chiefly to their destruction.

It is interesting at the present time to compare the various developments of this same active principle of aggression as illustrated by the policy of the three most powerful nations of modern times. In England we are in the habit of concealing the iron hand beneath the velvet glove; our object is commercial, not territorial extension; and if unfortunately it is sometimes necessary for our soldiers to ratify the contracts of our merchants, or to take a province in exchange for a bad debt, this is only an incident in trade, and not its legitimate scope and tendency.

Those politicians, known as the "peace party," are of opinion that every commercial advantage might be gained without coercion, or the exercise of a material pressure, which is often not to be justified upon moral grounds. Their views in this respect are based altogether upon theory, and display an entire lack of practical knowledge of the character of those semi-barbarous peoples with whom we maintain commercial relations. Almost every foreign market which we possess has been won at the point of the bayonet; and although it is deeply to be regretted that this should be so, we doubt whether, as a nation of quakers, our trade would be so extended, or our position so firmly established, as by the more violent policy which has been employed. We are far from approving altogether of this policy, morally speaking, and believe that the period has arrived when further acquisition of territory would be a source of weakness rather than of strength, and that our naval and military forces will find ample occupation in maintaining that prestige which England possesses above the world, without seeking to extend her conquests.

The policy of France, though no less aggressive than that of England, is conducted upon different principles and influenced by an entirely opposite set of motives. National glory takes the place of dollars, and it is not so much the desire for territory as the excitement of gaining it, that tempts the Frenchman to acts of violence. With an organization and an army essentially adapted to the prosecution of European wars upon a grand scale, France will always fail utterly in military operations undertaken in distant quarters of the globe, while every addition to her territory which is isolated and remote, is a serious element of weakness, and an endless source of anxiety. The only power which can afford to own distant colonies is that to which possesses the command of the sea. Impressed with the truth of this conviction, the present ruler of France confines his ambition almost entirely to Europe and the more contiguous portions of the neighbouring continent, and seeks to regain, by a combination of diplomatic and military operations, that position which his uncle achieved by force of arms alone. The dominant principle, then, of English policy is the desire for trade; that of France is national vainglory; Russia alone is animated by the lust of territory. In the cases of both the other countries, the extension of the frontier is subservient to other ends; in the case of Russia it is the moving principle.

An attentive study of the history of this gigantic power during the last sixty years will convince us that this is the key to that policy which has now become traditional. Each successive Czar considers it a sacred duty to carry on the work so successfully prosecuted by his ancestors, and all the energies of the Foreign Office are devoted to the accomplishment of this grand purpose. The rise and progress of Russia is unexampled in history. Within the last century it has more than doubled its area. The whole frontier, from the Baltic to the Sea of Tartary, is composed of provinces which have been annexed since the death of Peter the Great; and the work of territorial extension is progressing slowly and steadily, but not the less surely, because it attracts little attention in this country. It is, indeed, specially conducted with a view to secrecy, and is an insidious process, which has been reduced almost to a formula. It invariably begins with the disorganization of the country to be annexed, by means of corruption and secret agency, pushed to the extent of disorder and civil confusion. Next in order comes military occupation, to restore tranquillity, and the result has always been, protection, followed by incorporation.

Every year the frontier of Russia, in Central Asia, is being steadily advanced across those arid steppes, where the nature of the country would defy the advance of an army, so long as it remained in the hands of an enemy. Like a riding tide, each successive wave encroaches upon the shores of the Central Asian states, until they become at last submerged.

In the case of her most recent acquisition, with reference to which we are in possession of some special information, Russia has departed from the formula above indicated, and acquired a territory equal in extent to the South of Europe, by virtue of a treaty with China, made in 1856, which the Government of that country seems now disposed to repudiate.

Until that date, the country lying to the north of the Amur river, forming a portion of Manchuria, was comprised within the limits of the Chinese frontier. The Russians were, however, in the habit of ascending and descending the river in boats, in defiance of the

objections of the Chinese authorities, upon its banks, who never ventured upon hostile measures to bar their progress. Nevertheless, it was considered desirable, not merely to secure the river itself, but to annex the province on its north shore, as well as a strip of territory on the opposite bank of the Amur, extending along the shores of the Sea of Tartary, almost as far as the Corea. The results of this acquisition, and the present condition of the newly-annexed territory, may be summed up in a few words. On the left bank of the river, and near its mouth, has been established the capital of the new colony. It is the residence of the Governor, contains a considerable garrison, and is a place of increasing commercial importance, as the outlet of the produce of Eastern Siberia. The population of this town, by name Nicoslavsk, has been estimated at 10,000, including the garrison; but this is probably considerably exaggerated. The value of the river Amur for navigable purposes is somewhat diminished by the bar at its mouth, on which there is from fourteen to fifteen feet of water. This once crossed, the navigation becomes easy, and two steamers ply regularly during the summer to and from Nicoslavsk to Nerchinsk—a distance of about 1,500 miles. This city, near which are some valuable mines, is situated on the Gilka, a navigable tributary of the Amur, and at this point passengers and merchandise are disembarked and conveyed across the Yabloni range on horseback—a tract of about 100 miles—to the river Selenga, whence they are conveyed in a steamer to Irkutsk, the capital of all Siberia, and the residence of the Governor-General. The journey from Irkutsk to Nicoslavsk occupies thirty days, while that from Irkutsk to the mouth of the Amur is usually performed in fifteen. One or two large Chinese towns are situated on the southern bank of the river; the country is sparsely populated by semi-barbarous tribes, contains forests of magnificent timber, and is rich in all descriptions of poultry; but the most important feature of the new province is the imperial port, situated in the 49th parallel of latitude, upon the Sea of Tartary, and which is to be the Russian naval station for the Pacific.

By a recent treaty with Japan, Russia has possessed herself of the island of Sagalien, which produces excellent coal, is the immediate vicinity of the new port. The climate here is comparatively temperate, and the harbour commodious and sheltered. It is connected with the Amur by a chain of lakes, from which that river is entered at some distance from its mouth. There can be little doubt that the comparative proximity of the new Russian frontier to the capital must exercise a considerable influence upon the government, while fresh facilities are now afforded for a still further extension of the frontier in the same direction; viewing the subject impartially, however, it is difficult to perceive in what manner British interests can be seriously affected by the predominance of Russia in this remote quarter of Asia, while we foresee great danger to Russia herself. Within the last few years Siberia has been increasing rapidly in wealth and population. Few of those exiled ever return. Established with their wives and families upon their own farms, they enjoy the society of their equals, and find in Irkutsk all the amenities of civilization. By degrees the development of trade on the eastern coast will attract an independent population in that direction, with interests of their own, and comparatively unconnected from that direct control which is exercised in the less remote parts of the empire. With trade liberal ideas will be introduced; it will gradually dawn upon the exiled population that a new era has arrived, and that it may be possible to avenge their wrongs and attain their freedom at a blow. They are no longer isolated from contact with the outer world; and the day may come when Russia will find that her lust of territory has induced her to overstep the limits of prudence, and that this last great acquisition may be the first step on the road to her ultimate downfall.

DISASTROUS SEASONS—1816 AND 1860.

SHOULD the effects of the present season resemble those of former unfavourable years, there will be some trouble in society, and a more earnest turn will be given to the thoughts of the public. From the "Annual Register," from Tooke's "History of Prices," from recollections and traditions, we propose, therefore, to place before our readers some of the prominent facts of the season of 1816, which resembles in many points the season of 1860.

The spring was then extremely inclement, and the summer very wet and cold. In the neighbourhood of London the rain fell in the four months, May, June, July, and August, and the total rain fell in the year, as compared to the year immediately preceding and following, were as follows:—

| 1816. | Rain-fall in four months. | | In the whole year. | |
|---------------------------------|---------------------------|-------|--------------------|-------|
| | 12-23 inches. | | 29-7 inches. | |
| 1815, | 7.55 | " | 23 | " |
| 1817, | 8.22 | " | 21.0 | " |
| Average of the two years = 7.88 | | | 22.54 | |

In the four months, therefore, the excess of rain above the average of the two other years was 4.41 inches, and the excess above the average of the total rain-fall in the two years was 6.20 inches. The

temperature, never higher than 81°, fell, between August 16th and September 13th, to 30°, or 2° below the freezing point; while the mean temperature of the year was 46° 87', against 49° 25' in 1815, and 48° 26' in 1817.

This excess of rain and low temperature were accompanied, as are the low temperature and excessive rain of the present year, by remarkable spots on the sun. On June 18th, five such spots were especially observed by a French astronomer, who estimated one to be as large as the diameter of the earth. They continued visible in July and August; and in September were still more numerous, and of greater magnitude. At present, according to a letter in *The Times* of Monday, the temperature at St. Petersburg is higher than usual; and in 1816, while the south and centre of Europe suffered from cold and wet, Russia and other northern countries experienced only dry and warm weather.

In consequence of heavy rains and low temperature in 1816, hay was washed from the low-lying meadows into the streams, or was rotted on the ground. Fruit was abundant, but it ripened imperfectly, and in many cases burst and rotted on the trees. For nearly three months, in some districts, the farmers had harvest-work on land, and in several cases the corn was covered with snow before it could be carried into the barn. All grain, but especially wheat, was lamentably deficient in quantity, and in quality very inferior. It was so damp as to be wholly unfit for use, and was frequently kiln-dried. Fortunately, there was on hand a considerable stock of the surplus of previous harvests, otherwise the sufferings of the people would have been great.

The continent had not then recovered from the effects of the war, and the very inclement spring had occasioned a demand for corn early in the year. It was supplied by exports from England; and the price of wheat rose from 52s. 6d. per quarter in January, to 74s. 10d. in June. As it became apparent that the harvest would be very imperfect, the price rose continuously, and in December reached 105s. In June, 1817, the average price was 111s. 6d.; and on the 14th of that month wheat was sold in Mark-lane for 135s. per quarter. This was almost famine price; throughout the neighbouring continent, too, the price was very high, and French writers described the period as one of actual famine.

The distress of the labouring classes was very great in England, and as the price of corn rose, and as miners, colliers, and others, found their employment diminished, considerable disturbances ensued. On the opening of Parliament, in 1817, the condition of the people was referred to in the Prince Regent's speech, and measures were speedily brought forward to give relief and employment. Unfortunately, a riotous prevailed that the remedy from war to peace was the chief cause of the public distress, and sufficient weight was not assigned to the defective harvest. Statesmen, as is natural, look more to their own acts than to the laws of the material world, and as they generally mean well, they as generally conclude that only an untoward disposition in the people mars their success. On his way to Parliament, the Prince Regent had been insulted, his carriage-window was broken, whether by a stone or a shot was never ascertained; and, making little or no allowance for the sufferings occasioned by a dearth, when only blessings had been anticipated from victory and peace, the Government adopted measures of rigid coercion. Laws were hastily passed to suspend the Habeas Corpus Act, and prevent seditious meetings. The dissatisfaction and discontent which arose from comparative destitution and positive want were ascribed to "factious individuals," and a state almost of civil war ensued between the Government and the hungry multitude. Riots occurred in almost every part of the country; incendiarism was common; great assemblages of colliers in Staffordshire, and weavers and spinners in Lancashire, proposed to march on the metropolis; and in the metropolis itself ragged riot and insurrection. The troops were everywhere actively employed; the magistrates were armed with additional powers; and thoroughly discontented people were only prevented, by extreme vigilance and severity, from organizing a rebellion.

The year 1817 is one of the most painful in our modern annals, but we should have been slow to ascribe its many woes to the defective harvest of 1816, had we not noticed in England and in France, both before and subsequent to that year, several examples of general tribulation immediately following bad harvests. Thus, in 1756, in 1757, and in our own time in 1811, there were disorders and disturbances in England, consequent on short crops. In France, from a similar cause, there were insurrections in 1770, 1775, and in 1789 a severe scarcity was the forerunner of the terrible Revolution. Short harvests, too, preceded the revolutions of 1830 and 1848. No circumstance, then, has a greater influence over the well-being of society—over the security of the Government and the contentment of the people than—the yield of the harvest.

With the facts of great excess of rain, low temperature, rotting hay, a very backward harvest, and great spots on the sun, now brought continually under the notice of the public, we need not expatiate on the striking resemblance between the seasons of 1816 and 1860. The latter, however, is not yet closed; and till then, great as is the similarity between them, we cannot speak positively as to

which of the two is the more unfavourable. Mr. Glaisher told us last week that the mean temperature of July, this year, was above the mean temperature of July, 1816. The rain-fall in June of the present year, 5·8 in., is greater than the rain-fall in June, 1816, 2·4 in.; but we are not in possession of the official returns subsequent to June to enable us to institute a fair comparison. Admitting, however, that 1860 is at least as unfavourable, from excess of moisture and lowness of temperature, as 1816, no one anticipates either such high prices or such terrible disorders as occurred in 1817. The average price of the quarter of wheat, in January and June of the two contrasted years, was—

| | January. | June. |
|-----------|-----------|-----------|
| 1816..... | 52s. 6d. | 74s. 10d. |
| 1860..... | 52s. 11d. | 55s. 0d. |

The price, therefore, this year, is nearly 20 per cent. lower than it was then, and in an equal interval has risen much less. Then the whole continent was disordered; production was everywhere damaged and impeded, and England had a stringent Corn Law. Now the continent is generally better ordered; production is established for our market; we have a large corn trade, which embraces all Europe, and is susceptible, if occasion serve, of great extension. America, too, and Africa—at least Egypt,—are now sources of continual supply, which, at any time like this, may be indefinitely enlarged. Free trade has secured the national contentment. The whole nation is thoroughly convinced that the Government is one with it, and will do all that it can to alleviate whatever disastrous consequences may ensue from the wet, cold season of 1860. All the people are now animated by a spirit of loyalty to the Throne, and of mutual sympathy; and in conjunction with the Government will lessen as much as possible, while they bear in common, the general misfortune. And all this we owe to the triumph of the great and civilizing principle of FREE TRADE.

TOO GOOD TO BE TRUE.

THE Count de Persigny, President of the Council-General of the Loire, and Ambassador from the Emperor of the French to the Court of Great Britain, has just made a remarkable speech. He states—

"The military rôle of France is at an end. It affords me great happiness to be conscientiously able to say, that an era of peace and prosperity is dawning for Europe."

How does the Count know? He may know the intentions of his friend the Emperor, or he may not. But even if he do know, how can he conscientiously be able to state that such an era is about to commence, unless it be upon the supposition that France can command all Europe; and that the issues of peace and war are entirely in the hands of the Emperor. That they are so to an extent far greater than is consistent with the self-respect of the Great Powers of the continent, is undubitably, but too palpable a fact; but that Napoleon III. is absolutely the lord and master, as M. de Persigny seems to imagine, is not quite so obvious.

If France will scrupulously confine her attention to her own affairs, the era of peace and prosperity will be nearer than it might otherwise be; but, even in that case, the fate of Turkey and the independence of Italy are events that are certain to be troublesome enough in their course towards completion to justify the world in believing that M. de Persigny is either too sanguine or too presumptuous. When he states that "the Emperor has placed France in her legitimate position without shaking the confidence of Europe," Austria, Prussia, and Russia—and even Great Britain,—may stand aghast at the hardness of the assertion. If France be in her legitimate position, and desires no further extension of her frontier, Germany may cease to fear for the Rhine, and Belgium for her independence and her free constitution; but when M. de Persigny asserts that the position, such as it is, has been attained without shaking European confidence, he calls black white, and perverts facts (perhaps innocently) to serve the Imperial purposes of the moment.

It is notorious to all the world, and ought to be so to M. de Persigny, that European confidence is shaken in everybody and in everything, except in Garibaldi and in the triumph of the Italian cause; and that the European system is so rotten—from St. Petersburg to Constantinople, and from Paris to Vienna,—that there is not a Sovereign, great or small, in its whole boundary, who is not mistrustful of his neighbour; and not a nation or a nationality which does not distrust France more than it does its own rulers. M. de Persigny is one of the few honest men among the race of modern French statesmen. He no doubt speaks as he feels; but we are afraid that his pleasant convictions are due to his good heart rather than to his sound judgment; and that his picture of the future—painted *en couleur de rose*—is but the vision of an excited imagination. His Imperial Master knows better. When Napoleon III. shall disband two-thirds of his army, and induce Germany, Austria, and Russia to imitate his example, we may believe in the dawn of the new era of peace and prosperity—but not till then.

at Lyons, he refers to the distrust excited against him abroad, and begs the industrious inhabitants of his manufacturing capital to take no heed of idle clamours, but to devote themselves to the pursuit of industry and commerce, in the firm belief that, at present, there is no reason to anticipate any serious war. In all places visited by the Emperor and Empress they have met with a warm welcome, and nowhere have they been received with greater enthusiasm than at Chambéry.

The important words contained in the Emperor's speech at Lyons, were doubtless considered insufficient to unfold his new policy of peace. A commentary was necessary, and this commentary has been supplied by M. de Persigny in an elaborate address, which he delivered on Tuesday last, in opening the Council General of the department of the Loire. The most important statement in the speech of the ambassador is that the French Emperor is of opinion that the Russian war and the Italian campaign against Austria, have terminated the diplomatic difficulties which embarrassed the early part of his reign, and have so far solved them, as to render any future warlike demonstration on the part of France unnecessary, whatever may be the complications of European politics. The apprehensions entertained in Germany respecting the Iberian frontier, and the fears of an invasion current in England, M. de Persigny does not consider worthy of serious discussion. "To believe," he says, "seriously that either England or France would be disposed voluntarily to produce between the two greatest powers in the world that formidable struggle in which they would both alike have everything to lose and nothing to gain, is the very climax of folly."

The efforts of the Emperor to increase the internal prosperity of France form the theme of several recent articles in the French newspapers. The most remarkable of these is a very long account, published in the *Moniteur*, of the improvements carried out in the French capital since the fall of the Republic. These great improvements have not caused a drain upon the revenues of the State. They have been, according to Dr. Veron, the author of the article in the *Idées*, on the contrary, a source of revenue to the city of Paris, its credit having steadily increased since they were undertaken.

At the last meeting of the Society for the Economization of the Science of Political Economy at Brussels, the national prosperity of France was discussed in connection with the probable results of annexation on the welfare of the people of Belgium, when it was shown by incontrovertible statistics that it would in the first instance double the present burden of taxation, raising the proportion of the public debt falling on each citizen from 130 to 250 francs. The unanimous opinion came to by the society, after a thorough investigation of the whole subject, was "that in every point of view—material, moral, and political—it is the interest of Belgium to remain free and independent."

The Committee of the Austrian Reichsrath has divided into two sections, each of which has published a political scheme. The result of the adoption of the proposal of the majority would be to confer a liberal constitution on Hungary, but to three recent articles in the French newspapers. The most remarkable of these is a very long account, published in the *Moniteur*, of the improvements carried out in the French capital since the fall of the Republic. These great improvements have not caused a drain upon the revenues of the State. They have been, according to Dr. Veron, the author of the article in the *Idées*, on the contrary, a source of revenue to the city of Paris, its credit having steadily increased since they were undertaken.

Great excitement prevails in Hungary. General Benedek, a few days ago, returned to Vienna to resign his post as Governor of Hungary, he having refused, in the event of a hostile demonstration among his countrymen, to carry out coercive measures against them; but he has been persuaded to return to Puth, and to remain there until the decisive debate in the Council of the Empire is over.

There is little news of importance from the East. The French and Russian parties are now at odds even in Montenegro, and murders have been recently committed by Turks in Serbia, but there is no longer any dread of a general outbreak. Farouk Pasha conducts his prosecution at Damascus after the barbarous and atrocious fashion of a Turkish Pasha of the old school, inviting suspected persons to a friendly interview, and then quietly handing them over to justice.

A plan for the permanent government of Syria is suggested in a recent number of the French official paper, by M. Saint-Mère Girardin. He lays it down that the Christian population will not be safe until it is placed under the protection of a European military police. The jealousy of the Great Powers of course prevents any of them from sending troops into Syria for its permanent pacification; but this is no reason why some of the minor states, which are either neutral or empire no distrust, should be deterred from supplying a force, to be supported by the Turkish Government, or by revenues raised for the purpose in the country.

A letter from Beyrout, dated the 10th ultimo, states that vessels had arrived that morning with 2,000 French soldiers on board, who were to disembark in the evening, to the intense gratification of the European and native Christians, who have awaited their arrival with all the impatience of men whose lives and fortunes were placed in jeopardy by delay.

MONEY AND COMMERCE.

We commence our weekly review of corn, money, and other great elements of business, by stating that the price of new white English wheat per quarter (the best) was, prices generally—was, in Mark Lane, on Wednesday, from 68s. to 67s. This is about the same as the price on the same day last year, but it is from 5s. to 7s. per quarter above the price of the previous Wednesday. There was no rise on Wednesday, chiefly in consequence of large arrivals from America. To have some striking proof, we shall refer in this article to the condition of the corn market and the other elements of business at the time of the year, so as to enable the unprejudiced reader to form an opinion for himself. Then the price of similar wheat was from 48s. to 46s., and had a tendency downward. The average price of the six weeks ended the 18th inst. was 58s. 1d.; last year at the same period it was 55s. 6d. A similar fact may be observed in the case of potatoes. Potatoes, such as regents, were last year from 80s. to 100s. per ton; they are now from 100s. to 120s. As many are damaged and will not keep, they will be sent quickly to market, and the price at present may not rise very much, while it will average very much with the quality of last year's crop. Wheat was last year from 4s. to 4s. 2d. the 80s. for the carcase, making the offal, is now from 5s. to 5s. 6d. Prime mutton was then 4s. 2d. to 4s. 4d., now it is 4s. 8d. to 4s. 6d. Thus the price of food, especially corn, is high, and is rising. One gratifying circumstance is that in the week the cattle and sheep markets have slightly declined.

The public is well aware that this peculiarity is the consequence of the weather. It is to be hoped to some extent all kinds of trade other than that connected with the production of corn from abroad, which it promotes. In 1859 more wheat and flour was imported than the average monthly import this year, and more than in July last year. At the same time much less has been imported in the seven months of this year than last; but the deficiency will very soon be more than supplied by the large quantities of wheat which have been ordered from July last year. The great fact of the time, so far as business is concerned, is the high price of food, with the tendency of the price to rise, stimulating the foreign corn trade into unwonted activity.

The money market was the week last both active, and the demand considerable. Last year at this time the minimum rate of discount at the Bank of England was 2½; now it is 4 per cent. There is no obvious cause for a dearth of capital as of corn, yet it is comparatively scarce. This is probably more immediately the result of demand of several great undertakings, which have been ordered in the past few months, than of any unusual speculation. On the contrary, there is comparatively little activity in our manufacturing cities and commercial havens; and, apart from the tendency of large imports of corn to lessen the bullion in the Bank, which curtails in the proportion the amount of legal tender, there is nothing in the condition of business to induce us to suppose that the demand for money will become extremely active at present. Expressing the facts in millions, the principal features in the condition of the Bank of England, which may serve as a clue to the condition of the money market, are as follows:

Week ended Aug. 26, 1859. Week ended Aug. 27, 1860.

| | | |
|-----------------------|------|------|
| Notes in circulation | 22.5 | 22.0 |
| in reserve | 9.6 | 8.7 |
| Bullion | 10.8 | 15.6 |
| Government securities | 11.2 | 8.6 |
| Private ditto | 19.8 | 19.8 |
| Government deposits | 6.1 | 5.5 |
| Private ditto | 14.1 | 13.8 |

The lessened quantity of bullion, of Government and of private deposits, and the greater quantity of Government and private securities, with a diminished amount of notes in circulation and in reserve, all concur in indicating, as compared with last year, a less quantity of disposable capital, and a less demand for it. The Bank of England has necessarily many customers for loans at its minimum rate; and in Lombard-street the best short-dated bills are discounted a little below this rate, while long-dated bills cannot be discounted under 4½ per cent. This diversity shows that distrust prevails among the moneyed classes, who will readily part with their cash on easy terms for very short periods, but, expecting a greater demand, will not lend it except on much higher terms for long periods.

At present Canada has about 93, and have been, with trifling variations, steady at that price for some time. Last year at this period they were 90½. Taking the London and North-Western Rail as one of the stoutest, the price of the shares was last year 96 to 98½; last week it was 102½ to 102½. This week the price has never been reached, but the comparison between it and the price of Canada indicates that rails are the more improving property. A delicate harvest will induce less to loosen traffic on railways, and in proportion the price of railway shares may not continue to rise faster than the price of Canada. Those who deal in stocks and shares make it a rule to be especially discerning in the case of shares, and, therefore, the present dullness of the railway share market is in part the consequence of the anticipations that the traffic will not increase hereafter so fast as heretofore; otherwise the present prices of railway shares, in comparison to the prices of other stocks, are encouraging. And this is equally true of railway property in France and the United States. In fact, the value of the capital invested in railways and similar undertakings will increase with population and wealth, while State and other debts have in them no such healthy principle. They only rise in price when capital is very abundant, and funds in adequate quantity.

Neither the prorogation of Parliament nor M. Persigny's speech, the two political events of the week of most importance, had any marked effect on the stock or the market. It continued steady after they had occurred as before, and prices underwent no material alteration.

Prices generally have for a considerable period been very steady. At this time last year, for example, the price of B plantation yellow sugar was 24s. 6d. to 31s. per cwt., now it is 24s. to 24½; the price of cotton ten was 1s. to 1s. 3d. per lb., it is now 1s. 1d. to 1s. 3½d.; and the price of Indian corn was 1s. 1d. to 1s. 2d. per cwt., now it is from 2s. to 2½s. 6d. Cotton is now much cheaper than it was last year at this time; then Upland at Liverpool was from 6d. to 6½d. per lb., now it is from 4½d. to 5½d. Great exertions have been made to secure a supply; none were able to decrease the supply of food, and now for some time the supply is abundant, and the higher very much wanted. Wool is something cheaper than it was last year. On the whole, the markets for raw materials and colonial produce have been steady for some time. The demand has continually increased, and the supply has increased also.

The illustration which has characterized the week, in which, except the rise in the price of corn on Monday, has not been marked by great changes, is not due to any want of enterprise, or any deficiency in the materials with which commerce deals. There is, however, some uncertainty as to the effects of a short

harvest, which has not been experienced for several years, and it is likely to be particularly injurious to some branches of business. To meet all the credit that has been taken in the expectation of the usual crop, there will be an insufficiency. Some traders must be less successful than they have anticipated. On whom the blow will fall,—the farmer, exposed to great expense to gather in his harvest, and unable to obtain a corresponding remuneration; the tradesman, who has speculated on what he was to gain from supplying the farmer, or the merchant, importing, perhaps, more corn than the market for in 1857, cannot yet be known; but the certainty that there will be losses make all distinct.

In most of the markets there was last week considerable activity, and this week there has been a proportionate dulness. We have already stated the chief prices, and have only to add that if the trade of the week be satisfactory, the whole trade of the year, as far as it is known by the official tables, is fully as large as ever. The value of the exports in July was £1,522,693, against £11,286,461 in July last year; while in seven months the value was £7,642,687, against £7,128,610 in the same months of 1859. But it must be remarked that trade has increased relatively more with foreign countries than with our own possessions; the exports to the East Indies, which increased very much in 1859, have this year declined materially. The imports have increased, and in the six months amounted in value to £22,465,487, against £7,514,946 in 1859. This increase is partly balanced by a great falling off in the previous months, the value of which imported in seven months was only £12,971,203, against £23,350,350 in seven months in 1859, and £18,046,331 in 1858. The imports, it must be remembered, comprise the raw materials of our manufactures and the basis of our enjoyments, and their increase augurs well for the future prosperity and well-being of the community.

SKETCHES FROM THE HOUSE.

BY THE SILENT MEMBER.

CAN THE mistakes? Does not the entire British nation breathe more freely? Has it not grown in every age, and in every age, daily each of St. Stephens. Does not all mankind rejoice at the condition of the nation, the conscious click-click of the parliamentary mill? Are we any better than the street musician, unskilled player of trombones, performers upon ill-tuned lured-organs and automatic lured-guitars, who outrage and affront Mr. Babbage Hall by playing under his nose and disturbing him in his peaceful and legitimate pursuits? Are we not a nuisance? Will any deny that we are an assembly of vain talkers, empty praters, self-seekers? If, in any mixed company of practical Englishmen, I admit I am a member of Parliament, is not the new problem upon me to show why they should not like me? When I call my constituency together, is not the case equally upon me to show why they should not turn me out? If any man of business conducted his affairs as we have conducted ours, would he not go into the Gazette? If any English matron dabbled and wasted her time as we have wasted ours, would not her children run about with holes in their stockings, and her household become a by-word? We are an example to the nation! Pshaw! Was there ever a worse House of Commons? Had any legislative assembly ever sit so long, talk so much, and do so little? Fugh!

My own particular sufferings have been indescribable. The late remembrance of them excites the actions and passions, such as provoked from Miss Tabitha Bramble at the recital of *Linnæus's* tortures among the Indians. As for Mr. Bull, he takes up his morning newspaper, throws it from him with a grunt when he sees twenty columns of parliamentary drivel, takes it up again, and perhaps eliminates in a few minutes the half-dozen grains of wheat from the basket of chaff. The talkative member, too, has his consolation. If his name do not appear in the debates to-day, it will be there to-morrow. He submits to be bored on Monday, in the hope that he may be allowed to bore somebody else on Tuesday. But a silent and unassuming member, who takes his seat with the Speaker at four o'clock, and likes to be in the House when the man at the door cries "Who goes home?" has no resource like Mr. Bull, and no consolation like Mr. Peter. The end of such a Session finds him reduced to the last state of mental prostration. Messrs. Ayrton, Edwin James, Danby Seymour, and Darby Griffiths ought to be bound to carry him home on a shutter; with Horsman, Kinnaird, Malins, and Denton following, as an English relay; and G. Bowyer, Butt, Homeboy, and McGuire as an Irish contingent. These wretched representatives have not only ruined my health and nerves by keeping me out of bed until three and four o'clock in the morning; they have pursued me with unrelenting hostility into the land of dreams. The honorable and learned member for Marylebone has sat heavily upon me in a nightmare. The honorable and learned member for the Tower Hamlets has roared and bawled me at the stake, and, like his language, so with everyone. That air of concentrated conceit, and the itch for talking on any and every subject, that has made him the most stuporous bore in St. Stephens. Mr. Bull may believe me or not, as he likes, but I assure him, on the faith and honor of a silent member, that if the score of M.P.'s I have enumerated had been clapped under lock and key at the beginning of the Session, we should have had time enough to pass both the Reform Bill and the Bankruptcy Bill. I suppose there is not a lunatic out of Bedlam who would maintain that public business would have suffered anything by their absence. Avenue me, I pray you, virtuous Tabitha Bramble, against these fell destroyers of my health and patience,—these our torturers, these organs grinders. May every face, eye, lip, and ear at the recital of their cruelties. And then conceive, if you can, my unspeakable delight on Tuesday, when the Usurper of the Black Rod, in all the splendor of blue-and-gold, knocked at the door of the House of Commons, and asked me (with others) to please to step into the House of Lords and hear something to my advantage.

The lords and metropolitan members (they are nearly convertible terms) mustered very strong on the last day of the Session. Our Noble Viscount was, of course, the central figure of our Parliamentary Gallery. We all looked at him with interest and pride, as he sat, so jaunty, so active, so cheerful, so bawling red he appears. Our Noble Viscount, who rides a horse, so "wanting race." In the earlier days of the Session he left the running to his "chamberlain" of the Exchequer. Then Lord John took it up, and we had a neck-and-neck race

between Reform Bill and Budget, which ended in Budget breaking down at Paper Hill, and Reform Bill falling lame at the straight running. The Attorney-General, upon Bankruptcy, then came to the front, but, becoming petulant, he threw up the reins in a tiff. Our Noble Viscount now for the first time drew ahead, and from this moment to the end of the Session he was never headed. According to the most careful and accurate calculation I have been able to make, our Noble Viscount has been in the House for two hundred and two hours, after midnight, since Parliament met on the 24th January. Six and seventy of significance, expended by his ordinary ministerial duties and avocations, would have killed half a dozen fine young English gentlemen." Our Noble Viscount, when he stood at the bar of the House of Lords on Tuesday, to hear his own Speech read by his Lord Chancellor, looked a little pale, and somewhat thin, since he listened to the voice of his Royal Mistress in the same spot, but appeared to be in the enjoyment of undiminished vigour of mind and body.

I must leave the other members until I return from the House of Lords,—so anxious am I to appear at that bar, perchance to be told that I am, by the fanatics of others who are not Silent Members, an idle and unprofitable servant and subject of Her Majesty. The Parliamentary mill was in full chafe when Sir Augustus Clifford tapped at the door. Bailie Cochrane had found time to "call attention" to the Militia; Spooner was going to "call attention" in the rainy weather; Edwin James and Mellor to the necessity of appointing two Solicitor-Generals at the next vacancy; and Ayrton to the abominable loggery of certain members, which has all but prevented him from getting in a word edgewise. But Black Rod advanced to the table, and making three obeisances, said,—“Mr. Speaker, the Lords Commissioners desire the immediate attendance of this Honourable House in the House of Peers, to hear the Commission read.” If he had left Her Majesty on the throne, would Sir Augustus have held such civil parity with your honorable friend? No! But would he have said, with a serene and peremptory smile, “Mr. Speaker! The Queen commands this Honourable House to attend Her Majesty immediately in the House of Peers.”

The Speaker rises and leaves his chair; Lord Charles Russell comes to the table, and seizes the gold mace, and then we all march off to the House of Lords. Arrived at the bar, we put our Speaker in the centre, with Black Rod on one side of him, and our Sergeant-at-Arm on the other. Our Noble Viscount, as our most distinguished Parliament man, stands on the right of Black Rod, and Sir Charles Wood, as the next senior Minister, and not at all as a distinguished Parliament man, on the left of the Mace. For the rest of us, we push and shove ourselves into the best places, after the manner of Englishmen, that is, to our mutual discomfort, and without the least necessity, and then we look round, and compose ourselves to the due enjoyment of the imposing spectacle.

The throne was uncovered, and so were the royal chairs of state. Between the steps of the throne and the woodwork was a long cushioned seat, upon which several "objets" were placed, who seemed at first to be guys, but when, on a closer inspection proved to be the Lords' Commissioners. There were five of them, and all were cocked-hats, and the scarlet robes of peers, barred with ermine. The figure in the centre was discerned to be the Lord Chancellor, by his tall bag and by a three-cornered hat, such as our own the portraits of his illustrious predecessors, Sir Thomas More, on his right was the Duke of Somerset, and on his left Viscount Sydney, who wore a white wand, and had a white rosette on his robe, in token of his office of Lord Chamberlain of the Household. The other Commissioners were Lord Stanley of Alderley, and Lord Montagu. They all sat covered.

We are in the House of Lords, but not one spiritual peer greets the ceremony. Yes, a single bishop occupies the right reverend bench. It is the new Bishop of Rochester, who preaches against fairs and horse-races, but will hardly persuade our Noble Viscount to give up his stud. Behind the bishop there is a dreary row of empty red benches. A tall good-humoured face is seen peering at us from the glass door of the Council Chamber. It is our late Speaker, Viscount Eversley, who on don'ts rejoices over his deliverance from Mr. Ayrton, and thinks we have not improved much in regard to legislative deeds and things since he stood at that bar, groaning because the period of his captivity was not accomplished. On the Opposition side, ten ladies, in morning costume, occupy the second bench. Two of the fairest, charming daughters of the Queen of Beauty, may be so proud of the wit and personal charms of the Sicilians as of that Lord Protector Somerset, first duke of their line, whose lord rolled from the scaffold. The Diplomatic Gallery contains the well-known features of Baron Brunow, the Russian Ambassador, who has long loved our fair country, and who, with everyone, I hear that the Stranger's Gallery was occupied by ladies, but who were not visible from the bar, they do not properly enter into my sketch.

I hope the distinguished Russians are edited by our politeness. The new bishop and the ten ladies appear to be profoundly impressed with the ceremony that begin as ours as we come to the bar. First, Mr. Speaker, who has no lot to take off, makes a lowly obeisance with his bejeweled head. Then the Lords' Commissioners simultaneously raise their hats and replace them. Then our Speaker, delighted to find himself in such agreeable company, makes them another low bow. Then the Lords' Commissioners, not to outshine in politeness even by the "first commoner of the realm," again lift their hats and again put them upon their heads. Then our Speaker, punctuated in a Spanish hallo of the reign of Charles V., transported to be *vis-à-vis* to such polite gentlemen, makes another low obeisance, and again five black cocked-hats are lifted in the air, held at arm's length, and replaced. "Compliments pass when good-faiths meet;" and the first civilities over, we severally apply ourselves to business.

The Lord Chancellor, taking off his hat, said,—“My Lords and Gentlemen,—Her Majesty not thinking it to be personally present, has caused a Commission to be preferred under the Great Seal, for giving the Royal Assent to certain bills, which is always “by the Queen herself signed with her own hand,” and attested by the Clerk of the Crown in Chancery, is then read in a stammering voice (one of the ancient usages of Parliament) by one of the clerks

as the table, called the Clerk of the Crown in Parliament, or the Reading Clerk, because he never can read. When the clerk came to the names of the right doubly-beloved counsels and councillors appointed of the Commission, the Lord Chancellor, according to custom, raises his hat, in token of respect to the sign-manual and the Queen's pleasure. One of the other Lords' Commissioners seeing civilities going on, and being somewhat new to the business, also raises his hat, but, discovering his mistake, replaces it upon his head in some little confusion. Then the other Lords' Commissioners, as they are severally named, all make their obeisances, and bow by the precipitate peer is able to take off his hat at the proper place.

The ceremony of giving the Royal Assent to the bills is then gone through, it is in this wise: The Clerk of the Crown stands on the west side of the table, with his face to the Lords' Commissioners. He makes an obeisance to their lordships, and then reads the title of a bill, after which he makes another obeisance. The Clerk of the Parliament (Sir John Shaw Lefevre), standing on the other side of the table, and facing the Lords' Commissioners, first bows, then declares the Royal Assent, and then bows again. As there were fifty bills and four bows to each bill, this made up the number of two hundred obeisances, or one hundred to each clerk. Everybody knows that the Royal Assent is signified in Norman-French, which, to the uninitiated Russians in the gallery, sounded like the French of Cockaigne. The bills of supply—the only bills carried up and presented by our Speaker's own hand—received the Royal Assent, according to immemorial usage, before all the other bills. The Clerk of the Parliament pronounced the Royal Assent to these bills in the well-known words—*« La Reine veut que les bills soient acceptés, accepte les bills, et ainsi le veut. »* For the public bills the form of expression was *« La Reine le veut. »* When the Clerk came to the private bills, he said, *« Soit fait comme il est désiré. »* Sir J. Lefevre's predecessor embosomed the traditions of a hundred Parliament in his style of pronouncing the Royal Assent. It was the style generous and despatch, such as befitted the ungracious mind of a Tudor or a Plantagenet, who for two pence would chop off Mr. Speaker's head. But when this peppy old gentleman had backed his last *« soit »,* the whole thing was seen to be incontinent with Reform-Bill days and the reign of Queen Victoria. Sir J. Lefevre's tone is tempered by a consciousness of constitutional government. It is not wanting in dignity, but there is a dash of mildness in it, suited to those later days of popular power and mutual concession in the great council of the nation.

After the bills had received the Royal Assent, the Lord Chancellor, still covered, proceeded to read the Queen's Speech. His Royal Mistress would have read it a hundred times better. His Lordship's voice was pitched too low, as if he were charging a grand jury, instead of addressing a crowd of gentlemen, twenty or thirty yards off. His tones were slightly tremulous; yet, making allowance for occasional indistinctness, Lord Chancellor Campbell read the Royal Speech with great deliberation and impressiveness. *« Great virtue in an 'if,'* said my neighbour, as the Lord Chancellor read, *« If no Foreign Powers interfere in Italy, and if the Italians are left to settle their own affairs, the tranquillity of other states will remain undisturbed. »* Our Noble Viscount, we pronounced, had put a very good line upon our do-nothingism—*« main Her Majesty may also had »*—given her ready assent to several measures of great public usefulness—praised our measures of law reform, and finished by saying, *« You will, on returning to your several countries, have duties to perform, severely less important than those which have occupied you during the Session of Parliament, »* which, we added, *« may very well happen. »*

The commission for procuring Parliament was then read, with the same ceremony of each peer raising his hat when his name was mentioned. The Lord Chancellor declared Parliament prorogued until Tuesday, the 6th November, which, it will be observed, gives Guy Fawkes a chance. Mr. Speaker and the Lords' Commissioners now took leave of each other, with the same ceremonies as before, but for a longer interval, as they mutually hoped, than until the 6th November. We returned to our own House where the Mace left the Speaker at the door, as a token that the right hon. orable gentleman's authority had departed, and that all that was now to be done was private, unofficial, and unofficial. The Speaker went to his chair, and, standing, read the Queen's Speech; the members also standing bareheaded, and listening in attitudes of respectful attention. Mr. Bernal Osborne, junior, as usual, drew attention to the fact that old Mr. Spencer, the great parliamentary champion of Exeter Hall, and antagonist of Maynooth, and Sir George Boyce, the member for Rye, and champion of the Pope's temporal rule, stood side by side—unconscious of each other's proximity—as the Speaker read the Speech. Our Noble Viscount then went up to the Speaker and congratulated him upon the conclusion of his arduous labours. Sir C. Wood, Sir C. Lewis, Mr. Villiers, Mr. Brand, Mr. Weymouth, Mr. Seymour Fitzgerald, Sir Frederick Smith, Mr. Colclough, Mr. Scholefield, Sir J. Duke, Mr. B. Osborne, Mr. Bass, &c., followed. Even Mr. Ayton had the hardihood to present himself, and to tender his congratulations; and such was the good humour of the moment, that he was not rebuffed. And thus ended the Session of 1860, leaving us, as a legacy, its stormy and chequered memories of a Commercial Treaty, a Paper Duty repealed and restored, a War Income Tax in peace, the legislative *pilotes de relâche* of the Session sent back in the kitchen to be re-cooked, Savoy and New Annations, an expenditure of £70,000,000, and Garibaldi in Italy. Session of great promises and little performances! I would except the Chiltern Hundreds. If I thought I should have to groan and sigh, and lose my rest over many such.

THE EXCURSION TO ETRA AND VESUVIUS.—The armed party of excursionists to Southern Italy has been organized in London, and will shortly leave for Naples. In Scotland the movement has been very successful, the numbers of volunteers enlisted at Edinburgh being already 110; while the numbers enlisted in Glasgow had risen on Tuesday night to 160, the first volunteers' meeting having taken place only on the previous day.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

THE Town is more empty than ever. It is not alone the Upper Ten Thousand that are fled; but the entire population seems to have abandoned the West-end. After the late season and the bad weather, tourists seem to have concentrated all their energies to get away by the 1st of September. The cheap trains have done their part, and no one is left in town but the poor Government officials and the gentlemen of the press—or, at least, as many of both sets as are still required for the business of the nation. The few people to be met with in the streets have a country air about them. The cabs loiter and crawl more than ever. This "creeping," as it is termed, is an offence under the Police laws—but there never is a policeman when he is wanted, to enforce law and order. These creeping vehicles are most dangerous to foot passengers who desire to cross the streets; for, whilst counting on the slow pace of one, another comes by at a dangerous speed, and the unwary traveller on the *pavé* is knocked over before he knows where he is. The crossing-sweepers and the beggars neither aggravate the evil. The policemen neglect this part of their duty altogether. If Sir Richard Mayne will not look to it, the public press must remove the grievance.

A considerable number of our more enterprising tourists have made their way to the stirring scenes of Sicily and Southern Italy. The majority go for pleasure, including several of our senators, just released from one of the longest, latest, and most wily Sessions of Parliament on record; but not a few of our spirited young Volunteers seem to have more than mere holiday-seeking in view. The "Excursion to Mount Etna," which has been planned by the friends of Garibaldi, has assumed a large proportion, and has a shrewd air of business about it. There are already more than 800 fine young fellows enrolled, and it is expected that the party will be made up to 1,000 before the departure, which is fixed for next week. It will not be easy to overtake them. If the excursionists do not quicken their movements, they will miss the interesting sight of the embarkation of the *Redoubt* from the shores of that most splendid country, which they have kept in slavery and misery so long. The appeal made by the noble ladies of England, for relief of the sick and wounded volunteers of Italy, has been nobly answered. But much is still wanted. The sufferings of those who have been struck down by the hired oppressors of their country are described in late letters as very severe. There is only wanting to announce this fact to arouse the warmest sympathies of the men as well as the women of England to hasten to their relief.

Although the Session is but barely over, there is abundant evidence already to show that a great accession to the "business" of next year will proceed from the necessity of legislating for the metropolis, which cannot be much longer deferred. The streets and thoroughfares must be looked to. The public buildings, and the so-called works of art, which disfigure, instead of ornamenting the metropolis of Great Britain, are positively disgraceful to us as a nation. Mr. Cowper had better look to it in time. It is not so prepared with plans to remedy some of the most glaring defects in the public monuments of London, and to do something in the matter of widening the great existing thoroughfares, and providing new ones, the public will begin to ask what is the use of his office. We would advise the metropolitan members also to make themselves up in those matters, for they will brook no longer delay. Instead of wasting the public time over crude attempts at over-legislation, and squabbling over supplies, they must endeavour to get up the supplies for the relief of the public streets and the improvement of the public buildings. Instead of providing new constitutions, the constituencies that exist will demand some reform in the system that interfere with the comfort, and disarrange the business of every one who has occasion to pass from one part of this crowded city to another. It is not so crowded just now; but that is the very time to see the defects, and to study the remedies.

Mr. Disraeli remarks—in "Conspicuity," if we recollect right—that at no time are the streets and buildings seen so well as in the grey light of the early morning. The members of the House of Commons had many opportunities of this sort lately. They could admire the Strand (which Mr. Disraeli calls one of the finest streets in Europe) as they passed up from Whitehall, and they could see how much that great thoroughfare required to be prolonged through the Park to the West, whilst the town is already so far extended, and whither it is still extending so fast. There is only the old street in Charing-cross (which is much better than many of the new ones), and two or three holes in Spring-gardens that stop the way. The public must insist upon this most necessary opening being made, as well as on the demolition of the ugly statues of Carlton House, and the completion of Carlton-terrace, which will pay a good share of the expense. The public will demand, too, if we are not mistaken, that something should be done to make Trafalgar-square more worthy of its name and situation. It is a good site, although not the best in Europe, as Sir Robert Peel could tell it, who knew as little about Europe as any honest English statesman of his time.

The question of the Artisans' Voluntary remains at a standstill. Lord Salisbury still declines to end them, although it is understood that Lord Palmerston is strongly in favour of the idea. Should the Marquis not alter his decision, we understand that the first battalions will be raised in Surrey; the Lord-Lieutenant of which county is favourable to the movement.

The statue of Jenner is not a bad one, but it is entirely out of place. Surely a more appropriate site could be found for the commemoration of one of the benefactors of the human race. The statue of Sir Charles Napier is so bad that it ought to be put anywhere but in the prominent position where it is placed on trial. We do not like this system of placing great stone memorials upon trial, it is as difficult to get them removed. The statue of the Duke of Wellington on the arch in Piccadilly is the ugliest thing in London, until the Guards' memorial was erected in Waterloo-place. And yet the respect felt for "the Duke" and for the valiant warriors who defended the flag of England through the wintery campaigns of the Crimea, will probably keep these two prominent deformities of modern London where they are.

The small sum voted for the interior accommodation of the National Gallery will probably be laid out by Mr. Venetothorpe, according to the proposed plan, in such a way as to increase the accommodation of the building. But so long as the Royal Academy remains, we cannot hope for anything like a building worthy of a national collection of pictures.

However little has been done this Session respecting the three much abused institutions at Brompton, Bloomsbury, and Trafalgar-square, the ground has been somewhat cleared for future action, and next year we may be able to profit somewhat from past failures, and put all three houses in better order.

The Industrial Exhibition at Kensington will go on in 1862. The guarantee fund subscribed is £358,000, and the commissioners of 1851 have granted the ground.

Messrs. Langman have some new works of interest in preparation. A new edition of Moon's "Lalla Rookh," with numerous illustrations from original designs by John Tenniel, engraved on wood by the brothers Dalziel, will be ready in October.

The same publishers have obtained possession of the "Autobiography of Mrs. Piazzi," with a collection of her letters. This collection has remained, since her death in 1821, in the family of her late physician, Sir James Fyfe. The autobiography will be published shortly.

The "Narrative of the Canadian Red River, and Assiniboine, and Lake-Indian."

Exploring Expedition," drawn up by Mr. Henry Wode, Professor of chemistry and geology at Toronto, is preparing for publication by Messrs. Longman. A series of thirty photographic views of the scenery will be published simultaneously with this work, by Mr. W. J. Hogarth, of the Haymarket.

A "Treatise on Mills and Millwork," by William Fairbairn, corresponding member of the National Institute of France, is in the press.

On Monday next Messrs. Stobley and Wilkinson will conclude a sale which has been going on during the past week, of miscellaneous books. Among the lots will be found a rare collection of the works of the poet George Withers. We call attention to Lot 774, being the first edition, which was suppressed, of "Alonzo Striped and Whipped, or, Satirical Essays." It may not be known to most of our readers that it was for these identical "Essays" that the poet suffered imprisonment in the Marshalsea, which led to English poetry his celebrated "Shepherd's Hunting," Lot 788.—Our "Meditations Upon the Lord's Prayer," is interesting from the fact of its great scarcity, most of the copies having been destroyed in the Great Fire of London.

The City Corporation Library will be reopened on the 14th of September. It now numbers upwards of 4,000 volumes. The library is open daily for visitors, from ten till five. Admission can be gained by introduction by a member, or by tickets, which the members of the corporation have the power of giving. The visitor will find the rules similar to those of the reading-room of the British Museum. A portion of the library is selected for circulation among the members, and thus the exclusiveness common to royal and corporate libraries is, in this particular, depurated from.

It may be interesting to our readers to learn that the committee charged with the collection of Napoleon the First's writings (some volumes of which have already appeared), have a suite of rooms devoted to their interesting labours in the Palais Royal, where clerks are employed in making clean copies from the almost incomprehensible writings of the first emperor. The policemen and some with which none of these relics have been deciphered are not without. Still, indeed, which we saw not very long since, appeared like so much yellow paper blurred with brown ink.

The St. James's Theatre is about to pass out of the hands of Mr. Clarendon, Jun., and Mr. Willott. Mr. Alfred Wigman, late lessee of the Olympic Theatre, is the new entrepreneur. He has taken a lease of the house for seven years.

A very interesting first appearance took place at the Princess's on Monday evening. It was that of Miss Maria Harris, the daughter of Mr. Augustus Harris, manager. The piece in which this young lady appeared was a farce called "The First Night," an amusing version of "Le Père d'Antant." It is well known from the English form in which it was presented at the Olympic Theatre. The interest of the performance on Monday night, at the Princess's, lay in the striking fact that the father was really instructor and father, and that the daughter was truly pupil, daughter, and pretending and veritable actress. The entire performance was highly and deservedly successful.

At late Alfred Smith's famous Egyptian Hall, a comprehensive and splendid Diorama of striking points and places in Europe is to be speedily exhibited to the public. It is to be a first-class exhibition, with light, line, and music of Mr. Charles Marshall is ample guarantee that, in pictorial respects, the panorama will be unique.

The "St. Devon Marine Hotel Company," has purchased one of the finest and most romantic sites in Devonshire for a palatial hotel. This spacious and noble establishment is to be placed amidst the cliffs and spreading woods of Kingswear, on the Torbay side of the Dart. This splendid hotel, which will be the precursor, we anticipate, of a beautiful little seaside town, will be close to one of the most interesting places in the kingdom—Dartmouth. By means of the new railway, extending from Froggry to Dartmouth, the Marine Hotel will be brought within five hours of London. It is to have two seasons, a summer and a winter one. Myrtles, magnolias, and other bloom in the open air; roses are to be found in January; and the climate is genial, sunshiny, and delicious as that of the south of France, without its extreme heat.

WILLS AND BEQUESTS OF EMINENT PERSONS.

THE HONOURABLE JOHN WILLIAM FORSTER, ESQ., of 17, Grosvenor-square, London, formerly M.P. for Barnstaple, died at Madras, on the 23rd of June last, aged 40, having executed his will there only a fortnight before his death. He was the second son of Earl Forster, K.G., and had left personal property valued at £12,000, which he bequeathed to his family, with a few exceptions in favour of some personal friends. He leaves a wife, the late Mrs. Anna Maria Forster, M.P. for Andover, a life-interest in the sum of £5,000, and the prin-

cipal as his decedent be given to his brother's children. There are two legacies, one of £1,000 to the Bishop of London, for church endowments in his diocese, and the other of £500 for church and educational purposes in the locality of the family residence at Castle Hill, Devon, Lord Forster having the patronage of six livings—three in Devonshire, and three in Lincolnshire. The testator's brother, Viscount Ebrington, is appointed sole executor and residuary legatee. The Earl of Portsmouth and Viscount Ebrington are nominated trustees.

JOHN HENRY CANCELLER, ESQ., who was one of the Masters of Her Majesty's Court of Common Pleas, a magistrate for Middlesex, and late residing at Barnes, Surrey, and St. Leonards-on-Sea; formerly of Chester-le-foze, Regent's-park, and of Sergeant's Inn, Chancery-lane; died at Guilford, on the 22nd of June last, aged 62. This gentleman made his will on the 13th of February, 1852, to which he added a codicil three days prior to his decease. The personal estate was sworn under £8,000. This, of course, is exclusive of the realty. The executors named are Charles Cancellor, Esq., the brother; the Rev. John Henry Cancellor, the son; and Mr. Cancellor, the nephew, but who is not acting. His freehold estate at Barnes has been left to his wife, and on her decease, to be divided by his eldest son John, to whom he also leaves his freehold property situate in Gray's Inn-lane, and an equal share in the personality together with his other children.

JAMES BRAND, Esq., merchant, of New Broad-street, London, and of Bedford Lodge, Baltham, Surrey, died 12th of June, 1860, aged 61, possessed of estate, real and personal, the latter estimated for probate duty at £250,000. The will is dated 26th of January, 1855, to which are added four codicils; and he has distributed his immense property, real and personal, almost entirely amongst his family. He bequeathed to his eldest son, James Brand, Esq., of Dewlish, Hereford, formerly of the City of Bath, died on the 20th of July last, having made his will on the 6th of July, 1850, which was proved in London on the 20th of August, by Richard P. Long, Esq., the nephew, and Richard Walsley, Esq., the son, two of the executors. The testator died possessed of both real and personal property, the latter being £15,000. Mr. Walsley inherited considerable freehold and landed estates under his father's will, which are to descend to the five sons of the testator in succession. The son being thus amply provided for, the testator has bequeathed to his eldest son four children the sum of £20,000, to be paid to him on his decease; to be repaid, taking a life-interest. The estates which will ultimately fall in be bequeathed to his grandson, John Walter Hawkehurst, the son of his daughter Florentina, and John Hawkehurst her husband, with a desire that he should assume the name of "Walsley."

THE REVEREND THOMAS CLAYTON GLYNN, M.A., of Durrington House, Sheering, Essex, and of Orsett-terrace, Gloucester-road, Hyde-park, formerly of Gladwin, Essex, died, at his town residence, on the 17th of June last, aged 71. He executed his will on the 9th November, 1856, which was proved on the 10th of January, 1857, by his eldest son, Clayton William Procter Glynn, Esq., who is nominated sole executor. The testator is the son and heir of the late Colonel Thomas Glynn, from whom he inherited considerable landed property; the greater part of the estates are, however, settled upon his (the testator's) eldest son, so that he also inherits the realty of the real estate. He also leaves to his eldest son his carriage, furniture, and other effects absolutely, excepting the plate, jewellery, and pictures, which are to come into the possession of the party inheriting the mansion and estate of Durrington, and to be considered as hereditary. This gentleman was employed under his management in the East India Company, and was paid £12,000, to be applied for the benefit of his younger children, and has divided the residue of his property amongst all his children, with the exception of his eldest son and his youngest daughter.

SIR WILLIAM HENRY KAT., Q.C., of Pinfold House, Hertford, and Upper Harley-street, London, who died a widower, on the 13th of July last, at the age of 87, was possessed of real and personal property, the latter sworn under £30,000. The will is dated 10th June, 1852, and there are three codicils. Probate was granted on the 26th of August, to his executors, namely, the Rev. Henry, his eldest son, and Henry Egerton, Esq., barrister, Lincoln's Inn. The estates are under settlements, and his property he has bequeathed to his son and son, the Rev. W. Henry, in trust, to carry out certain stipulations for the benefit of his children. Sir William was twice married, and had left a large family. He was a member of Lincoln's Inn, and obtained a silk gown in 1830; had held the offices respectively of Solicitor-General, Attorney-General, and a Master in Chancery, having declined the acceptance of a Judgeship. He represented Hildon, Newport, and Marylebone successively in Parliament.

THE GOUTY PHILOSOPHER.—No. VIII.

MR. WASTAFFE WRITES THE EULOGIUM OF STUPIDITY.

ERASMUS wrote the praise of Folly. I write the eulogium of Stupidity. I have never read the book of Erasmus, and probably never shall; and neither know his argument nor the instances by which he supported it. This fact I mention, lest I should be accused of plagiarism. As Coleridge says in one of his prefaces—"There are such things as fountains in the mind," and we must not imagine that "every stream we see flowing must come from a perforation made in some other man's tank." My ideas on this subject—such as they are—are mine own, drawn out of my own fountains; although Erasmus, out of his fountains, may, for all I know, have drawn a very similar liquor. But I consider my theme a much greater one than his. A fool may be a wise man; and a wise man may be a fool. Folly may be either a deficiency or an excess of wisdom. "The folios of the wise" would make an instructive book, or even a whole library; but Stupidity, without a scintilla of wisdom, transcends Folly a thousandfold, is a greater power in the world, and one of the sturdiest bulwarks of civilization and society.

I know very well the kind of criticism with which I shall be met in attempting to do justice to this great subject. I know the old and stale quotations that will be employed. "Who sells great authors' works should,

sure, himself be great." "Who drives fast alone should himself be fast," "Who writes of snobs should be himself snobbish." "Who writes on folly is himself a fool;" and "Who praises stupidity is himself a prince and a lauder of stupidity." But I take such quotations at their value, which is very small; and say nay in spite of them.

The advantages of Stupidity are not confined to the stupid person himself, but extend their benign ramifications through all the society, state, commonwealth, system, or civilization of which he forms a part. Is it not payable to every one who looks carefully around him, that all his happiest friends are the most stupid, and that men of great intellect are seldom either contented in their minds or prosperous in their circumstances? It may be laid down as an axiom, that a certain amount of stupidity is absolutely essential for worldly success. *Il n'y a que les imbéciles qui sont heureux.* Experience shows that a very intellectual shopkeeper or trader will generally allow his vagrant intellect to divert him from the narrow path that leads to wealth, into the broad way that leads to bankruptcy. The stupid man, who has just wit enough to buy cheap and sell dear, never picks a pocket or forges a bill, or gets into any trouble that he cannot get out of. Fools may do such things, and fools only; but respectable Stupidity, looking after cent. per cent. by the recognised rogues of trade, would no more think of such aberrations from the line than a jackass or a porker.

It is only genius or talent that gets itself into difficulties, and that misculcates the means to its end. The truth was exemplified by *Æsop*—a very able and doubtless a very unhappy man,—in his popular fable of the Hare and the Tortoise. The hare was genius, and went to sleep, full of confidence in its own powers to win anything against any opponent. The tortoise was the stupid and estimable man of business, who attended scrupulously to the task set before him, and so left genius in the lurch. Did ever a poet make money, unless he had some commonplace business to attend to, in addition to his poetry? Shakespeare the manager of a theatre, looking after the main chance, may have gained a fortune; but Shakespeare the poet, we may be sure, never gained a penny by his poetry. Was there ever an inventor—a man of an ingenious mind, a lively fancy, and a ready hand, always taking out a patent for some admirable contrivance of utility or beauty—who was poor and wretched?—or who was not compelled, for want of a few pounds, to part with his patent to some stupid capitalist, with just sufficient brains to know that a good thing was to be made out of the brains of another? The man of genius is always in advance of his time, which consequently does not care for him, and allows him to starve; but the stupid man is of his time—with it—in it—lives by it, and would scorn to march an inch ahead of it. Let a man write a thousand books, and he will be voted a bore; but let him sell a thousand cheeses, or a thousand pairs of boots, and he will gain a comfortable per-centage, and no one will hate him or be envious of him for being better than his neighbours. The invariable tendency of intellect is to make a man dissatisfied with himself and his kind; but Stupidity is warm and comfortable, and never complains. Occasionally, "when it thinks that it thinks," it may be heard quoting, parrot-like, after its heavy dinner, washed down by its heavy port, the lines of Pope:—

"—as in writing *Boswell's* style
One truth is clear—no spring is tight."

And, after all, Stupidity is right, and Reason is a firebrand, that would set the world in flames, if it could work its wicked will. Luckily for the world, Stupidity is the wet blanket that puts Reason out, and saves us from the misery of the conflagration. A man of any intellect at all cannot but be discontented with much that he sees in his own condition, and in that of his fellow-creatures; but Stupidity takes the world as it finds it,—costs well, drinks well, sleeps well, and grows as sleek, as fat, and as puny, as it can. Behold the sown upon the dunghill, stretched at full length, with the sunshine streaming down upon her ponderous carcase, in the warmth of which she lazily twitches her little curly tail—what cares she for war and rumours of war, or for the countless miseries that afflict both the just and the unjust? Let the keen philosopher groan over such matters, for he is a fool, and may have some degree of sense; but the sown is no fool, but a stupid. Satisfied with her dunghill and her sunshine, she grunts her acquiescence in things as they are—too complacently comfortable even to pity the beggar who pases by and envies her her spathy.

The public advantages of Stupidity are of a still higher order, and stand on a far more comprehensive basis. Folly is the Liberal and the Reformer, but Stupidity is the great Conservative. It is this element of society that keeps its framework together. Stupidity—dense, addid, granitic, with its *vis inertie*—enables society to bear unshaken all the storms, buffetings, and angry waters of theory and philosophy, that would otherwise wash it away. If the world, by its unhappy fatality, were at some future day to contain none but clever men and women, it would speedily become an unfit place for a gentleman or lady to live in—a world of wolves, and tigers, and boar-constrictors. Instead of one man, every forty or fifty years (as in our stupid age), there would be war perpetually; foreign war, civil war, household war,—war in every shape, form, and degree,—triumphant anarchy, and a gradual disappearance of the human race. Hark!—didst thou think what a stupid creature it is, and yet for what immense quantities of its beautiful bowdler's trials and furies are indebted to it? Then look at the spider; he also can spin silk and hew better than that of the silkworm. But the spider is not stupid. On the contrary, he is remarkably clever; and what is the consequence? Put him with his fellows—say a thousand or ten thousand of them;

and instead of spinning silk, like stupid silk-worms, the whole community will take to quarrelling, out of the sharpness of their intelligence. War and death rage in the factory, and lead to ultimate annihilation of spiderhood. So would it be with men, were it not for Stupidity. At considerable intervals a man with a keen intellect comes into the world—a fool only, and not a stupid by any means,—and he discovers and proves to his own satisfaction that monarchy, or aristocracy, or priestcraft, or the accumulation of wealth, is an evil that ought forthwith to be abated. There is immediate danger of an uproar. Were it not for the influence of blessed Stupidity, the whole nation would begin to think, and the end would be *REVOLUTION*. What has caused the misfortunes of the French, from 1789 to 1815, and from 1848 to 1860? Their intelligence, *£.*, their folly—nothing else. They were not quite stupid enough to be happy and contented, so, foolish Monsieur Jean Jacques Rousseau and foolish Monsieur de Voltaire sent them a-thinking on the wrong tack; and lo, the vessel of state was cut loose, and floundered out into the deep waters of doubt, dismay, and hopelessness, where it still drifts about, unconscious of a harbor, somewhere in the possession of a mutineer, at others in that of a pirate, and more generally with some captain or other who knows no more than the crew whether he is going and what he wants.

A social philosopher—a fool, certainly, but as certainly not a stupid—preached to the world, about a dozen years ago, the great doctrine that the good things of this world ought, in common fairness, to be equally shared amongst all mankind, and that there could be no such thing as poverty in any true scheme of civilization. "Property," said he, with a loud voice, "is theft." If everyone had been as clever, and as foolish, as this philosopher, and had assented to his logic, where should we all have been by this time? Back again into barbarism,—or very close upon it. But the benevolent and beneficent agencies of Stupidity came to the rescue. Few people heard of the philosopher—still fewer understood what he meant,—and Stupidity, when it did hear, and did understand, instead of grunting and laughing him down, as it ought to have done, if it had been true to its own nature, became somewhat alarmed, and began to squeak, like the sow, its prototype, when the knife of the butcher is ominously near its throat. A very strong man, and no fool, saw the opportunity thus afforded him, and made himself Lord and Master, by force of the acquiescence of Stupidity, and has consoled it, flattered it, and fattened it ever since. Under his fostering eye, Stupidity has grown richer than ever; and foolish intellect has had to look for a home somewhere else than in his dominions.

Nor in our own realm is there much, if any, chance for those fools, the over-ardent reformers, and the apostles of a new social philosophy. You may batter down stone walls, but a fortification of mud and earth defies your cannon-balls. You may send your shot through Vauban's masterpiece of building, but you can do nothing against tales of cotton. How are you to reason with midges? You can kill them by thousands (which proves nothing), but they come on in millions. To argue with a crowd, in a direction contrary to their Stupidity or their prejudice, is to attempt a more hopelessly-aggravating task than that of Sisyphus. For what use are the old ruts left, unless for Stupidity to travel in? Stupidity takes the comfortable side, and does not meddle with principles. It cobbles the old shoe, and does not fashion a new boot. It sees that there may be one abuse here, or another there, but feels that it would be far too much trouble to attempt to remedy it. It admits that there may be a deluge, but says "it will not be in my time." And, like a good, easy, amiable creature—which it is,—tells poets to sweep crowns, and not bother their brains; and philosophers to grow mangled-worried, or spin calico, or retail adulterated stout, and not perplex themselves about the schemes of Providence or the happiness of society.

Like Stupidity. It keeps the peace. It anchors the ship. It favours the Lord Mayor's coach. It supports Law and Physic. It maintains crime and men's hats. It uses itself nothing. It is the break and the buffer of the train. It makes the world habitable; and if you are a man of genius, and by any chance happen to become fashionable, it shows and follows in your track without knowing anything about you; and swells the chorus of your fame with its multitudinous grinnings. Blessings upon it! In its case the prayers of the Eastern people for the despotic sovereigns are fulfilled. It lives eternally. Its shadow never grows less. Law supports it. Literature panders to it. Fashion loves it. Custom perpetuates it. Respectability worships it. It pervades the earth like an atmosphere, and, though the stars of genius shine through it, men live not by the stars, but by the air. It is great as truth, and, like the truth, it prevails. STUPIDITY FOR EVER!

RAMBLES BY RAIL.—No. IV.

BY THE BRIGHTON AND SOUTH COAST TO FORTSMOUTH.

THE Brighton Railway is the most useful ventilator of London. As a health-restorer, it produces a material and beneficial effect on the weekly returns of the Registrar-General. Its chief representative may be not imply termed Volunteer Sanitary Commissioner, or Physician-Extraordinary, to the Metropolis. He has most extensive practice; and the remedies he prescribes are by no means barren. The illustrious Dr. Sanguedo had one specific for all diseases—whatever the complaint, he invariably bid the patient, and administered copious draughts of warm water. Mr. Night, too, like the doctor in "Gil Blas," has always the same remedy to recommend for the preservation or restoration of health,—he only—cool air and sea-bathing. The physician's fee varies, to suit the means of his different patients; but, though there is a scale of

changes, all who are worn down by toil of hand or toil of brain, receive the same advice, and for the fee paid—whatever be its amount—be introduced to the presented with opportunities of following the directions of the physician. These opportunities occur with great frequency. Twelve times a day carriages loaded with patients leave London for Brighton and the various watering-places on the south coast. Hastings and St. Leonards to the east; Worthing, Bognor, Littlehampton, and the Isle of Wight to the west—situated large numbers of the health-economists. But the vast majority of those who leave town proceed no further than Brighton. In general the fares thither are 10s. 6d., 8s., and 6s.—first, second, and third class respectively. On Sundays and Mondays, however, as all Londoners know, passengers are conveyed to Brighton and Bognor for half-a-crown; and such numbers, and with such frequency, do they go—Jews, Turks, Infidels, and Heretics—that they have come to regard Brighton as their peculiar heritage, intended specially for their use. So they have cockneyized it,—made it the largest watering-place in the world—and caused it to be looked upon and spoken of as London-super-Mare.

On Tuesday, last week, an unusual circumstance occurred—the day was extremely fine! Unable to resist its influence, I fought my way through the deafening, granite-wearing, traffic of London-bridge, and jumped into a train, which immediately afterwards started off for Brighton. It was a fast train, and we soon flew by the Crystal Palace, passed New-road, left Chroydon and Reigate behind us, dated through the tunnel that pierces the South Downs, and, in eighty minutes, reached the terminus at Brighton. As the traveller emerges from the station, the town stretches itself out before him—ragged, chalky, comfortable, with every appearance of having been made to order, and ready to receive its guests in packages. A narrow, crooked, action does not dissipate this impression. The streets—in shops, squares, and terrace—seem to have been built by the same architect, who modelled them after those rows of open-glasses we see in the shop windows of opticians. But the genuine excitement does not stop to criticize or to admire bones and streets. The first object of sight is the sea—directly before you, and down—either with “some other young fellows,” or very likely, with his wife or sweetie—towards for the “how,” and a blow be drizzles to have. He scans the sea; accordingly for the sea he makes; and then, on the beach, finds himself one of four or five thousand who have come with the same intention. All are in the same mood. At night they return in earnest drinkables, in the consumption of which they amuse themselves, even carry eight hours at London-super-Mare. Whatever is the state of the weather, they invariably come clothed in summer costume; are noisive careful to avoid getting wet (for they imagine getting wet at the seaside to be, if anything, beneficial to health), and are very anxious to sit close to the margin of the sea, for the spray to play in their faces. At night they return in a most deplorable condition—cold, wet, and miserable, but well pleased—for, have they not seen the sea, and have they not had their “how”!

I did not get up at Brighton, but left by the next train, and in a quarter of an hour got out at Worthing. Here we arrived at the station, the rain fell in torrents, and had not the omnibus driven in waiting, I should have got wet to the skin before reaching the hotel, although it was not ten minutes’ walk. The omnibus drew up in front of the Marine Hotel, and there I ordered dinner and a bed. I saw the little town to much disadvantage. The weather kept visitors within doors, and the occupants of the hotel were all a dozen machine-like, and two laborious, hunching for a lack of better words.

Worthing, however, has the reputation of being a quiet, pleasant watering-place, with excellent facilities for bathers. It certainly does not “go ahead” as rapidly as some other places; but that, with many, will be considered an advantage and a recommendation.

The following day turned out fine, and shortly after breakfast I was again on the rail. The first station at which the train stopped was Arundel. There two omnibuses awaited our arrival. One takes passengers to Littlehampton, a small bathing-place on the coast, two miles off; the other runs to Arundel town. I entered the latter, and, after a pleasant ride through a pretty country lane, alighted at the Norfolk Arms. Arundel is a town of high antiquity, and has many interesting historical associations; but it would probably be overlooked by tourists, were it not for the presence of the neighbouring castle, which is the seat of the Duke of Norfolk. The building at present occupied by the Duke is of modern date, of various styles, and is impressive only from its size. Enough, however, of the ancient pile remains to satisfy the curiosity of visitors. Having procured a ticket of admission, at the hotel, I presented myself at the entrance-passage, and was conducted through a series of steps and passages to the Keep. Here the chief attraction is a collection of coats, that appears to divide the favor of the wonder-seeking public with the Duke’s collection of arms. Some of them are remarkably fine creatures, and one, who paid particular attention to me, was, I will maintain, the descendant of him who, for his wisdom and the gravity of his appearance, was called Lord Chancellor Thurlow, and, as such, was introduced by the intemperate keeper to that great legal functionary when he visited the castle. By the time I had seen all to be seen in the castle, and paid a visit to the church, the omnibus was ready to return to the station. I was again a passenger by it, and arrived at the station just in time to get my ticket. Two stations from Arundel is Woolgrove, where an omnibus meets each train, to take passengers to Bognor, a little watering-place, much esteemed, but that I did not visit. The family likeness, in its general character, to the other towns on this coast. The rain came down with such force that I did not venture to leave the carriage. I continued my journey to Chichester, with a commercial traveller as my *vis-à-vis*, and arrived there by the express at twenty minutes past four. Chichester is the successor of ancient Regium. The neighbourhood is rich in relics of Roman times—mosaic pavements, urns, and coins, occurring in all directions.

The present city, extended on a level plain, gives one the impression that it fell asleep 500 years ago, and has not yet awoken. The cathedral and campanile, and the houses in their vicinity, present precisely the same appearance as they do in pictures of the city. The same groups seen in the pictures, in the market-crease that banged there when the clock was striking. In the cathedral I could not help feeling a slight degree of surprise to find ladies dressed in the present mode; and when I sat down to dinner at the Dolphin Inn, I every moment expected to hear the sound of the queen’s horn, announcing the approach of the mail-coach to Portsmouth. It is an old, quiet, and agreeable country town; and few who have visited it, especially if they have

come from the noise and worry of London, but will look back with pleasure to the days or hours they spent at the birth-place and burial-place of the poet Caliban.

EMBANKMENT OF THE THAMES.

A SHREED observer of men and things once commented upon what appeared to him the remarkable fact that rivers run through all the principal cities which he had visited; a good, but unlettered Yorkshireman, known as the Village Blacksmith, when occupying a London public during the prevalence of the cholera, exhorted his congregation to gratitude to Providence for having sent the Thames through London, and for so doing, he said, might be the severity of that terrible scourge in the metropolis. Topsy believed he grew; and there are many Topsy in London who believe the name of our noble river, and who seem to think that the operations of nature are sufficient to preserve its navigation free and open to all time and under all circumstances. They have no idea—for they have never contemplated the possibility of such a contingency—that it could ever be other than it now is. There are, however, indications not merely of the possibility, but the probability, that at no distant date the river will cease to bear merchant navies upon its bosom, unless some means are adopted to preserve its navigable condition. It is in the passage through the metropolis that the Thames suffers the greatest amount of injury, and it is mainly with a view of providing a remedy that we would recommend the construction of a continuous solid embankment between Westminster and London bridges.

Let us place at a few of the agencies constantly at work to destroy the Thames. First, there is a general tendency in the sea, on the eastern coast of England, to destroy the land, and to salt up the estuaries and mouths of the rivers. The estate of the Earl of Godwin is now the Goodwin Sands; ancient Cromer is now washed over by the German Ocean; Norwich stands on the banks of an arm of the sea; and the port of Harwich, which at one time would have been sheltered by the largest ship in the world, is now so completely protected a fragment. The same powerful agent which causes the “sitting up” of rivers may, however, by engineering science, be applied to the removal of these obstructions. The tides which break up the rocks, and undermine the tide cliffs (if they better to their base, and fall into the ocean, pour millions of tons of water every twelve hours into the sea, and the limit will soon be the debris of the shores, which they deposit on the bars and shoals of tidal streams. But the hydraulic engineer perceives in the ebb a power greater than that exerted by the flow of the tide, inasmuch as it carries down with it the river water, which it had to contend against in its upward progress from the sea. The tide pours into the Thames twice every day a volume of water, the depth of water, at its fiercest seasons, is not less than 21 feet at London-bridge, and which gradually decreases, until at Teddington Lock, which prevents a further flow of the tidal waters, it is but from 1 foot to 2 feet. Between Westminster and London bridges an average of 25,000,000 cubic feet of water is thus supplied every twelve hours. The removal of the water would be the removal of the scouring or deepening of the bed of the river. Between London and Westminster bridges the total rise is as much as 13 feet, or about 6 feet 6 inches per mile; while from London-bridge to the Nore, 43 miles, the descent is but 214 feet, or only 6 inches in the mile. Beyond Westminster-bridge, and up to Teddington Lock, the river is rising, and more than a succession of this character, separated by shoals. Such is the difficulty which the tide has to overcome in order to ascend the river, that, although it has gained 4 or 5 feet in height at London-bridge beyond what it has at the Nore, still at Vauxhall the high-water mark is considerably lower than at London-bridge.

The causes of this condition of the river are to be found principally in the removal of Old London-bridge. This structure operated as a dam at the point where it stood. The diminution in the number of arches, and the increase of water-way, has admitted a greater flow of the tide up the river, and there has been in consequence a gradual deepening of the water above the bridge, by the removal of portions of the bed; but the parts so removed above bridge have been deposited lower down, in the Pool, and other parts of the Thames. The tendency of ages would be, in the opinion of Smeaton and others, to bring the Thames to an uniform level; in the opinion of some it does not appear to be corroborated by actual experience, or by the going on of the river, but a succession of this character, separated by shoals, is the result of the Commissioners, founded upon the evidence of Mr. Page and other engineers, has been to cause a higher rise and lower fall of the tide than heretofore, and is producing, as was also to be expected, a general though not uniform lowering of the level of the river bed. Father Thames, if left unmolested, will make but slow work of improving his bed, and ages will pass on before a uniform level will be obtained, even if he were left free and unfettered to his work. But the shoals of irregularities that are to be removed offer obstacles to the action of the tides which they will never be able to overcome. There is a want of uniformity in the bends and curves of the river; there is the irregularity between the breadth and volume of the water and the rise in the varying nature of the materials forming the bed; and, added to these, there are the artificial causes provided in the projections and recesses which abound on either side of the Thames; irregular dredging, and many other evils which have been inflicted upon the unfortunate river, by the capricious of those who have sought to improve it, and the neglect of those who have shirked their duty. The river was formerly entered by the sea, and the Thames are constantly struggling with the irregularities occasioned by partial embankments, and they strive, by deposit of mud-banks, such as those at Hungerford and elsewhere, to build up for themselves boundary-lines uniform in their outline. Those adverse banks of mud are the silent power of the river, and the gradual and unperceived encroachment of the mud, which is referred to in our last number, without plan or condition, which have been made upon its noble waterway. Until the banks are regular and uniform, the tides will not do their work of scouring and deepening the river. The question to be answered is, “Shall we assist the operations of the river by a regular and uniform system of embankment?” If this is not done, shoals will be formed below

London-bridge by the deposits which the ebb tide will carry down with it, and the navigation, in the most important part, will be seriously affected. If it were not for the happy circumstance that the tide rises at London-bridge much higher than at the Nore, large vessels which now come up to the docks would not be able to do so. If, by the formation of new shoals and banks, we permit this advantage to be neutralized, we shall, by our neglect, as effectively close the river, and destroy the trade of London, as if we had raised a wall of water against the city. It is not, therefore, the object of our subject. Everything that can be done to lower the bed of the river above London-bridge, provided it is not done in irregular patches, will have a corresponding effect below bridge; because there will be a large quantity of tidal water available for clearing away obstructions in its passage to the sea. The construction of an uniform embankment would greatly assist this flow of water by giving to it a more regular and rapid motion. The necessity of counterbalancing a quantity of water equal to its own bulk; but that displacement would be more than counterbalanced by the removal of the mud-banks on the side, the material taken from the bed of the river, which would be used for filling up between the walls, and the gradual deepening of the channel which would consequently take place. With the exception of the small quantity of mud which would remain on the bed, the whole materials of the embankment would be taken from the banks, and the river would be enlarged.

Hitherto we have spoken only of the advantage which would result from enhancing the river within the metropolis, so far as its navigation would be effected. It must not be forgotten, however, that the construction of two new roads in the river, for such is the only proposition worthy to be entertained, would produce a great deal of inconvenience to the City, and to Westminster and Chelsea, and relieve the overcrowded thoroughfares of a large portion of their passenger and goods traffic. The journey from Charing-cross to the Bank has become, in point of time, almost as long as from London to Brighton; and to each the cluster of railway stations is a great hindrance, and the delay of the traffic is becoming almost impossible. The more money value of the time lost in going to and returning from the City or the railway stations, would, in twelve months, more than suffice to build the Thames Embankment. The amount of annoyance, disappointment, sorrowing of temper, to say nothing of the perils of the river, and the expense of the traffic, would be incalculable. It is not only the bus drivers, and others, as a sort of safety-valve to their feelings, would, if it were possible to prevent them each day in any visible shape, a record affords, the most extraordinary evidence of the rudeness of Londoners, and the readiness with which they will grumble and submit to inconvenience and annoyance, that is, the more they are inconvenienced, the more they are inclined to be impatient of the "communications of the metropolis." It is a subject almost as old as the embankment. When London was first built there was no necessity for roads, for there were no carriages to run upon them; to Britons, and Romans, and Saxons walked to their Banks, and Exchanges, and to the City, and to the Palace, and to the Court, and to the House of the nobility, or hackney coaches for the commonalty, and carts and vans for the traders, there has been a constant struggle to widen and adapt the streets for the new description of traffic. Railways have created so much additional traffic, and the necessitous population has been obliged to be cramped to the requirements of the day, that the old Pudding-lane and Tyndal-lane, the Sturata to the augmented traffic of London-bridge in the time of the last of the Georges. The House of Commons, and other authorities who are supposed to look into these matters, act in regard to them with the strongest caution, and it is not till it is too late that they are obliged to do so. The House of Commons, that if railways were made from Charing-cross to the railway stations at London-bridge, crossing the Thames at Hungerford, it would materially relieve the traffic going east and west of Temple-bar, and a bill was passed, graciously permitting a company to spend one million of money in widening the streets of the City, and in building a new road, leading from the southern and north-western districts of England; and from the southern and south-eastern counties, to be concentrated into the very heart of the city of London, in the small valley formed by Holborn-hill and Skinner-street on the one side, and Ludgate-hill and Fleet-street on the other. What the result of this bill will be, it is not possible to say, but it is probable that the metropolis railway, as completed it will not be difficult to predict. At arrival and departure of each train the leading thoroughfares will become all but impassable, and the city of London will be the great focus for goods and passengers to and from all parts of the United Kingdom and the continent. It is not till the year 1862, that the City of London was obliged to do so, and last year they called a new street, from Southwark to Blackfriars-road, with a view of diverting some portion of the traffic from the City. Beyond pulling down a few houses in the Borough, nothing, however, has been done. A sum of £50,000 was assigned out of the produce of the extended local tax to the City of London, and the City of London, in the year 1862, has the work is no nearer completion than it was twenty years since.

The high price of land and property in London is a serious difficulty in the way of all projected street improvements. The new street made some years since from Oxford-street to Holborn-sec, for land and property, at the rate of £37,380 per acre; the one from Row-street to Charlotte-street, Bloomsbury, at £27 per acre; the short one from Mary-street to St. James's-street, at £108; the one from St. James's-street to the Strand, at £100; and the one from the Strand to the Strand, at £100. When land is sold to the Metropolitan at the rate of more than £200 per acre. When land is sold to the Metropolitan at such enormous value as this, surely it would be worthy of consideration to take two new roads out of the river Thames, more especially when the area can be well spared, and the formation of the roads would be a great advantage to the city. The new roads would be 100 feet wide—the one wide as London-bridge—could be made about the north side of the Thames, between Backsians and Westminster bridges, with carriage-way, footpaths, and railroads, for £214,685. It is not half the cost of one of those iron-rod-and-iron-rod frigates which we are so much in the habit of building; and but little more than the amount of one day's natural expenditure.

A third great and useful purpose which an embankment in the river would serve, would be the providing means for constructing a portion of the great low-level sewer. This sewer could be built in the embankment, and thus avoid the great public inconvenience with which the metropolis is threatened of having the whole line of the Strand, Fleet-street, and the thoroughfares leading eastward blocked up for many months, while the work of building

The sewer is going on. It is impossible to estimate the loss to the tradesmen along these streets, the annoyance to the public, the danger to house property and to public buildings, which the excavations required for this monster sewer must entail. The committee of the House of Commons which has just reported on the subject, has recommended that the Government should provide for the construction of this sewer along the forebore of the river; but if the recommendations of committees and commissions without number were of any avail, we should not now have to impress upon the public, and to urge upon the Government, the necessity of taking such measures to induce the executive to act upon these repeated recommendations, and give the necessary power to somebody to do something which would save what every one must feel to be a great and much-needed public improvement.

AN INTERCEPTED LETTER

THE following letter has been forwarded for publication. It appears to be a very extraordinary document. The signature, P., is the first letter for "Peregriny," an illustrious individual, honoured lately by an epistle as remarkable as any that ever reached Rome, in "the good old times," from Caprasa. Can it be possible that the following is the genuine, truthful reply to the Imperial message? We offer no opinion; but leave the matter to the judgment of the reader.

« **SIRE.**—Il faut que la franchise engendre la franchise: votre lettre est un chef-d'œuvre du style loyal et franc; je l'achèterai d'y répondre de la même façon. »
 « Vous avez raison: les affaires sont compromises à un tel point, qu'il est certain que ni les conversations personnelles (du reste sans votre intérêt), ni les lettres, ne pourraient servir à rien. Je ne puis que vous le dire, sans vous tromper, Sire: c'est une union pratique et opiniâtre: elle regarde les faits, et non pas les mots. Votre lettre est excellente pour le théâtre ou pour un roman, mais elle ne peut servir à rien. Je ne puis que vous le dire, sans vous tromper, Sire: c'est une union pratique et opiniâtre: elle regarde les faits, et non pas les mots. »
 « **Monsieur l'abbé.**—Dieu! que vous l'oubliez en vendant la robe! Il est difficile aux os: mais l'épître du vieux roi paraît presque divine sur le contraste du ministre, et il n'est clair qu'avec l'ensemble du difficile de ne mesurer pas la mesure de la franchise, et de ne pas se laisser aller à la franchise, et de ne pas dépasser la ligne de la dissimulation; votre lettre n'est pas naturelle, et ne peut servir à rien. Je ne puis que vous le dire, sans vous tromper, Sire: c'est une union pratique et opiniâtre: elle regarde les faits, et non pas les mots. »
 « **Monsieur l'abbé.**—Dieu! que vous l'oubliez en vendant la robe! Il est difficile aux os: mais l'épître du vieux roi paraît presque divine sur le contraste du ministre, et il n'est clair qu'avec l'ensemble du difficile de ne mesurer pas la mesure de la franchise, et de ne pas se laisser aller à la franchise, et de ne pas dépasser la ligne de la dissimulation; votre lettre n'est pas naturelle, et ne peut servir à rien. Je ne puis que vous le dire, sans vous tromper, Sire: c'est une union pratique et opiniâtre: elle regarde les faits, et non pas les mots. »

[illegible]

“ Mais ce diable de peuple est un animal *rauminant* ; il savoure et avale aisément les nouveautés fruppantes ; mais après, il *raumine* ; il a raminé les *speeches* de M. Bright, et il ramine votre lettre. Au commencement de la Session, depuis Cicéron, il n'y avait d'orateur comparable à M. Gladstone. Eh bien, le Parlement, le peuple, quoiqu'éloigné, un premier moment par l'écrit de son éloquence, ont raminé ; en raminant ils ont réparé la furie du son ; et M. Gladstone, au lieu d'être le diable de son parti et de la nation, est le roi de tout le monde.

[illegible][illegible]

"Quant à la Chine, laissez votre chemin, vous pouvez y envoyer un plus grand nombre de troupes que les Anglais, et ils sont absolument fous quand ils vous nébrent à prendre part au jeu. Il est plus que probable que la Chine deviendra le champ de bataille du commencement de la guerre mondiale; c'est bien; vous avez bien joué là. Pour l'Italie? ça me dépasse! Qui aurait cru que vos troupes mériteraient un tel choc dans leur train?"

"En un mot, Sir, vous avez les mains pleines, du politique que vous savez."

Vous avez beaucoup de peine pour la grande affaire, mais vous vous confiez quelquefois trop à ce génie. Votre lettre n'était pas écrite à votre ami Persigny, mais au peuple Anglais; mais vous y avez mis tant de finesse, que la finesse n'est plus; elle est trop trompeuse.

"Comme j'ai lu la *Revue*, je ne me salue pas votre ami, mais je reste toujours le serviteur le plus humble et obéissant de votre Majesté Impériale.—P."

(TRUE AND UNAUTHORIZED TRANSLATION.)

SIR,—Frankness is the father of unreserved speech; and as your letter is a masterpiece of candour and plain-dealing, I shall endeavour to answer it in the same style.

You are right; affairs are now so extremely complicated, we may well fear that neither personal interviews (the old remedy, look of the face, smile, nod, frank, cordial letters) will have the effect of unravelling them. You deceive yourself, Sir. This is a practical, pig-headed nation. It looks to facts, and does not care for phrases. Yours is a capital letter to read in a play or a romance, but it is too easily seen through by the English. As you directed me, I read it to Lord Palmerston; but, goodness, gracious! you should have seen him whilst I was reading it! He is to the backbone a diplomatist; but the vagabond spirit of the old jockey was very near getting the better of the restrained manner which belongs to a Minister of State, and it was perfectly plain to me that it was with the greatest difficulty he could keep from laughing in my face. Yes, Sir, this letter is a failure; it did not hit the mark: you went too far—your transgression, by a long step, the line of dissimulation; your epistle is not in keeping, and therefore it is regarded with suspicion. If I had your naïveté, there had been no trait of hypocrisy, the English might place faith in it; but where is there that one solitary trait to which I can direct their attention?

Although educated and breken in to all the arts of diplomacy, I found it exceedingly difficult to maintain myself in the presence of a fellow, Palmerston, read to me, with a wicked grin, and as if casually, "Very good, my dear Persigny; but, surely you have had another letter, at the same time, from your good friend." As to Palmerston—there are none but divellers there who stretch the slightest importance to your letter. Your friend Mr. Bright has been too busy not to venture to speak of it but in a very gingerly way. And, then, as to the press. *The Times* appears to place some faith in it; but though all Englishmen read *The Times*, still there are few that follow its vacillating opinions. *The Times* is the great organ of opinion, and it is neither more nor less than a collection of men. It is with much pain I observe your friend Mr. Bright is daily descending in general estimation. His eloquence (and his is prompt, rapid, and manly) loses its influence. His motives are, like your own letter, too easily seen through. I had been under the impression that Mr. Bright would sustain your interests admirably; for, though he is stone-blind as to consequences, yet he is animated with such a genuine unmitigated spirit of hatred against the respectable, well-born classes, that it was to be hoped he might be able to infect the multitude with the poison of his principles. He reminds me of the hero of our first Revolution. Look at him; he is a man of the highest talents, but he is a demagogue he would be a *préfecture*. Poor man! he tries to stanch, and even to dry up the red blood of a civilisation nation with lakes of cotton.

But this accused person is a *running* animal. It relishes, it swallows greedily, striking nothing as it goes, and having no conscience, it will run on, it has run on the speeches of Mr. Bright; and it will run on upon your letter. There was no error since the days of Cicero who was thought comparable to Mr. Gladstone at the beginning of this Session. Well! The Parliament, and the people, although they are stone-blind as to consequences, yet they have since then run on; and in running they have separated the grain from the chaff; and now Mr. Gladstone, instead of being the demigod of his party and the nation, is an object of universal contempt and derision.

When a scamp—that is, one who has no conscience, and who attempts to play the part of an honest man, and speaks or writes in a seemingly frank or candid manner, he excites distrust instead of eliciting confidence, and his conduct is watched still more closely than before. Be assured, then, that your letter will have the effect of hurrying on the opposition of the English despots. What good, Sir, was there, in the very teeth of established facts, your denying that your army and fleet were in such and such force, when everyone was in a position to satisfy himself by facts, that you were telling a fib. Such assertions only lead to investigations, and investigations are sure to corroborate you with shame. All the European Powers are at this moment on the alert, and you can neither launch a vessel nor recruit a regiment without exciting distrust. The English, it is said, are not good diplomats; and yet you have aroused, on their faces, but their anxiety for the preservation of the liberty and wealth of which they are so proud. The history of the seventeenth century proves that the English can fight as bravely for principles as the French have ever done for glory. You may dream of averting Waterloo, and pillaging the richest city in the world; but believe me that you do not mean to do so. You are a man of honour, and you care for your health. The English, who have known how to achieve their own liberties, will know also how best to defend them.

You write as if the English lived not on this earth, but in the moon. Every Englishman knows that, and you know it too. Lord KILGORE, Egyptian as you are, and particularly wished for by the French. Your inclinations to compare it; and all are aware that an expedition to Syria would be the first step on the march to Egypt. As to the Christians, it is more than probable that they were the first aggressors. All history teaches us that better. You have a long arm, and your political schemes stretch wider and wider; but still they do not stretch as far as the Russian policy; and the most sensible people here firmly believe that you and the Emperor of Russia are at the bottom of these insurrections, which come so appropriate for the ferocity of the most cherished projects of you both. But, take care, Sir; it is a dangerous association to make with you, and your schemes in the West, and leave the East to another despotism. Be on your guard that there is no collusion.

As to China—go on and prosper! You can send them a still greater number of troops than the English; and they were great folk when they allowed you to share the cake with them. It is more than probable that China will become the battle-field for the commencement of a war that is inevitable. It is well! You can make a winning game there. As to Italy: there you are beyond my comprehension. Who could have supposed that your victories would leave such a chaos in their train?

In a word, Sir, acute a politician as you are, you have your hand filled with difficulties. You have a great genius for the grand scheme, but sometimes you trust too much to your schemes. Your letter was written, and your friend Persigny, but to the English people; and you imported into it so much of finesse, that the French was palpable, and had deceived no one.

As I have read La Fontaine, I do not designate myself "your friend," but remain over.

Your Imperial Majesty's most humble and devoted servant, P.

INEDITED LETTERS OF LORD NELSON.

[Continued from p. 184.]

OUR last article upon the Nelson Letters left matters at the point when the hero had been ordered to Bastia. He immediately examined the place, and recommended that it should be besieged, expressing his full confidence of the result. Sir David Dundas, the commander of the forces, considered the project rash and visionary; but Lord Hood thought otherwise, and the siege was accordingly determined upon. It was a work of time and patient perseverance. General D'Aubant, who succeeded Dundas in the command, was so opposed to it that he did not think it right to grant Lord Hood a single soldier, and only a few artillerymen; and we find Nelson, late in March, 1794, writing to Sir William Hamilton, urging him to supply them with artillery stores. On the 3rd of April, the troops and the season, the latter under the command of Nelson, landed for the siege. On the 16th, he writes to Mrs. Nelson:—"We are in high health and spirits, besieging Bastia; the final event, I feel assured, will be conquest. Lord Hood is at anchor near the town, and our troops are active. Our batteries opened on the 11th, and apparently have done great execution." From that day the siege was carried on with unflagging vigour on both sides, the French strengthening their works, and the besiegers eventually advancing their batteries. Everything was against the English, but Nelson was still confident of victory. He complains, towards the end of April, of the conduct of the Commander-in-Chief, in leaving the expedition to its fate, and writes to his wife:—"General D'Aubant will not attack our enemy with 2,000 as fine troops as ever marched, whilst we are here beating them from post to post with 1,000." In another letter, written early in May, he says:—"My only fears are, that these soldiers will advance when Bastia is about to surrender, and deprive us of that part of our glory. The King, we trust, will draw the line of our deserts." Such was the state of affairs before Bastia when Nelson addressed the following letter to Sir William Hamilton:—

CAMP, May 7th, 1794.

MY DEAR SIR,—I hear from Lord Hood that the Neapolitan frigate which arrived this day sails to-morrow morning, therefore I will not let the opportunity slip of inquiring after you and Lady Hamilton, for whose kindness I feel myself so much indebted.

Our enemies are obstinate, but behave infamously ill, not like men of spirit; but I have no doubt we shall soon bring down their proud stomachs. Our loss has been nothing; theirs, deserters may, very great. You may remember seeing Captain Clarke, of the troops, on board *Apennine*; and has lost his right leg, and part of his right arm; but he is still, I am happy to say, likely to recover. St. Michel, and the Commander of the troops, are gone, as they tell the people, for meercs. The Mayor got off last night in a very fast-sailing boat; the ship's boats could not overtake him. My dear boy is very well, and, as you desire, has your remembrance of him. I beg to best respects to Lady Hamilton, and that you will believe I feel myself your most obliged,

Br. Hon. Sir William Hamilton, K.B.

HORATIO NELSON.

The accident that happened to Captain Clarke took place in the afternoon of the 12th April, when Nelson went with Colonel Villettes, Lieutenant Duncan, and Captain Clarke, and a Corsican guide, to examine a ridge about one thousand yards nearer the town than their previous position. During the whole time the enemy kept up an incessant fire of musketry and grape, and the last shot they first killed the Corsican guide, who was standing beside Clarke, and shot off Clarke's right arm and a part of his right side. But, in this letter to Sir William Hamilton, we do not hear of the circumstance which stamps the casualty with its deepest interest—that Clarke, at the moment when he was shot, was looking over Nelson's shoulder.

The St. Michel alluded to in the letter was La Combe St. Michel, the Commissioner who had come down armed with powers from the Convention. He it was who refused to receive Lord Hood's flag of truce, which was landed in one of the *Vietoria's* boats, at seven o'clock on the morning of the 11th of April, before the siege began. In answer to the English officer who presented Lord Hood's letters, which the Commissioner refused to accept, St. Michel said, "I have hot shots for your ships, and bayonets for your troops. When two-thirds of our troops are killed, I will then trust to the generosity of the English." "On the officer's return with this message," says Nelson, who records the matter in his journal, "Lord Hood hoisted a red flag at the main-top-gigant-mast-head of the *Vietoria*; when our batteries opened on the town, citadel, and redoubt of Campouella, English colours having been hoisted on the rock over my tent, and every man giving three cheers."

By the 20th of May, Nelson's predictions were verified; the enemy sent off a flag of truce, and two days afterwards, at six in the evening, the French colours were struck from fort and post, the British colours hoisted, and the English troops, with their hands playing "God save the King!" marched into the town. "I always was of opinion," writes Nelson to his wife, on this exhilarating occasion, "that we have ever acted up to it, and never had any reason to repent it,—that one Englishman was equal to three Frenchmen." This patriotic superstition of the old days of our naval supremacy was a strong reason, with Nelson, and with every soldier in the service, not to without justification in the least enterprise, they achieved. On this occasion, at all events, it was no matter of being, for it appeared that the proportion between the conquerors and the conquered was not one to three, but less than one to four and a half. "This morning," Nelson writes in his diary, "the British Grenadiers took possession of the town gates, and the gate of the citadel; and on the 24th, at daylight, the most glorious sight that an Englishman can experience, and which, I believe, none but an Englishman could bring about,

was exhibited—4,500 men laying down their arms to less than 1,000 British soldiers, who were serving as marines."

It was curious enough that the apprehension Nelson had previously expressed in a letter to his wife, that the garrison of St. Fiorenzo would advance when Bastia was about to surrender, was fulfilled to the letter. After informing Mrs. Nelson that the French had sent in a flag of truce, he adds, "Our Fiorense army, hearing what was going on here, have marched to the tops of the heights, which will probably terrify the enemy." It does not appear, however, that they either declined, or received, any part of the glory—to which they were certainly not entitled.

Our next letter is dated from Leghorn, on the 21st August. In the interval Nelson had been engaged, for nearly four months, upon the reduction of Calvi, in which service he lost the use of his right eye, from the bursting of a shell, which scattered the rest of the battery he was directing. This was the only hurt he received throughout all these scenes of danger, with the exception of what he describes in one of his letters as "a sharp cut in the back" at Bastia. The siege over, Nelson had taken the *Agamemnon* into Leghorn, to obtain a little rest for his men. The letter of the 21st, to Sir William Hamilton, refers solely to this circumstance as a reason why the writer had not paid his personal respects to his friends at Naples, and speaks in terms of high commendation of a Mr. Pierson, a friend of Sir William Hamilton's, who had volunteered into the army serving before Calvi, and had subsequently received a commission.

After Calvi had been taken possession of, Nelson was ordered to proceed in search of the French fleet, which had taken refuge in Goujan Bay, and he was afterwards sent with despatches to the Minister at Genoa. Late in September, Admiral Hotham and Lord Hood arrived at Genoa, and a few days afterwards Nelson went to see with them. In the course of this cruise Lord Hood was obliged to go to Leghorn, to receive despatches from England, and shortly afterwards went home on account of his health. Meanwhile Nelson was ordered to watch the French in Goujan Bay. He writes to Mrs. Nelson on the 2nd October: "We have here [in Goujan Bay] eleven sail of the line, the enemy have fourteen—seven here and seven at Toulon." A few days later he writes to Captain Locker: "The French ships in the bay are so fortified, that we cannot get at them without a certainty of the destruction of our fleet. At Toulon six sail of the line are ready for sea, in the outer road, and two nearly so in the arsenal." Finding that nothing was to be done, the *Agamemnon* put into Leghorn, to get some refreshments, and early in November rejoined the fleet in Goujan Bay, when Nelson found that the enemy had given them the slip; upon which he was ordered to Toulon, to examine into the condition of the enemy's fleet. A letter written subsequently, from Leghorn, contains the result of his observations, and explains generally the state of affairs at this time—

Agamemnon, Leghorn, Nov. 21st, 1794.

MY DEAR SIR,—Perhaps Admiral Hotham has wrote you the present state of the enemy's fleet, and of our own; if so, this will be a *How-do-you-do* letter; if not, you will, I think, like to know the state of both the fleets, and as I was sent to look into Toulon, after the enemy's squadron from Genoa, I may possibly give you a little account of them. In the harbour of Toulon are 22 vessels of war, disposed of as follows:—In the arsenal, nearly ready, 3 sail of the line; in the inner road, the Goujan squadron, 7 sail of the line & 4 frigates in a state of fitting, are nearly ready by this time for sea; in the outer road, 5 sail of the line and 2 frigates, perfectly in appearance, ready for sea. Our transports, detained with the three flag flying, are laid up dismantled in a great degree. What are the designs of the French you are much more likely to know than myself. As the Corsica everybody supposed the attack will be on that island; in Italy, that it will be on Italy. I am of opinion the letter is most likely. Port Espica is, in my opinion, the destination of their fleet; and as they will not scruple taking possession of the Genoese forts, they will be able to not only maintain their situation, but also be enabled to secure their army in Italy, by either small squadrons, or a fleet, which the English have nothing to oppose. How Leghorn will be defended I know not; sure I am it is capable of a long siege, if provisions are laid in; but I don't think there is three days' provisions for the inhabitants in the place, and I really believe it will instantly be delivered up. What allies has poor England! Our fleet is at St. Fiorenzo resting, and nearly ready for sea.

An unpleasant business has happened with us. The crew of the *Windor* (last mentioned), and insisted on another captain and first lieutenant being appointed to the ship, which Admiral Hotham thought it right, for the benefit of His Majesty's service, to comply with, and removed the officers. They have been tried, by their own desire, by a court martial, and most honourably acquitted, the charges against them being found only unbecoming, but without the smallest foundation in truth. Various are the opinions, as you will believe, of the admiral's conduct on this occasion. I shall not venture to give an opinion on his conduct; sure I am that Admiral Hotham is a most amiable, good man, and has done what he thought best for the service.

I beg my best respects to Lady Hamilton. I do not forget your kindness to me and Josiah, who is a young man grown.

Believe me ever your most obliged,

HORATIO NELSON.

Poor *Agamemnon* is quite a wreck, being without masts; crew destroyed by the Corsican expedition.

For several weary weeks the captain of the *Agamemnon* was detained at Leghorn, repairing his shattered vessel. The delay and inactivity made him wretched. Towards the close of November, he wrote to his uncle, to tell him that matters were drawing to a crisis; that Jean Bon St. André had sent an insolent message to Lord Hood, intimating that if his lordship sent at all more flags to the Port of the Mountain, he would burn the vessels; and that the French had fifteen sail of the line ready for sea, with which they declared they were ready to fight our fleet. "Now," continues Nelson, "as Admiral Hotham is gone off Toulon with thirteen sail of the line, they may, if they

phase, I am, as you will believe, uneasy enough, for fear they will fight, and *Agamemnon* not present,—it will almost break my heart; but I hope the best—that they are only boasting at present, and will be quiet till I am ready." In this, and, indeed, in all his letters, Nelson, speaking of his ship, drops out the definite article, and calls her "*Agamemnon*," with an affectionate interest, as if she were in reality "a thing of life." The trait is characteristic.

At last the English fleet arrived at Leghorn, under the command of Admiral Hotham, and immediate preparations were made for sailing.

LEGHORN, December 1794, 1794.

MY DEAR SIR,—You will have heard from Admiral Hotham of his arrival here, for necessities and refreshments for his fleet, and of his intentions on sailing from Leghorn (therefore I now only write a line to my dear friend, as nothing occurs worth your notice, I shall not fail to write you, and perhaps oftentimes to tell you that nothing has happened, which news is often most acceptable. Reports here say the French fleet will certainly put to sea very shortly, to protect the entrance of a number of corn vessels, from the coast of Sicily, and I know they have called in their anonymous privateers from the Gulf of Genoa, and that all the men are gone to Toulon to man their fleets—this measure certainly indicates strongly an intention of going to sea. I have no doubt of the event, should they be disposed to give us a meeting, and I trust it will be a victory which may rival our home fleet, for why should not laurels grow in the Mediterranean. The Admiral, I think, has wrote to you to ask for some of the Neapolitan ships; they may at present be of the greatest service for the protection of Italy (even should a hostile force appear before us), and I am sure I perfectly agree with you, that, although it may not be proper to dislodge the whole of a campaign (which may be entrusted to a commander-in-chief), yet that, allies have a right to know what is going on at the moment. To you I may say that Admiral Fortescue is the master of all the naval affairs of the coast of the English. We all love the captain of the *Trevellick*, *Carnegie* (I believe, I know not his name). We respect the Neapolitans, and have a sincere esteem for the King of Naples, who is so attentive to all of us. You will not, I am sure, mention my opinion of Fortescue to any one, for no one in our court knows my opinion of him, although I do most of them. Letters from Genoa say that all vessels above fifty tons are detained at Nion and Villafraña, for the purpose of transporting 12,000 men somewhere. I have no doubt but Port Espica is the object, although many amongst us think it is impossible. Accounts are certain that two sail of the line are on their passage from Brutt to Toulon. *Agamemnon* will be ready, as to masts and yards, to sail with the fleet, and my ship's company get tolerably healthy; but as to numbers, we are miserably short. Col. Villot's probability is with you; he is not only a good officer, but a perfect gentleman, a character not very often met with. I beg my kindest remembrance to Lady Hamilton. Josiah assures her to always remember her goodness; and believe me, my dear sir, your most obliged and faithful,

HORATIO NELSON.

December 20th.—We are all on board the fleet, unmixed.

Sir William Hamilton, K.B.

From the date of this letter to the 16th January, 1795, when they put into Fiumara, the vessels were exposed to a series of storms and heavy seas such as Nelson had never experienced before. The fleet were twelve days under storm stay-sails. At Fiumara they remained throughout the month of January, and here Nelson's eye became much worse. "It is now," he writes to Mrs. Nelson, "in almost total darkness, and very painful at times; but, never mind, I can see very well with the other." He had a strong desire to get home, as Lord Hood had done; but he could not be spared. The inferiority of the English fleet rendered it absolutely indispensable to keep all the ships together, ready for action.

Agamemnon, Fiumara, Feb. 1, 1795.

MY DEAR SIR,—As the Admiral sends a ship to you with two dispatches, I shall not say a word about the fleet, only what must give you pleasure; that, except being short of numbers, no fleet ever was in better order to meet an enemy than I conceive ours to be at this moment. We are remarkably healthy. I had letters from Lord Hood as late as January 1, and I have great pleasure in saying the fleet would have been of great service, and he begins to turn his thoughts towards this country. I think he will be here the first part of April. I am prevented for the present from going home, by our inferiority; and when the summer gets forward, I shall have that desire, but we cannot leave our duty. I do not see one of us can say what to-morrow may produce. If it would produce an opportunity for me to pay my personal respects to you, I should be much pleased. Josiah joins me in best respects to Lady Hamilton, and I beg you to believe that I ever conceive myself. Your most obliged,

HORATIO NELSON.

Right Hon. Sir William Hamilton, K.B. &c. &c. &c. but after touching at Port Fernu in Ellis, the *Agamemnon* returned in a week to Fiumara.

[To be continued.]

Reviews of Books.

THE DEVONSHIRE "HAMLETS."

THE literary history of Shakespeare's dramas is extremely uncertain and obscure. The very form in which they have reached us is often imperfect, and very often corrupt, and scarcely a trace remains to show when or how these immortal productions were first issued from their authors' hands. Not a scrap of original manuscript is known to exist; not a tradition is preserved as to Shakespeare's mode of composition, and critics are divided as to the chronology of his plays. The editors (or rather collectors) to whom we are indebted for the famous folio of 1623, profess to have had original "papers" to print from, in which they "received verse a line"; but they evidently used very extensively the "divers stolen and surreptitious copies,"

* Hamlet: by William Shakespeare, (1616); Hamlet, by William Shakespeare, 1604; being early editions of the First and Second Editions of the play of Hamlet, the very first editions of the possession of the Duke of Devonshire, the two first being printed on opposite pages, and as arranged that the parallel passages face each other; with a bibliography printed by Messrs. Tinsley.

Reviews, and has republished them in a handsome volume, with this euphonious but inaccurate designation. The subjects treated upon are as various as the contents of a play-bill, or a page in the catalogue of a circulating library. There are, for example, "Klondike," "Klondike," "Food and its Advertisements," "The Zoological Gardens," "Rats," "Lunatic Asylums," "The London Commisariat," "Woodwick Arsenal," "Shipwrecks," "Lodging, Food, and Dress of Soldiers," "The Electric Telegraph," "Fire and Fire Insurance," "The Police and the Thieves," and "Mortality in Trades and Professions."

With the merits of most, if not all, of these various essays, the general reading public, it is to be supposed, had previously been pretty well acquainted; and no one, we venture to say, until the author had thought of his title-page had conceived he was studying a treatise illustrative of one of the curious phases of civilization. To give a book something like a completeness in form, Dr. Wynter should have favoured the world with what in his idea is civilization itself; what are the circumstances that denote civilization; what is to be considered as civilization in England, as contradistinguished from civilization in France, in Germany, in Russia, in China, and in Japan. After this, all these various forms of civilization could have been advantageously contrasted with that condition of circumstances which was deemed to be civilization amongst the Assyrians, Hebrews, Greeks, and Romans. With the author's abilities and learning, he might have favoured the world with a most interesting essay upon such a theme; and he might well have concluded it with pointing to the quarterly periodicals that published his own contributions as specimens of the state of civilization in England and in Great Britain. There is, in point of fact, nothing in the literature of Greece or Rome like those publications, which appear with the regularity of the seasons, and that bring forth in such number such rich products of human intellect, wisdom, skill, and science. The *Quarterly* and *Edinburgh Reviews* are in themselves "Chronicles of Civilization," and should not be either in justice, or in gratitude, have been omitted by a contributor to both, if the contents of his book were in accordance with its title-page.

But though we find fault with the title of the book, we have no remark to make in respect to the various articles now republished, except it be in their commendation. Those who have seen before will gladly renew an acquaintance with them; whilst those who have not had that advantage, will be astonished at the vast collection of strange facts and shrewd observations that are packed closely together within the pages of a single volume. Where all are good it is difficult to make a selection; but still we are disposed to affirm that the article calculated to produce the strongest impression upon the public mind is the last,—"Mortality in Trades and Professions," and that which will continue to be the most universally attractive is the first,—"Advertisements." In this article, the author, whose notions of civilization are confined exclusively to England, traces the first appearance of advertisements of newspapers, when journals were struggling into existence, up to their full development in every guise and form that fancy can suggest or cupidity dictate, in the universal advertising columns of *The Times*. Doctor Wynter dwells upon every description of strange advertisements but one, and that one, in itself, the most characteristic of the high civilization to which this country has arrived. The advertisement which is taken up is that of a personable forerunner, even by the mode in which he refers to it, his conviction that one of the unerring tests of the purest state of civilization is an extreme tenderness of the domestic affections,—the love not merely of parent for child, and the child for its parents, but still more, the devoted attachment of sisters for brothers, and even the attachment of brothers to their sisters. In the same column of *The Times*, from which he has been making many comical extracts, exhibiting in their own words the absurdities of crackbrained lovers and pining spinsters, are to be found "notices" which must have made many a father shudder with fear, and that before now has shown how a mother, wiser, or a cousin were agitated by the misconduct or misfortunes of some beloved member of the family. Why did he not give specimens of these—many of them so pathetic and so heart-breaking?

We have seen somewhere a very pretty thought attributed to one of the ancient philosophers, viz., that the virtuous and the wicked members of a family never absolutely abandon the household; that the virtuous, when dead, were its tutelary deities, or *Lares*, and the wicked its malignant demons—*Lemures*. The domestic affections in England are not to be typified by idols of stone, or images of wood; for neither accident, nor calamity, nor even crime, can break, destroy, or obliterate them. They live through all ills, and survive all disasters; and the permanent proof that they do so is daily to be found in those notices which appear with such regularity in a peculiar feature of society in England—a demonstration that its heart is sound,—that neither wealth nor poverty have, in the slightest degree, hardened or corrupted it. When such a topic lay in the author's way he should, we think, have dwelt upon it, illustrated it by examples, pointed it out as being what it really is, a characteristic of English civilization, and then have sketched over it for the purpose of unravelling dwelling anonymous effusions about an obscure "Flo," or a comended "Ceneretola." The omission is not, perhaps, after all, the fault of the author. The appeals from dead hearts to fugitive relatives may have been transcribed by the author, and yet "cut out" by a relentless editor for the purpose of unbecomingly the original article to the space of "the review" in which it was published.

In republishing his "Essays" in a collected form, Doctor Wynter has imitated a good example set by others; but considering their character, and the many small incidents referred to in each of them, we regret he did not, for the purpose of making his work as useful as it is agreeable, give to his reader the benefit of an index. We hope it will reach a second edition; and should it do so, we trust that the suggestion now given may be acted upon. For such a book an index is as indispensable as for an edition of *Adrian Gellius*, *Photius*, *Atthæus*, *Pausanias*, or *Allesandrin*.

ROBERT OWEN, THE SOCIALIST.*

The life of any really eminent man must contain, if it be fairly and properly written, much matter for instruction and reflection. The name of Robert Owen, the socialist, of worldwide notoriety, heard and spoken by thou-

sands who have never known what he really did or what he tried to do and failed. Whatever may be thought of his Utopian plans for securing the universal happiness of mankind by those familiar with them,—what few may have heard of him,—yet the many to-day ignorant of his views and wishes,—neither mature nor sensual as ever been able to smother the strict integrity, morality, and charity of Robert Owen's private character, prolonged even as his long and unconsciously laborious life was,—far beyond the usual term of tenure.

The close of one of two summer seasons has not faded away from his simple grave in his native Montgomeryshire, nor the third winter's snow whitened the Norman ruins of St. Mary's, Newtown, since his friends listened to the peaceful voice of the parish clergyman solemnly committing, as "dust to dust," the earthly case of at least a kind, generous, and earnest soul. We think of Robert Owen only as the attempting founder of an irreligious sect; whose writings have, however, the effect of stirring up, or for an objectionable advocacy of communism, of co-habitation, and of property. Could anything be farther, whatever his mistakes and failings, from his real views and wishes? But in truth the ostensible good work of his life was done in the first half of it, the latter portion being an unbroken succession of failures in attempting to carry out philanthropic but unreal projects.

In our daily life we have around us blessings and good results sprung from Robert Owen's early labours, of which many glory but few know the cause. So effectually did the visionary theories of his later days, in their failure, obscure for the future as a moral philosophy, the real and lasting effects of his factory system, that the remembrance of his finest deeds was buried, as it were, under their stupendous ruins long before he himself had departed in peace from this earthly scene, in which, after all, he had been a great and efficient actor. If we revert to the early efforts of Robert Owen, we find him first a manufacturer, and secondly a teacher of the poor, an education, a liberal supporter of Filton in that precarious career which was crowned at last by the happy application of science to navigation. The Prussian national education scheme and the ameliorated paper system of Holland are standing memorials of the good effects of Owen's early publications; which, as infant-schools in our own land are the very foundations of one of his best labours. And these are not all the good results of the efforts of a man who elevated himself from a humble state, spent large sums in good causes, while still amassing greater wealth, and who, receiving but a portion to keep him from want, diminished his fortune in benevolent but visionary schemes for the betterment of the social happiness and welfare of his race. Even from his failings we are gainers of wisdom.

Robert Owen was the youngest but one of the seven children of the Postmaster of Newtown. His mother's parents were respectable farmers in the neighbourhood; and at five years old he was sent to the village school, in which, at seven, he was made a monitor, employing his leisure time in reading the books afforded him by the libraries of the clergyman, the doctor, and the lawyer. At nine he was engaged to serve in a shop; but the promptings of his natural ambition led him to seek in London a wider sphere, and thus, at ten, he was consigned to the care of his brother, a saddler in Holborn. Six years later he was in the ranks of the army, and the son of an honest and kindhearted draper, who had started in life with half a crown, as a hawker. At fourteen, kindly treated and happy as he had been, at Stamford, by the McGuffays, he was again bent on seeking a wider field, and entered a shop on the borough side of London-bridge, which is reported to have been the establishment on which he commenced his career as a ready money man. His next engagement was in Manchester, and to the extent we find Owen possessed of a happy disposition, making friends everywhere, and always maintaining himself by his own exertions. This was the great epoch of the cotton trade, from which so many of the enterprising men of our own date the foundation of their massive fortunes they subsequently accumulated. A Unitarian, whose acquaintance Owen had made, proposed setting up a factory for making the new machinery, but he had no money; so Owen, borrowing a hundred pounds from his London brother, left his situation, and commenced with his partner to manufacture "mules" for cotton spinning. His partner appears to have been unskilled in the management of the mechanical department, and Owen shortly accepted the offer of a capitalist to buy him out. Owen was now offered a partnership by his old master, McGuffay; but his aspirations looked higher than to the life of a line-draper in a country town, and he preferred to take upon himself the anxieties of a factory in Ancoats-lane, Manchester. Letting off the greater part of the machinery he commenced his business with three or four partners, received in part payment from Jones, and he soon found himself earning £6 a week. At twenty Owen abandoned this fair prospect, to undertake the management, at a salary of £300 a year, of the large mill of Mr. Drankwater, in process of being fitted with machinery for the finer sorts of spinning, and amidst the efforts of five hundred workmen, and with a large staff of management, which included what Owen got this enormous appointment were singular, and such as to display the characteristic determination of his character. Mr. George Lee, the scientific and able superintendent of the factory, had been cut out away by the offer of a partnership, and had left Mr. Drankwater, who was ignorant of the business, in a very awkward position. As soon as Owen heard of the advertisement he put on his hat, and without further reflection applied for the situation.

The reader will have seen how limited was the new manager's experience, and will not wonder that gossip predicted failure and disappointment; but the result proved that Mr. Drankwater had suggested good fortune; the situation which he had been the ruin of an unskilled man was the turning-point of advancement to Owen. His experience in goods of fine quality, which he had acquired at McGuffay's, now stood him in good stead, as the article he was required to produce was yarn of unusual fineness.

So satisfactory were the results of the boy-animal's exertions, that his salary was liberally increased, and at twenty-two he had entered into partnership with his employer and his two sons. Owen, it may be conceived, did not relax in his efforts under these arrangements, and he continued to produce yarn finer in quality, which sold for higher and higher prices. It was at this time he formed the acquaintance of Dalton, Winstanley, Crompton, and others of the Birmingham school, who were turning up when he became entitled to a fourth share of the profits. Mr. Drankwater, at the solicitation of a wealthy manufacturer, who had proposed a matrimonial

* Robert Owen and his Social Philosophy. By Wm. Lucas Sargant. London: Smith, Elder, & Co., 1860.

alliance with his daughter, desired to annul the agreement, offering Owen any salary he chose to name. Owen at once thrust the agreement into the fire, remaining, however, until a substitute was obtained. The result to Mr. Drinkwater was disastrous; for the intended son-in-law proved less wealthy than was supposed; the match was broken off; the new names were not as Owen, and so the business fell into confusion, and the factory was sold.

It would have been natural enough if Owen had indulged some resentment, but he acted in a manner the reverse of this. He felt that Mr. Drinkwater had behaved towards him with kindness and liberality, that a want of firmness was the only fault he had committed, and he constructed his new factory for making yarns of a sort quite different from those fine ones by which his reputation had been established, thus writing "his gratitude in marble and his repentance in sand."

Among other duties which now devolved upon Owen was that of visiting his customers in the north of England; and soon after the new mills were at work he extended one of his journeys as far as Scotland, when he had an accidental opportunity of visiting New Lanark, a visit which ended in Owen's marriage with Miss Dale, and the establishment of that "New Lanark Factory," which had a worldwide fame, through the memorable result of Owen's management and benevolence. It was in 1779, when Owen was about twenty-eight, that this "New Lanark Textile Company" was formed. Owen's property at this period was far less than might have been supposed to have resulted to a man of so much success, but it must be remembered that he had already aided not only Faison, but both Bell and Lancaster, with a third of his entire savings—a noble earnest of his future philanthropic sacrifices.

We reluctantly omit the statement given as to the rise and progress of New Lanark, and Robert Owen's successful career there; and come to the time when Lancaster encouraged him to attempt the inauguration of a better system of education in Scotland, visited Glasgow, and Owen presided at the public dinner at which he was entertained. It was here Owen first gave vent, in a moderate and acceptable form, to his doctrine that "Man is the creature of circumstances; and that it depends on our social arrangements, whether children who are growing up shall be the blessings or the scourges of the world." How Owen subsequently unfortunately exaggerated this doctrine, and how, falling into other extravagant and imprudent notions, he wasted the remainder of his life, is the one theme of the remaining portion of his history. Although he made friends in high rank, and even amongst royalty,—although he spent large fortunes in attempting to practically realize his generous and gigantic schemes for the moral improvement of his race,—although he spared no pains or labour,—the history of his life from this date is the record of one long succession of failures. The basis of his visions was unreal, and the fabrics he reared fell one after the other, as everything based on unreality will fall sooner or later.

Owen's life is worthy of being read, if only for the sad instructions one gets from his failures. Owen's life should be read, for it is the record of an existence at once an example and a warning. It is the record of an unselfish man, labouring with every energy to do good; and if we view his failings justly we shall pity the man, without regretting that his schemes should have been tried and found wanting. The goal that has sprung from his wisest and successful deeds should be remembered in his native land, which, after all, has no reason to be ashamed of, and many reasons for being proud of, Robert Owen.

THE KNIGHT OF THE SWAN.*

The legend of the Knight of the Swan is probably more universally known than any other. The Brothers Grimm alone have mentioned nine versions; it exists in fifty different languages; six or seven princely houses lay claim to a descent from him. The celebrated Duke of Burgundy, beheaded in the Tower in 1521, declared himself to be a descendant of the Chevalier Helyas, and ordered a translation of his history to be made from Robert Goyland, under the title of "The History of Helyas, Knight of the Swans," which was printed by William Goyland. Mr. Thomas has reproduced this version in his "Collection of Early Prose Romances," lately republished.

This poem, in its various modifications, consists generally of two distinct parts: the adventures of the Knight of the Swan, and the narration of the first crusade, ending in the taking of Jerusalem by Godfrey of Bouillon. As it usually the case in all traditional subjects of this kind, the poetical and popular legend serves as the introduction to the narrative, and the hero is first invested with a mythical or fairy-like origin, in order to satisfy the imagination of the people.

The poetical fable of the Knight of the Swan has been made use of and worked upon by twenty different poets. Let us enter into a chronological inquiry upon the various works in which mention has been made of it.

William of Tyre, in his History of the Crusades, is the first from whom we date this legend. He flourished between 1180 and 1190. In the beginning of the following century, Helinand, a native of Flanders, wrote a universal chronicle, in which this fable is mentioned, and Vincent of Beauvais, in his *"Speculum Historiale,"* has quoted the passage. All this is, of course, Latin. It is not until the end of the thirteenth century that we find the French *"Chanson de geste,"* on the Knight of the Swan; but several years previously the Germans possessed three or four poems on a similar legend. The "Schwan-Ritter" of Conrad of Würzburg, the "Lohengrin," by Wilfrid von Eschenbach, the "Percival," and the "Titurel," in which this knight always occupies a prominent place.

Jacques van Maerlant, who flourished in Flanders about 1275, mentions him also in his poems written in Flemish. It was at that period that the legend became most extensively popular. Not only did poets in three different countries and languages sing of the fabulous origin of Godfrey of Bouillon, but even historical documents were consecrated to the memory of the Knight of the Swan. Among other the chronicle of the Abbey of Brege, and the history of Lambert d'Andres.

In the fourteenth century they began to translate this fable into prose from the poem of the *Trois-Clans*. In the next century the Danish popular works

on Charlemagne were circulated throughout Europe, and among them we find inserted the Saga of the Knight of the Swan. It is equally known in Iceland, under the name of Helis, son of Julius Cesar.

Caston, who received a part of his literary education in Belgium, carried this fable to England, and Winkley de Winton propagated it after him. Anon, in his work on the "History of Printing," mentions a copy, in quarto, on parchment, but this has never yet been traced.

In the sixteenth century we find many versions of the "Saga of the Swan" in at least ten different languages.

Such is the chain of tradition from the twelfth to the sixteenth century, of which William of Tyre forms inconspicuously the first link. But the fable was not invented by him; for he says that it was already popular before his time. *Liect id fuisse plurimum narranto.* With whom, then, did it originate? From what source did this legend spring? The opinions of learned writers are much divided on this point. The German Goerres traces some veinges as far back as Tacitus, where it is made of a tradition relating to a voyage of Ulysses on the borders of the Rhine. More attributes it to the French. Leroux de Lincy, in his *"Livre des Legendes,"* pretends that it is borrowed from the East, and from the "Thousand and One-Nights."

When we find in such a saga as the "Knight of the Swan" characteristics which are also to be found in Latin, German, French, Spanish, and Flemish popular legends, it is needless to assume that this similitude is the result of mere servile imitation—the traditions of one people copied from another; but it shows the original working of the popular mind on a stock of traditional fables of previous nations, around the nucleus of a tradition relating to each its several time and place. We shall say, with Mr. Dureau, that the story was primeval among many tribes and races, and that it only "crystallized itself round a great name by that process of attraction which invariably leads a grateful people to throw such mystic wreaths, such garlands of poetical darts of previous nations around the hero of its predecessor."

In the publication of the Royal Academy of Brussels, Baron de Reichenberg has thrown more light on this subject than any of his hardworking in the same field, and we consider that he has almost exhausted it.

THE WEATHER DURING THE MONTH OF AUGUST.

(By JAMES GLASSIER, F.R.S., Royal Observatory, Greenwich.)

The weather in the month of August has been of the same general character as that which has been prevalent all this year. The pressure of the atmosphere has been variable, and in August for the most part small; the sky has been far more than usually covered with cloud at this season of the year, with remarkably little sunshine. The temperature has been always low, and particularly during the day; the direction of the wind has been chiefly from the S.W., and rain has fallen frequently.

The following table shows the more important meteorological elements in the month of August. The numbers in the first column show the mean daily reading of the barometer, or pressure of the atmosphere, as far as they are compared with the reading, 29.90 inches, which is the average for the month, the error is less than the average amount of air which has passed over us will be readily seen.

The numbers in the next column show the highest daily temperature of the air; the average value of this element in August is 73°. By comparing this value with those in the table, the remarkable deficiency of high day temperature in August is seen.

The numbers in the next column show the lowest night temperature, whose average in August is 53°; and if that value be compared with those in the table, it will be seen that the nights were, for the most part, of too low temperature; the observations below their averages were small compared to the deficiency of day temperature.

The numbers under the head of Mean Temperature show the value of this element every day, and if compared with 61½°, it will be seen at once that there is no instance in August till the 29th day, in which the temperature has reached that due to the season, and that the loss of temperature thus experienced, as shown in the numbers in the next column, has been large and continuous.

Meteorological Table for August, 1860.

Complete Instructions for the Drawing-Room Model 3s. 6d.
Bodemann's Complete Instructions, intended for those who wish to learn the French Method, containing a full explanation of the use of the different Stops, &c. 6s. 6d.
And a variety of Harmonium Music by well-known Composers.

WITH THE PATENT PERCUSSION, OR PIANOFORTE HAMMER ACTION.

The invention of the PATENT PERCUSSION ACTION has entirely removed the sole objection to these admired Instruments—want of variety of articulation when used for Pianoforte Music. It consists of a set of Hammers which strike the Vibrators at the same moment that the air is admitted, thus facilitating the execution of the most brilliant and rapid passages, and also producing a fuller and very superior quality of tone, and imparting to this instrument all the advantages of the Pianoforte.

| | | |
|---|--------|-------------|
| No. 14.—In Rosewood Case, Nine Stops, Two Rows of Vibrators | | 20 Guineas. |
| No. 15.—In Rosewood Case, Thirteen Stops, Two complete Rows of Vibrators | | 29 |

Warehouses—9, Great St. Helen's Churchyard, Bishopsgate-street.

DRESSING CASES, DRESSING BAGS, and higher finished appliances for presentation, variety, ultra-handled table cutlery, every requisite for the toilet, and work-tables—MURPHY & BAZIN, 111, Regent-street, & Leadenhall-street; and Crystal Palace, Hyde Park.

MECHI & BAZIN'S ESTABLISHMENTS are replete with a large and well-selected assortment of useful and elegant articles, adapted for presentation, consisting of dressing-cases, travelling dressing-bags, modern-made writing-tables, and other articles, which, by their production, chambers and chambers, card-cases, portfolios, and other articles, are well known in all parts of the world. Particular mention is made of their pens, nibs, and writing-cases, in Russia and Morocco leather, in twenty different forms and sizes, fitted with real Brandy and Chalk, also others of a cheaper description. Portable writing and dressing cases, in "rose" wood, mahogany, and other woods, leather booklets, sporting knives, wine and spirit flasks, &c.

111, REGENT STREET, W. & LEADENHALL STREET, E.C., LONDON; and CRYSTAL PALACE, HYDE PARK.

NOW READY, PARTS I. TO X.

THE TURNER GALLERY:

A SERIES OF SIXTY ENGRAVINGS

FROM

THE WORKS OF THE LATE J. M. W. TURNER, R.A.

WITH DESCRIPTIVE TEXT BY RALPH NICHOLSON WORNUM,

KEEPER AND SECRETARY, NATIONAL GALLERY.

THE TURNER GALLERY IS ISSUED IN TWO FORMS:—

1. ARTIST'S PROOFS, half grand-eagle size—each plate printed on India paper, with the greatest care. Three Plates form a Part, which, with the accompanying text, is sent out in a stout Portfolio. The price is £2. 2s. the Part.

2. LETTERED PAPERS, quarto grand-eagle. Three Plates are also printed on India paper. Three Plates form a Part, which, with the accompanying text, is enclosed in a neat ornamental cover. The price is 10s. per Part.

The number printed of each size is strictly limited to the actual Subscribers. The price of the ARTIST'S PROOFS is not permitted to exceed 250. The whole to be complete in Twenty Parts.

London: JAMES S. VIRTUE, 294, City-road, and Ivy-lane.

PHOTOGRAPHS BY FRANCIS FRITH.**EGYPT AND PALESTINE PHOTOGRAPHED.**

A SERIES OF SEVENTY-FIVE BRILLIANT PICTURES.

With Letter-press Descriptions by FRANCIS FRITH.

The Work is complete in Twenty-five Parts, each containing Three Photographic Views, also 9 in. by 7 in. Price 10s. per Part.

Also in Two Vols., half-morocco, £14.

CAIRO, SINAI, JERUSALEM, AND THE PYRAMIDS.

A SERIES OF SIXTY PHOTOGRAPHIC VIEWS.

With Descriptions by Mrs. POOLE and REGINALD STUART POOLE.

To be completed in Twenty Parts, each containing Three First-Class Photographs, size about 9 in. by 7 in., with accompanying Letter-press, printed on fine Drawing Paper, size 15 in. by 13 in. Price 10s. each Part.

EGYPT, SINAI, AND JERUSALEM.

A SERIES OF TWENTY LARGE PHOTOGRAPHIC VIEWS.

Mounted on Imperial Drawing Paper, size 30 in. by 22 in., with Descriptions by Mrs. POOLE and REGINALD STUART POOLE.

Complete in Ten Parts, each containing Two Views. Price £1. 1s. each Part.

London: JAMES S. VIRTUE, 294, City-road, and Ivy-lane.

THE BRITISH INTERESTS IN SPAIN.

London: EYREMAN WILSON, Royal Exchange.

SUGGESTIONS FOR THE FORMATION OF A VOLUNTEER GUARD FOR GREAT BRITAIN, in connection with a National Benefit Society, under the protection of the State. By A. BROWNE, Esq., commanding London Rifle Brigade.

"I think it impossible for any man to cast his eye over the face of Europe and see what is passing, without feeling that the future is not free from danger. We may not be able to tell where that danger may burst, but the clouds are charged, and no one can foresee the time of the coming tempest." *Speech of the Premier of England, House of Commons, Tuesday, July 25, 1860.*

London: EYREMAN WILSON, Royal Exchange.

ONCE A WEEK.

Part XIV. Price 1s.

THE ENGLISH CYCLOPEDIA OF ARTS AND SCIENCES.

Part XX. Price 2s. 6d.

CHARLES KNIGHT'S POPULAR HISTORY OF ENGLAND.

BRANDST & EYRE, 11, Bouverie-street, Fleet-street, E.C.

Just published, price 1s.; free by post for 14 stamps.

THE HAND-BOOK TO THE TEETH, BEAUTY, AND REFINEMENT.

By EDWARD DAVENPORT, Surgeon, Dental, 66, WEST STRAND, LONDON.

CHAPTER I.—Contains a Description and Analysis of Beauty and its Modifications.

CHAPTER II.—A Treatise on the Teeth; showing how these organs may be preserved from decay; an important discovery for Artificial Teeth; and a new agent for rendering natural ones sound.

CHAPTER III.—The Complexion; Beauty in the Human Face, and how it may be attained.

CHAPTER IV.—Cosmetics; showing how many a beautiful complexion has been destroyed.

CHAPTER V.—THE FLESH DE LAQUE; one of the greatest discoveries in the history of the skin; how it may be made white, soft, and delicate in an incredibly short space of time, &c., &c.

The work is illustrated with numerous cuts.

LONDON: HOLMES & CO., 147, Fleet-street; and at all Bookellers.

The Author continues to be consulted at his Dental Establishment, daily from 10 till 6. 488, WEST STRAND, LONDON, over the Electric Typing Office.

A MANUAL OF ILLUMINATION. By I. W. BARNES, R.A. With Appendix by T. Goodwin, R.A., and Twelve Lithographic Illustrations. Price 1s. WILKES & NEWTON, 39, Bathurst-place, London, W.1., and all Booksellers and Artists' Coloursmen.

DARNELL'S COPY-BOOKS.

A SHORT AND CERTAIN ROAD TO A GOOD HANDWRITING; being a Series of Copy-books, gradually advancing from the simple stroke to a superior small hand. Large post, 100 pages, 1d. each. (Including 10 numbers (the three last consisting of Ladies' Angular Writing), 3d. each. Post, creans over fourth cover, 4d.

"For teaching writing, I would recommend the use of Darnell's Copy-books; I have noticed a marked improvement wherever they have been used."—*Report of Mr. May (N. S. Inspector of Schools) to the Worcester Education Board of 1859.*

A Specimen Number of either Series sent post free on receipt of the amount in stamps.

DARNELL'S GRAMMAR made INTELLIGIBLE to CHILDREN. 1s. cloth.

DARNELL'S SHORT AND CERTAIN ROAD TO READING. 6d. cloth.

DARNELL'S ARITHMETIC made INTELLIGIBLE. 1s. 6d. cloth.

A KEY to ditto. Price 1s.

GUTHRIE & FARRAR, the Corner of St. Paul's Church-yard.

CARVING.—WALTON HALL, WARWICK.

SHIRKSHIRE. THE BUILDERS OF THIS DAY, have at, attended, Mr. Gordon. First View and Plan of Walton Hall, Warwickshire.—Stonemasonry for Carving—Sculpture and Carving.—The Art Union—Architectural—Construction, Victoria Opera House—Food Supplies—Victoria Cemetery—Ventilation of Warehouses—Architectural Examinations—Folk-Office—Recent Papers—Ventilation—School building—New Church—building—New—Provisional—New—Competition, &c.—Painting, 1, York-street, Covent Garden; and all Book-sellers.

THE ART-JOURNAL FOR SEPTEMBER.

The price 2s. 6d. contains a picture from the picture of "The Children of George III." by Cooper, in the Royal Collection, and of "The Burial of White," by Turner, in the National Gallery. The Sculpture is "Preparing for the Bath," after J. Gibson, R.A. The literary contributions include:—

Rome and her Works of Art. Part IX. Redcliffe—Su. & J. Duffour. Illustrated.

The Hudson. Part VII. By B. J. Lonsing. Illustrated. South Kensington Museum.

The Companies (Gulls) by Railway in South Wales. Part IX. By Mr. A. Mrs. S. C. Hall. Illustrated.

The Larkspur Monument. Illustrated. Sir T. Lawrence. By the late E. V. Biddings, Esq., &c.

VIRTUE & CO., 294, PATERNOSTER-ROW.

THE TOURIST IN SCOTLAND.

Now publishing, Weekly, a Series of Papers, with Illustrations, on Scottish Landscapes and Scenery, in the LITHOGRAPHE HOFER. One Penny each number.

Over the Border, No. 447, July 19.

Dart to Edinburgh, No. 448, July 20.

London: 10, PATERNOSTER-ROW, and may be ordered through any Bookseller.

THE NEWS: Bankers' Journal, Insurance, Mining, Railway, and Joint-Stock Company's Repository.

A Journal specially identified with the educated, the wealthy, and the "well-to-do" sections of society. "THE NEWS OF JERSEY," on all the exciting topics of the day, are produced a professional vocation. They are read by every educated man in the country, and appear regularly every week in "THE NEWS."

From the *Critic*, Feb. 25th, 1860.

"THE LANCET INSURANCE JOURNAL. 'THE NEWS' has recently increased its size. Nothing can be more satisfactory than the reason given for the change. It will not, says the announcement in the editorial columns, have escaped the attention of our friends that, for some months, very frequently more than one-half of the entire journal has been occupied with advertisements. These have been so much upon the space which is due to literary and original contributions. Hence the enhancement, in connection with which 'THE NEWS' will add to its Insurance matter, Mining, Banking, Railway, and General Commercial information."

Publishing Office of "THE NEWS" (price 4d.), 5, BRYANSTON-STREET, STRAND, W.C.

THE VOLUNTEER RIFLEMAN'S MAGAZINE.

Just Published, for September, The Volunteer Magazine, or Contents of No. 2.

The Volunteer Movement of all the Rifle Corps in England.

Extraordinary Adventure of a Rifleman with a Lover in the Temple.

The Volunteer's Answer to the Emperor's Letter. Colonel Mordaunt's Tale. Review in Morning Post. Paris and Shan Fight at the Month.

Price 6d. Order of all Booksellers.

H. BRANT, 10, Ave Marie-lane.

LONDON:—Printed by WILLIAM LEITCH, in the Printing Office of Cox & Weyl, 71 & 73, Great Queen-street, Lincoln's-inn Fields, in the Parish of St. Giles-in-the-Fields; and published by the said WILLIAM LEITCH, at the Office of "THE LONDON REVIEW," 111, Brookman-street, Strand, in the Parish of St. Paul, Covent Garden, 10th in the County of Middlesex.—ESTABLISHED, SEPTEMBER 1, 1860.

THE LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 10.]

SATURDAY, SEPTEMBER 8, 1860.

[PRICE 3d.]

COMING EVENTS CAST THEIR SHADOWS BEFORE.

THE fate of Europe, at this most critical juncture, is hanging upon the fortunes of a single man. Even Napoleon III., the would-be arbiter of her destiny, is compelled to fold his hands, and patiently watch the progress of GARIBOLDI. The Italian Liberator himself, absorbed in the great work which has hitherto prospered so marvelously under his direction, in all probability, has scarcely appreciated the extent of his influence upon every country in Europe. Devoted to the cause of Italian freedom, pursuing with single-minded earnestness the noble purpose with which a lofty ambition has inspired him, he has not had time to consider the varied effects which success or failure may produce upon the Government and people of almost every country upon the Continent. To every foreign capital messages flash daily from the Peninsula; and we, who are calmly looking on, can best appreciate their significance by observing their effects upon the public and official mind. The foundations of the great European edifice are being undermined by the stout arm whose blows are now echoing throughout the whole civilized world, and in the crash which must ensue, the rottenest portions of the structure will be destroyed. We who dwell in a substantially-built outhouse may contemplate with comparative security the falling timbers; our only care will be to see that out of them no enterprising plunderer shall raise a tower which may imperil the safety of our own isolated abode. To ensure this it may become necessary for us to assist in propping up the most substantial portion of the neighbouring edifice. At the risk of being considered premature, let us glance behind the curtain, at the scene which the next act in the great drama will probably display to the gaze of the great European audience.

The first scene of the first act was Sicily; the second, Naples. The curtain falls before Rome. Then will come an interlude, during which the diplomatic orchestra, under the able and skilful direction of a celebrated French conductor, will execute some elaborate and complicated pieces of its own composition. The graceful waving of his magic wand will draw forth just the tones he requires from the bass fiddle of Mr. Bull, who is generally ready to play innocently into his hands; nor will the other artists be allowed to execute flourishes of their own. Then the little bell will tinkle, and the curtain rise, and we shall see, not the city upon seven hills, as we expected, but the Bridge of the Sea, waiting for her deliverer. The flight of the Pope will be reserved for the last scene, as being not only most effective, but more convenient for the development of the plot. For it is evident that if the Italian patriot makes an assault upon His Holiness at once, the protector of the head of the Church, in the person of the French Emperor, would be compelled to defend him, and an exchange of hard knocks between Louis Napoleon and Garibaldi would create an effect, and ruin the whole uniformity of the play. It is probable, therefore, that the first scene of the second act will be laid at Venice, and that, in the universal confusion which will be created during this part of the performance, which will be very noisy, menus will be taken to withdraw the French troops from Rome, under some plausible pretext, and while the attention of the spectators is riveted upon the more exciting episodes in the piece. Thus the unpleasant dilemma into which Garibaldi would force the Emperor, by advancing directly on Rome, would be avoided.

Meantime the attack on Venice is the spark which will blow up the magazine. Garibaldi, unassisted by a foreign ally, can hardly hope to drive the Austrians out of the Quadrilateral. His army,

admirably adapted for guerilla warfare, is scarcely in a condition to sit down before Mantua, and undertake a protracted siege. It is quite certain, on the other hand, that the Austrians, when attacked, will exchange defensive for offensive operations. It has even been supposed that it is the policy of the Austrian Government to strike the first blow; this, we have the best information for asserting, is not the case; but they will not rest satisfied with offering a successful resistance. If they are so unwise as to push the war into the enemy's camp, French interference becomes inevitable. The great results of the North Italian war must be made good, and the Emperor will feel bound to see that the objects which it has cost France so much blood and treasure to achieve are not defeated. The intervention of France in favour of Garibaldi will be the signal for the mobilization of the Prussian army, and a declaration of war with France, in pursuance of the engagement entered into between the Prince Regent and the Austrian Emperor at Toplitz, by which the former pledged himself to interfere in favour of the latter, should any portion of the Austrian territories be again attacked by France. The march of the Prussian legions on the Rhine will remove the interest of the plot from Venice to the provinces of the Rhine; while Garibaldi is holding his own at Venice, the struggle will be waging fiercely on the western frontier of Prussia; and the attention of Austria will be divided between the war in Italy and that in which, as a member of the Germanic Confederation, she will have to take part on the Rhine. While the states of Germany, stimulated by the recollection of their last struggle with France, and its disastrous consequences, are thus straining every nerve to regain the prestige they lost upon that occasion, and to preserve the integrity of their frontier, it is not to be supposed that outlying states, with old-standing grievances and traditional animosities, are to remain passive spectators, or that the French Emperor will fail to awaken every sentiment of jealousy or hatred which now lies dormant. Thus an opportunity will be afforded to Denmark of settling the long-pending Schleswig Holstein question, which, although to some extent arranged after the late war, from which she emerged victorious, still presents points of difficulty, which would in all probability, on the death of the present king, embroil her in hostilities with Prussia.

But Denmark and Italy would not be the only allies upon which France could count in the event of her engaging in a war with Germany. With Austria fully occupied on two sides, Hungary would be in active revolt. It is well known that during the late war every success of the allied French and Italian arms was hailed throughout Hungary as an additional step gained towards their deliverance; that the gloom which the peace of Villafranca cast over the patriotic spirits of Italy was not more profound than that which exercised its depressing influence upon the Hungarian national party; that since that peace was concluded the revolutionary spirit in Hungary has been increasing; that the concessions now promised by the Austrian Government fail to satisfy them, and that nothing short of an entire compliance with all their demands will prevent a revolution, when the approaching European conflict presents a favourable moment. If Hungary receives the modified constitution of 1848 before Garibaldi attacks Venice, Austria may feel no uneasiness for the eastern portion of her empire; but if the Cabinet at Vienna are so benighted as to refuse this concession, the attack on Venice will be the signal of a national rising throughout Hungary. It is impossible to suppose that Russia can regard this event with indifference. She will be

divided between fears for some of her Slavonic provinces and the intense animosity she feels towards Austria for the selfish policy she displayed during the late Crimean war, when her obligations to Russia for the intervention which crushed Hungary in 1848 failed to enlist her in the cause of her benefactor; it is, indeed, whispered that the Hungarian liberal party have negotiated with the Russian Government upon this subject, through the medium of French diplomacy, and that the engagement which was entered into at St. Petersburg by Count de Morny, and which, like that of Montebello, does not affect to be a treaty, comprises a stipulation for Russian non-intervention in the event of a Hungarian rising.

It is very evident that if Russia can preserve tranquillity in her own provinces she has everything to gain from such an event. The Austrian empire is at present the great barrier to Russian aggression on Turkey. The dismemberment of one empire would be the first step towards the dismemberment of the other, and Russia might contemplate with satisfaction the absorption of a considerable share of both. Hungary left to itself, possibly weakened by internal dissensions arising between the Kossuth and the aristocratic parties, with many internal discordant elements to reconcile, would fall an easy prey to Russia, whose intrigues in the trans-Danubian-Slavonic provinces would now fructify. For it is not to be imagined that the Christians in Turkey would look calmly on at Italy and Hungary in revolt, and their fellow Christians in Syria enjoying French protection while they still submitted to Ottoman rule. A revolution in Turkey is as certain as one in Hungary, and it will be carried on under the combined auspices of the French and Russian Governments, but more especially the latter, as the former will for the present be fully engaged elsewhere. Perhaps the prospect of the annexation of a considerable part of Turkey to Russia, and of the Italian provinces to France, to be followed by Belgium, may induce us to take part in the pleasant little complication, the possibility of which we have thus shadowed forth.

We do not presume to offer an opinion upon the policy for the British Government to pursue under these very difficult circumstances. Our sympathies with the liberal party may lead us to side with Russia, Garibaldi, Louis Napoleon, and Kossuth, against United Germany and the Sultan; or our instinct of self-preservation may lead us to make French interference in behalf of Italy *a causa belli*, and leave Garibaldi to be crushed by Austria. We merely indicate, in the rough, some of the probable leading features in the impending catastrophe, and wish our statesmen well through it.

THE PROGRESS OF EVENTS IN CHINA.

OUR last intelligence from China is not of a satisfactory nature. The expedition to the north had been detained by a series of gales, and the season was already so far advanced that, in all probability, the commander-in-chief will think it desirable to postpone operations until September. We understand that, in so far as the organization of the British portion of the force was concerned, it had been completed some time since, and we were only waiting for our allies to proceed to the rendezvous. We were quite prepared, by our previous experience of that organization on which our Gallic neighbours so especially pride themselves, to learn that it is as defective upon this occasion as it was during the operations of 1858. We do not mean to impute to our allies inefficiency in this respect as a general rule. For European warfare, there is no doubt that the French army has always proved itself admirably equipped. It is only when operations have to be undertaken at a distance, and the scene of war presents but slight natural interest, that a curiousness is betrayed which, in the present instance, is calculated seriously to increase the expenses and prolong the period of hostilities in China. The war in that quarter has been entered into for a political purpose, in which French feeling is in no way involved. The Emperor felt himself compelled to join with us again in revenging the insults which had been offered to the allied flags at the mouth of the Peiho, and hurried the necessary troops to those distant regions under the command of a General who had earned for himself an ill reputation in Algeria, and whose force is composed of the scum of the French army.

The British troops alone, which are despatched to the north, and which are to take an active share in the operations at the mouth of the Peiho, consist of 10,000 men; a force of 3,000 men will be left at Canton; a depot battalion and a Madras Native Infantry regiment will garrison Hong Kong, while the newly-acquired promontory of Kow-loo, situated on the mainland opposite to Victoria, and the possession of which has long been considered essential to the convenience and prosperity of Hong Kong, will be occupied by a regiment of Sikhs and a force of 400 Europeans. A convalescent depot will be formed at Chusan, or the neighbouring Island of Poosoo, at present tenanted only by priests, and dedicated to the mysteries of Buddhism. Its sacred groves will form a charming and healthy retreat for our invalids, who will be provided, for their protection, with a guard of 500 men.

The base of operations in the Gulf of Pecheli will, in all proba-

bility, be the town of Cheefoo, on the northern shore of the Shantung promontory. Here supplies are abundant, the harbour secure, and the climate healthy. It is distant about 120 miles, or fourteen hours' steaming, from the Takoo forts at the mouth of the Peiho. Here the superfluous strength exceeding the force of 10,000 men, to which the expedition is limited in the field, will be left in reserve. There are the usual rumours rife of a disposition on the part of the Chinese Government to yield, and the usual conviction in the Chinese popular mind that we shall be beaten if we attempt to take the forts. There is the usual report of rebel success, of panic in the imperial troops, and of an impending crisis. We even hear that the Governor of Shanghai has fled, and placed the town under the protection of the English, so that while we are attacking one portion of his Celestial Majesty's dominions we shall be protecting another. This should, in fact, be an additional card in our hand, and we have no doubt that Lord Elgin will avail himself of the anomalous condition of the internal affairs of China as a valuable lever with which to act upon the Government.

His Excellency, by the last accounts, had reached Hong Kong, and proceeded at once to the north. At Singapore he had, as we learn from the *Times* correspondent, in the exercise of a wise judgment, assumed the responsibility of ordering the Sikh regiment which had volunteered for active service in China, and been most improperly detained at Singapore, to Hong Kong. Just three years had elapsed since His Excellency had taken upon himself a still weightier responsibility, and on his arrival at the same spot, diverted the whole of the first expeditionary force from its original destination to Calcutta, thus saving Lucknow and Bengal. The allied ambassadors will, doubtless, accompany the present expedition to the Gulf of Pecheli, and we trust will proceed with the army to Tien-tsin, as the occupation of that city by the allied troops is absolutely essential to the success of the undertaking in which they are engaged. We say the allied troops; but in the event of the French not being in a sufficiently advanced state of preparation to commence this enterprise simultaneously with ourselves, it is to be hoped that this consideration will not be allowed to operate as a cause of delay. We are well aware that it is the opinion in certain quarters that the military movement ought not to end at Tien-tsin, but that our troops should be pushed to the gates of the capital. Apart from the physical obstacles which oppose themselves to such an undertaking, we believe that, in a political point of view, it will be found inexpedient.

It is impossible to estimate the consequences of the flight of the Emperor and his Court from Peking, which would naturally be the result of such a measure. It would probably unhinge the whole government of the empire, and involve us in as many difficulties as the Chinese authorities themselves. Even if this were not the case, it might have the effect of inducing the Emperor to remove the seat of government to another more remote and less vulnerable part of the empire. The arrival of the allied force at Tien-tsin, upon the last occasion, brought the Government to terms, and there is no reason why it should not do so again. Upon that occasion, when the treaty was made, the pressure was removed. This time it must be retained, and we hope to hear that, among the stipulations of the new treaty, will be the opening of Tien-tsin as a new port. It should be made the permanent station of two or three gun-boats, and the residence of our ambassador, who should, during the earlier period of his stay there, be protected by an adequate European force. An establishment of this nature only at a point fifty miles distant from the capital, and which has been properly regarded as the key to it, will ensure us against the recurrence of any future difficulties at the mouth of the Peiho, which river should, by treaty, be defined as the recognised highway to Peking, while the reconstruction of the forts at its entrance should be prohibited. As a preliminary to this arrangement, however, a visit by the allied ambassadors to the capital is necessary, and we trust that this vital step will form part of the programme which it is in the contemplation of the ambassadors to carry out. We have little doubt that a treaty thus consummated, and containing these stipulations, will prove lasting; and that we shall have no reason in the end to regret the expense which has been incurred in obtaining it, or to deem those measures harsh which, if energetically carried through now, will secure us a substantial peace, and save us the constantly-recurring difficulties which are alike injurious to our prestige, and attended with the most disastrous consequences to the Chinese themselves.

ANOTHER AMATEUR DIPLOMATIST.

MR. LINDSAY'S mission to the United States is at once voluntary and persuasive. He is not invested with authority by our Government, and is to rely entirely on his own eloquence to induce the American Government to give additional freedom to navigation. Having made his own way from a humble beginning up to great wealth, and now being one of the largest ship-brokers and ship-owners of the world, he may have an influence over the Americans which a man, born wealthy could not acquire. His ambitious undertaking, however, seems too plainly suggested by that of Lord Ashburton, some years ago, and Mr. Cobden's late success, to

be regarded as a bold stroke of genius before which all obstacles fall away. What his persuasive power may be, over the American Democracy, the body he must influence, cannot be known, but while Mr. Calhoun has led the multitude here by his terse eloquence, Mr. Lindsay has not always been patiently listened to by his own fraternity. As a ship-owner, his motives will be suspected. Already our ocean-steamers succeed in competition with those of the United States—they carry off the principal part of the passenger traffic; and he is avowedly to procure additional advantages for them. He will not find a favourable auditory, nor does he go at a propitious time, for the people are intensely interested in the contest for the Presidency; and the American shipping interest, the prejudices of which he is to assail is not so flourishing as to be extremely pliable. Nevertheless we heartily wish him success; and should he obtain it, his merit will be the greater for the difficulties he will have surmounted.

The shipping of the world is only now beginning to recover from the delirium following excess. More than any other interest, it was influenced by the gold discoveries; afterwards came an unusual demand for transports, to convey two large armies to the Crimea; and between 1852 and 1857 it prospered amazingly. All its resources were insufficient to meet the demand. In the four years 1852-1856, the Americans built on the average 488,000 tons of shipping yearly, while the average quantity built in the four previous years was only 280,000; in 1858 the tonnage built declined to 242,000, and last year to 176,000. Our own shipping, in the same interval, was also rapidly, though not equally augmented, and suffered, though not equally to the American shipping, in 1858 and 1859. The amount of tonnage built and registered in America in 1859 declined from the average of the four preceding years 58 per cent.; the decline of our shipping was only 15 per cent. It is now comparatively flourishing, and the Americans will not be ready to alter a law which they erroneously suppose—and Mr. Lindsay's mission strengthens the supposition—gives an advantage to their shipping over ours.

They may, indeed, be informed, that the lesser decline in our shipping than in theirs, while our coasting trade is thrown freely open to all the world, and they preserve the monopoly of theirs, is a proof that the monopoly is injurious to them. In fact, it has encouraged them to believe that they would derive greater benefit from it than is possible; and so they were led to build an excessive number of ships. Had the trade to California been open to competition from the first, it would at once have been shared by other shipping, and the expectations of the American ship-owners would not have reached such extravagant dimensions. What we regret most in Mr. Lindsay's mission is the encouragement it is likely to give to the errors of the Americans. It implies that the monopoly is advantageous to them,—and gives them a superiority which we wish to abate. The fact, however, is, that we abolished our Navigation Laws not for the advantage of the Americans or the French, or any other people, but for our own advantage. We are satisfied with the result. It has proved entirely beneficial to ourselves, and our example will in time be much more persuasive than Mr. Lindsay's eloquence. We want to convince the Americans that the utmost freedom of navigation is for their advantage, and this is more likely to be retarded than promoted by those direct efforts which are supposed to spring from interested motives.

It is deeply to be regretted that the Americans generally, but especially those of the northern and eastern states, who are the chief ship-owners, should be inclined to free-trade; but the fact is easily explained. These states were peopled when the system of encouraging trade by monopolies and regulations was in full vigour. They carried with them all the old political prejudices of Europe. Great Britain flourished in conjunction with the old system, though in spite of it. Circumstances, including a body of men devoted to literature, with leisure to investigate political subjects, have taught us better; but the Americans still cherish the old belief that a state can make trade flourish by regulations. They continue high tariffs therefore, to encourage their own cotton, their own iron, and their own woollen manufactures, and they retain the trade between the Atlantic and Pacific as a coasting-trade exclusively in their own hands, to encourage their own shipping. The error is deplorable; but nations are not to be suddenly reasoned into knowledge and truth.

Amongst the political writers of America are many who inherit the animosity of the Irish to English modes of thought; and others who still believe that England, as before the separation, seeks her own greatness by monopolizing trade. Against such passions and prejudices, which predominate in the Northern and Eastern States—which are strongest in those who claim to be the leaders of the Americans in the path of civilization—which are so much the creed of the so-called Republicans as their antipathy to slavery,—arguments can be of no avail. To succeed with the American Government, the American people must be convinced; and some converts might be made by a fervent, sincere, and zealous apostle of free trade. Mr. Lindsay is not, we believe, such a man, and therefore but little good can be expected from his mission.

CANADA;—THE PRINCE OF WALES'S VISIT.

While the old nations and old systems of Europe are in a state of ebullition, and their rulers are regarding each other with jealousy and distrust, the New World is buying itself with the more powerful and pleasing occupation of hospitality and loyal demonstrations. Canada, with the minor British provinces of North America, is giving the Prince of Wales a reception which cannot fail to be grateful both to the recipient and to the donors. Among the numerous addresses presented scarcely one is to be found that has not allusion, more or less direct, to the moral and domestic excellences of the Queen. In no part of the empire are these qualities of the sovereign more highly appreciated than in the British provinces of America, and even in the United States; and it is well that the youthful Prince should, thus early in his career, learn how much greater is the majesty derived from virtue than the merely conventional majesty attributed in Europe to all who wear the crown and wield the sceptre. The attachment of a people to the institutions of their native land may make them loyal; but it is the character of the sovereign that can alone create an affection such as the Queen commands in her distant provinces.

This visit can hardly prove abortive. The Prince goes to Canada attended by those who, though of riper years, may still learn, at least some wholesome truths. For example, it may be discovered, in this journey, that fear of Downing-street, and respect for the Circumlocution Office, are not widely felt by Her Majesty's lieges in North America; and that the colonists cling to a British connexion in spite of many reasons to the contrary, too often given them by Whigs and Tories who hold the colonial seals at home, and know nothing of the wants and wishes of the colonies, or even of their geography. His Grace of Newcastle may be well employed in noting such under-currents of colonial life as may pass within his fathomings; for there is more to see and know of Canada than floats upon the surface of her lakes, or is expressed in the joyous acclamations of a gala day. The Prince of Wales and the Duke of Newcastle may see the noble colony in her holiday attire, with her work-a-day clothes thrust out of sight; but it would be well for the Colonial Minister to make it his business to study the real character and aspirations—as well as the complaints and hardships of the people. He should hear what the backwoodsman and the new settler can tell him, as well as the story of the French *habitant* or the U. E. loyalist.

In reading that page of the world's history for which our own time is now furnishing the material, posterity will not fail to discern how little we comprehended the effect our policy was calculated to produce. Standing upon the vantage ground of a later day, with all the consequences revealed, the student will assume, with reference to ourselves, the position we now occupy in regard to the periods of the Commonwealth, the Restoration, and the accession of the third William—seasons of the seedtime of the harvest which, during the last half-century, it has been England's destiny to garner. As in the natural soil, so also in the political and social. If we sow tares we shall certainly not reap wheat. If the culture has been negligent, what may we expect but thistles! What were the seed and culture of our ancestors, we, from experience of the crop, are now able to perceive. Did Cromwell believe that his Republicanism would lead to Roman Catholic Emancipation? Did the kingcraft of James II. anticipate the institution of Orangeism? Or, did the rejectors of Franklin's appeal for accommodation dream of the empire their destiny was to be the means of establishing? It is useless now to speculate on what might have been the advantages on either side, had the great colonies of America been retained by Great Britain. It seems hardly probable that so extended a territory, with a population that nearly approaches, if it do not already exceed that of the parent state, would long have remained a dependency. And though the results of the struggle for independence have been highly beneficial to both parties, a policy so palpably suicidal as that pursued by George III. and his ministers is not to be commended, because good arose out of it. Have we grown wiser in our day?

Does not history teach us that colonies are but the life-estate of nations, the title to which is either by consent or coercion, and the term of possession a contingency? Greece colonized successfully, because her colonization entailed no inferiority: it was incorporation. Roman colonization was little, if anything, better than a military occupation. France, too, in our time, has colonized after the Roman model; with what want of success is well known. England, the great mother of worldwide possessions, has spread her institutions and her tongue in every quarter of the globe. One of these offshoots has already become a powerful nation. There are two others, at least, that are approaching a sturdy maturity, demanding the most cautious vigilance.

With regard more especially to Canada, there are many reasons why the present generation of British statesmen should beware how they do injustice to so noble a possession. The visit of the Prince of Wales has drawn the eyes of Europe upon the British provinces of North America. Among these, Canada, as the largest and most important, stands out in strong relief. Her territorial extent and geographical position are

commanding; a consideration which the British statesman should not venture to ignore. Canada is no laudible, but is truly the brightest jewel in the Crown of England—a gem for which kings and nations might compete, and which, if incorporated with the United States, would form of the latter the most formidable empire in the world, and make of Great Britain the second, instead of the first Anglo-Saxon Power of Christendom. A slight put upon, or a wrong done to these millions of British people might entail consequences which all the circumspection of Downing-street could not remedy. The thing has already happened, and there is nothing to prevent its recurrence, unless it be the better knowledge which the Prince of Wales and the Colonial Minister may bring home with them, for the future guidance of British statesmen and parliamentary majorities.

What, it may be asked, is the present grievance of the Canadians? We proceed to inform them, in the words of a correspondent from Quebec, whose letter is dated on the 24th of August:—

"Is it not (he says) a monstrous perversion, that after conceding to Canada a most liberal constitution, and recognising her right to independent action in all her social relations, the Imperial Government should have allowed itself to be betrayed or cajoled into even the semblance of bad faith with an important colony in the matter of the British and Canadian mail service? It was both a political and a moral delinquency which degraded from the dignity and character of British relations with the province, and from which the Government now suffers in the estimation of the Canadian people. The breach of faith, unfortunately, is not the whole sum of the offence. To this is added a positive and palpable slight which it is vain to attempt to disguise. The Cunard contract, and the apologetic afterglows offered in explanation, would doubtless have excited some passing discontent; but it would have been merely for the time. The repetition of the affront—in the instance of the Galway subsidy—aggravated by the marked preference of an American to a Canadian port, was of a nature calculated to wound the amour propre, and to arouse the indignation of the colonists; and Lord Palmerston's Cabinet, as well as that of Lord Derby, may rest assured the Canadians hold them alike responsible for the offence. Is the retention of a colony like Canada to be galled against the votes of Mr. Lowe and Mr. Roebuck? Are the possessions of the empire to be jeopardised to secure the parliamentary support of Irish members?"

"Recently, some persons from Canada met certain members of the 'Barnacle' family in Downing-street, to confer upon the postal arrangements between that province and England. These gentlemen had not the slightest recollection that any one of them had ever given assurances to Canada that notice should be given, or that the claims of the province should be considered previous to any renewal of the Cunard contract. Nor could they imagine how injustice was done to Canada by sealing the mails at the rate of one day of sending them to Canada direct; how any ground of complaint that the Galway and American steamships were subsidised in preference to those of Canada could arise in the minds of Canadians; and why there was any objection to the sending of the mails 700 miles round, was beyond the comprehension of any Barnacle. Wondrous Barnacles! Simple colonists!"

"To what end are lofty declarations or the granting of liberal constitutions, or rhetorical flourishes on the advantages of British connection, if British policy and British subsidies are to be made antagonistic to colonial interests? The experiences of 1776 and the warnings of 1837 have no moral for those who think a Tea Tax or a Stamp Duty the only means by which the allegiance of a people can be dissolved. We in Canada pray Heaven that the visit of His Royal Highness, attended as he is by those who should know how to look at things in a true light, may bear the fruit of a wise discernment, and perpetuate a connection which folly and mismanagement may only endanger."

It is well, not only that the Duke of Newcastle, who is on the spot, but that our statesmen at home should know the feelings of the colonists. The Galway contract has been a bad business from first to last; and it will become still worse, if, having led to such dissatisfaction in Canada as our correspondent expresses, the means be not taken, at the earliest opportunity, to show the Canadians that no future contract will be made to their disadvantage.

TWO GREAT COMPETITORS.

GARIBALDI marches from victory to victory. He is the man of the day and hour,—nay, of the very moment,—for the telegraphic wires may flash to us, between the hour at which these lines are written, and that at which they shall be printed, the heart-inspiring fact, that he has entered Naples at one gate, and that the king had departed at another, never again to wield the sceptre which he and his fathers have dishonoured. What has made Garibaldi the sole Liberator of Italy, when another great man competed with him for the character? Entirely his own virtue, patriotism, and straightforwardness, aided by the exhibition of opposite qualities in that other great man of the age who shares with him at this juncture the highest interest of all Europe. A year ago Napoleon III. was regarded in England as the disinterested Liberator of Italy, the champion of freedom, the cardinal principle of whose policy was to be, henceforward, peace, and whose most cherished desire was to develop the internal resources of his empire, and secure, by an enlightened administration, its general prosperity. Germany was at that period looked up to by conflicting interests, and destitute of that principle of cohesion in which alone its strength must consist. Prussia and Austria were

indulging in mutual recriminations,—the one reserved and indignant, the other crippled and rendered almost desperate by the humiliating results of the campaign in the North of Italy. Twelve months have produced a change so remarkable as to cause the great Emperor some uneasiness. He is no longer regarded as the Liberator of Italy, but as the despoiler of two of her provinces; and at the present juncture he enjoys the unenviable distinction of being the champion, not of freedom, but of the Pope and, as far as he dares, of the Bourbon dynasty at Naples. The pressure to which we predicted some weeks ago, that Garibaldi would be subjected, has been brought to bear upon him in its full force, and at the instance of the French Emperor. The unhappy King of Sardinia has been compelled to write autograph letters to the Dictator in a sense directly opposed to the wishes of his heart. Cavour has been tossed like a shuttlecock between Italian public opinion, and telegrams from the French capital, ordering him to outrage it. And, worst of all, the people of Italy have learned to exorcise that interference which they hailed a year ago with such exuberance of ecstasy. But Garibaldi holds on his way triumphantly. The simple man is stronger than the tortuous one; and the mightiest potentate of our time has been held in check, and may be ultimately defeated in all his machinations by a soldier of fortune.

The distrust which manifests itself in the Peninsula by the sullen murmur of a discontented people, finds an altogether different expression in Germany, over which, as yet, the baneful influence has not extended. It has produced that long-desired rapprochement between the two leading Powers of Germany, which, in the present aspect of political affairs, seemed absolutely essential to their safety. The results of the meeting of the Emperor of Austria and Prince Regent at Toplitz have been in the highest degree satisfactory, by concessions on both sides, and a mutual determination to sacrifice petty jealousies to the national weal. A cordial alliance has been formed, which only requires to be extended to the smaller states to render the accomplishment of our time has been held in check, and may be ultimately defeated in all his machinations by a soldier of fortune.

Still further East, in the resistance offered by the Porte to the French Syrian expedition, we have another evidence of the same distrust; while, in our own country, an army of Volunteers, a levy for national defences by the Government, and the general tone of the Press, all prove the same tendency on the part of the public mind. In Italy, cursing, in Germany, mutinings of crowned heads,—in Turkey stubborn resistance,—in England general armaments,—these are signs of the times which prove that the Emperor cannot direct the great power which he wields to the issues which he pleases, and that there are forces in operation in all Europe which move by a law and by a weight of their own, which France can neither alter nor diminish.

It is possible that the consciousness of the profound suspicion which attach to each new phase of the Emperor's policy throughout Europe may have the effect of retarding its development, with the view of calming the public mind, and regaining, in some degree, its confidence. We should hail with satisfaction any delay in the prosecution of those schemes of territorial aggrandisement which have been already upon more than one occasion, shadowed forth. The success of Garibaldi in Naples will either direct those schemes for a time, or give them a new and perhaps unexpected direction. A few days may suffice to show us which.

HANGING, AS A PUNISHMENT AND AS AN EXAMPLE.

ON Tuesday morning the filthiest, basest, and most dissolute and abandoned portion of the populace of London enjoyed the spectacle of a public execution in front of Horsemen-gate Goal. From twenty to thirty thousand people, including large numbers of boys and girls—the boys with pipes between their lips, and the girls with indecent language on their tongues—saw, with far more than the satisfaction derivable from an ordinary holiday, the death-struggles of the miserable assassin, William Godfrey Youngman. Of all the wretches ever brought to justice, this was among the most filthy. There was not a single redeeming feature in his case, from the first to the last. He led a plot to defraud an insurance office of one hundred pounds; and in working out the excessively stupid project, he ruthlessly sacrificed the lives of his aged mother, of his betrothed wife, and of his two little brothers, one of whom had slept unawakened on his own side on the night of the butchery. And having committed this unparalleled series of atrocities, he added to his ineffable villainy, the cowardly lie that his mother was the murderer, and that he had only killed her in self-defence. Persisting in this lie to the last moment of his life, he walked calmly to the gallows, and was hung without making a confession. It is not

sufficient to say that the execution of the good attended this monster to his doom, but that the worst ruffian and scoundrel of London felt that such a creature was not of their class or kind, but something viler than had ever come within their knowledge. There is generally some sympathy for a common murderer, especially if he walk stoically to the gallows, and do not flinch from the hangman at the last moment. But for Youngman there was none. Greener and Daniel Gool were respectable people in comparison. Atrocious as are the yet unadvised murders of the poor babe at Roud, and of the wretched old woman at Stepney, they might, and doubtless would take credit to themselves for not being such base and cowardly fiends as William Godfrey Youngman. A murderer of ordinary bloodlessness might feel himself contaminated by the touch of such a man; and as for sympathy, most people would feel more for a wolf or a skunk.

But if we allude to this case, it is not to throw epithets at the senseless crime of a dead ruffian; but to show, if we can, that the punishment of death is not only too merciful towards such guilt as his, but that its infliction in the sight of the public is highly demoralizing and degrading. And first of all the Death-punishment itself. It is an error to suppose, as the vulgar do, that Death is the severest punishment that can, in any case, be inflicted. John Sullivan, the great robber who poisoned himself on Hampstead Heath, knew of something more horrible and more intolerable than Death; and to escape that greater evil he voluntarily accepted and inflicted upon himself the lesser. Walter Watts, the forger—the gay man about town—the lessee of a theatre—the patron of actors, actresses, ballet-girls, and farce-writers—knew, in his miserable cell at Newgate, after his conviction, that there was something worse than Death—something that he could not bear even to think of. To escape it, he took Death to his arms as his friend and counsellor, and hung himself.

A thousand, or fifty thousand such instances might be cited, if need were, not alone in the case of criminals such as these, but of men overburdened with care and anxiety, and with the fear of loss of social position staring them in the face, and haunting them in their dreams, to show that there are miseries worse than Death, and to which Death comes as a relief and a blessing. The common expression that "hanging is too good" for some criminals, conveys a truth that is not sufficiently recognised; and, for William Godfrey Youngman, hanging was undoubtedly too merciful a punishment. The granting of life, and the extension of the state of public opinion would not permit, even in such a case as this, of the infliction of a hideous torture, we may well reiterate the old question, Why should there be a public exhibition of the last agonies of this or any other murderer? The spectacle is brutalizing. It does not operate as an example. It only attracts the classes who would go in the same way to see a cock-fight, or a bull-fight, if either were allowed, and who vent profane jests at a consummation which, if it be not awful, is alike disgusting, cruel, and useless. Why should not such executions be private? The official presence of the sheriff of the county, the governor of the gaol, the gaol chaplain, the gaoler, and a deputation from the jury by whose verdict the man was found guilty, would be sufficient guarantee to the public that the sentence was carried into effect on the right criminal, with the proper decency. This piece of reform has been urged over and over again; but all to no purpose. The brutal mob appears to be as much of an institution in England as the Law itself; and if the Law have its victim, the Mob must have its holiday. Why this should be, surpasses reason to discover; but that it is, not alone the exhibition of Tuesday last, but a hundred others, are in evidence to prove. We are a conservative people; and, as our good friend the "Gouty Philosopher" might say, we must pay our dues, even in the execution of criminals, to the great conservative principle of STIMULITY. We must punish one criminal in a prescribed fashion, even although by so doing we harden the hearts and deprave the souls of a thousand others.

THE NEW STAMP ACT.

THE past Session, though it has been barren of any great measures of law reform, has, nevertheless, effected some minor alterations in, and additions to the law, of considerable importance. Amongst these, the extension of the Stamp Acts holds a prominent place. The net-work of these acts may now truly be said to envelope almost every business transaction capable of being entered into, and every document necessary to give evidence of it. Mr. Gladstone exhibits as great subtlety of genius in small matters as comprehension of mind in the great fiscal revolution he has succeeded in effecting by his eloquence and industry.

Among the changes effected in the Stamp laws may be mentioned the extension of stamp duty to agreements, the subject-matter of which is of the value of £5 or upwards, instead of £20, as formerly. The duty hitherto imposed on the latter class of agreements was 2s. 6d., but now there is one uniform duty of 6d. on all agreements, with a progressive duty of the same amount, ac-

cording to their length. A thoroughly avaricious Chancellor of the Exchequer would have retained the duty on the £20 agreements, and would, nevertheless, have imposed the new duty on those above £5 as well. Doubtless Mr. Gladstone thought that the small uniform duty would be an inducement to all persons to stamp their agreements; and it is extremely probable his conjecture will prove to have been well based, for it has been of almost daily occurrence in courts of law—and particularly in the County Courts—that written evidence of contracts has not been admitted, in consequence of the absence of the 2s. 6d. stamp. It is, not, however, thought that the increase will be so great as to add much to the revenue.

Another most important alteration is the virtual annihilation of agreements for leases, by requiring them to be stamped with the same duty as leases. By this, it is probable the revenue will gain considerably, as in hundreds of cases the agreement was not followed by the execution of the lease.

The extension of the penny stamp to cheques payable to self, is the most questionable of all the recent changes. It shows how easily the wedge can be driven in after the thin end has been inserted. When Mr. Disraeli subjected cheques payable to bearer, or order, to this imposition, there was a slight outcry; but now poor John Bull submits with patient resignation.

The remaining new burdens are, a penny stamp on certificates of birth, &c. Declarations, in lieu of affidavits, are subjected to the 2s. 6d. stamp, payable on the latter. This cannot be complained of, and the only wonder is that the former were ever exempt.

Delivery-orders and dock-warrants complete the list, being respectively liable to the duties of 1d. and 3d.

It remains for the genius of a Gladstone to ferret out something else which has escaped his own observation and that of his lynx-eyed predecessors. In the mean time, let him not forget the old saw,—*Patientia læni sit furor.*

EXCURSION TRAINS.—The time seems to be fast approaching when it will be necessary either absolutely to prohibit the running of excursion trains or to enforce by severe legal penalties the fitting means for their being conducted in such a manner as that the passengers shall not be exposed to such a wholesale massacre as has occurred within the past week. Until the coroner's inquest shall have been held we refrain from making further comment upon the accident which occurred a little before one o'clock on Tuesday morning, on the East Lancashire section of the Lancashire and Yorkshire Railway near Helmsbury Station, about 18 miles north of Manchester. Ten persons were killed and fifty-six seriously wounded. A great party of excursionists had, it appears, gone to a *fiat* at Belle Vue Gardens, near Manchester. Their number was so great that three trains were required to convey them home. All of these left Manchester before eleven o'clock at night. The first accomplished its journey in safety. The second, consisting of eighteen carriages, reached Helmsbury soon after midnight, where the station stands on a steep incline, rising in some parts of the line one yard in fifty-two, and extending over several miles. At this place, when the second train again started to pursue its journey, the coupling-chain between the third and fourth carriages broke, and the fifteen sped away down the incline, moving slowly at first, but gradually gaining in speed as they descended. At three hundred yards from Helmsbury, fortunately not far from the line, they came into collision with the third excursion-train from Manchester, and such was the shock, that the two first of the descending carriages coming upon the engine of the advancing train, were shattered with a tremendous crash, which was immediately followed by the groans and cries of the wounded, and a fearful destruction of human life. In one case like this, the fault or crime,—or crime it is, if there have been negligence or carelessness in any quarter,—must be traced to its source. It will not do to sacrifice some poor stoker or other railway servant, if the company itself, in its over-anxiety for business and profit, have failed to take as much precaution in the public interest as any railway director would take in his own individual case. To run fifteen carriages, attached to each other, by one or more coupling irons, not fit to bear the weight of two-thirds the number, is a crime that deserves the punishment of principals as well as of accessories.

THE BRITISH MUSEUM.—The Select Committee appointed to ascertain what additional space is required for the extension and arrangement of the collection of objects of natural history, relics of antiquity, and works of art belonging to the British Museum, have just published their report. Professor Owen, on ground that varieties now possess equal importance with species, recommends the formation of a museum of natural history, which would cover ten acres. Fortunately for the public purse, his views are opposed by the whole of the other naturalists examined as witnesses, all of whom concur in recommending a more limited exhibition, on the typical principle of arrangement, which they say will meet all the requirements of the scientific student, and, at the same time, tend less to confuse the great mass of visitors. The Committee are opposed to the removal of the natural history collection to a less central position, and recommend to Government the immediate purchase of 5½ acres of ground surrounding the present buildings, to the north-east and west, which already belongs to one proprietor, its value being estimated at not more than £200,000.

CRYSTAL PALACE—ARRANGEMENTS FOR WEEK ENDING
